2. While the Magi were thus a distinct caste of Medians, and apparently the recognized leaders of the subject population in the time of Aryan (Persian) dominion, there is no reason for doubt that their ascendancy was essentially religious, like that of the Brāhmans in India. Darius writes of his repairing temples which the Magus had destroyed (*Bh. [Pers. text] i. 63-66*), and so far the inscription favours the existence of a marked difference of religion—of course, its scanty reference does not definitely prove anything one way or another. But the testimony of Herodotus and all later classical writers is so unanimous and precise that we need no other. It would appear that, having failed in their bold bid for political supremacy, as leaders of the people against Aryan invaders, they began to build up power upon their popular vogue as shamans. It was easy to insinuate themselves into the open place of priest in the unreformed Iranian nature-worship, as described most accurately by Herodotus (i. 131 ff.); they had only to emphasize certain clear points of resemblance between their own religion and that of the Aryans, veneration of the sun and of fire being the chief. There is one important detail of ritual in which we can with high probability trace an appearance of Magianism separate from Aryan connexions at a very early date. Ezk 8^{1st} describes, as the greatest of three 'abominations' that had brought Jahweh's wrath on Jerusalem, the sun-worship of men in eastward position, who 'put the branch to the nose.' To hold a bough before the face in solar cultus is a natural action; its special interest for us lies in its coincidence with the Parsi use of the *barsom* (*q.v.*), a bunch of tamarisk twigs held by the priest before his face in worship. The name, and the peculiar use of the verb 'spread' to describe the preparation of the instrument, alike take us to something quite different—the Aryan carpet of stalks of tender grass (Herod. i. 132) on which the offering was laid (Skr. *barhis*, Av. *baresman*). We may infer that the Magi adapted the Aryan use to their own by prescribing that a bunch of the sacred stalks should be picked up from the ground and held reverentially before the face.

3. This notice enables us to trace the Magi in a separate activity as far back as 591 B.C., when they seem to have secured proselytes in Judæa. This is quite in keeping with what we know of them. Their contemporary appearance in Babylon is probably attested by Jer 39¹³, where 'the Rab-Mag' appears among Nebuchadrezzar's officers (for alternative views of Rab-Mag see the *Oxford Lexicon* and *EBi*, s.v.). H. Zimmern and H. Winckler (*KAT*³, 416) explain the Rab-Mag's name, Nergal-sharezer, as 'Nergal, protect the king'; and in their account of Nergal they expressly compare Ahriman, who in the Later Avesta has features which could be very easily connected with Babylon. The head of a caste of exorcists, who by their charms can keep the Satan from harming the king, is wholly in place at court. We compare at once the apotropaic functions of the Magi in Plutarch, *de Is. et Osir.* 46. We may add to this small but important peculiarity several other traits by which the Magi may be distinguished from the Persians in religion, whether in the earlier or the later stages of what we now call Parsiism. First come two conspicuous features recognized from the first by Greek writers as Magian and not Persian: (1) their exposure of the bodies of the dead to birds and carrion dogs was distinguished

by Herodotus (i. 140) from the Persian custom of burial after encasing in wax. It has pronounced aboriginal affinities, and was neither Semitic nor (almost certainly) Aryan. Coupled with this was (2) their insistence on next-of-kin marriage, which they belauded extravagantly for its accumulations of merit. It was never accepted by the Persians, and never found its way into the Avesta (see on this Moulton, p. 205 f.), first appearing in the Pahlavi writings of the Sasanian age as a precept of developed Parsiism. But modern Parsiism repudiates it with the utmost emphasis, and its scholars attempt the heroic but impossible task of denying that their predecessors meant anything of the kind (see art. MARRIAGE [Iranian], § 2). (3) The very name of *magic* attests the strength of their association, in the mind of antiquity, with an accomplishment altogether ignored in the Avesta, and never countenanced in Parsiism. Equally ignored is (4) *oneiromancy*. The Magi were renowned for their skill in divining by dreams; but the very word for dream occurs only once in the Later Avesta (*Yt. xiii. 104*), and there is no hint that dreams were ever studied. Closely linked with this is (5) *astrology*, with which the Magi were traditionally credited. But the Avesta, while it has plenty of star-lore, and some mythology, has never a hint of ideas belonging to astrological conceptions. A curious point under this head is the inconsistent views of the planets held in the later Parsi Scriptures (the Avesta has nothing one way or the other). On one side there is the official view that planets were malign; on the other we find them named by the names of the good *yazatas*, including Ormazd himself. These names are simply equivalents for the Babylonian terms, like those which we ourselves have taken over through the later Greeks and the Romans, so that the date is post-Avestan. But it seems probable that the Magi put the planets into the creation of Ahriman because of their irregular motion, while the Parsis generally believed in their beneficence. There is the same kind of discrepancy in (6) the views of *mountains*, which in Aryan and Semitic mythology alike were venerated as divine, but by the Magi were treated as blots on the symmetry of creation, to be smoothed out when the Regeneration came. It will be seen that most of these peculiar traits, by which we may distinguish the Magi from the people whose religion they adopted and adapted, are incompatible with either Aryan or Semitic affiliation, or at least do not suggest the one or the other. It seems a fair inference that they were aboriginal Medians, who, like the Elamites, belonged to neither of the two great races which divided Nearer Asia between them. To what stock they belonged we may not be able to say. L. H. Gray (*Expt* xxv. [1914] 257) points out that there were Magas in India, about whom we hear in the *Bhaviṣya Purāṇa* and the *Bṛhatsamhitā*; he thinks that these were probably Magians, accepting the general view of them which has been outlined above, and he believes them to be immigrants to India from Persia.¹

It must be premised that the foregoing view of the ethnography of the Magi and their religious origins is to some extent new, and has not yet had the benefit of full discussion. The extent of approval expressed by L. O. Casartelli (*Manchester Guardian*, Dec. 23, 1913) and L. H. Gray (*loc. cit.*) encourages the writer to epitomize here the thesis set forth in his *Early Zoroastrianism*, chs. vi. and vii. (cf. also K. Geldner, in *ThLZ* xxxix. [1914] 290).

4. Pursuing this thesis further, we are led to credit the Magi with all that is fairly called 'dualistic' in Parsiism. There is nothing really

¹ It may be noted that a Skr. *Maga* cannot be directly equated with Iranian *Magu*; but *Magu* may be borrowed as a foreign word with altered declension (the form *Magu* also occurs in the *Bhav. Pur.*). This would imply an Iranian origin, which suits our theory. See, on the Magas, art. SAURAS AND MAGAS.

dualistic in Zarathushtra's *Gāthās*. The very name of Ahriman (*angra mainyu*, 'enemy spirit'; see art. AHRIMAN) occurs only once there (Ys. xlv. 2), as a casual epithet and not a fixed title. The good and evil spirits make their choice in the beginning, but there is never any real question as to the issue of the strife between them; one whose perpetual counsel is 'Resist the devil and he will flee' can never be called a dualist. But the Magi, on Plutarch's express testimony, offered sacrifices to Ahriman.¹ The practice is entirely absent from the Avesta—a fact that does not discredit Plutarch, but only shows the survival of distinct usages among the Magi, whose genius is well suited by the mechanical division of the world into creations of Ormazd and creations of Ahriman. This is practically absent from the *Gāthās*, and even from the *Yashts*, where a pure Iranian nature-worship shows small sign of influence from Zarathushtra on the one hand or the Magi on the other. The prose Avesta (excluding the early *Gāthā haptanghanti*)—which by the loss of metre and the presence of much dubious grammar proclaims itself composed in a virtually dead language—is full of this dualism. Even words have to be distributed between the two camps; different terms are used for the head, hand, voice, etc., of an Ormazd-worshipper and those of an Ahrimanian. Every *yazata* has a demoniacal opponent; but we note that the balancing is imperfectly completed, and that the fiends are often of manifestly late origin and vague functions, so that we should suppose the work of correlation to have been rather half-heartedly undertaken as a concession to theory. The type of dualism implied suggests affinity with that which apparently called forth the declaration of Is 45⁷. The presence of such a system in Babylonia during the Exile suits our view of the Magi as shamans exercising influence far beyond their own land of Media; and the presumption adds something to the case for recognizing the Rab-Mag as an ἀρχιμαγος. We may observe that, if Jahwism emphatically denied this dualistic assigning of darkness to an evil demiurge, Zarathushtra himself was no less clear in his claim that Mazda made the night as well as the day (Ys. xlv. 5).

5. We are reduced mainly to conjecture when we ask what was the Magian eschatology. That death must be abolished if Ormazd is at last to conquer Ahriman—*pouru-mahrka*, 'many-slaying,' according to his standing Avestan epithet—seems a natural inference from their first principles. We know, further, that they pictured a regenerate world in which such unsymmetrical features as mountains would disappear, and the earth would become a 'slopeless plain.' But how far they pressed their form of the doctrine of immortality we have no means of knowing. Our early Greek witness, Theopompus, according to an important statement of Diogenes,² declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th cent. authority may, of course, be describing only the doctrine of Persian religion in his own time, when the Magi were its long-established priests. But the extract apparently connects this immortality with a doctrine that looks rather characteristic of the Magi themselves. The *locus classicus* in Plutarch, already quoted, is ordinarily taken as silent as to any doctrine of a resurrection among the Magi. But E. Böklen (*Die Verwandtschaft der jüdisch-christl. mit der pers. Eschatologie*, Göttingen, 1902, p. 102 ff.) argues

¹ *de Is. et Osir.* 46: 'Zoroaster the Magus . . . taught them to sacrifice to the other [Ahrimanes] offerings for averting ill, and things of gloom.' The blood of a wolf is specially mentioned. Cf. the Mithraic dedication *DEO AHRIMANIO*.

² Diog. Laert. *Proem.* 9, 86 (sc. Theopompus) καὶ ἀναβιώσεσθαι κατὰ τοὺς Μάγους φησὶ τοὺς ἀνθρώπους καὶ ἕσσεσθαι ἀθάνατους. See Moulton, pp. 406, 416 f., for a full discussion.

that in Plutarch's quotation from Theopompus¹ we should translate 'Hades is to be deserted,' which agrees with the other accounts of the testimony of Theopompus. The absence of any doctrine of immortality in Tobit can hardly be regarded (as in Moulton, p. 416) as a contributory argument. For, whether the book is rightly or wrongly held (as by Moulton, ch. vii. and p. 332 ff., and D. C. Simpson in the Oxford Apocrypha) as containing a Median folk-story re-written by a Jew, we must admit that the adapter was not likely to include that element unless he agreed with it, which, if the date was early, he would not do. It is clear that, if Zarathushtra's eschatology came before Jews during the Exile only in an adaptation determined by Magian ideas, it was very little likely to attract the thinkers of Israel. The common belief that the rise of the doctrine of immortality in post-Exilic Judaism owed some real stimulus to Persian influence becomes less and less probable as the history of early Zoroastrianism is investigated more thoroughly.

6. Such, then, in outline were the Magi as a sacred tribe, so far as our information allows us to isolate them for separate portraiture. Most of what we hear of them naturally belongs rather to the religious system upon which they fastened so tenaciously. As early as the travels of Herodotus, they had compensated for their failure to regain political ascendancy by making themselves indispensable to the ritual of Persian religion. It involved, as we have seen, considerable suppression of beliefs and usages traditional among themselves. These they continued to practise in their own community, with or without attempts at propaganda. They could easily use general similarities between their religion and that of the native Iranians so as to prove to the latter their fitness to serve their altars; and the people to whom they ministered, including a large proportion of their own kin, would be slower to realize how much change the proselytes were bringing to the religion which they so zealously adopted.

7. Later developments of Magianism belong to the history of Zoroastrianism as established under the Sasanian dynasty. It only remains here to add a few words about the Magi as they figure in the Nativity story of our First Gospel. To discuss the historic credibility of that story, or the various theories that have been devised to explain the star, must be left to the Dictionaries of the Bible. Here it suffices to connect the foremost traits of the Magi, as described above, with points in the story of Mt 2. That these *Μάγοι ἀπὸ ἀνατολῶν* answer to the picture as experts in dream-interpretation and in star-lore is clear. It is noteworthy, therefore, that Mt 2, so far as its testimony goes, isolates the Magi from Persian religion, which, as we saw, has practically no room for either (see art. FRAYASHI, *ad fin.*). This constitutes within its limits a rather striking witness, when we remember how little we are able to discover about the Magi as apart from the religion with which even four centuries earlier they were almost completely identified. Naturally we must not be tempted to make too much of evidence so limited in its range.

LITERATURE.—Greek and Latin *loci classici* are collected in A. Rapp's two papers, *ZDMG* xix. [1865] 1–89 and xx. [1866] 49–140. Those which affect Zoroaster are conveniently printed together in A. V. W. Jackson, *Zoroaster, the Prophet of Ancient Iran*, New York, 1899. The account here given depends largely on the writer's full discussion of the whole subject in *Early Zoroastrianism* (H.E.), London, 1913.

JAMES HOPE MOULTON.

¹ *de Is. et Osir.* 47: ἡλὸς δ' ἀπολείπεσθαι τὸν Ἀΐδη, καὶ τοὺς μὲν ἀνθρώπους εὐδαίμονας ἕσσεσθαι, μὲν πρῶτ' ὁμοῖον μὲν σκιάς ποιούντας, κτλ. Hades has been usually taken as a name for Ahriman, but this almost demands the alteration of ἀπολείπεσθαι.

MAGIC (Introductory).—I. History of the term and problem of its definition.—In any general treatment of the subject of magic the problem of its definition must occupy the chief place, seeing that it constitutes a veritable storm-centre in the anthropological literature of the present day. As so often happens when a word belonging to the common language, and used in vague and conflicting ways, is taken over by science that it may correspond to some precise concept, theorists interested in different and more or less incompatible concepts claim exclusive rights over the same technical term; so that, if they are at all equally matched, the term becomes for the time being ambiguous, *i.e.*, it answers to more concepts than one. Something of this kind has occurred in regard to the word 'magic.' It may be instructive, then, to begin with a glance at its meaning as a popular expression. It is, of course, the lineal descendant of the Gr. *μαγία* and the Lat. *magia*, which in their strictest sense refer simply to the religion, learning, and occult practices of the Persian Magi, or priests of the sect of Zoroaster, in the form in which they became known to the West (see art. MAGI). Such matters, however, being both foreign and ill-understood, would naturally be more or less suspect. Hence the word tends from the first to carry with it the unfavourable associations summed up in the notion of witchcraft (see, for instance, Hesychius, *s.v.* *γῶγς*, which he identifies with *μάγος*, and Pliny, *HN* xxx. 11; and for further references cf. H. Hubert, in *Daremberg-Saglio*, *s.v.* 'Magia'). These associations the equivalent words in the various languages of modern Europe have never lost. Bacon's attempt to rehabilitate *magia* as natural science in its operative aspect (*de Augmentis scientiarum*, iii. *ad fin.*) proved quite abortive. Thus it comes about that the modern anthropologist in attributing 'magic' to a given people can hardly do so without at the same time implying that it is something inferior and bad—something that, however prevalent it may be, belongs to the lower levels or even to the pathology of mind and society. A survey of representative views on the subject will bring out the fact that, in this respect at least, most, if not all, theories tend to be at one.

2. Representative views.—As far back as 1870 E. B. Tylor laid it down that the 'confusion of objective with subjective connexion, . . . so uniform in principle, though so various in details, . . . may be applied to explain one branch after another of the arts of the sorcerer and diviner, till it almost seems as though we were coming near the end of his list, and might set down practices not based on this mental process, as exceptions to a general rule' (*Researches into the Early Hist. of Mankind*, p. 129). He adds that the same state of mind will account for tabus, many of the food-prejudices of the savage, for instance, depending on the belief that the qualities of the eaten pass into the eater (*ib.* p. 133). Such an attitude of mind he characterizes as one of 'gross superstition and delusion' (*ib.* p. 119), even while allowing that at a stage of development when human life 'was more like a long dream' such a

system of error was perfectly 'intelligible' (*ib.* 139 f.). He pursues the same line of explanation in his later work, *Primitive Culture*, where magic is described as 'occult science,' *i.e.* a 'pseudoscience' (3rd ed., i. 112, 119). 'The principal key to the understanding of occult science is to consider it as based on the association of ideas, a faculty which lies at the very foundation of human reason, but in no small degree of human unreason also' (i. 115 f.). He adds a disquisition on the futility of magic arts, in which he maintains that 'in the whole monstrous farrago' there is practically no truth or value whatever (i. 133). Meanwhile, he holds that the laws of mind are as unchanging as the laws of chemical combination, so that 'the thing that has been will be' (i. 159). The 'symbolic magic' of the savage and modern spiritualism are alike hurtful superstitions born of fallacies to which the human mind is naturally prone (see ch. iv., *passim*, esp. *ad fin.*).

J. G. Frazer (*The Golden Bough*) maintains a position which in most respects is identical with that of Tylor. In the first edition (1890) he credits primitive man with two views of the world that exist side by side, the one view being that it is worked by personal beings acting on impulses and motives like his own, the other view amounting in germ to the conception of nature as a series of events occurring in an invariable order without the intervention of personal agency. The latter is the view involved in sympathetic magic (*GB* i. 9), though the savage acts on it, not only in magic art, but in much of the business of daily life (*ib.* 31). In the second edition (1900) Frazer lays far more stress on the 'fundamental distinction and even opposition of principle between magic and religion,' being influenced especially by the theories of H. Oldenberg (*Die Religion des Veda*, Berlin, 1894), F. B. Jevons (*Introduction to the History of Religion*, London, 1896), and A. C. Lyall (*Asiatic Studies*, 1st ser., London, 1899). More than that, he is now disposed to affirm that, 'in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion' (*GB* i. p. xvi). He still represents magic as 'next of kin to science,' since the two have in common the 'general assumption of a succession of events determined by law.' Magic is nevertheless only 'the bastard sister of science.'

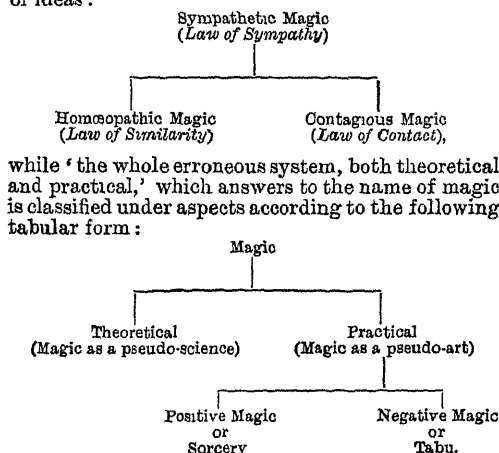

'All magic is necessarily false and barren; for were it ever to become true and fruitful, it would no longer be magic but science.'

All cases of sympathetic magic resolve themselves on analysis into mistaken applications of the laws of the association of ideas by similarity and contiguity.

'Legitimately applied' these same principles 'yield science; illegitimately applied they yield magic' (*ib.* p. 62).

Religion, on the other hand, 'is opposed in principle both to magic and to science,' since its fundamental assumption is that the course of nature and of human life is controlled by personal beings superior to man. Towards such beings conciliation must be employed, whereas to exert mechanical control is the object of magic and science, though the former often essays to control spirits, treating them, however, exactly as

if they were inanimate agents (*ib.* p. 63 f.). Finally, the human race are assumed to have passed through an 'intellectual phase,' in which they 'attempted to force the great powers of nature to do their pleasure,' and had not yet thought of courting their favour by offerings and prayer. Such an 'age of magic' finally gave place to an 'age of religion' only because mankind at length were led by experience to a 'tardy recognition of the inherent falsehood and barrenness of magic,' whereupon the more thoughtful part of them cast about for a truer theory of nature (*ib.* pp. 73, 75). In the third edition (1911) these main theses are retained, but the following scheme of the principal branches of magic (taken over from *Lectures on the Early History of the Kingship*, ch. ii.) is added, in accordance with the view that magic is simply misapplied association of ideas:

(See GB², pt. i., *The Magic Art*, i. 54 and 113.)

The view that tabu is a negative magic did not appear in earlier editions of *The Golden Bough*. Frazer holds that, if not the whole doctrine of tabu, at all events a large part of it, would seem to be but a special application of sympathetic magic, with its two great laws of similarity and contact (*ib.* i. 111 n.).

E. S. Hartland (*Ritual and Belief*, London, 1914) enters on a full discussion of 'The Relations of Religion and Magic' (p. 26 ff.). He insists at the outset that they spring from a common root.

'I venture to suggest that in man's emotional response to his environment, in his interpretation in the terms of personality of the objects which encountered his attention, and in their investiture by him with potentiality, atmosphere, *orenda*, *mana*—call it by what name you will—we have the common root of magic and religion' (p. 66).

Correspondingly, magician and priest are differentiated from a common type, namely, the medicine-man.

'Roughly and provisionally it may be said that the professional magician is he who in the course of the evolution of society, by birth, by purchase, or by study and practice in the conventional methods, has acquired the most powerful *orenda*. Similarly, the professional priest is he who in these ways, or by prayer and fasting, has obtained the favour of the imaginary personages believed to influence or control the affairs of men—who has, in a word, possessed himself of their *orenda*. The union of these two professions in one person is not adventitious; it is probably fundamental' (p. 95 f.).

Hartland, while thus differing from Frazer on the question of origin, is disposed in other respects to follow the latter's method of delimiting magic and religion.

Magic 'conveys the notion of power, by whatsoever means acquired, wielded by the magician as his own, and not as that of a higher being whose coöperation is only obtained by supplication and self-abasement' (p. 86).

On his view prayers and sacrifices are magical processes just in so far as a constraining power is attributed to them; and he asks, 'Have analogous

beliefs in the magical powers of a rite even yet disappeared from Christianity?' (p. 87).

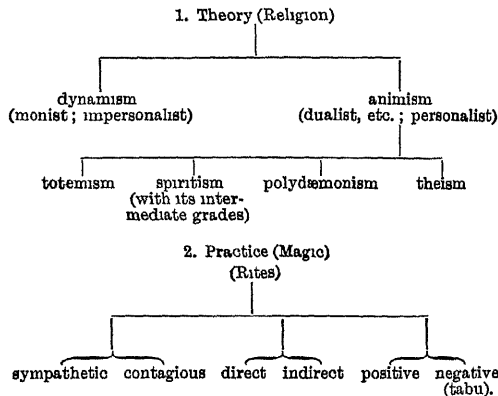

Religion, on the other hand, is 'confined to cultural systems, whose objects, so far as they are personal, are endowed with free will, are to be approached with true worship, and may or may not grant the prayers of their suppliants. . . . Where the object is impersonal, or is but vaguely personal, it is none the less treated with reverence and submission, as something transcending man; it is the object of an emotional attitude, actively directed towards it. The object thus, even where it is not personal, tends to become so' (p. 88).

A. Lehmann of Copenhagen (*Aberglaube und Zauberei von den ältesten Zeiten an bis in die Gegenwart*, Stuttgart, 1898) defines superstition (*Aberglaube*) as any belief which either fails to obtain authorization from a given religion or stands in contradiction with the scientific conception of nature prevailing at a given time. Correspondingly, magic or sorcery (*Magie oder Zauberei*) is any practice which is engendered by superstition, or is explained in terms of superstitious notions (p. 6 f.). By insisting on the essential relativity of these two ideas he claims to have avoided many difficulties that puzzled former inquirers. For instance, if it be asked how magic is to be distinguished from miracle, the reply is that it is all a question of standpoint, Aaron performing miracles while his Egyptian rivals are mere magicians (p. 9). For the rest, he finds two more or less independent theories to be equally at the back of magical practice, namely, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 314).

H. Hubert and M. Mauss ('*Esquisse d'une théorie générale de la magie*,' in *ASoc* vii. [1904]) start from the conception of rites. Rites are traditional acts that are efficacious in a non-mechanical way, thus involving the notion of *mana* (q. v.), or wonder-working power (p. 14; cf. p. 138). Such a notion underlies the idea of the sacred as implied in a religious rite like sacrifice. A magical rite, though non-religious, involves ideas of the same order (p. 2 f.). The differentia of magical rites consists in the fact that they do not form part of an organized cult, and therefore tend to be regarded by the society concerned as illicit (p. 19). Thus religion and magic tend to stand to one another as two poles representing severally the social and the anti-social ways of trafficking with the miraculous. Finally, magic, as being always the outcast of society, becomes charged with all the effects of decomposition and rejection, and so is gradually differentiated from religion more and more. This very ingenious and weighty study of magic, to which a short sketch cannot pretend to do justice, is made, it must be remembered, from a strictly sociological standpoint, and throughout regards magic and religion not as phases of mind, but as social institutions, having as such a reality of their own determinable in terms of form and function.

Arnold van Gennep (*Les Rites de passage*, Paris, 1909) treats the magico-religious as an indivisible whole, distinguishing only between the theoretical and the practical activities which it comprises, and assigning the term 'religion' to the former and 'magic' to the latter. It is essential, in his view, to insist on the indissolubility of the relation between the theoretical and the practical sides, since the theory divorced from the practice passes into metaphysics, while the practice founded on another theory becomes science. For the rest, the mysterious forces which are the objects of magico-religious theory may be conceived equally well under an impersonal or a personal form; and, correspondingly, magico-religious practice, whether it issue in positive acts or in abstinences—viz. in the observance of tabus—may seek to deal with things either directly or indirectly through personal agents having power over the things, while the mechanism of association by

similarity and contact is involved in both cases alike. The theory is stated (p. 18) in tabular form as follows:

Wilhelm Wundt (*Völkerpsychologie*, vol. ii. pts. ii. and iii., Leipzig, 1907-09) makes myth or belief the ultimate source of cult or ritual, since the latter is but the former put into practice. There is but one mythical idea at the back of all rites, namely, the idea of soul; and from it are generated in succession three forms of cult, magic, fetishism, and totemism, which by reaction cause the idea of soul to develop correspondingly. To deal only with the first of these, magic in its primary form consists in the supposed direct action of soul on soul, as when the evil eye is feared, while the secondary form consists in supposed action from a distance, when the soul-influence makes itself felt indirectly by means of a symbol (ii. 46 f.). Thus Wundt is entirely opposed to the Frazerian theory that magic implies a theory of natural causation on the part of the savage. On his view, while ordinary events are accepted as a matter of course, extraordinary events, demanding as they do a theory that will account for them, are at first ascribed to the soul-power or will of a man, and later (when the stage of magic is transcended) to that of a magnified man, or god, similar soul-power or will being ascribed to inanimate objects and to animals at the intermediate stages of fetishism and totemism.

Here perforce must end the survey of representative views, those selected for examination at least exemplifying the wide diversity of the notions which it is sought for purposes of science to impose on a highly plastic, since popular, term. Now the purely verbal side of the question need not be a source of trouble. If the things are envisaged distinctly, the words may be trusted to look after themselves. Thus in the present case there are evidently different concepts answering to separate aspects of human life; and it will be sufficient for the present purpose if these aspects are discriminated, so that terminology may be given the chance of adjusting itself to the facts.

3. Magic as a general name for rudimentary cult.—On any theory of the evolution of religion which represents it as a single movement falling into distinguishable stages, there will always be a first stage of minimum development immediately preceded by a stage of what Bacon would call *absentia in proximo*—a 'pre-religious' stage, as it might be termed. Now, since the word 'magic' tends to bear an unfavourable sense, nothing is more natural than to dub magical whatever fails to come up to the evolutionary standard which religion is more or less arbitrarily taken to embody. It hardly matters whether, after the manner of Frazer, an age of magic is held to have

preceded the age of religion, or whether, in the style of Wundt, magic is identified with the lowest form of religion. In either case magic answers to something to which is assigned an unfavourable, because inferior, place in the evolutionary scale as compared with religion at its most characteristic. Anthropological science, however, is becoming increasingly chary of constructing any such scale on lines so simple and so drastic. Human evolution is a tissue of many interlacing strands; and, again, the savage of to-day is no older or earlier than the civilized man, so that typological and historical primitiveness cannot be identified off-hand. At most, then, it is with the help of psychological and sociological considerations of a general type that a primordial stage of mind and society can be theoretically posited, out of which determinate religion may be shown to have emerged by some sort of subsequent process. Such general considerations suggest that, just as Jourdain talked prose before he realized the fact, so the primeval savage acted before he thought about his action. Correspondingly, therefore, in the sphere of nascent religion there must have been a stage of cult or ritual (if so it may be termed), the product of sheer unreflective habit, which preceded the growth of ideas concerning the how and why of what was being done. Certain recurrent situations in the social life—and, as for the individual life, it is wholly subordinate to the social so long as mere gregariousness prevails—induce states of emotional intensity. The emotions must find a vent somehow. This they do either through activities directed to practical ends, such as hunting, fighting, and love-making; or else through secondary activities such as are not immediately practical in their object but serve simply as outlets of superfluous energy, such as the dances that simply play at hunting, fighting, or love-making. In either case habit entwines with the activities in question all sorts of more or less functionless accidents; and the presence of these unaccountable details helps to make the whole performance seem mysterious to the performers and still more so to the civilized onlooker. When the activity is of the directly practical kind, say, hunting, whereas the tracking, the killing of the game, and so on, explain themselves, the accompanying observances enjoined by custom which do not explain themselves so readily—for instance, wearing such and such a garb, uttering certain words, and the like—may well seem to call for justification even to the unthinking savage, who will at least translate his sense of the value of custom into the vague doctrine that there is 'power' in these things, that they 'work.' When, on the other hand, the activities belong to those of the secondary type which are not immediately practical, constituting 'protreptic' rites, as they might be termed, which, while affording emotional relief, act likewise on the whole as preparations for the business of life—very much as play does, in the case of the young—then accretions in the way of accidental features due to custom are likely to be more pronounced, inasmuch as there is no discipline of hard fact to impose bounds on the action. Meanwhile, in proportion as these secondary activities conform to the same stimuli as the primary activities of which they are the by-product, as, for instance, when the hunting interest overflows into a pantomimic rehearsal of the chase, they will wear an imitative appearance, though in reality being 'repercussions' rather than imitations. When, however, an *ex post facto* justification of them becomes necessary, it is quite natural that the doctrine that they have 'power' should implicate the belief that their seemingly imitative character has something to do with their efficacy. It is putting the

cart before the horse to say, as Frazer seems to do, that the belief that 'like produces like,' or what not, generates symbolic ritual. It is, on the contrary, symbolic ritual—i.e. a ritual that involves a more or less realistic reproduction of some practical activity—that generates the doctrine of 'sympathetic' causation in one or another of its forms. As a matter of fact, the so-called symbolic rites usually include all manner of details the mimetic bearing of which is at least not obvious; and the generalization that an 'age of magic' indulges in rites which are symbolic and sympathetic through and through is reached by picking out the abstract element of imitativeness which runs through primitive cult (and to no small extent through the more 'advanced' types of cult as well), and ignoring everything that is like nothing but itself, yet forms just as persistent a part of the approved ritual. If, then, we are going to use the word 'magic' loosely as a name for rudimentary or unreflective cult in general, let us at least identify the magical quality, not with the imitativeness, which is a secondary feature, but with the customariness, which is the real source of the value attaching to these non-utilitarian accompaniments of the more exciting moments of the practical life—these 'superstitious' practices, as the civilized onlooker ranks them. For the rest, in so far as these relatively unideated discharges of the social energy need any supporting doctrine, they would seem to find it, not in any philosophy about like producing like, and so on—ideas that appear quite late in the history of thought—but in vague notions of the *mana* type (see MANA). In other words, the savage comforts himself with no theory of *how* these ritual practices work, but is content to feel and know *that* they work—that, despite all appearances to the contrary (since their non-utilitarian character may be supposed to become gradually manifest), they have power and efficacy in them or behind them. It is just this faith in their efficacy that distinguishes nascent religious practices from such as are merely æsthetic. The former are so closely related to the practical activities that a sense of their contributory value runs through them, and they thus suggest and foreshadow practice in all sorts of ways that make for hope, courage, and confidence, whereas æsthetic enjoyment, though possessing a recreative function, does not thus point beyond itself. It remains only to ask whether 'magic' is a suitable word for the designation of the most rudimentary type of cult. On the whole, it would seem a pity for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far less question-begging to predicate religion throughout (unless, indeed, one is prepared to follow van Gennep, and predicate magic throughout as well as a general name for the practical side of religion—which is surely an abuse of language). The science of comparative religion, if it is to do its work properly, must impartially embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classificatory apparatus ready-made from the hands of the theorist. If such an one has learnt to identify magic with the sympathetic principle or with those early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific ceremonies 'hunting magic,' 'productive magic' (a term often used to describe rites of the *intichiuma* type, which bear on the increase of food-animals and plants), 'agricultural magic,' and so on. But it is just as easy to speak of hunting and agricultural 'rites' or 'ritual'; and it is much more likely to lead to an

unprejudiced description of all the relevant facts, whether they be of the sympathetic order or not. So, again, tabus are better treated as a part of ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions; to make them a part of magic is neither necessary nor even natural according to the ordinary usage of speech. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under one general heading, and leave the theorists to determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex needs to be pushed (see *Notes and Queries on Anthropology*, issued by the Royal Anthropol. Institute, London, 1912, section on 'The Study of Magico-Religious Facts,' p. 251 f.).

4. Magic as a name for the black art and allied developments.—The view which has just been discussed and deprecated, that identifies magic with rudimentary cult as a whole, may be said to draw a horizontal line between magic and the later and more evolved products of the same tendencies which rudimentary cult embodies. The other view, which will now be examined, differs altogether from the former in that it draws a perpendicular line between magic and certain contemporaneous but rival growths which may be broadly classed under the two heads of religion and science. This point comes out very clearly in Lehmann's definition, which correlates magic with superstition as practice with theory, and in turn makes superstition co-extensive with such ideas as stand to the accepted religious and scientific beliefs of a given time in a relation of more or less direct conflict and contradiction.

(a) *Magic as the rival of religion.*—Starting once more from the fact that the word 'magic' tends to stand for something bad, we realize at once that it is possible to treat magic as a general name for all the bad kinds of trafficking with the occult and supra-sensible in vogue in a given society, while, conversely, religion may be taken to comprehend all the good kinds of such trafficking. Obviously the power of bringing wonders to pass is a two-edged sword, since surprising things may happen for weal and for woe, while, again, immoral as well as moral persons may seek benefit from miracle. It is, indeed, eminently characteristic of ideas of the *mana* type that they are, from a moral point of view, ambiguous and two-sided, covering all manifestations of the efficacy of rites, whether they be beneficent or maleficent in their intention (see MANA). Now it is easy to see how rites of an ill-intentioned kind will come to be practised and will have efficacy imputed to them. Hate, greed, and the other types of anti-social attitude being more or less endemic at all levels of society, they are bound to find expression in habitual activities that assume the character of mystic rites in proportion as they abound in accretions and in secondary activities of the expletive order, such as cursing in set phrases or destroying an absent enemy in pantomime. Moreover, the very fear which hate and malice awake in the breasts of those against whom they are directed is enough to create an atmosphere in which the natural seeds of black magic cannot but germinate freely. The almost universal dread of the evil eye illustrates very well how the responsibility for the existence of a belief in sorcery often rests with the credulous victim just as much as, or more than, with the alleged aggressor. Anthropological literature is full of striking examples of the tendency which W. E. Roth (*North Queensland Ethnography*, Bulletin no. 5, Brisbane, 1903, p. 28) calls *thanatomania*,

namely, the suggestibility leading sooner or later to death on the part of one who satisfies himself that he is doomed. Roth has had personal experience as a medical man of five or six such cases among the Queensland natives. Thus it comes about that, by an extension of the same line of thought, 'evil magic' becomes the stock explanation offered for any form of accident or mysterious disease.

'An individual becomes incapacitated through some chronic and painful illness which does not answer to the various aboriginal methods of treatment or *materia medica*: the illness weighs upon his mind, and after a time he becomes more and more confirmed in his conviction that someone has been "pointing" the *munguni* (death-bone) at him—i.e. that a "bone," pebble, flint, etc., has been put inside him and his blood removed' (W. E. Roth, *Ethnological Studies among the North-West-Central Queensland Aborigines*, Brisbane, 1897, p. 154).

Indeed, it has often been observed that the savage scarcely recognizes the fact of 'natural' death, so ready is he to impute the event to the sinister arts of some particular individual or at least to the machinations of persons unknown (cf. art. LIFE AND DEATH [Primitive], § 7). From these vaguer attributions of ill-will to one's neighbours it is but a step to the conception of an evil magic independent of the will and intention of any person at all. Various more or less impersonal forms of evil—such as the *arungquiltha* of the Arunta (Spencer-Gillen^a, London, 1899, p. 548 n.), the *otgon* of the Hurons (J. N. B. Hewitt, *Am. Anthropologist*, new ser., iv. [1902] 37 n.), or the *badi* of the Malays (W. W. Skeat, *Malay Magic*, London, 1900, p. 94)—are regarded as malignant and destructive agencies in their own right, very much as one thinks of the plague or the influenza. In short, there is always more or less of black magic 'in the air' for the panic-ridden savage. For this reason, and seeing also how much the healer of diseases and, again, the witch-finder do to foster the evil reputation of the magician by their highly-coloured accounts of the dreadful arts which it is their professional privilege to be able to counteract, one might almost be tempted to declare that the sorcerer is a mere bogey, the creation of abject fear wedded to ignorance and credulity. But this would be to go too far. There seems good evidence that in Australia men and even women, despite the fact that black magic practised within the group is normally held to be punishable by death, wreak their vengeance in this way on their private enemies. Roth's own black servant, a mere layman, actually dared to point the bone at a native doctor, the latter dying about a fortnight later (*N. Queensland Ethnography*, Bull. no. 5, p. 80). At most, then, it may be surmised that for every case of genuine guilt there are far more false accusations; and, in short, generally, in every witch-haunted society, whether it be native Australia or 17th cent. England, that the proofs of witchcraft mainly rest on an argument from effect to cause.

As for love-magic, it may not seem at first sight to have the anti-social character of the magic of hate; but, if closely observed, it will be found on the whole to minister to hardly less disreputable purposes. Thus among the Arunta of Central Australia such magic is chiefly resorted to in order to bring about a runaway match. It is true that, according to native ideas, it is merely a case of one tribal husband trying to entice the woman away from another tribal husband, so that, as Spencer and Gillen say, 'it is a breach of manners but not of custom' (^a, p. 544). Even so, however, it would seem to be extremely liable to lead to a general fight within the group, or between one local group and another, so that its anti-social tendency is bound in the long run to become tolerably manifest.

So much for what are perhaps the clearest instances of types of ritual acts generated by

passions and desires which society is bound to try to suppress in the interest of its own self-preservation. Such rites can be placed in a more or less determinate class by themselves, whereas over against this class can be set in contrast another class of rites, entirely similar as regards the general nature of their mechanism, but embodying motives of a kind held to be socially salutary. Broadly speaking, all public rites have this common quality of being licit and reputable, since the fact that they are the recognized custom of the community is taken as a sufficient guarantee that they exist for the furtherance of the common weal. Thus the totemic ceremonies of the Central Australians, the object of which is the increase of the food-animals and plants, occupy exactly the same place in the life of the people as is filled by the rites of the Church in a Christian country. Hence E. Durkheim (*Les Formes élémentaires de la vie religieuse*, Paris, 1912) takes the totemic system of Australia as the typical instance of an elementary religion, whereas Frazer, adopting what has been termed the horizontal line of division between magic and religion, would assign these totemic rites wholesale to the age of magic. Indeed, no better instance could be cited to illustrate the incompatibility between the horizontal and the perpendicular methods of viewing magic and religion in their relation to each other. While, then, for the simpler societies at all events, public rites always rank as good and licit, does it follow that private rites as such will tend to be regarded as bad and illicit? According to Robertson Smith (*The Religion of the Semites*, London, 1894, p. 263 f.), it well-nigh amounts to this:

'It was the community, and not the individual, that was sure of the permanent and unfailing help of its deity. It was a national not a personal providence that was taught by ancient religion. So much was this the case that in purely personal concerns the ancients were very apt to turn, not to the recognised religion of the family or of the state, but to magical superstitions. . . . Not only did these magical superstitions lie outside religion, but in all well-ordered states they were regarded as illicit. A man had no right to enter into private relations with supernatural powers that might help him at the expense of the community to which he belonged. In his relations to the unseen he was bound always to think and act with and for the community, and not for himself alone.'

Granting, however, that in the small undifferentiated society private enterprise is suspect, we must recognize that, as the division of labour develops and the individual asserts himself more and more, the law is increasingly ready to sanction, or at least condone, the use of ritual forms for securing personal ends, such as the protection of property by tabu-marks having the force of conditional curses (see P. Huvelin, 'Magie et droit individuel,' in *ASoc* x. [1907] 1 f.; and cf. M. Mauss and M. H. Beuchat, *ib.* ix. [1906] 117, on the magico-religious significance of the Eskimo property-marks). For the rest, there will always be in every society a number of ceremonial practices to which a certain amount of magico-religious value attaches that fall most naturally under the category of folk-lore, having no place in the official cult, yet being too insignificant to call for much notice favourable or unfavourable, and, on the whole, tending to be despised rather than condemned. In short, for certain purposes of science it is best to treat all magico-religious rites as generically akin, even while making due allowance for their tendency to group themselves round the opposite pole of beneficence and maleficence, of social service and individual greed or spite. More especially is this so when the interest passes from intent to content, from motive to mechanism. Social and anti-social rites are hardly distinguishable in respect of their external forms at the stage of the most rudimentary culture. Thus the agents bear the closest resemblance to each other, the

sorcerer and priest often meeting in the person of the medicine-man. The rites are of the same general pattern, whether they be manual or oral. Lastly, the ideas that are bound up with the rites conform to a common type, now to that of *mana* and now to that of spirit (cf. Huvelin, *op. cit.* p. 2). After all, it is no wonder that differentiation should hardly have begun, seeing that, so long as society is represented by an aggregate of small groups living in a state of perpetual discord, what would be evil if practised on a friend becomes good the moment it is directed against the people just across the way. Or, again, society may halt as it were between two ethical opinions, with the result that ritual practices of contradictory intent may obtain something like equal toleration; the moral status of love-magic was especially ambiguous, so that, for instance, among the Kurnai tribe of Victoria, where marriage by elopement verges on the position of a recognized institution, 'while there were medicine-men who assisted those who wished to elope, there were other medicine-men who aided the pursuing kindred to discover them' (A. W. Howitt, *The Native Tribes of S.E. Australia*, London, 1904, p. 277). Once more the medicine-man in his capacity of tribal head-man may use his supernatural power to punish offenders against the laws of the group, such as the novice who behaves improperly at the initiation ceremonies, or the man who attacks another by means of evil magic; but he will likewise in his private capacity use his power against his enemies, and will even bring to bear on them the power of Daramulun, the great anthropomorphic god of the mysteries, the very embodiment of all that is most religious in the eyes of the tribe (Howitt, pp. 543, 382). Clearly, then, it is not to the simpler and more undifferentiated societies that we must look for an accurate evaluation of the purposes embodied in rites, leading sooner or later to their organization in rival systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic. It is religion that has all the organization to itself, because public approval affords it every chance of free expansion. Magic, on the other hand, as the enemy of organized cult and, indeed, of the social organization as a whole, must lurk in dark places, and grows not by internal systematization, but merely as does a rubbish-heap, by the casual accumulation of degraded and disintegrated rites of all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the 'black mass.' On the whole, however, it is utterly deficient on the side of theory, and consists simply in a congeries of practices which by perversion and distortion have lost most of the meaning that they once had. Only in this sense, then, do they rest on the principle of compulsion as opposed to conciliation, that, being mere rites, lacking the support of any consistent scheme of thought, they have to depend for their validity on the bare fact that they appear to work. Religion, on the other hand, though never wholly escaping the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of mere power is gradually converted into that of a power that makes for righteousness, and is therefore to be moved and conciliated not by rites but by righteous conduct.

(b) *Magic as the rival of science.*—The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (*GB*³, pt. i., *The Magic Art*, i. 220) will hardly bear close inspection. The

magician surely does not postulate 'that the same causes will always produce the same effects.' On the contrary, his art is based on the supposed possibility of miracle—on what might be termed super-causation as contrasted with normal causation. In other words, he seeks to help out ordinary action by means of an increment of power borrowed from a supra-sensible source. This is what Tylor means by characterizing magic as 'occult science.' It makes a fatal difference if, after the manner of Frazer, this qualification be omitted. Magic thus stands in far closer affinity with religion than with science, inasmuch as religion and magic equally consist in dealings with the supra-sensible and differ not as regards the means employed but simply as regards the ends pursued, since the one tries to bring blessings to pass by means of miracle, and the other to bring curses. On the other hand, at no known stage of his evolution does the existence of man consist in one continuous round of mystic practices. It is mainly at the crisis, periodic or occasional, in the social and individual life that the need to draw on unseen sources of support is felt. In the intervals the workaday world of actions, guided by the routine of sense-perception, stands in the foreground of attention; and this is the world in which science in the sense of natural science has always been at home. Chipping a flint so as to produce a cutting edge is nascent science, whereas bringing up a quartz-crystal mysteriously from one's inside is a magico-religious proceeding belonging to quite another order of experience. A considerable part at any rate of modern science has originated in technical processes of a directly utilitarian and 'lay' character. Thus European geometry would seem to be the outcome of the art of the 'cord-fasteners' who measured out the land in Egypt after each inundation of the Nile (cf. J. Burnet, *Early Greek Philosophy*², London, 1908, p. 24). It cannot be denied, however, that, so long as their occult character be recognized, certain developments of the magico-religious way of thinking may be held to correspond to sciences or pseudo-sciences, inasmuch as they severally represent a body of organized lore intended on the whole for the furtherance of secular and purely technical ends. Of these the most characteristic types are faith-healing and divination (*q.v.*). Faith-healing is in its most typical form a direct counterblast to sorcery, which is in essence a faith-hurting. White magic and black magic determine to a large extent each other's form, since the natural procedure of the healer is first to establish by his diagnosis what exactly the wicked magician has done, and then by dramatic reversal of the action to undo it. Indeed, as has already been suggested, witchcraft is in no small part a pure invention on the part of leechcraft. To bring about a faith-cure it is essential to show that what is wrong is something that will answer to the proposed method of putting it right; and what more plain than that medicine-man may checkmate medicine-man, diamond cut diamond? Meanwhile, the occult science of the faith-healer is not the only form of medical science known to the savage. On the contrary, it may be more or less sharply distinguished from the ordinary folk-medicine, towards which it stands in a certain attitude of rivalry.

Thus Roth, who, as a medical man, went very carefully into the various methods of dealing with disease that prevailed among the aborigines of North Queensland, shows that 'no "doctors" attend specially on the sick, the charge of all such being left to individual caprice, e.g., a woman looks after her husband, a mother after her child. Nor do they specially prescribe, the knowledge—where known to all—of the therapeutical value of any plant, of massage, etc., being common to the tribe' (*N. Queensland Ethn.*, Bull. 5, p. 29). It is only when the ordinary treatment fails that the aid of the medicine-man is called in (*ib.*).

Among the specifics in common use among the natives observed by him, Roth enumerates more than forty different plants, for some of which at least genuine remedial properties can be claimed. Again, ligatures, bleeding, massage, poultices and fomentations, dressings for cuts, the use of splints for fractures, and so on, are 'lay' methods of treatment which rest on a basis of what we too would be ready to recognize as 'science,' i.e. a more or less organized common sense. At the same time, the lay mind is likewise addicted to what the modern doctors would regard as pure superstition, such as reliance on charms, amulets, the sucking-string, etc. But at any rate the atmosphere of mystery with which the professional faith-healer surrounds the exercise of his craft is absent from these applications of communal lore to the ills of life. Further, the professional enters into competition with the layman in order to demonstrate how superior his wonder-working is to the humdrum procedure of the ordinary folk-medicine.

Thus Roth specially notes that 'among the Boula blacks, there are indications of a desire on the part of the medicine-men to claim a share in the cure, with a corresponding reward.' The common cure for snake-bite being a vapour-bath, which apparently answers very well, the medicine-man undertakes to help it out by operating on the snake. 'The doctor himself goes to the place where the accident happened, is shown where the snake lies hid, digs it out, and lets it glide away a few feet before commencing to pelt it with stones. During this process the snake gradually diminishes in size, and gradually becomes harmless, when it is carried back to camp, where the medicine-man, turning its skin half-way inside out while still alive, throws it into water, and so makes an end of it. It is needless to say that no layman is allowed to witness any part of this procedure' (ib. p. 42).

It only remains to add, in fairness to the medicine-man, that a reputation for magic in the sense of a more or less bad and anti-social kind of wonder-working is thrust upon him by the very fact that he is a professional and hence has the public against him, according to the principle that whatever is private in rude society is suspect. As Huvelin points out, so long as society remains undifferentiated, all custom rests on the common belief and wears a religious character, so that every manifestation of individuality is destitute of sanction, when it does not actually amount to a crime. Hence, when social organization begins to come into existence through the division of labour, individual activity is obliged to disguise itself under a cloak of religious forms, which gives the professional an ambiguous character, not only in the eyes of others, but even in his own eyes, since others suspect, while he himself is obscurely conscious, that powers and practices which originally came into being for the public service are being exploited for private ends (Huvelin, p. 46). Whether it be the professional doctor or the professional smith, his right to be a specialist has been purchased at the cost of seeming, and being, something of a humbug.

Passing to the subject of divination, we have an even clearer case of a pseudo-science, since, whereas faith-healing has been to a certain extent purged of its supernaturalism and incorporated into modern medicine, divination has no part or lot in the science of to-day, unless we detect its after-math in the accepted postulate that the goal of science is prediction. On the other hand, divination has in certain of its developments all the appearance of science so far as concerns the organization of its principles and the directly practical character of its aims. Thus Babylonian divination, the literature of which is particularly rich, reveals an amazing wealth of lore involving the most elaborate classifications of omens resting on a wide basis of genuine observation. It is also to be noticed that here the practice of the art depending on this body of would-be knowledge was thoroughly respectable,

being, in fact, a branch or department of the official religion (see DIVINATION [Assyro-Babylonian]). It is not, in fact, until it migrates into Europe that Babylonian astrology is differentiated from astronomy, and the opposition between the two becomes apparent. Again, at a lower stage of social evolution divination can fill the place of science in so far as it calls out the reasoning powers of the mind and supplies some sort of intellectual gymnastic. Thus H. A. Junod, a missionary, who gives an admirable account of the use of the divinatory bones among the Thonga of S. Africa, spent many hours with his native teachers trying to acquire the principles of this system of theirs which they call 'The Word,' and vaunt to be superior to the missionary's Bible:

'So I had an opportunity of reaching the depths of the Bantu mind, that mind which has perhaps invented nothing more elaborate and more magical than the divinatory system. Of course no sensible person would for a moment believe in the objective value of these practices. Astralomanancy has no more real worth than Chelromancy, Necromancy, and all the other "mancies." But I am obliged to confess that the Thonga system is far more clever than any other which I have met with, and that it admirably answers to the wants of the Natives, as it comprehends all the elements of their life, photographs them, so to speak, in such a way that indications and directions can be obtained for all possible cases' (*The Life of a South African Tribe*, Neuchâtel, 1913, ii. 494).

It remains to show how science in the modern sense has managed to shake itself free of its rivals, the pseudo-sciences. As far as relates to what has been called 'the European epoch of the human mind,' the mother of science is undoubtedly ancient Greece. There the human spirit shook itself free of the domination of the magico-religious, thanks to its interest in the things of this world.

'Between Homer and Herodotus, Greek Reason has come into the world. . . . Man has become the measure of all things; and things are worth observing and recording . . . according as they do, or do not, amplify human knowledge already acquired, or prompt or guide human attempts to classify and interpret them. In this high meaning of the word all Greek records are utilitarian, relative to an end in view: and this end is ever anthropocentric, it is nothing less, but it is also nothing more, than the Good Life, the Wellbeing of Mankind' (J. L. Myres, in *Anthropology and the Classics*, ed. Marett, Oxford, 1908, p. 123).

There is no violent breaking with the old-world rituals and the associated beliefs; but colonization, trade, and the progress of the industrial arts beget a secular frame of mind which dismisses theological prejudices in so far as they conflict with technical improvements.

'All ailments are from God,' writes Hippocrates, 'no one of them being more divine than another, or more human either, but all alike from God. But each of such things has a process of growth, and nothing comes into being without a process of growth.' Wherefore he turns without more ado to the study of these physical causes (cf. Myres, *loc. cit.* p. 140).

Meanwhile, in philosophy, which at first understands by 'nature' something eminently supernatural in its potency for making wonders happen, there gradually develops a scientific tradition by the side of a mystic tradition, the former of which affirms the reality of the many things of the sense, world as against the reality of the one transcendental world-soul conceived by the latter (cf. F. M. Cornford, *From Religion to Philosophy*, London, 1912, p. 144 f.). The former view culminates in the atomism of Democritus, which has prevailed in the sphere of physical science until recent times. Now this whole scientific movement is opposed in spirit to magic and religion alike. It contradicts the whole tenor of the magico-religious type of procedure whether by manual or by oral rites, and hence cannot be identified or equated, after the fashion of Frazer, with magic regarded as equivalent to the earliest phase of cult in general. Nor, again, has it any real affinity with black magic or any parallel development, save in so far as all technical processes undertaken by experts are at first more or less suspect as private exploitations, as has already been explained. Natural science

by association with the productive arts has taken into its hands the entire control of the mechanical and material sphere of human life, and within this sphere will brook no rival. In the moral sphere, on the other hand, it shows no signs of making headway against the claim of religion to be the supreme authority. Meanwhile, neither science nor religion can afford to tolerate the anti-social and immoral person, the man who tries to make a living out of the credulity and idle fears of weak humanity. In practice, however, both find it hard to distinguish between the delinquent and the innovator, so that the line between evil magic and charlatany, on the one hand, and mere heterodoxy, on the other, tends to be even now of a somewhat fluctuating kind. As for black magic, it has almost disappeared from view in civilized society. As the folklorist knows, however, a permanent possibility of demoralizing superstition lurks in human nature, and only education in regard to both physical facts and moral truths can keep the monster down.

LITERATURE.—The subject has a vast literature, more especially seeing that, according to one definition of the term, magic covers all the ruder forms of cult. The following works are in various ways authoritative: E. B. Tylor, *Researches into the Early History of Mankind*, London, 1870, ch. vi., *PCB*, do. 1891, ch. iv., art. 'Magic,' in *EB9*; J. G. Frazer, *GB3*, pt. i., *The Magic Art*, do. 1911 (see also earlier edd.); *Lectures on the Early History of the Kingship*, do. 1905; A. C. Lyall, *Asiatic Studies*, 1st ser., do. 1898, p. 89 ff.; F. B. Jevons, *Introduction to the History of Religion*, do. 1898, 'The Definition of Magic,' *Sociological Review*, i. [1908] 105 ff.; *Trans. of 3rd Internat. Cong. of Religions*, i. R. R. MARETT.

MAGIC (Arabian and Muslim).—The word used in Arabic for this notion is *sihr*, connected with the verb meaning 'to produce illusion' on the eyes (*Qur'an*, vii. 113); it seems, therefore, to be in origin the causative of the verb *hāra*, 'to be bewildered,' and is explained by the verb 'to frighten' (*istarraba*), whence the whole phrase resembles *μαγεύων καὶ ἐστράβων* in *Ac* 8⁹. It is probable that the Hebrew *shahar*, used twice by Isaiah for 'conjure away,' is identical, and the Armenian *skhroumn*, 'marvel,' may be borrowed from this word. The passage in the *Qur'an* which contains most information on the subject is ii. 96, where it is stated that the *sihr* was revealed to the two angels in Babel, Hārūt and Mārūt, who taught it to mankind, without concealing the fact that they were tempting them; the *sihr* showed how to separate a man from his wife, i.e. was the contrary of a love-philtre. Isaiah (47¹¹) connects the *shahar* with Babylon, which, according to classical writers also, was the headquarters of magic:

'Tunc Babylon Persae licet, secretaque Memphis
Omne vetustorum solvat penetrale Magorum'
(Lucan, *Pharsalia*, vi. 449 f.).

Hārūt and Mārūt seem from their names to be Aramaic personifications of mischief and rebellion, with which their recorded operation corresponds.

In the *Qur'an*, as might be expected, it is not

clear whether the results of *sihr* are always subjective only or may be objective; and some commentators think both possible. When, therefore, a miracle is branded as *sihr*, it may be regarded either as an optical illusion or as an illicit process due to the employment of demons; it is true that Solomon employed them (according to the *Qur'an*), but this may have been a prophetic privilege. And a theological difficulty arises from the statement that *sihr* was revealed to two angels, as what is revealed ought not to be evil. The orthodox view is that magic can be objective; but some Mu'tazilite doctors and some members of the Shāfi'ite and Hanafite schools took the other view; and even those who believed that it was objective thought that it could affect accidents only, and could not transmute substances.

The practice was forbidden, and, indeed, under penalty of death; Mālik held that one convicted of sorcery should not even be given the option of repentance, whereas Shāfi' confined the death-sentence to the case where examination of the accused proved him to be guilty of unbelief (Qastalānī, *Commentary on the Mawāhib Ladunniyyah*, Cairo, 1278, vii. 116). Acquisition of the theory was, however, permissible, and, according to some, a duty incumbent on certain members of the community, as protection against those who practised the art.

The recognition by Islām of the existence of *jinn* furnished a basis for the belief in magic, to which, however, the attitude of the educated and of serious writers is about the same in most countries; it is not ordinarily recognized as an agent in the course of events, yet may well be admitted into tales of wonder and delight, whereas the superstitious may resort to it for a variety of needs.

It figures on one occasion in the biography of the Prophet, when an illness was brought upon him by a Jew named Labīd ben al-A'sam; according to one account, the latter obtained possession of some hair left on the Prophet's comb, which he hid with some other objects in a well; according to others, the object hidden was a string with a number of knots upon it. The latter version is doubtless suggested by the penultimate *sūra* of the *Qur'an*, which is a spell against eclipses and women who breathe or spit on knots. The practices against which these spells are directed are similar to, if not identical with, those which are enumerated by classical writers (e.g., Lucan, vi. 460 ff.). Others, of which the *Arabian Nights* offers ample illustration, also have analogies in the literature of classical antiquity; the transformation of men into animals by a witch's potion is found as early as the *Odyssey*. In Arabic there is a special word for this process, *maskh*.

Hājī Khalifah (*Lexicon bibliograph. et encyclopaed.*, ed. G. Flügel, London, 1835-58, iii. 584) classifies the various magical methods as follows:

The Indian consists in purification of the soul; the Nabatean in the employment of spells at suitable times; the Greek in compelling the service of the spirits of the spheres and the stars; that of the Hebrews, Copts, and Arabs in mentioning names of unknown meaning—this method being a variety of that by incantation, those who employ it professing thereby to press into their service the angels who have power over the *jinn*. This last expression recalls Lucan's

'habent haec carmina certum
Imperiosa deum, qui mundum cogere, quicquid
Cogitur ipse potest' (vi. 497 ff.).

The classification cannot be maintained, though it is possible that the tendency in the case of the different nations corresponded roughly with the methods assigned; thus doubtless the theory that ascetic practice won command over the gods was carried to greater lengths by the Indians than elsewhere, whereas the theory of mysterious words may be particularly Jewish, and the Hermetic

magic specially astrological; ordinarily, however, all these ideas are confused or combined.

The difference emphasized by Lucan between authorized and unauthorized occultism ('si quid taciturnum, sed fas erat' and 'detestanda deis saevorum arcania magorum') was fully recognized in the Islāmic State, which had its official astrologers while it condemned the black art. Since, however, what was required from the former was prediction of the future, the distinction could not be maintained with the desirable clearness.

Tabarī records (*History*, ed. M. J. de Goeje, Leyden, 1879-1901, iii. 1463) how the highly respected astrologer, 'Alī ben Yahyā, in the year 247, was reading out to the khalīf a book of predictions (*malāḥim*), when he came across the statement that the tenth khalīf would be slain in his own reception-room; he had to alter the text in consequence. Much the same is recorded by him in the case of an unauthorized lad, who possessed 'the Book of the Empire' (*Kitāb al-dawlah*), where there was a prophecy that the khalīf Maḥdī would last ten years. Since such a prophecy would mean certain death to any one who was discovered to be in possession of it, the word 'forty' was substituted for 'ten' in the book, and with such skill that no one could detect the interpolation (iii. 497). In the year 284 (Tabarī, iii. 2179) an unknown person haunted the palace of the khalīf Mu'taḍid, who summoned 'the lunatics and the conjurers' to detect him; the conjurers were to get control of the demon in possession of one of the lunatics, who would then give the necessary information. The behaviour of the lunatics, however, so much alarmed the khalīf that he dismissed them all with gratuities before anything could be done.

Similarly, there is a distinction between the normal or legitimate spell and that which would be condemned by the orthodox, though here, too, clearness is wanting. The child's amulet called *tamīmah* is regarded as normal. About the magical employment of Qur'ānic verses there seem to be differences of opinion. The historian Sakhāwī (*Tibr Masbūk*, Cairo, 1896, p. 218) records a controversy about the *ḥafizāt* *Ramādān*, certain verses which, if written on the last Friday in Ramādān, will secure the house which contains them from burning and the ship whereon they are inscribed from being wrecked; the historian's teacher wished for government interference with their inscription, but the practice was too widely spread to admit of this. In the *Maqāmahs* of Ḥarīrī the impostor succeeds with the spells which he composes; in one case the magic lies in the eloquence of the composition, whereas in the other (for facilitating childbirth) the work is really done by a drug with which he happens to be acquainted.

In the *Arabian Nights* the magician is frequently a Moor (*Maghrībī*), and the association of magic with those regions is not extinct; the most elaborate treatise which we possess on Islāmic magic is E. Doutté's *Magie et religion dans l'Afrique du Nord* (Algiers, 1909). Women and negroes also play a considerable rôle. In the tradition the art has a tendency to be connected with Israelites, as we have seen in the case of the Prophet.

According to Mas'ūdī (*Murūj al-dhahab*, ed. and tr. B. de Meynard and P. de Courteille, Paris, 1861-77, iv. 286), one of the complaints against Uthmān, the third khalīf, was that he had shown insufficient firmness in dealing with the case of a Jew, named Batruni, who had performed some marvellous exploits in the mosque of Kūfa; 'he caused a mighty king mounted on a horse to ride in the court, he then turned himself into a camel, then produced a phantom ass, which passed through him, then he beheaded a man, and by another stroke with his sword put him together again'; a pious spectator beheaded the Jew, who probably was a conjurer, and performed some feats which the narrators have exaggerated.

Written spells which are brought to Europe from Islāmic countries are often in Hebrew or contain Hebrew words.

The limits which separate the practices condemned by the Prophet from those which he approved are again very narrow; thus in the authoritative collection of traditions by Muslim (Cairo, 1290, ii. 180-183) evidence is adduced to show that Muhammad sanctioned the employment of spells or magical prayers for treatment of the evil eye, snake-poison, and disease generally; the

expert who employed the Qur'ānic texts for this purpose might even charge a fee, out of which the Prophet would accept a royalty. The word *ruḡyah* is employed for charms of this kind, and in the case of snakes it would seem, from a story told by Jāhiz (*Zoology*, Cairo, 1906, iv. 134), that their effectiveness depended on the loudness of the charmer's voice.

The name for collections of oracles is, as has been seen, *Malāḥim*, and this word is applied to those prophetic works wherein the future is regularly read (e.g., the Book of Daniel), as well as to less authoritative books. Others were of the sort known as *Consulting-books*, i.e. tables whence the future could be divined by certain modes of combining the words, letters, or figures which make them up. It is likely that the primitive practices which constitute the magicians' chief stock-in-trade, and are common to many countries, are handed on by oral tradition, and to be learned only from the persons who perform them or from travellers who have made careful observations (e.g., E. W. Lane, *Manners and Customs of the Modern Egyptians*, London, 1895).

LITERATURE.—The authorities are quoted in the article. Cf., further, DIVINATION (Muslim), CHARMS AND AMULETS (Muhammadan). D. S. MARGOLIOUTH.

MAGIC (Babylonian).—For the purpose of this article we may regard the term 'magic' as connoting practices which have their origin in the belief that man is able by their exercise to control the unseen powers and force them to act in accordance with his own will. Without attempting to discuss the vexed question of the relationship of magic to religion (see 'Introductory' section above), we may say that this generally accepted use of the term has great advantages for the classification of material. And it corresponds, moreover, to a distinct contrast in attitude towards the supernatural. Magic may be said to be present wherever power over the unseen is believed to be inherent in the ritual, whereas, according to the religious concept, the seat of power is regarded as resting outside the sphere of man's deliberate control. When the term is used in this sense, it must be admitted that a great body of the religious beliefs and practices of the Babylonians and Assyrians should be more accurately described as falling under the category of magic.

It is true that, when reading some of the Babylonian religious compositions, one is struck by the resemblance which many of the phrases bear to ethical passages in the Hebrew Psalms and prophetic writings. Quoted apart from their context, such passages suggest an extraordinarily high standard of morality and great depth of feeling. But it is dangerous to judge any literature merely by extracts or anthologies; and, when studied in their own surroundings, they are at once seen to have a background that is largely magical rather than moral. To take a single example, the Babylonian penitential psalms and many of the prayers to the gods show that the Babylonians had a very keen sense of sin. The contrition and misery of the penitent are expressed with great beauty of metaphor; but it is essential to examine the precise meaning of the words employed, and not to read extraneous associations into them. In this connexion it is important to realize that the moral character of sin which we find emphasized in the Hebrew prophets is quite foreign to the Babylonian conception. In almost the whole of their religious literature the expressions 'sin', 'sickness', and 'possession by evil spirits' are employed as pure synonyms; they denote merely an evil state of the body. In fact, all sickness and disease were believed to be due to the attacks of evil spirits, under

whose power or influence the sufferer had fallen, whether by his own act or through the machinations of a hostile sorcerer or sorceress. Such spirits and powers of evil were legion, and were ever on the look-out to inflict bodily harm on men. They might be ghosts of the dead, or gruesome spirits half-human and half-demon, or, lastly, fiends and devils of a nature corresponding to, but lower than, that of the gods.

The sole object of the magical texts was to enable the priests to control and exorcize these demons, or to break in some way the malign influence which they exerted upon their victim. And, in order to be successful, it was of the utmost importance that the spirit or evil influence which affected the sick man should be mentioned by name. To this end the magician repeated long lists of ghosts and devils, any one of which might be the cause of the sickness. Thanks to this practice, we know a great deal about the Babylonian demons and their characteristics. In order to illustrate the manner of their attack, and how dissociated this was from any moral offence on their victim's part, it will suffice to refer briefly to one class of spirits, the ghosts of the dead. These spirits were the ghosts of dead people which, for some reason or other, could not find rest, but wandered as spectres over the earth. After death the spirits of men and women who died in the ordinary course of nature and were buried were believed to enter the under world, where they eked out a miserable existence with the help of offerings and libations paid to them by their descendants and relatives upon earth. But, if the offerings were not made, or if the corpse was left unburied, the spirit might wander unsatisfied. Other ghosts were the spirits of those who died violent or unnatural deaths, or who departed this life before completing certain natural functions—such as the ghosts of women who died in childbirth. As a rule, such spirits haunted ruins or desolate places, and, if a man wandered there, they might seize on him and plague him. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of eating, drinking, or dressing in his company. From these instances it will be seen that a man was liable, through no fault of his own, to supernatural attack, and precisely similar results were believed to follow both ceremonial and moral offences. To touch the chair or bed of a person already affected by such evil influence or ban was, according to the texts, quite as dangerous as committing a moral offence, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same.

In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself, or, in cases induced by human intervention, over the hostile sorcerer or sorceress who had cast the spell. In a large class of texts prepared for the use of the magician their purely magical character is sufficiently apparent from their contents. In others, where the contents refer more to the condition of the sufferer than to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the compositions may sometimes be detected in notes or 'rubrics' which give directions for their due recital and for the performance of accompanying rites and ceremonies. For the rites prescribed often have an intimate connexion with the subject-matter of the prayer or incantation. Sometimes the offerings and the accompanying rites have, to

our eyes, only a vague relationship to the character of the god or goddess addressed. But in other compositions the media employed for the magic are specifically named in the recitative, or liturgical, portion of the text. In fact, a study of the rubrics makes it clear that many present a certain general resemblance in giving directions for the recital of the main text over something which is mentioned in the accompanying formulae. The relationship between text and ritual may be illustrated by the following group of rubrics from the Eighth Tablet of the *Maḫlū* series, col. iii. lines 8–22, which give directions for the due recital of incantations on the Sixth Tablet of the series and the performance of accompanying rites.

(a) The incantation (beginning): "Thou art good, who in a pure place art born!" over a good offering shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place it.

(b) The incantation (beginning): "Come my sorceress or my enchantress!" over a *nulukkha*-plant shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place it; (and) with an upper-garment shalt thou envelop the bed.

(c) The incantation (beginning): "Come my sorcerer or my enchantress!" over twelve pieces of *sha'irru*-wood shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place them.

(d) The incantation (beginning): "Come my sorceress, my witch, whose paths are over all the world!" over two caged locusts shalt thou recite, and to the right of the door and to the left of the door of the enchanted man shalt thou set them.

(e) The incantation (beginning): "Come my sorceress, my witch!" over a stone from the mountain shalt thou recite, and in the court (of the house) shalt thou lay it.

(f) The objects for ceremonial burning (*kutari*), which belong to the incantation (beginning): "Elli! my head," all that are described as potent against bans, shalt thou heap together and make to go up in smoke. The incantation (beginning): "Elli! my head," shalt thou recite.

The connexion between these rites and the corresponding sections of the liturgical, or recitative, portions of the composition is clear. For example, the incantation referred to in section (b) corresponds to *Maḫlū* vi. 102–109, which twice refers to the *nulukkha*-plant (cf. 108 f.); that in (c) corresponds to *Maḫlū* vi. 110–117, and the *sha'irru*-wood is referred to in line 116 of the text, which should read: 'At the head of my bed will I place twelve pieces of *sha'irru*-wood'; that in (d) is *Maḫlū* vi. 118–126, and the two locusts are symbolical of the two 'gods of the watch' who will slay the sorceress (cf. 123 ff.).

This rite of the locusts, which may be regarded as typical of a great body of Babylonian ritual, will be seen, when examined, to be an obvious example of sympathetic magic. The locusts were set, one on each side of the sick man's door, to represent Lugal-girra and Meslamtaea, who, as 'gods of the watch,' would be ready to pounce upon the sorceress and slay her. The magic would work and the gods would act at the second recital of the incantation.

In many of the rites and ceremonies the use of fire was essential, and it would seem that, after the recital of the correct formulae, the destruction of the objects collected by the magician for that purpose synchronized with the destruction or removal of the evil influence under which the patient suffered. The rites sometimes required substances of some value or rarity, such as fragments of gold or precious stones; and it is probable that, except for powerful or wealthy clients, the magician would make the same fragments do again and again. But the objects used by the magician also included plants, pieces of wood, various sorts of seeds, vegetables, dates, palm-spates, sheep-skin, wool, etc.—all perishable substances which could easily be consumed. And in their case the sympathetic connexion between the destruction of the ban and that of the object is obvious. That this is the correct explanation of this whole class of ritual is clear from a singularly instructive sub-section, in which the employment of images is prescribed in place of unfashioned natural objects or substances. The images were to be fashioned in human form, to represent the hostile sorcerer or sorceress, and the destruction of these by fire, to

the recital of the correct formulæ, was obviously believed to synchronize with the destruction of the hostile person whose figure had been imitated. These images could be made of wax, honey, bitumen, sesame-seed, and the like—all perishable and common substances. When metal was employed, we may assume that the mere passing through the fire was sufficient for the purposes of the magic. Evidence of the great part played by fire in Babylonian magic may be seen in the titles of the two chief magical works, *Shurpu* and *Maklû*, both of which signify 'burning,' and in the great number of prayers and incantations addressed to the fire-god.

In one particularly interesting class of magical rites the relationship which was constituted by the magician between the hostile influence and the object destroyed may be clearly traced. Here the magician is engaged in exorcizing a demon from his patient, and, having gained control by the necessary formulæ, he transfers him to some object which may be destroyed or rendered harmless. In one such case the medium is a pot of water, which is then broken and the water spilt; in another a clay image is fastened to the patient's body and afterwards removed; or the body of a pig might be spread upon the sick man, and afterwards thrown out of the house. In these cases we have a physical transference of the hostile power from the sick man to the object employed. In other rites, such as the knotting of cords, the weaving and unweaving of coloured threads, and the like, it is not clear how far the physical action was believed to exercise a direct influence. It is possible that we should explain such rites on the principle of imitation, which is the basis of sympathetic magic.

But it must be confessed that with regard to a considerable section of the ritual we are still not in a position to follow the underlying trains of thought. The large class of so-called medical prescriptions were, no doubt, essentially magical, and, although in some instances the substances prescribed may have actually had curative effects, the associations which led to their employment by the Babylonians are still obscure.

Most of our knowledge of Babylonian magic is derived from purely textual sources, for we have recovered but few amulets, in which we may be said to deal with magic in a concrete form. It is true that we possess a few plague-tablets, inscribed with a text relating to the plague-god, and intended to be hung up in houses to keep off the plague; we have also recovered the figures and heads of demons, sometimes inscribed with incantations; and these, too, were doubtless employed in propitiation or defence. But the only magical apparatus, in the strict sense of the term, that has come down to us may be seen in certain rectangular plaques of cast metal, moulded on the face with the figure of a sick man lying on a couch, attended by the magicians or exorcizers, and surrounded by various hostile demons and protecting spirits or their emblems, which are arranged in horizontal registers. On the back is the large figure of a demon in relief, with his head usually protruding above the top of the plaque. From the subject of the reliefs it is clear that the plaques are to be classified under the general heading of sympathetic magic, but the precise manner in which they were employed by the magician in cases of sickness is not certain. Another class of objects, consisting of little clay figures of deities or birds, which were buried below the pavement in the main doorways of a temple or a palace, may be treated as magical in their supposed effects, but they fall rather under the special heading of foundation-deposits. It may be added that the magical beliefs and practices of the Babylonians survived their racial disappearance,

and, largely through Jewish, Syriac, and Mandaic channels, contributed in no small degree to the great and composite body of mediæval magic.

LITERATURE.—General treatises on Babylonian magic will be found in M. Jastrow, *Die Religion Babyloniens und Assyriens*, ii., Gießen, 1910; A. H. Sayce, *The Religions of Ancient Egypt and Babylonia* (Gifford Lectures), Edinburgh, 1902; C. Fossey, *La Magie assyrienne*, Paris, 1902; R. C. Thompson, *Semitic Magic*, London, 1908; R. W. Rogers, *The Religion of Babylonia and Assyria*, New York and London, 1908; and J. Morgenstern, *The Doctrine of Sin in the Babylonian Religion* (=MVG x. 3 [1905]). For edd., with trr., of the principal magical works see K. L. Tallqvist, *Die assyrische Beschwörungsserie Maglû*, Leipzig, 1894; H. Zimmern, *Die Beschwörungstafeln Surpu*, do. 1896, and *Ritualtafeln für den Wahrsager, Beschwörer, und Sanger*, do. 1901; L. W. King, *Babylonian Magic and Sorcery*, London, 1896; Thompson, *The Demis and Evil Spirits of Babylonia*, do. 1903-04; and S. Langdon, *Sumerian and Babylonian Psalms*, Paris, 1909. Full references to other published texts (up to 1910) are given in Jastrow, *op. cit.*; and for subsequent references, the bibliographies in *ZA*, *AJS*, or the Babylonian sections of the *Oriental Bibliographie* may be consulted. For the plague-tablet amulets see King, in *ZA* xi. [1898] 60 ff.; and for the magical plaques for the cure of the sick see K. Frank, *Babylonische Beschwörungstafeln*, Leipzig, 1908. For the latest discussion of the survival of Babylonian magical practices, cf. J. A. Montgomery, *Aramaic Incantation Texts from Nippur*, Philadelphia, 1913, p. 106 ff. L. W. KING.

MAGIC (Buddhist).—If we rightly understand the real character of Buddhism, what Buddhism ought to be according to its cardinal tenets, there is no possible connexion between Buddhism and magic. The only aim of the Buddhist monk is 'nirvāṇa to be attained in this life,' i.e. absolute freedom from passion in order to reach freedom from rebirth, i.e. eternal, blissful nirvāṇa. All the machinery of intellectual and moral life is organized with a view to this. Buddhism does not deny that there are good (*kusāla*) acts that ripen into happiness in a future life (*svarga*, 'paradise'),¹ but monks consider them not only as of no avail for, but even as obstacles to, nirvāṇa. Ascetic and religious acts (*śīlavrata*, *tapas*, *pūjā*) have no place in the training for nirvāṇa, and it is a very grave and delusive heresy to lay stress upon them. *A fortiori*, in contrast with Vedism and Brāhmanism, Buddhism ignores all the magical theories connected with sacrifice, worship, or asceticism as a means of salvation. As far as every-day or trivial magic is concerned, its efficiency is acknowledged, but Buddhists are strictly forbidden to practise it; all kinds of magical arts and performances—even of a benevolent nature—are regarded as pernicious.²

But 'historic Buddhism' is not, in every respect, what Buddhism ought to be. Buddhists are Hindus, 'regular' Hindus; and no large religious body has ever been found that was always scrupulously faithful to the true spirit of its creed, the more so as the Buddhist creed implies a superhuman disinterestedness and a non-Oriental disregard for any kind of superstition.

1. *Īddhi*.—There is a large category of 'super-human' activities, which to some extent would be understood by Europeans as magical, and which are 'very good Buddhism.' We mean *īddhi* (Pāli *iddhi*)—in the words of Rhys Davids, 'mystic wonder,' 'wondrous gift,' 'magic power,' a mastery (*prabhāva*), which is only the exercise of a power acquired by pious works, by penance, and also by 'formulæ,' and especially by contemplation.

There is nothing 'preternatural' in the *īddhi*, and the natural character of the 'miracles' performed by *īddhi* is clearly shown in the following passage of the *Mūṇḍa-pañha*: "'There are persons who can go with this four-element-made body to

¹ These are 'mundane' (*laukika*) good acts, in contrast with 'supramundane' (*lokottara*), those which lead to nirvāṇa, i.e. the volitions concerned with 'trances' (*dhyāna*) and other 'concentrations' (*samādhi*).

² On the position of the Buddha with regard to magic see T. W. Rhys Davids, *Dialogues of the Buddha*, I. (SBE ii.), London, 1899) 273.

Uttara-kuru [see art. *BLESSED, ASPECT OF THE* (Buddhist)], or to the Brahma world. "But how can they?" "Do you admit having ever jumped three or six feet of ground?" "Yes, I do; I can jump twelve feet." "But how?" "I cause this idea to arise. 'There will I alight!' With the genesis of this idea, my body becomes buoyant to me." "Just so does a monk, who has *iddhi* and mastery over his thought, travel through the air."¹

The man whose thought is concentrated has indeed a great power over his body; but this power is not different, in nature, from the power of an ordinary man.

Birds are, by nature, endowed with magic power, as is proved by the fact that they go through the air. Their *iddhi* is 'born from the ripening of acts,' i.e., the special character of some of their acts in a former birth endows them with this special 'super-human' faculty. Gods are, of course, magicians; they go through the air, they create at their will palaces and pleasures (*bhoga*). Sovereign kings or world-emperors (*chakravartin* [g.v.]), too, are magicians by nature. Ordinary men obtain momentary magic power by many devices, and are 'super-human' at some time and for some object.²

As a matter of fact, Buddha was looked upon by his followers—as he was by the unbelievers—as a great magician; and it is recognized by all Buddhists that magic power is one of the natural possessions of the saints, since they are holy men, just like the *yogis* of old and the modern *fajirs*. Magic power ranks therefore with the divine eye, the divine ear, the knowledge of the thought of others, the knowledge of former births, the knowledge of the disappearing of passions, i.e. with the most desirable gifts of saintship. And it is no mean eulogy of Mañḍalyāyana that he is styled 'the best of the Buddha's disciples with regard to magic.'

It is evident that the admission of the reality of *iddhi* is beset with many dangers. Buddhists were, accordingly, strictly forbidden to boast of possessing superhuman faculties; that was one of the gravest sins.

There is nothing specially Buddhist in the manifestations of *iddhi*. Buddha's disciples win success in the phantasmagorical shows which have long been familiar to Hindu romancers and dreamers:

'Being one, he becomes many, or having become many, becomes one again; he becomes visible or invisible; he goes, feeling no obstruction, to the other side of a wall or rampart or hill, as if through air; he penetrates up and down through solid ground, as if through air; he walks on water. . . ; he travels cross-legged in the sky; even the sun and the moon, so mighty though they be, does he touch and feel with his hand; he reaches in the body even up to the heaven of Brahmā. . . .'³

Stories of miraculous exhibitions intended to convert the incredulous are frequent. Buddha and his disciples willingly condescend to give 'signs.'

When the Tibetan writer Tāranātha narrates the mediæval miraculous tournaments between the Buddhist and Brāhmanist scholars, which often conclude with the Buddhist victory and the conversion of kings, he only testifies the continuance of an old tradition. But—and this restriction is of paramount import—even when narrating miracles, the old texts add that miracles, by themselves, prove nothing; the unbelievers, conquered by the more powerful magic of Buddha, used to say: 'Gautama'—the 'mundane' name of the Buddha, and the one used by unbelievers—'Gautama is the magician (*māyāvin*); every thousand year there appears in the world a great magician who eats or enjoys the world' (*Abhidharmakośa*); or, in the words of the *Kevaddhasutta*: 'Well, Sir! there is a certain charm called the *gandhāra*-charm. It is by the efficacy thereof that he performs all this.'⁴

There is in the *Bodhisattvabhūmi*, a text-book of the Vijñānavādins (by Asaṅga, 4th–5th cent. A.D.?),

¹ C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1914, p. 161; see also pp. 127, 190, 199; *SBE* xxxv. [1890] 129 f. Magic power (*iddhi*) is sometimes only a momentary possession; of the story of a disciple who, when crossing a river, concentrates his mind, and, accordingly, walks on water; but, being distracted, he sinks (*Jātaka* 190).

² On the ten kinds of *iddhi* see *Paṭisambhidāmagga* (London, 1907), ii. 205. The *iddhi* 'born from spells' or 'made of spells' (*vijjāmayā*) is the worst.

³ See 'Sāmaññaphala-sutta,' *Dialogues of the Buddha*, i. 88, and *Mahāvastu-sūtra*, § 14 f. (*Buddhica*, xii., Petrograd, 1911).

⁴ *Dialogues of the Buddha*, i. 278.

a complete survey of the magical power of the *bodhisattvas*. It is said to be twofold: *pārināmikī* *iddhi*, power of transformation, when a *bodhisattva* modifies the nature of an existing thing; and *nāirmānikī*, power of creation, when he creates some thing or some person. The 'created persons' (*nirmita*, *nirmitaka*) are frequently mentioned in the Mahāyāna works; but they are not unknown in the Hinayāna, both Pāli and Sanskrit. Elaborate theories on the *nirmitakas* are to be found in the *Abhidharma* treatises of the Sarvāstivādins (*Lokaprajñāpti*, 1st cent. A.D.), which embody the views of the Sanskrit Hinayāna; and in the *Abhidharmakośa* (ch. vi.), where the creative power of Buddha and of the gods (*nirmāṇarati*, etc.) is discussed.¹

2. *Paritta*.—Another very orthodox form of magic is *parittā*, or *raṭṭhā*, 'guard', 'safeguard.' It plays an important part in Sīnhaiese Buddhism under the name of *pirit* (Spence Hardy, *Eastern Monachism*, London, 1850, p. 240, *Manual of Buddhism*, do. 1880, p. 47; D. J. Gogerly, *Ceylon Buddhism*, ed. A. S. Bishop, Colombo, 1908, pp. 327–393). Good examples are found in Pāli literature.

Taking refuge in the three 'jewels' (*ratna*, *ratana*), Buddha, the *Dharma*, and the *Saṅgha*, forms a charm called '*sutta* of the jewels,' which is very efficacious against illness:

'Whatever spirits have come together here, either belonging to the earth or living in the air, let all spirits be happy, and then listen attentively to what is said. Therefore, O spirits, do ye all pay attention, show kindness to the human race who both day and night bring their offerings; therefore protect them strenuously. Whatever wealth there be here or in the other world, or whatever excellent jewel in the heavens, it is certainly not equal to Tathāgata. . . . By this truth may there be salvation.' In the same way: 'Nothing is equal to the *Dharma*, to the *Saṅgha*!'²

So also, in the Peacock *Jātaka*, sun-worship ('the only king, the one who beholds, the light of the world') is connected with that of the Buddhas:

'I worship thee, golden and luminous being! May I spend this day under thy care! Homage to the omniscient sages! May they protect me! Homage to the Buddhas and to the illumination, to the delivered and to the deliverance! . . .'

When Sākyamuni was a large golden peacock, he recited this half-solar, half-Buddhist prayer morning and evening, and consequently avoided all dangers. And, as the peacock is the born enemy of serpents, the '*sutta* (or 'charm') of the peacock' is used as a preventive and as a cure for serpent-bites.³

In these examples the magical character is not very prominent: there is nothing pagan in the formulæ, which are, above all, acts of Buddhist faith; there is nothing mechanical, nothing really magical, in the efficacy ascribed to the *pirit*. The non-Buddhist gods are clearly subordinated to the Buddha: it is almost a dogma that the Buddha converted gods and demons;⁴ and it is quite reasonable to believe that they will grant their favour to the disciples of Buddha. It is believed also that benevolence (*maitri*) possesses a power in itself (*maitribala*), which is capable of protecting the benevolent person against all the attacks of the wicked; in order to avoid serpent-bites, it is not a bad plan to sleep on a raised bed, but the right method is to declare to all the tribes of serpents that they are being enveloped in a universal sentiment of benevolence.⁵ This magic of bene-

¹ A summary of the *Bodhisattvabhūmi* has been published by C. Bendall and the present writer in *Musson*, vi. [1905] 38–52, vii. [1906] 213–280. A summary of the *Lokaprajñāpti* is being published as an Appendix in *Cosmologie bouddhique, troisième chapitre de l'Abhidharmakośa*, London, 1915.

² *Ratana-sutta* (*Sutta-Nipāta*, ii. 1); Rhys Davids, *SBE* xxxv. 213; art. *Jewel* (Buddhist), § 9.

³ *Morāvatāka, Jātaka*, ed. V. Fausboll, London, 1877–97, ii. 83.

⁴ It is a dogma for the Sarvāstivādins (see A. Csoma and L. Feer, 'Analyse du Kandjour,' *AMG* ii. [1881] 167). The Pāli sources admit that there are still wicked gods (*Digha*, xxxii.).

⁵ See *Chullavagga*, vi. 2. 3, and v. 6. 1 (*SBE* xx. [1885] 168 f., 75 f.).

violence is the most noteworthy invention of Buddhism in connexion with the subject which we are discussing.

3. **Hindu influences.**—All practices tainted with magic or superstition, from the most trivial to the most serious, are strictly forbidden: astrology, divination, charms, incantations—in a word, all that any one may accomplish with the help of certain secret recipes and a technical method. Holy men, in ancient as in modern India, priests or sorcerers, had only too much opportunity for making huge profits by giving horoscopes and practising white or black magic. The Buddha—the first Order—was anxious that the monks should be sheltered from this temptation, and drew up a long list of 'wrong means of livelihood,' of low arts, that were strictly prohibited. The Brāhmins also made an effort to distinguish themselves from sorcerers.

Among these 'low arts' we may mention specially:

'Arranging a lucky day for marriages; using charms to make people lucky or unlucky, to procure abortion, to bring on dumbness, deafness, to keep a man's jaw fixed; obtaining oracular answers by means of the magic mirror, or through a girl possessed; bringing forth flames from one's mouth; causing virility; making a man impotent; invoking Sīri (Sri), the goddess of luck; worship of sun,' etc.¹

Whatever precautions the Order took to avoid all paganism and superstition, there is, nevertheless, a Buddhist magic. It was impossible to guard against Hindu infiltrations. At no time could people have been completely ignorant of the sun or the inferior deities; a day came when the infiltrations became 'streams,' when paganism—gods, rites, theurgies—under a thin Buddhist veneer, took its place in sacred literature. Of course, we find popular magic always condemned in principle (love-rites, elixir of life, etc.). What is more serious, official worship and mysticism are permeated with Hindu elements, heavily laden with magic; this is, properly speaking, what is called Tantrism (*q.v.*).

Among the earliest of these infiltrations we may mention: (1) in some very orthodox books of the Mahāyāna, the great value attached to the sacred texts, to the *sūtras*, the mere reading of which effaces sin; (2) the great value attached to sacred names (*e.g.*, the name of Amitābha): devotion turns to superstition pure and simple; (3) the name replaced or strengthened by mystic formulæ (see *ĀVALOKITEŚVARA*), represented, when carried to an extreme, by the Tibetan 'prayer-wheel'; it has been noticed that, in the *Lotus of the True Law* (*q.v.*), in which there is no mention of a female deity, the formulas are made from feminine vocatives: these invocations or litanies are undoubtedly borrowed from rituals; (4) the coming of a day when the rituals received the consecration of literature, and were put at the service of the great work of identifying the faithful with the Buddhas (Tantrism).

MAGIC (Celtic).—1. **Wielders of magic.**—Magical rites resembling those used by other races abound in Celtic paganism. They were performed by the gods, the Tuatha Dé Danann being later regarded as supernal wizards, by kings (a reminiscence, perhaps, of the origin of the kingship in the magic-wielding class), and by all members of society, but, above all, by the druids as the official magical class. There is evidence that they had ousted women as the earlier magic-wielding persons. The rites of agriculture and the possession

¹ See Rhys Davids, *Dialogues of the Buddha*, I. 23 f.—a collection of interesting documents on the ancient life of India.

VOL. VII. — 17

of much primitive lore having been first of all in the hands of women, and these rites being largely magical, they were *par excellence* magicians. With the gradual encroachment of man on woman's domain, with the growing supremacy of gods over goddesses, men became also greater magicians. But women still professed magic, and their claims were never forgotten. The so-called 'druidesses' of the later empire, the priestesses of Sena, and the virgin guardians of Brigit's fire were magic-wielders. The 'spells of women' were feared even by St. Patrick, as they had been in earlier times by Connla's father,¹ and in the Irish texts women as magicians, performing all magical rites ascribed to druids, are much in evidence. But their magic was, so to speak, non-official; hence, when the druids were overthrown, they still retained their powers, and much mediæval witchcraft is directly connected with them. Women, as the earliest, remained also the latest, magicians, though in time they were proscribed and persecuted. On the other hand, many of the druidic magical rites were later ascribed to the *filid*, or poets, and also to Christian saints. Whatever view may be taken of the origin of the druids, it is certain that the Celts believed firmly in magic, and did not require to learn the superstition in any of its branches from the races which they conquered.

For the druids as magicians in Gaul and Ireland see *Druids*, § 7. Their prominence is seen in the fact that in later Celtic literature 'druid' is the equivalent of *magus*, 'magician,' as in the lives of Celtic saints *magi* = 'druids,' while in saga and folk-tale 'druidism' = magic.

2. **Elemental magic.**—The druids, who claimed to have created the elements, claimed also to rule them. They could cover the dry land with the sea to destroy their victims;² they produced enchanted mists in which to hide people or places; they changed day into night, or caused blinding snow-storms. These feats are ascribed to them even in the lives of early Celtic saints.³ They caused showers of fire to fall upon enemies during battle.⁴ In other cases they dried up all the rivers and wells in an enemy's country by means of spells, though the druids of the latter caused water to flow again by shooting an arrow into the ground.⁵ They even claimed to remove mountains and dash them against an opposing host.⁶ Druids accompanied the warring hosts of Erin, and these marvels usually occurred on such occasions, the rival magicians striving to outdo each other. These and other powers—*e.g.*, rain-making—were later claimed by wizards (*tempestarii*) and witches in Christian times over the Celtic area. Rain-making was usually associated with a sacred well, whither the people went in procession, probably with an image of a divinity, which was sprinkled with the water; in some instances it was sufficient to beat the water with branches, sprinkle it on stones, or throw it in the air. In certain cases the Church took over this rite by making it a part of an elaborate ritual, including a procession with an image of a saint, the priest officiating and saying prayers.⁷ But in pagan times the presence of a druid was probably essential. The control of the elements by *tempestarii*, which was denounced by the Church, was directly borrowed from druidic magic. Until comparatively recent times the

priest in rural French parishes was believed capable of causing rain in time of drought, or of averting tempests.¹

3. **Magic affecting human beings.**—The druids could make themselves or others invisible, and this was also done by Celtic saints.² A spell used for this purpose, or by which the person using it appeared in another form to his enemy and so escaped, as well as the effect produced, was called *fath fada* ('the wild beast's cry'). By it he and his followers appeared as deer to their foes.³ The power of such an incantation is still spoken of in remote parts of the W. Highlands.⁴ Still more common was the power of shape-shifting, which was also ascribed to women. The evidence of Irish texts shows that the druid could take any shape, or invest others with it, while the same power is also ascribed to divinities.

The children of Ler became swans through the arts of their step-mother, the daughter of the god Bodb Derg, while Oisín's mother became a fawn through the power of the druid Fear Doirche (F. W. Joyce, *Old Celtic Romances*, London, 1894, p. 115; P. Kennedy, *Legendary Fictions of the Irish Celts*, do. 1896, p. 235). The priestesses of Sena could take any shape (Pomp. Mela, iii. 6), and many tales of goddesses or women assuming the shape of birds are found in the sagas. In some instances the belief is evidently connected with totemism, explaining a tabu upon eating certain animals by saying that they were human beings transformed.

'Killing' people to death—a practice used by the *filid* as well as by the druids—was connected with the power of the spoken word, though it may also be connected with the actual power of violent emotion to affect the body. It was usually the result of a satire spoken in verse to the victim; black, red, and white blotches arose on the face, and were followed, sooner or later, by decay or death. The satire was probably a magical spell, and the fear of such a spell brought about the result automatically. Coirpre pronounced the first satire in Ireland upon Bres, king of the Fomorians, and many other instances occur in the texts.⁵ To the power of the satire was attributed a quelling force over nature itself.⁶ A magical sleep was also produced in different ways. Sometimes it was done by music, which produced first laughter, then tears, then sleep. These three results are uniformly ascribed to music in Irish saga; they were brought about by Dagda's harp, as well as by the songs of the *filid*.⁷ All this probably reflects the power of music upon primitive minds, especially since it is so frequently connected with religious or magical dances and orgiastic rites, in which the motion and the music produce delirium, then exhaustion. But it may also suggest the soothing power of music. Similar magical sleep was caused by the music of divine visitants (see BLEST, ABODE OF THE [Celtic], §§ 2, 6). In other cases sleep was produced by a 'drink of oblivion,' probably some narcotic made from herbs;⁸ but sometimes the effect was curious, as when Cúchulainn, by the drink given him by the druids, was made to forget his fairy mistress, and his wife to forget her jealousy.⁹ Another 'druidic sleep,' in which the victim is made to forget or is rendered motionless, and occasionally in that state is caused to tell secrets, is of frequent occurrence, and is suggestive of hypnotism, the powers of which are well known to savage medicine-men, and may quite well have been employed by the druids.¹⁰ The power of 'glamour' produced by

magicians, by which stones or trees seemed to be armed men and were attacked by the victim, is also strongly suggestive of hypnotic influence. It may, however, be merely the record of actual hallucinatory cases, since the 'glamour' in which the modern Celt believes is little else than hallucination. The druid could also turn a man into a lunatic by throwing a wisp of straw at his face after saying a spell over it.¹ Even more primitive was the method of killing a person by throwing a spear into his shadow,² or of making an image of him and sticking pins into it or placing it in running water, so that he might suffer or waste away. This image is the *corp creadh*, still known and used in remote Celtic regions.

4. The Airbe Druad, or 'Druid's hedge,' was an invisible magic barrier made by the magician round an army, probably by circumambulating it sunwise and singing spells. Its effect was that the ranks could not be broken, but, if any one was bold enough to break through, its power was gone, though the act usually cost the trespasser his life.³

5. **Magical rites connected with stones and trees.**—The cult of stones and the belief that sepulchral stones were the abode of the ghosts of the dead probably gave rise to many magical rites, the origin of which must be sought in remote times. Many of these are still practised, and the method used throws light upon the earlier pagan customs. These are of a magico-erotic nature, and, like similar rites among savages, are founded on the belief that the ghost can cause fruitfulness, or perhaps may incarnate himself in the barren woman who performs the rite. The woman sits on the stone, or slides down it, or thrusts her head or body through a hole in one of the stones of a dolmen. Pregnant women do the same to ensure an easy delivery, or unmarried girls to procure a husband.⁴ Similar practices are used in connexion with boulders or stones which are not sepulchral, and probably these were anterior to the use of megalithic monuments. In these cases the rocks were believed to be the abode of spirits, or perhaps manifestations of the power of the Earth divinity, who gave vitality or fruitfulness to those performing the rites. A small offering was usually left on the stone.⁵ Such practices may already have been used by the Celts, though they necessarily adapted them to existing stones and monuments in the lands conquered by them. Other practices were the passing of sick persons three times through a holed dolmen or a weather-worn hole in a rock, to obtain strength and healing.⁶ In other cases a slit was made in an oak or ash sapling, through which the patient was passed, and the slit was then carefully closed and bound. The underlying idea is complex. The spirit of tree or stone was expected to cause healing, or there was a transference of the disease to either, or perhaps there was some idea of a new birth with renewed strength to the re-born.⁷

Certain magical stones had the power of producing rain or wind when turned with appropriate rites, or in other cases the water in which stones of a fetish kind had been dipped procured healing when it was drunk—a method used by St. Columba.⁸ Other magical rites with stones were used in cursing an enemy.

6. Celtic saints and magic.—Much of the magic of the druids was popularly ascribed to the saints who combated them—with this difference, that their power was held to come from God. In the *Lives* of Celtic saints we find them opposing druids with their own weapons—neutralizing their magic, controlling the elements, producing rain, rendering themselves invisible, producing marvellous supplies of food, and causing transformation or confusion through their curses. The popular belief in magic could not be eradicated, and they who now filled the place of the ancient priesthood were freely dowered by the people and by their biographers with the ancient powers.

MAGIC (Chinese).—Magic in all its forms is a subject which has always fascinated the Chinese mind. The literature which deals with the theory and practice of magic is enormous; and, if much of this literature is wearisome to the modern reader on account of the childish credulity of its authors and the extravagance of their speculations, it is nevertheless worthy of more patient scrutiny and analysis than it has yet received from anthropologists and students of folklore, or even from serious students of Chinese life and character. In this article we cannot do more than touch the fringe of a subject which derives much of its interest from the fact that a belief in magic is still a living force in the China of to-day.

There are many early references to a class of sorcerers or witches known as *wu*. This name is often applied to male as well as female witches, though the more correct designation of the former is *chi*. The term *chi* is rarely found outside the old books, but the term *wu* (usually in some such combination as *wu-p'o*, which means 'witch-wife') has persisted throughout the ages, and is still in common use. In pre-Confucian days the *wu* held a recognized position in the social organization of the country. They were entrusted even in the courts of kings with certain quasi-sacerdotal functions, and in public ceremonies they had stated duties to perform in connexion with divination and exorcism. Judging from the somewhat meagre accounts which we possess, we may suspect that the rites observed by the *wu* were in many respects identical with those practised to this day by the shamans of Central Asia and Siberia (see BURLATS, SHAMANISM). Their methods included mimetic dancing, drum-beating, chanting of mystic formulae, and trance-mediumship, and their efforts were directed towards the foretelling of the future, the conjuration of spirits, and (in general) the invocation of good influences and the expulsion of evil. In the course of ages their position gradually deteriorated. This was largely the result of the rise of Confucian culture, which always aimed at reducing every non-Confucian ideal and practice to a position of inferiority; but it was also due to the fact that many of the magical notions and methods of the *wu* fraternity were taken up and systematized by the Taoists. This is one of the reasons why the popular Taoism of modern times concerns itself with magic and sorcery to an extent which seems quite unwarranted by early Taoist philosophy, and why the illiterate village witches and fortune-tellers of the present day usually profess to act in co-operation with one or more of the innumerable Taoist deities, in spite of the fact that they are the sole surviving representatives of the ancient *wu*, whose name they still bear.

There is reason to believe, however, that besides the officially-recognized *wu* there were always

numerous 'free-lance' witches who carried on a lucrative business among the superstitious multitudes, and whose connexion with the State-cult or predominant religion of the time was little more than nominal. It was probably sorcerers of this type that were aimed at in certain anti-witchcraft regulations (reminding us of Plato's *Laws*, xi. 933) which we find in the *Li Ki*—the canonical 'Book of Rites.'

'Those who gave false reports about spirits, about seasons and days, about consultations of the tortoise-shell and stalks, so as to perplex the multitudes: these were put to death' (*SSE* xxvii. 2371.). It may be added that the same fate befell inventors of 'wonderful contrivances and extraordinary implements,' because such things raised 'doubts among the multitude' (*ib.*).

But it seems that even the official *wu* were not always free from peril, for the very fact that they were supposed to have a mysterious controlling power over the forces of nature rendered them liable to terrible punishment if those forces seemed to be showing hostility to mankind.

In the year 683 B.C., e.g., there was a disastrous drought, and a certain reigning duke expressed his intention of dealing with the situation by burning two persons—an emaciated or deformed man and a witch. Evidently this was a familiar practice in such emergencies, and the reason why special mention was made of it in this particular case was that, owing to the remonstrances of the duke's minister—who seems to have been far in advance of his time in his attitude towards popular superstitions—the barbarous custom was not carried out.¹ From a similar story which refers to the reign of Duke Mu (409-377 B.C.) it appears that the practice had been modified to the extent that the witch and deformed man were no longer burned alive, but were merely exposed to the scorching heat of the sun.²

One explanation of these customs is that by burning a deformed or emaciated man, or by exposing him to the sun, the pity of the heavenly powers would be aroused and rain would be sent to alleviate the wretched man's sufferings; and that the same happy result would follow the burning or exposure of a witch, because a witch was a person who was able to compel spirits to descend to earth. A sounder explanation is based on the belief in the supposed interaction of the principles of *yang* and *yin*—the male and female, or active and passive, forces, which by their alternating pulsations or activities give rise to all natural phenomena. In time of drought the *yang* principle shows excessive activity and disturbs the harmony of nature's processes; steps must be taken, therefore, to redress the balance of forces. The intricacies of the *yin-yang* theory are necessarily bewildering to a Western reader until he has acquired some knowledge of the principles of *feng-shui* (q.v.); but it is this pseudo-philosophy—belief in which is slowly decaying in China, but is still far from extinct—that supplies some of the most important hypotheses on which the edifice of Chinese magic has been erected.

No doubt it was only in extremely serious cases of drought that the witches were tortured or put to death. The regular method of obtaining their assistance in rain-making was to send them out, under the guidance of their official leader, the *ssü-wu*, to perform a ritual dance.³ The dancing of the witches formed part of the ordinary ritual observed on the occasion of the official rain-sacrifices; and, if we may judge from similar practices in other parts of the world, the dancing partook of the nature of mimetic magic.⁴ It was

¹ See *Tao Chuan*, in Legge's *Chinese Classics*, vol. v. pt. i. p. 179 f.

² See *SSE* xxvii. 201. It has been suspected by commentators that the two stories refer to the same historical incident.

³ *Chou Li* (Biot's tr., ii. 102).

⁴ The ceremonial dancing of ancient China was not always magical. There were six dances officially recognized under the Chou dynasty, of which only one (the *huang*) had anything to do with rain-making. Ceremonial dancing is not yet extinct in China, for it still forms part of the ritual proceedings at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, *Adversaria Sinica*, Shanghai, 1906, p. 119 f.

accompanied by music; and, if there is any truth in such ancient legends as that of King Mu (whose reign ended in 947 B.C.), we may suspect that music preceded dancing as a means of producing rain. We are told that the method adopted by that monarch for putting an end to an excessive drought was to play magic music on his flute.

Many of the observances still carried out at the popular festivals in China are undoubtedly of a magical character, and are intended to regulate the rainfall, to expel disease and misfortune, to ensure good harvests, and to attract good luck. Communal magic of this kind is sometimes official in character, as in the case of the spring-welcoming ceremonies presided over by the local district-magistrates; but for the most part the rites are conducted by the villagers themselves, under the guidance of their own clan-committees (*hui-shou*), or headmen. Ceremonies which at one time were doubtless carried out with punctilious care and with something like religious awe have in many cases become mere village games and pastimes of which the original significance has been partially or wholly lost. Such are the lantern-dances and stilt-walking of the children of N. China at the full moon of the first month of the year. Few of those who take part in such merry-makings understand that by the skilful manipulation of their paper lanterns they are supposed to be helping and encouraging the moon to go successfully through her phases; that in getting up before dawn on a certain day and cooking a dumpling which 'rises' they are assisting nature to stimulate the dormant activities of animals and vegetation; and that in walking on stilts over ground destined to produce a crop of grain they are helping the wheat and millet to grow to their full height. It is perhaps a significant fact (when we remember the important part played by women in fertility-magic in other parts of the world) that many of the men and boys who take part in these festival-ceremonies are clothed for the occasion in women's garments.

Magical notions are also traceable in numerous simple acts which practically every family performs with a view to the well-being of its own members. Such are the hanging of certain plants above the doorway on certain days, the entwining of red threads in the queues of children to protect them from the demons of disease, and the affixing of pieces of scarlet cloth to the scrub-oak bushes to ensure the protection of the shrubs and the silkworms against hurtful insects and noxious influences. At the New Year it is customary to cover the outsides of doors and windows with paper scrolls containing sage mottoes, quotations from classical and other literature, and words expressive of virtuous aims or suggestive of material prosperity. These scrolls may fairly be regarded as magic charms which will not only prevent evil from entering the house, but will attract the influences which make for good fortune and happiness. Many of the usages connected with death and burial, the ceremonial summoning of ancestral spirits, and the tabuing of personal names are also essentially magical, though their intimate connexion with religious beliefs and observances makes it difficult to decide where magic ends and religion begins.

In China, as elsewhere, magic arts are practised for private and personal as well as for public and family purposes, and many persons who know of no normal method whereby they may bring about the fulfilment of their desires are glad to seek the aid of magicians and witches. The witches of China have had many illustrious clients. One of them was the T'ang emperor Hsüan Tsung, who ordered certain Taoist necromancers to summon

before him the shade of his dead consort, the beautiful Yang Kuei-fei. Very similar stories are told of the emperor Wu of the Han dynasty and the emperor Hsiao-Wu of the earlier Sung dynasty. As for the self-styled 'First Emperor,' who reigned in the 3rd cent. B.C., the assistance of witches and necromancers in his case was unnecessary, for he—like the king Solomon of Muhammadan legend—was himself a king of magicians.¹ Returning to more recent times, we find that the great empress-dowager, who died in 1908, put implicit faith for a time in the magical attainments of the 'Boxers'; and, though the 'Sacred Edict' of the emperor K'ang-hsi bids men abjure all kinds of heterodox teachings and practices, among which the arts of magic are included, and though in quite recent years proclamations have been issued warning the people not to allow themselves to be deluded by witches and soothsayers, it is beyond question that a belief in the reality of magic is by no means confined to the ignorant peasantry.

The official attitude towards 'black magic' (to use the convenient Western term) is clearly demonstrated in the anti-witchcraft clauses of the Penal Code of the late Manchu dynasty. The punishments inflicted on persons convicted of this crime were extremely severe, though it is only fair to add (in the words of a scholarly student of the subject) that 'the pages of Chinese history have never been stained by such a mad epidemic of witch-killing as disgraced Europe and America in the seventeenth century.'²

As recently as the summer of 1914 an alleged case of 'black magic' occurred in the territory of Wei-hai-wei, at present administered by Great Britain.

The inhabitants of a certain village approached one of the British Courts with a petition in which they complained that a fellow-villager had been practising magic with disastrous results to their little community. It was stated that he had quarrelled with the village headman, and had foretold the headman's death. 'And sure enough,' they said, 'the headman died, though there was nothing whatever the matter with him.' Two or three other enemies of the accused subsequently died in the same mysterious way; and, to crown all, a villager, on going to the shrine of the guardian-spirit of the village, discovered there a slip of paper on which were written, in the accused's handwriting, the names of various people with whom he was known to be on bad terms. This discovery created a panic among the villagers, who took it for granted that the list comprised the names of all those unfortunate persons whom the wizard had condemned to a speedy death. They therefore seized him and brought him before the writer of this article, who in his magisterial capacity had to perform the somewhat delicate task of differentiating between real and imaginary wrongs and grievances.

From the point of view of the student of magic, the special interest of this particular case centres in the unexpected part played by the tutelary deity of the village. Here, it would appear, we have an instructive example of the intermingling of religion and magic, and the junction seems to have been brought about in this way. One of the principal functions of the *t'u-ti*, or village deity, is to receive the spirits of the newly dead and to act as their spiritual friend and guardian.³ Each village has its own little shrine dedicated to the local deity, and this shrine usually stands by the roadside a short distance outside the village. When a villager dies, the members of his family go in procession to the *t'u-ti* shrine to make a formal announcement of the death, in order that the deity may make arrangements for the proper reception of the dead man's spirit. Now, at first sight, there seems to be no obvious reason why an

¹ For some of the stories of his magical exploits, which included the transfixing of the sun with a needle in order that uninterrupted daylight might be secured for the building of the Great Wall, see R. F. Johnston, *Lion and Dragon in Northern China*, London, 1910, p. 20 f.

² E. T. Williams, in a paper on 'Witchcraft in the Chinese Penal Code, *J.E.A.S.* (North China Branch) xxxviii, [1907] 95.

³ For a full discussion of the *t'u-ti* and his functions see Johnston, p. 21.

expert in black magic who wishes to bring about the death of his enemies should expect the *t'u-ti*—who is regarded as friendly to men and interested in their welfare—to give him help and countenance in carrying out his nefarious designs against their lives. What, then, is the magician's object in placing a list of the names of his intended victims on the little stone altar of the village *t'u-ti*? The theory seems to be that, when the *t'u-ti* perceives the list of names, he will assume that the persons bearing those names are already dead, and will make preparations in the under world for the reception of their souls. These preparations will act with a powerful attractive force upon the souls concerned, and will create in them an irresistible inclination to sever their connexion with their respective bodies. The non-arrival in the under world of the spirits of persons whose death had already been announced in a formal manner would cause bewilderment to the well-meaning *t'u-ti*, and might perhaps arouse his wrath; and, as it is strongly advisable, in the interests of the community in general, to 'save the face' of the *t'u-ti* and maintain friendly relations with him, the only reasonable course for the spirits in question to adopt is to bow to the inevitable and acquiesce in the premature loss of their physical bodies.

Magical and semi-religious theories of this kind are hardly likely to find Western parallels; but many of the ordinary magical practices of the Chinese are strikingly similar to some of those forms of sympathetic and mimetic magic with which we are familiar in Europe.

The great artist Ku K'ai-chih (4th cent. of our era), one of whose paintings is among the most treasured artistic possessions of the British Museum, was himself a graduate in magic. When spurned by the girl whom he loved, he drew her portrait, and in the place where the heart should be he stuck a thorn. Thereupon the girl, who knew nothing of the portrait and the thorn, began to suffer pain in the region of the heart, and next time her lover paid his addresses to her she did not scorn him. The artist then withdrew the thorn from the portrait, and, though the pain in the damsel's heart promptly disappeared, her love for him remained.

That many of the poets and artists of China have been credited with a knowledge of magic is no matter for surprise when we know how frequently their passionate love of wild nature brought them into contact with the Buddhist and Taoist saints and hermits, whose favourite dwelling-places have always been the caves and forests and ravines of the mysterious mountains. These mountain-dwelling ascetics have been for ages regarded as the discoverers and guardians of occult secrets of various kinds, and, though their disciples and biographers endowed them with faculties which they never possessed and which the best of them never pretended to possess, it is highly probable that there were some who, in the course of their own heart-searchings and their solitary communings with nature, not only made valuable discoveries as to the properties of plants and herbs, but were also successful pioneers in various untrodden fields of psychology and mysticism. To some extent, at least, the popular belief in their supernatural capacities and attainments was justified.

When Buddhism first came to China, and for some centuries afterwards, the relations between Buddhists and Taoists were often strained to breaking point. The victories of the Buddhists—if we may credit the Buddhist historians and biographers—were often brought about by miraculous occurrences which non-Buddhists would perhaps describe as magic if not as mere conjuring tricks. It is difficult, perhaps, in some cases, to draw a distinction between miracles and magic. A miracle, as E. S. Hartland remarks, is 'legitimate magic,' while magic is 'a forbidden

miracle.'¹ However this may be, many of the marvellous doings attributed to Buddhist monks and hermits bear a close resemblance to those recorded of Christian saints. But we know from the earliest Buddhist scriptures that the brethren were not encouraged to perform miracles, and it was certainly not by the help of miracles or of magic that the Buddhists achieved their most substantial successes in China. The Taoists, however, did not scruple to ally themselves with various forms of magic and sorcery, and it is their fatal readiness to meet the popular demand for signs and wonders that is largely answerable for their present degeneration (see TAOISM).

If we had space to deal with matters of detail, it would be necessary to describe the various magical uses made of plants and animals and also of manufactured articles such as metal mirrors and weapons. An authority has stated (see *EBR*¹¹ xviii. 577) that magic mirrors are mentioned in Chinese literature of the 9th cent.; but they are mentioned and their uses fully described much earlier than that. The curious book known as *Pao P'o-tzu*, which was written by the famous wizard Ko Hung in the 4th cent. of our era, contains full accounts of how to detect the presence of evil spirits and other dangerous beings by the use of magic mirrors. The belief once prevalent in the British Isles that a witch could turn herself into a hare is paralleled by the Far Eastern belief (still extremely common in China) that demon-witches can assume the form of foxes and other beasts.² A book could be filled with the magical notions and theories which in China are based on the habits and peculiarities of animals. Even insects are not exempt from the necessity of making a contribution to the treasury of magical lore. There is in China a destructive little insect known to Europeans as the silver-fish (*Lepisma saccharina*), which is a most unwelcome visitor to libraries. It is believed that, if one of these insects gets into a Taoist classic and eats the two characters *shên-hsien* ('spiritual-immortal'), its silvery body will become five-coloured. If the coloured insect be subsequently caught and eaten, the man who eats it will have the happiness of attaining the goal of Taoist ambition—he will overcome death and develop into a spiritual being. As to trees, plants, and herbs, large numbers are believed to possess some magical property or to be adaptable to magical uses. The cypress, pine, and similar trees are supposed to be conducive to immortality, and, when we learn that a noted hermit was in the habit of sleeping on a bed of pine-needles, we may be sure that this was not done merely as a means of mortifying the flesh.³ The willow is much used as a rain-charm. In times of drought in Shansi and neighbouring provinces adults and children may be seen going about with willow-wreaths on their heads. The peach-tree is famous for its magical properties, and for this reason peach-twigs and peach-blossom are frequently mentioned in Chinese fairy-lore. The use of peachwood for the exorcism of evil spirits is very ancient, for the brandishing of peach-wands was part of the recognized procedure of the professional *wu* at royal courts under the Chou kings and probably at a much earlier date.

That large and important subdivision of Chinese magic which concerns itself with charms and amulets and divination is dealt with elsewhere (see Literature below). Here it must suffice to mention that the principal purveyor of charms is

¹ *Ritual and Belief*, London, 1914, p. 81.

² For a full discussion of all forms of zoanthropy see de Groot, *Religious System of China*, iv. 156 f.; see also art. LYCANTHROPY.

³ See Johnston, *Buddhist China*, London, 1913, p. 245, and *Lion and Dragon in Northern China*, pp. 262 f., 375-384.

the 'Celestial Master'—usually described by Europeans as 'the Taoist pope'—who lives among the Dragon-Tiger Mountains in the province of Kiangsi. The practice of divination is also largely in the hands of Taoist specialists and *wu-p'o*; but Confucianism has always had under its patronage the complex systems of divination which are based on that abstruse classic the *I King*, or 'Book of Changes' (*SBE* xvi.). There is a grass known as *shih-tsao* which grows on the grave of Confucius and is carefully gathered and put up into packets. The stiff dried stalks of this plant are believed to retain some of the *ling*, or spiritual efficacy, which lies latent in the sacred soil, and they are or were highly valued for divining purposes. During recent years a very interesting discovery of 'oracle bones' and tortoise-shell fragments was made in the province of Honan. They are believed (mainly on the evidence of the archaic script) to belong to the 12th cent. B.C., though certain authorities assign some of them to a somewhat later period. An inspection of these fragments throws a most welcome light on the classical and post-classical references to the ancient methods of 'fortune-telling'.¹

Divination by the tortoise-shell and by the dried stalks of certain plants were the methods by which the ancient sage kings made the people believe in seasons and days, reverse spiritual beings, stand in awe of their laws and orders; the methods (also) by which they made them determine their perplexities and settle their misgivings' (*Li Ki*, i. 1. 5. 27 [*SBE* xxvii. 94]).

The forms of magic which are or were popularly supposed to be associated with astrology and palmistry, and with automatic writing, telepathy, clairvoyance, and 'possession' by gods or demons, are all familiar to the people of China; and there is good reason to believe that any society for 'psychic research' which showed itself enterprising enough to conduct some patient investigations on Chinese soil would be rewarded by interesting and perhaps valuable results.

LITERATURE.—The subject of magic and allied topics is exhaustively dealt with in J. J. M. de Groot, *The Religious System of China*, Leyden, 1892ff., esp. vols. v. and vi. E. Biot's Fr. tr. of the *Chou Li* (*Le Tchou-ly*, Paris, 1851) should be consulted for information regarding the official standing and functions of the *wu* (see esp. li. 76-104). There are many references to sorcery and magic—some of them shrewdly critical—in Wang Chung, *Lun Hêng*, an Eng. tr. of which (by A. Forke) has appeared in two parts (pt. i., London, 1907; pt. ii., Berlin, 1911). In J. Legge, *Chinese Classics*, Hongkong, 1861-72, and *SBE* xvi. [1882], xxvii. [1885], xxxix. [1891], and xl. [1891], English readers will find all the references to magic which occur in the canonical literature mentioned in the above article. Students of the subject will also do well to consult H. Doré, *Recherches sur les superstitions en Chine*, Shanghai, 1911 (*Varités sinologiques*, no. 32), and L. Wiegner, *Folklore chinois moderne*, Paris, 1909. From a more popular point of view the subject of Chinese magic has been dealt with in N. B. Denys, *Folklore of China*, London, 1878, and F. H. Balfour, *Leaves from my Chinese Scrapbook*, do. 1887. Interesting sidelights on popular notions of magic can be gathered from the collection of stories known as the *Liao Chai*, tr. H. A. Giles, under the title of *Strange Stories from a Chinese Studio*, London, 1880, new ed., Shanghai, 1908. The Chinese literature dealing with the subject from every conceivable point of view is voluminous, and hitherto only fragments of it have been translated. Good Chinese bibliographies will be found in the works of de Groot, Doré, and Wiegner referred to.

R. F. JOHNSTON.

MAGIC (Egyptian).—1. The Egyptian view of magic.—If the Egyptians had been more self-analytic than they actually were, they might, from their own point of view, have described all their actions as either ordinary or magical. By ordinary actions would have been understood all those simple ways of coping with inanimate things and living beings which were suggested by habit, mother wit,

¹ See, e.g., various passages in the *I King*, *Shu King*, *Li Ki*, and *Chou Li*. A recent account of the new discovery is to be found in *JRAS* (North China Branch) xiv. [1914] 65 f.

or acquired skill. But, when inanimate matter proved recalcitrant, and living creatures were unmoved by requests, prayers, commands, promises, or threats, there still remained, in their opinion, a method of achieving their ends by means of an art that they called *hike* (Coptic ΣIK). There is direct traditional authority for translating this very ancient term by the English word 'magic' ($\mu\alpha\gamma\epsilon\upsilon\omega\nu$, $\mu\alpha\gamma\iota\alpha$, Ac §⁸. 11), and the examination of the hieroglyphic and hieratic examples of its use proves it to correspond fairly well to what we understand by 'magical power.' Wherever mysterious, miraculous knowledge was required to effect a purpose, that was *hike*; *hike* was something different from the techniques and practices of everyday life, since it postulated special powers in its user, and always made a greater or less demand upon faith.

2. Magic and religion.—For our traditional Western thought magic and religion are always more or less consciously contrasted with one another, whence students have often unwarrantably assumed that the two are radically heterogeneous, and that they represent successive strata in the mental development of mankind. Some investigators argue that magic is the earlier and ruder product (e.g., Frazer), while others (e.g., Erman) hold it to be a debased corruption of the nobler phenomenon of religion. So far as Egypt is concerned, there cannot be the slightest doubt that *hike* was part and parcel of the same *Weltanschauung* as created the religion which it deeply interpenetrated. Before defining 'magic' and 'religion' for Egyptological purposes—and we must insist on our right to frame our own definitions within the limits prescribed by the current, untechnical meaning of these terms—it will be profitable to make a rapid survey of the facts to be distributed between the two provinces.

It is with active relations that we are here concerned, and with doctrines only in so far as they are involved in the same. There are three classes of being that are affected, namely the living, the dead, and the gods. Perhaps the most remarkable characteristic of the Egyptians' view of the universe is the thoroughgoing and impartial logic with which they drew the consequences of their belief that the gods and the dead were beings of like nature with themselves, subject to human appetites and needs, and amenable to the same methods of persuasion or compulsion. Hence the principal duty of the priests was to keep those whom they served provided with food and drink, and to maintain their houses in good order; the analogy with the domestic services demanded by the living was fully conscious, for the priests of the gods and the dead were called 'the servants of the god' (*hm-ntr*) and 'the servants of the departed spirit' (*hm-k*) respectively, even as the temple was called 'the house of the god' (*h-t ntr*) and the tomb (or an essential portion of it) 'the house of the departed spirit' (*h-t k*). Again, the Egyptians could seek help of their gods and dead in the same naïve and unsophisticated way as one man sought help of another—e.g., by prayer, by questioning (asking for an oracle), and by writing letters (for letters to the dead, see art. LIFE AND DEATH (Egyptian), § 9). But in their own everyday life, as seen above (§ 1), the Egyptians resorted, when all else failed, to mysterious, uncanny arts (*hike*) to achieve various difficult aims; the method employed was not simply coercion, but coercion of an abnormal and special kind. It would have been strange if the practice of *hike* had been restricted to the narrow circle of the living, when the living shared with the gods and the dead all their other modes of intercourse. In point of fact, it was *hike* more than anything else that welded together the seen and the unseen worlds. The self-protective rites of the living, as we shall have abundant occasion to see, are full of trafficking with the gods and the dead. But the gods and the dead themselves had a use for the miraculous power called *hike*; Thoth and Isis were famous adepts of the art (below, § 10), and in a demotic story the dead priest Neneferkaptah deeply resents the attempt to rob him of a book of incantations that had been buried with him in his tomb (F. Ll. Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 801.). Nothing could better prove the wide range of *hike* than to observe its transference from secular to funerary or divine employments and *vice versa*. In the *Pyramid Texts* and the *Book of the Dead*, compilations intended to ensure the well-being of the departed, one may often come across spells that must originally have been composed for earthly use—spells directed against the bites of snakes (e.g., *Die altägypt. Pyramidentexte*, ed. K. Sethe, Leipzig, 1908, §§ 246, 247) or of crocodiles (e.g., *Book of the Dead*, tr. E. A. W. Budge, London, 1908, chs. xxxi., xxxii.), for example; even erotic charms may be found inscribed on coffins (cf. H. Schack-Schackenburg,

Zweizegebuch, Leipzig, 1908, pl. 16, 11-18). Conversely, the *Book of Overthrowing Apophis* (Budge, *Egyptian Hieratic Papyri*, London, 1910) was a liturgy intended for daily recitation in the temple of Amen-ré at Thebes, Apophis being the mythical snake that was supposed to be the eternal foe of the sun-god Rê; the rubrics of this book nevertheless declare that it will prove of the greatest advantage to the private individual who recites it in the presence of the god. It may be added that the word *hike* is quite common in all parts of the *Book of the Dead*, as well as in such temple rituals as the *Book of Overthrowing Apophis* just mentioned.

It may therefore be taken as proved that *hike* was as intimately associated with the presumed existence of the gods and the dead as it was with the real existence of the living. But, further than this, a greater or less element of *hike* may have been inherent in all the dealings between men on the one side and the gods and the dead on the other. The two last classes of being were, after all, creatures of a world apart, elusive in their nature and hard to reach by ordinary, matter-of-fact means. The very idea of their existence puts a strain upon the imagination, and for this reason set forms of words, indicative of an effort to break down mystical barriers, had to accompany even such simple deeds of homage as the presentation of food-offerings. In other terms, the gods and the dead could hardly be approached save by the medium of what is known as 'ritual,' and the attribute which distinguishes ritual from ordinary performances may have been just that attribute which the Egyptians called *hike*. The point is not susceptible of absolute proof, for it was naturally only in the more extreme cases, where the sense of mystery and miracle-working had to be emphasized, that the term *hike* was actually applied; but the view that *hike* underlies all ritual is favoured by the close resemblance between the divine and funerary rites, on the one hand, and the rites performed for human benefit (self-protective and similar rites), on the other. The formulae of the *Book of the Dead* differ neither in form nor in substance from the incantations which the Egyptians used to heal their own maladies; and the same general similarity also runs through the daily liturgies of the temples and the tombs (see A. Moret, *Le Rituel du culte divin journalier en Egypte*, Paris, 1902).

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only *hike*, the nearest English equivalent of which is 'magical power.' The universe being populated by three homogeneous groups of beings—the gods, the dead, and living human persons—their actions, whether within a single group or as between one group and another, were either ordinary or uncanny (*hike*). But the gods and the dead were somewhat uncanny themselves, so that all dealings with them or performed by them were more or less *hike*. It was only when men treated them ordinarily, and as man to man, that this quality of *hike* was reduced to a minimum, as in the case of spontaneous prayer and the letters to the dead—in fact, just in those rare instances where the solemn phraseology of ritual was avoided.

3. Magic defined for Egyptological purposes as *privata religio*.—We shall hardly be able to avoid rendering *hike* in English by the words 'magic' or 'magical power'; but, if the Egyptian conception of *hike* be taken as the criterion of what is magical and what is not, we shall have little or no use for the word 'religion,' and a multitude of facts which the common parlance would more naturally describe as 'religious' will fall under the head of 'magic.' It is advisable, therefore, in defining 'magic' for Egyptological purposes, to strike a compromise between the Egyptian connotation of *hike* and the English connotation of 'magic.' Taking our cue from the former, we shall restrict the sense of 'magic' to those actions which clearly have the implications of mystery and the miraculous; at the same time we shall attempt to maintain the distinction between magic and religion, or, rather, between magic and other kinds of religious acts. It is fully in accordance with the practice of Egyptologists, instinctively adopted but inconsistently carried out, to contrast 'magic' with the 'cult of the dead' and the 'cult of the gods,' as referring exclusively to those rites which deliberately and in the first instance aimed at the advantage of living human beings, the cults of the dead and of the gods being in this division implicitly classed together as 'religion.' Magical actions may therefore, for our purposes, be defined as those actions which men performed for their

own benefit or for the benefit of other living men, and which demanded certain miraculous powers for their performance. Warning must be given against two misconceptions: in the first place, it must be clearly understood that the gods and the dead may, as indeed they usually do, enter into the *dramatis personæ* of the magical rite; the principle of division is not *de quibus* but *cui bono*; in the second place, magic as thus defined did not differ essentially in its mechanism from the cults of the dead and of the gods, nor was it necessarily regarded with feelings of moral reprobation.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian Magic,' in *Trans. Third Internat. Congr. Hist. Rel.*, Oxford, 1908, i. 208-210. Erman (*Ägyptische Religion*, Berlin, 1909), though forming a very different estimate of magic from that here adopted, accepts the same tripartite division of the active aspect of religion into *Gotterkultus*, *Totenkultus*, and *Zauberei*. Magic as thus defined has a whole native literature of its own: various hieratic papyri in Leyden, Turin, London, Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from the New Kingdom; several similar papyri of the Middle Kingdom, in the Ramesseum find of 1896, still unpublished and in the writer's hands; numerous ostraca in various collections. Besides these must be named the medico-magical papyri (see art. DISEASE AND MEDICINE (Egyptian)), and the so-called *Cypti of Horus*, of which the type is the *Metternich Stele* (ed. W. Golenischeff, Leipzig, 1877).

The abstract concept of *hike* is once or twice found deified, apparently in something like the restricted meaning assigned to 'magic' in this section. Two physicians of the Old Kingdom bear, besides the honorific title 'priest of Horus in Hundred-town,' also that of 'priest of *Hike*' (A. Mariette, *Les Mastabas de l'ancien empire*, Paris, 1889, p. 96; R. Lepsius, *Denkmäler*, Berlin, 1849-58, ii. 91a).

The deified concept of *Hike* is figured in the form of a man in some sculptures of the Vth dyn. (L. Borchardt, *Das Grabdenkmal des Königs Sahure*, Leipzig, 1913, ii. pl. 20), and is of occasional occurrence also in the texts (ib. p. 99). A funerary incantation whereby it was sought to confer upon the deceased the powers of *Hike* himself has recently come to light (P. Lacau, *Textes religieux*, Paris, 1910, no. lxxviii.); here *Hike* is described as a creation of the sun-god in primordial times, when as yet nothing else existed.

4. The purposes of magic.—In theory the domain of magic was as wide as men's desires themselves, magical art supplying all those things that were not procurable by simpler means. Our existing materials, which illustrate only a limited number of purposes, are probably very one-sided. The Egyptians believed, or feigned to believe, that their wizards could work all kinds of wonders; in a late tale a charm is made to bring the viceroy of Ethiopia up to Egypt, to the place where Pharaoh dwells, where he is to be beaten with five hundred blows of the stick, and returned to the land of Ethiopia again, 'all in six hours thither' (Griffith, *Stories of the High Priests*, p. 59). It is said to have been related at the court of Cheops how one magician fashioned a crocodile of wax that devoured an adulterer, how another parted the waters of a lake into which a jewel had accidentally fallen, and how a third cut off a goose's head and replaced it in a twinkling (Erman, *Die Märchen des Papyrus Westcar*, Berlin, 1891, i. 8 f.). The magical contest of Moses with Jannes and Jambres (Ex 7⁵⁻¹³, 2 Ti 3⁸) is thus quite Egyptian in spirit. Passing from such fabulous reports to practical magic, we may classify the attested uses under a comparatively small number of heads:

1. DEFENSIVE.—How important this class was may be judged from the fact that in a general panegyric of God as creator He is said to have 'made magical spells for men for defence against things that happened' (*Pap. Petersburg 1116 A* (ed. Golenischeff, Petrograd, 1918), line 1361.).

(1) *Prophylactic*.—To avert death, W. Pleyte and F. Rossi, *Papyrus de Turin*, Leyden, 1869-76, pl. 120 f.; W. M. F. Petrie, *Gizeh and Rifeh*, London, 1907, pl. 27 c; against scorpions, *Pap. Turin*, 134; *Pap. Leyden*, 549; against lions, hyenas, and 'all long-tailed animals that eat flesh and drink blood,' *Le Papyrus magique Harris* (ed. F. J. Chabas, Chalon-sur-Saône, 1861; also Budge, *Egyptian Hieratic Papyri*, verso B; against crocodiles and other dangers of the river, as with drowning, *ib. recto*; against snakes, L. Stern, *Papyrus Ebers*, Leipzig, 1876, pl. 97. 17.

(2) *Preventive*.—‘To prevent a woman from conceiving,’ *Ramesseum medical*, unpublished; ‘to prevent rats from devouring the grain in a barn,’ *Ebers*, 98. 6.

(3) *Counter-charms*.—‘To lay a spell (*h' st*) on him whom one fears,’ *Louvre, Hier.* 694, no. 1; ‘to banish magic from the body’ (prescription of drugs), *Ebers*, 34. 2, 7, 10, against a complaint named ‘the artifice of spells,’ *Ebers*, 88. 13. A book containing ‘formulae for repelling the evil eye’ (*ESP-BWON*; cf. also *Pap. Anast.* iii. 5. 4) was preserved in the Library of Edfu (*Z.A.* ix. [1871] 44).

(4) *Curative*.—Spell to cure scorpion-stings, *Pap. Turin*, 31 + 77; headache, *Pap. Leyden 345*, verso 2. 9; burn, *Ebers*, 69. 3, 6; *Pap. Leyden 345*, recto 3. 1; to ease pain, *Ebers*, 30. 6. For the relations of magic and medicine see below, § 8.

(5) *Psychological*.—‘A book for repelling fear which comes to befall a man by night or day, from front or behind,’ *Pap. Leyden 345*, recto 2. 1.

ii. *PRODUCTIVE*.—(1) *Obstetric*.—To facilitate birth, *Erman, Zaubersprüche für Mutter und Kind*, Berlin, 1901, pl. 5. 8, 6. 8; *Pap. Leyden 345*, recto 12. 6; ‘to bring milk to a woman who is nursing a child’ (prescription only), *Ebers*, 97. 10, ‘to keep a child warm,’ *Zaubersprüche*, verso 2. 2.

(2) *Weather-charms*.—‘Thou shalt perform these ceremonies when a storm rages in the east of heaven, or when Rē sets in the West, to prevent storm-clouds in the east of heaven. . . . Thou shalt perform these ceremonies many times against bad weather, that the sun may shine, and Apophis be overthrown in truth’ (*Book of Overthrowing Apophis*, 23. 14 f.).

(3) *Love-charms*.—A spell to secure sexual enjoyment, secondarily used for funerary purposes, has been alluded to in § 2. Erotic charms must have been frequent, but those that are known are of late date; in demotic, see F. L. Griffith and H. Thompson, *Demotic Magical Papyrus*, London, 1904, p. 14; in Greek, C. Wessely, *Griechische Zauberpapyri*, Vienna, 1888, lines 296 f. and 1877 f.

(4) *General*.—‘He who recites this book is blessed every day; he hungers not, thirsts not, lacks not clothes, and is not melancholy. He does not enter into the law-court, nor does judgment go forth against him. But if he enters the law-court, he goes forth vindicated, praise being given to him like a god. Nor does his popularity depart from him’ (*Pap. Leyden 347*, 12. 10-12).

iii. *PROGNOSTIC*.—Many cases that fall under this head are on the border-line between magic and the techniques of ordinary life.

(1) *Obstetric*.—To know whether a child will live, *Ebers*, 97. 13; to know whether a woman will give birth, W. Wreszinski, *Medizinischer Papyrus des Berliner Museums*, Leipzig, 1909, verso 1. 3, 7, 9, etc.

(2) *Divination*.—A number of magical modes of divination are detailed in the *Demotic Magical Papyrus*, ed. Griffith-Thompson (see p. 14), but these instances do not seem to be of ancient origin. Oracle-seeking does not come under the head of magic, as here defined.

(3) *Soothsaying*.—In the tale of Unamūn (*RTAP* xxi. [1899] 81) there is related a case of a young man being ‘seized by the god’ and giving a solemn warning while in this condition.

(4) *Prophecy* may perhaps be brought within the sphere of magic, as it postulates supernatural power in its human mouth-piece, and usually involves the welfare of human beings. There is only one very ancient book of predictive prophecies, in a Ptolemaic papyrus (see A. H. Gardner, *Journal of Egyptian Archaeology*, i. [1914] 100 f.).

There seems to be no Pharaonic evidence for horoscopes, oracles, and other forms of prognostic magic.

iv. *MALEVOLENT*.—See next section. Cursing and oaths (conditional self-curses) are magical in quality, but cannot be dealt with in this article.

5. *Magic and law*.—The Egyptians themselves seem to have made no distinction between ‘black magic’ and ‘white magic,’ but, when magical arts were used for wicked purposes and to injure others, they naturally came within the category of legal offences.

Thus papyri of the XIXth dyn. (*Les Papyrus Les et Rollin*, published by T. Devéria, *Ouvrages et fragments* [*Bibliothèque égyptologique*, v.], Paris, 1897, ii. 97 ff.) record the case of two harem-conspirators, one of whom ‘made magical writings to lead astray and work mischief, and made certain gods of wax and certain medicines to weaken the limbs of men,’ while the other procured ‘writings for giving himself fearfulness and majesty,’ and made ‘men of wax and writings in order that they might be introduced into the harem. . . . so as to lead astray the one faction and so as to bewitch the rest.’ Both these criminals were condemned to death.

6. *The magical rite*.—A characteristic example of a magical spell, translated *in extenso* from the original, will give a truer impression of the methods of Egyptian magic than any amount of mere description.

‘Flow out, thou poison, come forth upon the ground. Horus conjures thee, he cuts thee off, he spits thee out, and thou risest not up but fallest down. Thou art weak and not strong, a coward and dost not fight, blind and dost not see. Thou livest not thy face. Thou art turned back and findest not thy way. Thou mournest and dost not rejoice. Thou creepest away and dost not appear. So speaketh Horus, efficacious of magic!

The poison which was rejoicing, the hearts of multitudes grieve for it; Horus has slain it by his magic. He who mourned is in joy. Stand up, thou who wast prostrate, Horus has restored thee to life. He who came as one carried is gone forth of himself; Horus has overcome his bites. All men, when they behold Rē, praise the son of Osiris. Turn back, thou snake, conjured is thy poison which was in any limb of N the son of M. Behold, the magic of Horus is powerful against thee. Flow out, thou poison, come forth upon the ground.

To be recited over a hawk with the two feathers on its head, being made of isy-wood and painted. Open its mouth and offer to it bread and beer and incense. Place it on the face of one suffering from the bite of any snake and recite from beginning to end. It will repel the poison. A successful specific’ (*Pap. Turin*, 131. 1-8 = *Metternich Stele*, 8-8).

7. *Analysis of the magical rite*.—Except in certain border-line cases (prognostics, medical treatment, etc.), the magical rite is always twofold and comprises (1) an oral rite, consisting of certain words to be recited, and (2) a manual rite, consisting of certain actions to be performed. These two portions must be discussed in detail.

(1) *The oral rite*.—The task that lay before the magician usually involved a struggle with some difficulty, which might consequently be regarded as a hostile and aggressive force. This force is not always completely personified, but more often than not it is treated personally, being commanded, persuaded, cajoled, warned, threatened, or cursed, just like a human being.

A leading idea in defensive magic, which embraces no small part of our material, is that of ‘possession.’ The possible antagonists are often enumerated in a long rignmarole—e.g., ‘the assaults of a god, the assaults of a goddess, the assaults of a male pain, the assaults of a female pain, the assaults of a dead man, or the assaults of a dead woman,’ etc. (*Ebers*, 30. 13); ‘enemy male or female, dead man male or female, adversary male or female’ (*Pap. Turin*, 122. 5). Any god could doubtless attack human beings, but savage or malicious deities, like Seth, the murderer of Osiris, or Sakmet, the ‘lady of pestilence’ (*nb-t'idw*), were doubtless most to be feared. The dead were specially to be feared; nor was it only those dead who were unhappy or unbred that might torment the living, for the magician sometimes warns them that their tombs are endangered (*Zaubersprüche*, recto 8. 7-9; *Pap. Turin*, 124. 12-13). The possessing spirit was particularly likely to be of foreign origin, a negress or an Asiatic woman (*Zaubersprüche*, recto 2. 7-8), and it was wont to come secretly, ‘arriving in darkness, gliding in, its nose backwards and its face turned’ (*ib.* 1. 9 f.). Its mode of taking possession is, as a rule, vague; the ‘demon’

(*th*, Boheiric *th*) doubtless often dwelt ‘with’ or in the afflicted one (*Bekhten Stele*, 11. 19—Budge, *Egyptian Reading Book*, London, 1888, p. 27 f.), but sometimes it merely injected some kind of poison, such as its semen, urine, or the like (*Pap. Leyden 345*, verso 6. 6 f.; cf. especially the word *th* in *Ebers*, 24. 14, 34. 10, etc.). Or else, again, the hostile power might attack with arrows (*Pap. Leyden 345*, l. 5). The evil influences were most easily ejected through the excretions of the body, such as the sweat or urine (*Zaubersprüche*, recto 2. 6-10); or they might come out in the form of winds (*Pap. Leyden 345*, verso 12. 9). All the members of the body were subject to attacks of the kind, whence their frequent enumeration in magical texts (see below); here they are not seldom called upon to ‘open their mouths and vomit forth what is in them’ (*Pap. Leyden 345*, recto 2. 2. 14-3. 1).

The malignant force was sometimes merely informed of its defeat:

‘Thou flyest before the sorcerer, before the servant of Horus, as soon as he mentions the name of Horus, or the name of Seth, the lord of heaven. He raiseth his scimitar, and smiteth thy forearm and thy throat. Thou fallest upon the ground on which thy loin-cloth is spread, and there thou gropest in quest of thy heart. So dost thou die, and the report goes forth to the house of Rē that Horus has conquered the disease’ (*Pap. Leyden 345*, recto 3. 12-4. 1).

Sometimes the magician frustrates the aims of the enemy by a simple veto:

‘Dost thou come to kiss this child? I suffer thee not to kiss it’ (*Zaubersprüche*, recto 2. 1).

Elsewhere, as in the example quoted in § 6, the poison is bidden to flow forth upon the earth. Warnings frequently supplemented and reinforced such commands, as:

‘Fall not upon his tongue; it is a serpent at the mouth of its hole’ (*Zaubersprüche*, recto 3. 11, in the midst of a long series of similar phrases).

Commands and warnings failing in their effect, a more persuasive means is tried:

‘Come, lay thee down, departing to the place where thy

beauteous women are, on whose hair is myrrh, and fresh incense on their shoulders' (*Zaubersprüche*, recto 3. 5-8).

Or else the demon is made to understand that in delaying to obey the magician he holds the whole order of nature in suspense:

'Rē waits for thee in order to shine, and Atum to set, that thou mayest quit the arm of N son of M. The chief of the Westerners waits for thee in order to enter in triumphant, that thou mayest quit the arm of N son of M' (*Pap. Leyden 345*, verso G 4. 2-4).

In the last resort curses are employed:

'Every god curses thee, every goddess curses thee. . . . The [great] Ennead curses thee, the little Ennead curses thee' (*Pap. Leyden 343*, verso 1. 1-3).

It often happens, indeed almost in every spell, that gods are summoned to the sorcerer's aid. They are invoked with salutations and praise:

'Hail to thee, Horus, thou that art in the town of Hundreds, thou sharp-horned one, who shootest at the mark. . . . I come to thee, I praise thy beauty; destroy thou the evil that is in my limbs' (*Pap. Leyden 347*, 3. 10-13).

A trait characteristic of Egyptian magic, noted already by Iamblichus (ed. G. Parthey, Berlin, 1857, p. 245), is the threatening tone often adopted towards the gods; examples are very common:¹

'On the night that the wife of Horus (Selkis, the scorpion goddess) shall bite thee, I suffer not the Nile to beat upon its bank, I suffer not the sun to shine upon the earth, I suffer not the seed to grow, I suffer not cakes to be made, I suffer not jugs of beer to be brewed for the 365 gods, who are hungry by both day and night—on that night of the burial of Osiris' (*Pap. Turin*, 137. 1-4).

The most daring menace of all is the following:

'I will throw fire into Busiris and burn up Osiris' (*Pap. Turin*, 135. 10; cf. *Ebers*, 30. 8).

On such occasions the magician is apt to disclaim his responsibility:

'It is not I who say it, it is not I who repeat it; it is Isis who says it, it is Isis who repeats it' (*Pap. Leyden 343*, recto 11. 7; *Pap. Turin*, 136. 8-9; *Pap. mag. Harris*, 9. 11).

Elsewhere the gods are referred to in the third person, and the more numerous they are, the more efficacious the rite is likely to be. Thus, when the limbs of the body are enumerated,² it often happens that each separate limb is identified with, or said to belong to, some special deity; and the list ends with the words,

'There is no limb of his without a god' (*Pap. Leyden 343*, verso 6. 2).

Origen (c. *Celsus*, viii. 58) asserts that the Egyptians divided the human body into thirty-six parts, and placed each one of them under the charge of a god; 'and so,' he says, 'invoking these, they heal the diseases of the limbs.' The divine names mentioned by Origen are those of the gods of the decans, or ten-day periods.

The magician often speaks of himself in the first person, but sometimes identifies himself with a particular god whose assistance he desires—e.g.,

'I am Rē in this his mysterious name "He-who-was-in-the-Nun," shooting his arrows against his foes' (*Pap. Leyden 347*, 4. 11 f.)—

or else with some god who, like the person for whom the rite is performed, had once been menaced by some imminent danger:

'Avaunt thou, for I am Horus; retire thou, for I am the son of Osiris. The magic of my mother (Isis) is the protection of my limbs' (*Hearst medical Papyrus*, 11. 4 f.).

At other times he merely claims to be 'the servant of Horus' (*Pap. Leyden 345*, verso F 1; *Pap. Turin*, 134. 1.).

Often a mythical precedent was alluded to or narrated at length, and the mere mention of a parallel case seems to have been considered a useful expedient for ensuring the success of the rite. Thus the magician declares:

'I will banish all bad and evil things which come to fall upon N the son of M, even as Rē saved himself from his enemies, even as Khnum saved himself from Sobk, even as Horus saved himself from Seth, and even as Thōth saved himself from Be'bo' (*Pap. Turin*, 113. 9-10).

¹ For similar examples from the funerary books see H. Grapow, *ZA* xlix. [1911] 48-54.

² See Erman's remarks, *Zaubersprüche*, p. 23.

More often the point of the narrative is merely implied; in the following short incantation against burns even the names of the interlocutors, namely a messenger and Isis, are omitted:

"Thy son Horus has been burnt in the desert." "Is water there?" "There is no water there." "There is water in my mouth, and a Nile between my legs; I am come to quench the fire" (*Ebers*, 60. 3-4; see H. Schafer, in *ZA* xxxvi. [1893] 129-131).

Many valuable fragments of myths have been preserved to us by this means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sun-god Rē should be compelled to divulge his name; this she brought about by causing him to receive a snake-bite which none could cure save herself (*Pap. Turin*, 131-133). Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew; Horus, however, invents various absurd names, and so manages to elude his wicked uncle (*Pap. Turin*, 134 f.).

The importance of names in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was not a rare proverb that 'a man lives who is conjured by his name' (*Pap. Turin*, 133. 6, 11, 134. 7, 9, etc.). Thus to be familiar with the names of the epagomenal days (*Pap. Leyden 346*, 2. 6) was a safe method of protecting oneself against their perils. This is a topic that might be greatly elaborated (see art. NAMES [Egyptian]).

Closely akin to the question of the importance of names is that of the importance of language. Certain formulae were supposed to possess particular efficacy, such as the words 'Protection behind, a protection that comes, a protection!' (*Zaubersprüche*, recto 9. 2). The magical potency of anything depends in a large degree on its mysteriousness, and it is therefore but little wonder that cabalistic gibberish (*Pap. mag. Harris*, verso C) and foreign spells were held in high esteem (*Der Londoner medizinische Papyrus*, ed. W. Wreszinski, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kefti language).

The significance attached to names and language is an aspect of the doctrine of *sympathy*, by far the most fertile conception of all those underlying the magical rite. This doctrine holds that things that have once been associated in any way remain henceforth connected and almost interchangeable for practical purposes; its chief varieties are (1) the principle of *contagion*, which affirms that things that belong together or have once been in contact continue to influence one another even when separated; and (2) the principle of *homeopathy*, according to which like has special power to affect like. These and other forms of sympathetic magic not so easily classified are of constant recurrence in the Egyptian magical books, both in the oral and in the manual rites; the recital of mythical precedents also clearly comes under this head. The very idea of the oral rite is an instance of homeopathic magic, for language may be said to imitate and image the things which it expresses, and in so far verbal references to a desired effect may have been considered instrumental in producing it.

Sympathetic magic takes curious forms at times; one or two instances may be singled out. In connexion with the importance of language reference may be made to the significance of puns. A magician says:

'I make a charm for him against thee of 'afai-plant, which does injury, of onions, which destroy thee, and of honey, which is sweet to men and sour to the dead' (*Zaubersprüche*, recto 2. 4).

The virtues here ascribed to the 'afai-plant and to honey are of obscure origin, but the destructive

property of onions is clearly due to the fact that the Egyptian word for onions was *hādḡ* (the vowel is merely guessed), while 'to destroy' was *hōdḡ*. In order to tell whether a new-born infant would live or not, its first articulate cries were to be noted:

'If it says *ny*, that means it will live; if it says *mbi*, that means it will die' (*Ebers*, 97. 13);

the sound *mbi* resembles the emphatic Egyptian expression for 'no' (see *ZÄ* xliv. [1907] 132).

A widely different example of the supposed influence of like upon like is illustrated by the following words, addressed to a demon that is causing sickness:

'Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs' (A. H. Gardiner, J. G. Milne, and H. Thompson, *Theban Ostraca*, London, 1913, p. 14 f.).

A conditional curse that runs upon similar lines may also be quoted:

'He who is deaf to this decree, may Osiris pursue him, may Isis pursue his wife, and Horus pursue his children' (H. Sottas, *Préservation de la propriété funéraire*, Paris, 1913, p. 128).

The mystical potency attaching to certain numbers doubtless originated in associations of thought that to us are obscure. The number seven, in Egyptian magic, was regarded as particularly efficacious. Thus we find references to the seven Hathors (*Pap. med. Berlin*, 21. 8; *Pap. Turin*, 137. 12; cf. *al-ḥarrā ṭūḡai rōd ōpavōd* [A. Dieterich, *Enne Mithrasliturgie*, Leipzig, 1910, p. 71]):

'The seven daughters of Rē', who 'stand and weep and make seven knots in their seven tunics' (*Pap. Turin*, 135. 12 f.); and, similarly, we read of 'the seven hawks who are in front of the barque of Rē' (*ib.* 136. 3).

Oral rites have occasionally to be recited seven times (*ib.* 138. 9, 10), but the more usual number is four (*Pap. Leyden 348*, verso 3. 3, 5, 4. 10, etc.; *Pap. mag. Harris*, 7. 4), a number doubtless associated with the 'four pillars of heaven' (*oi téssapes stulloskoi* [Dieterich, p. 71]), or, as we should say, the four cardinal points.

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Reference has been made to the long lists of parts of the body, and to the formulæ naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (*Pap. Turin*, 120-121; Petrie, *Gizeh and Rifeh*, pl. 27 c), and of the various excretions through which the demon might transmit his baneful influence (*Pap. Leyden 348*, verso 6. 6 f.). This quasi-legal tautology is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) *The manual rite.*—(a) *Active elements.*—The employment of images played an important part in the manual side of magic. Sometimes it is the hostile power to be destroyed that is thus counterfeited and done to death; so, in the *Book of Overthrowing Apophis*, the words of the oral rite are 'to be recited over an Apophis made of wax or drawn on a new sheet of papyrus and thrown into the fire' (26. 20; cf. 22. 6).

More often the object imitated represented a means of effecting the purpose of the rite.

Thus in a spell to assist child-birth there was made 'a dwarf of clay to be placed on the forehead of the woman who is giving birth' (*Pap. Leyden 348*, recto 12. 6).

Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by slaying it, sealing it up, or devouring it (*Zaubersprüche*, verso 2. 4; cf. *ZÄ* xxxix. [1901] 87). A great number of the amulets found in such abundance in Egyptian tombs were of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above,

amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Petrie, *Amulets*, London, 1914).

The materials of which such images and amulets should be made are nearly always specified, and it is evident that this was considered a matter of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of *properties*; every plant, stone, metal, and colour possessed its own peculiar virtue, which prompted its use in the diverse cases. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity may have been thought symbolic of a wide adaptability. Aetiological myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Rē (*Pap. Salt 825*, 2. 5-6, [unpublished]), and the cedar-tree emanated from the sweat of Osiris (*ZÄ* xlvii. [1910] 71).

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (*dd mdu hr*, *passim*), and this transitory and intangible kind of contact seems to have ensured their continuous efficacy.

In a fabulous story the magician Hor, the son of Pa-neshe, made a litter with four bearers and 'pronounced writing upon them, gave them breath of respiration, and made them live' (Griffith, *Stories of the High Priests*, p. 59).

Elsewhere the ceremony of 'opening the mouth,' familiar from the funerary ritual, was performed over the magical figure (*Pap. Turin*, 131. 7), and offerings and incense were presented to it in token of its now animate condition (*ib.*; *Pap. Leyden 346*, 2. 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (*Pap. Leyden 346*, *ib.*; *Pap. Turin*, 31+77. 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, and licked off by some one (*Pap. Turin*, *ib.*). At times the mediating image could be dispensed with; the magician pronounced his spell, and then spat on the diseased limb (*Ebers*, 30. 17).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or heal; some kind of contact was a prime necessity of Egyptian magic; e.g., we read of spells that were fastened to the left foot (*Pap. Leyden 348*, verso 4. 3); but the neck was naturally the spot where most charms were worn (*Zaubersprüche*, recto 1. 3, 8. 3, and *passim*). The string or strip of rag employed for this purpose was usually tied into magical knots (*g.v.*), seven being the favourite number. Such knotted strings have often been found and are to be seen in many collections (Erman, *Zaubersprüche*, p. 31). In other lands than Egypt the idea of the magical knot is frequently to 'bind' the hostile force; but, though references to binding demons can be found in Egyptian magical texts (*Pap. mag. Harris*, verso A 6), it is not in connexion with knots. One view that seems to have been taken of knots is that they were obstacles, as, e.g., in the following words put into the mouth of a magician:

'If the poison pass these seven knots, which Horus has made on his body, I will not allow the sun to shine,' etc. (*Pap. Turin*, 135. 8).

Particularly interesting is a spell where twelve gods were invoked.

These were drawn 'on a rag of fine linen to be tied into twelve knots. Offer to them bread, beer, and burnt incense. To be placed on the neck of a man' (*Pap. Leyden 346*, 2. 8).

Here evidently each knot was put under the guardianship of a special deity, and thus formed a divinely protected barrier between the malign influence and its possible victim.

Imitative or significant actions were frequently performed with the apparatus of the magical rite; we have seen how a waxen image of Apophis was thrown into the fire and so destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stelæ known as *Cippi of Horus*; these are of comparatively late date (Saite period and after), and are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on two crocodiles. Such stelæ seem to have been placed in buildings for their protection, and especially to rid them of snakes and scorpions (see Golenischeff, *Metternichstele*; G. Daressy, *Textes et dessins magiques*, Cairo, 1903).

(b) *Negative or precautionary elements*.—Magical rites could not be performed at any time and under any conditions, but strict rules and restrictions had to be observed. Of these some, like the injunction to the magician to stand 'with his face to the East' (*Pap. Leyden 347*, 12. 10), are of so many different types that they elude classification. *Times and seasons*, like everything else in ancient Egypt, had their own specific properties; some days were lucky and others unlucky, in part at least through mythological associations (for such calendars on papyrus see art. CALENDAR [Egyptian], § 2). Such considerations had to be taken into special account where magical rites were concerned, and perhaps more attention was paid to the question of time than is indicated in the brief instructions usually given as to the performance of the manual rites.

Of one spell we learn that it had to be recited 'at eventide, when the sun is setting' (*Zaubersprüche*, verso 3. 7), in another case seven knots have to be tied, 'one in the morning, and another in the evening, until seven knots are complete' (*Zaubersprüche*, verso 3. 3).

Magical rites were also in demand for safeguarding men against dangerous periods of the year. As in ancient Mexico (*GB*³, pt. iv., *Ostris*, *Attis*, and *Adonis*², London, 1914, ii. 28, n. 3), the intercalary days, in Egypt known as the five epagomenal days, were fraught with exceptional risks, against which enchantments were employed (*Pap. Leyden 346*); the user of these had to refrain from all work during the period in question (*ib.* 3. 4).

Purity was requisite in him who would be benefited by magic (*Book of Overthrowing Apophis*, 24. 19, etc.), just as ch. lxiv. of the *Book of the Dead* was ordained to be recited by 'one pure and clean, not having eaten venison or fish, and not having been near women.' In another place the user of a spell is charged to purify himself for nine days, and his servants are to do the same (E. Naville, 'Destruction des hommes,' line 79, in *TSBA* iv. [1876] 16).

Secrecy was essential in dealing with magic. In reference to a spell written on a strip of fine linen the warning is given that 'it is not to be looked at' (*Pap. Leyden 348*, recto 2. 7); of another it is said that it must not be used for any one except him for whom it was prescribed (*ib.* verso 8. 6). For similar instructions in the *Book of the Dead* see J. Baillet, *Idées morales dans l'Égypte antique*, Blois, 1912, pp. 72-75.

8. *Magic and medicine*.—Magical spells are often recommended on account of their proven efficacy; 'a true remedy on many occasions' is a formula extremely frequent in the magical papyri (e.g., *Pap. Leyden 347*, 13. 2-3). This appeal to experience indicates a desire to justify magic as a science, and hints at the possibility of a real science arising out of it. There cannot be the slightest doubt that Egyptian medicine is the direct offspring of Egyptian magic, and that it

never became really emancipated from its parent.¹ The medical books are seldom free from incantations, and the magical papyri are leavened with medical prescriptions (e.g., *Zaubersprüche*, recto 7. 2). In the selection of drugs the doctrine of properties undoubtedly played a great part, though the defectiveness of our evidence and the fact that medicine was in process of becoming an empirical science tend to conceal this from our observation. It is no argument against the thesis here supported that many of the herbs and drugs prescribed were actually, and were known to be, wholesome. In the first place, magic itself is not necessarily irrational in its methods, and, in the second place, even the utility of many wholesome things like onions was based upon essentially magical conceptions (see above, § 7 (1)). The exotic and abhorrent nature of many drugs cannot conceivably be explained except as due to superstitious reasons; how else could one account for the use of 'the bones of an oxyrhynchus-fish' (*Ebers*, 6. 3), or 'the urine of a male ass that has begotten another' (Griffith, *Petrie Papyri*, London, 1898, pl. 5, l. 18)? It is significant that the latter medicament occurs in a treatise on midwifery and kindred topics. One can often make a shrewd guess at the meaning of a prescription. To cure a complaint called 'the working of charms' (*hmt-s*) the following is prescribed:

'A large beetle (*hpr*), whose head and wings have been cut off. To be burnt and put into fat, and then applied' (*Ebers*, 88. 18).

The point of this must surely be that, the word for beetle being derived from the verb *khôper* (*hpr*), 'to become,' a mutilated beetle would symbolize the frustrated achievement of a purpose; the purpose here to be frustrated was 'the working of charms.'

It must not be imagined that there was no distinction between a medical prescription and a magical rite. The former consisted mainly, if not wholly, of what may be considered as a specialized development of the manual rite, namely, the enumeration of drugs and directions for their use. The diagnosis, which is ushered in by the words 'so shalt thou say' (*dd-hrk*), and which sometimes precedes the list of drugs, may owe its origin to the oral rite of magic—just as the magician sometimes declares that he knows the name of the enemy. A difference is made in the medical papyri between an 'incantation' (*shînet*) and a 'remedy' (*pakhret*); the latter is, in the main, an enumeration of drugs. In the same way the physician (*sunu*) was not quite the same thing as the magician; the physician might be a layman, while the magician was a priest (below, § 9).

That even in the 'remedy' (*pakhret*) magical ideas were latent may be proved by some additional evidence. The following is explicit enough:

'Formula for drinking a remedy: Welcome, remedy, welcome, which destroyest the trouble in this my heart and in these my limbs. The magic (*hike*) of Horus is victorious in the remedy' (*pakhret*) (*Ebers*, 2. 1-2).

We also find formulæ to be recited in applying remedies generally (*Ebers*, 1. 1-11), in using the medicine-measures (*Pap. med. Hearst*, 13. 14), in using animal fat (*ib.* 14. 4), and so forth. These formulæ seem intended to supply the place of the incantations of which most medical prescriptions have purged themselves; their reintroduction was a reactionary step.

Where, then, does medicine begin and magic end? There is no definite boundary-line. Medicine may be said to begin when incantations are no longer used. At that point medicine becomes a technique, though using means which it does not understand, and which, if it pauses to give ex-

¹ The writer thus agrees with the views of E. Thraemer (in art. HEALTH and GODS OF HEALING [Greek]) against F. von Oefele and H. Schneider.

planations, it explains by superstitious reasons. So far as medicine was practised without a sense of mystery and without making appeals to faith, it was a technique of ordinary life like any other; but, wherever there was consciousness of its exceptional, occult nature, it might be said to lapse back into the domain of magic. Egyptian medicine was at its best in diagnosis and in its physiological speculations; the *materia medica*, on the other hand, remained permanently under the influence of magical conceptions.

9. The magician.—A Greek alchemistic treatise quoted by Maspero (*PSBA* xiii. [1891] 502) exactly defines the difference between the physician (*sunu*) and the practitioner of magic. The former exercises his craft *ἀπὸ βιβλίου . . . μηχανικῶς*, 'mechanically and by book', while the latter is a 'priest' (*lepeús*), 'acting through his own religious feeling' (*διὰ τῆς ἰδίας θεισδαμονίας ποιῶν*). There appears to be no common word for 'magician' (*s'w*, 'charmer,' e.g., in *Ebers*, 99. 3, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magic emphasized above (§ 2) that the priests should have been the chief repositories of magical knowledge, and particularly those priests whose function it was to be versed in the sacred writings. The subjects of many of the books kept in the library of the temple of Edfu cannot be described otherwise than as magical (see H. Brugsch, *Aegyptologie*, Leipzig, 1889–90, p. 156; cf. Clem. Alex. *Strom.* vi. 268). The 'lector-priest' (*chrai-hab*) is specially named as empowered to perform cures (*Pap. med. Berlin*, 8. 10), as having discovered incantations (*Pap. med. London*, 8. 12), and as being endowed with the gift of prophecy (*Pap. Petersburg 1116 B*, recto 9); and the wonder-workers at the court of Cheops in the tale were all 'chief lecturers' (see Erman, *Märchen des Papyrus Westcar*, i. 21). A passage in the *Ebers Papyrus* (99. 2) singles out the 'priests of Sakhmet' (*w'eb Sakhmet*) for special mention as skilled members of the magico-medical profession; this is because Sakhmet was a baleful goddess who manifested her wrath in inflicting disease; her priests were likely to know best how to cope with her. Priests, doctors, and sacred scribes alike received the final touches to their education at colleges called 'the house of life' (*per-onkh*); of these we know but little.

A 'chief physician' of the time of Darius describes how he was summoned by Pharaoh to restore the *per-onkh* (in Saïs) 'because His Majesty knew the value of this (i.e. the medical) art' (*ZÄ* xxxvii. [1899] 74). There was a *per-onkh* at Abydos, apparently attached to the temple (*Louvre A 93 = ZÄ* xxxi. [1894] 119). The word *per-onkh* is in the bilingual decrees rendered in the demotic as 'scribes of the house of life' (see Griffith, *Rylands Papyrus*, Manchester, 1909, p. 81, n. 13, *Stories of the High Priests*, p. 19). Magic could be learnt at the *per-onkh* (*ib.*; *Pap. mag. Harris*, 6. 10).

On the whole, we receive the impression that less importance was attached in Egypt than in other lands to the personality of the magician; his powers might in some cases be due to special gifts, but, broadly speaking, the belief in magic was a tribute to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right precautions. Thus the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet 'knower of things' (*rakh ikhet*) was commonly applied to him (*Bekhten Stele*, 11; *Ebers*, i. 9). This point is well brought out in a passage describing the all-wisdom of the Pharaoh Amōsis:

'An unique king, whom Sōthis taught, praised of the goddess of writing; the reverence of Thōth is beside him, and he gives to him knowledge of things, so that he guides scribes according to the true rule. He is one great of *hike*' (*Sethe, Urkunden*, iv. [Leipzig, 1906] 19 f.).

10. Celebrities in magic.—Egyptian-wise, we will begin with the gods. Thōth was the most powerful of all magicians; in the end this qualification of his gave rise to the fame of Hermes Trismegistos (*q.v.*; see Griffith, *Stories of the High Priests*, p. 58). The skill of Thōth as a magician is associated with his reputation as the inventor of hieroglyphs and the sciences of astronomy and mathematics; in the myth of Osiris he played the part of 'physician of the eye of Horus' (*Pap. med. Hearst*, 14. 6). Isis enjoyed great fame as a sorceress, mainly on account of the charms which she devised to protect her infant son Horus (*Pap. Turin*, 31 + 77. 6; *Ebers*, i. 12 and *passim*). Horus himself was not devoid of magical ability, though it was mainly in his skill in warding off attacks that this was displayed; the Horus of Letopolis is described as the 'chief physician in the house of Rē' (*Pap. Turin*, 124. 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Uraeus-snake on the forehead of Rē and of the Pharaohs, the earthly representatives of Rē, finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Uto or Buto by name; she is often referred to as Wēret-hike, 'she who is great of magic' (*Sethe, Untersuchungen zur Gesch. und Altertumskunde Ägyptens*, v. [Leipzig, 1912] 128).

According to Manetho, King Athothis of the 1st dyn. practised medicine and composed anatomical books. Under King Zoser of the IIIrd dyn. lived the wise Imhotep, whose skill as a doctor led to his identification by the Greeks with Asclepius; like Amenhotpe, son of Hepu, a famous man of the reign of Amenophis III. (XVIIIth dyn.), Imhotep was in late times worshipped as a god (see art. HEROES AND HERO-GODS [Egyptian], II. 2). The prince Hardedef, a son of Cheops, was similarly noted for his deep learning and wise utterances; he was the reputed discoverer of various books of *hike* incorporated in the *Book of the Dead* (see Erman, *Märchen des Papyrus Westcar*, i. 18). Another royal prince, who was high priest of Ptah, became the hero of many tales in which he appears as a great magician; this was Khamwese, one of the innumerable progeny of Ramesses II. (see Griffith, *Stories of the High Priests*, p. 2 f.). In the later Greek and patristic literature reference is made to various Egyptian magicians of note, Sochos, Psenosiris, and, above all, Nectanebo, the last native Pharaoh, who plays an important part in the legend of Alexander the Great.

11. The nature of Egyptian magic.—The magical rite, as described in § 7, was by no means wholly irrational in its methods; indeed, granting its premisses, namely the existence of gods and demons, the theory of possession, the principles of sympathy, and the doctrine of properties, its manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox; the essence of *hike* we stated to reside in its opposition to the mechanism of ordinary action (§ 1), yet now the methods of magic are declared to be simple and straightforward. The fact is that no explanation of the magical rite is afforded by the consideration of its parts either severally or collectively; its explanation can be sought only in the concept of *hike*, which is a thing apart from, and, as it were, superimposed upon, the methods and premisses of the magical rite, a sort of pervading vital principle making this what it is.¹ Without the concept of *hike* the magical rite would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puerile, though not wholly meaningless,

¹ For the proof of this assertion see H. Hubert and M. Mauss, 'Esquisse d'une théorie générale de la magie,' in *ASoc* vii. [1902–03], esp. pp. 97–108.

combination of words and pantomime. There was perhaps once a period when even the most gifted were utterly ignorant of the limitations of their own power and that of the world outside; they saw forces which they treated personally in all kinds of external phenomena, and the law of sympathy seemed to them very good logic indeed. In this hypothetical period magic and science were undifferentiated. Later on, a distinction became gradually discernible between the simple techniques of ordinary life and the less successful or, at least, less trustworthy means by which men sought to achieve more difficult aims, and the notion of *hike'*, or magical power, was precipitated. *Hike'* gathered round itself just those less matter-of-fact preconceptions which were found unserviceable in ordinary life, and these became its methods. Now, the simple techniques are always able to detect, amid the complex environment in which acts are necessarily performed, the actual determining factor in their results; not so *hike'*, which is therefore apt to regard the whole complex environment as essential to the achievement of its purposes. This is the reason for the meticulous attention that *hike'* pays to detail, the set form of words to be recited, the restrictions as to time and place, the purity of the officiant, etc. The more restricted the domain of *hike'* became and the less successful it was, the greater the necessity which it felt of insisting on its own inherent efficaciousness, and of diverting attention from its methods; hence its love of secrecy, and its use of mystic, incomprehensible jargon to enhance the impression of the wisdom lying behind it. In this context mention must be made of two more ways in which it was sought to obtain credit for *hike'*, namely the appeal to antiquity and the appeal to authority.

Such and such a rite was 'found at nightfall in the forecourt of the temple of Coptos as a secret of this goddess (Isis) by a lector of that fane; the earth was in darkness, but the moon shone upon this book, illuminating it on every side. It was brought as a wonder to King Cheops' (*Pap. med. London*, 8. 11-13).

The papyrus from which this quotation comes was written in the time of Amenophis III., more than a thousand years after the reign of Cheops. A mythical origin is assigned to other spells.

One was said to have been 'invented by Geb on his own behalf' (*Pap. med. Hearst*, 5. 11), while others were devised by Nut or Isis on behalf of Rê (*ib.* 5. 13, 15).

A more reputable way of appraising the value of a magical rite was by appealing to the test of experience; it is often claimed for a particular spell that it has been successful on many occasions (see above, § 8). Where the claim has proved justifiable, or where it has seemed sufficiently so for the rite to pass into general use, the more mysterious elements rapidly disappear, and the rite becomes an ordinary technique; so in the case of medicine and, it may be here added, of legal oaths.¹ Nothing can better illuminate the nature of *hike'* than the alterations which it undergoes in the course of its transformation into some ordinary technique.

LITERATURE.—This has been indicated in the body of the article. Of general treatises may be named E. A. W. Budge, *Egyptian Magic*², London, 1901; A. Erman, *Ägyptische Religion*³, Berlin, 1909, ch. vii.; A. Moret, *La Magie dans l'Égypte ancienne* (*Bibliothèque de vulgarisation du Musée Guimet*, xx.), Paris, 1907; A. Wiedemann, *Magie und Zauberei im alten Ägypten* (*Der alte Orient*, vol. vi., pt. iv.), Leipzig, 1905.

ALAN H. GARDINER.

MAGIC (Greek and Roman).—I. INTRODUCTION.—It is practically impossible to extract anything from the great mass of magic theory and practice as certainly the particular contribution of any given people. There is no system of human thought which, in its unchanging essential

¹ Legal oaths are, of course, a fairly effectual way of guaranteeing truthfulness; but less because the implied curse is feared than because perjury is a criminal offence.

principles, is more primitive and, for that very reason, more cosmopolitan, more literally devoid of distinguishable national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, can rarely be identified with certainty. This is especially true of the two great nations of classical antiquity. Here, as elsewhere, magic was believed and practised by the common man, and even the literary record of magic theory and practice begins with Homer and continues with increasing volume and particularity until the latest times. But, rich as they are, the records of classical magic are too incomplete and the possibility of filling the lacunæ is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of our subject. For this reason, too, as well as on account of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

1. Magic and religion.—From more than one point of view the civilization of classical antiquity is still quite justified in challenging comparison with that of any other period in history. No civilization has shown such remarkable ability to observe, reflect, organize, and create in so many great departments of human thought and action. And yet among all the higher civilizations of the world there is none in which magic—of all things the most relentlessly and essentially primitive—had such an abiding influence, none in which men had such a perennial interest in the subject, none in which the progress of magic from the lore of the farmer to the lucubrations of the philosopher is more clearly marked and more profusely illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always impossible to distinguish it from magic on the basis of any essential details of ceremonial or of the generalizations from which they were derived. Even the doctrine of incantation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—they were utterly unable to differentiate clearly between magic and their religion on the basis of this or of any other criterion which, when seriously applied, would have left their religion unimpaired, and at the same time would have transformed their once redoubtable magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

According to this distinction, 'religion is prescribed, official, an organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed' (N. W. Thomas, *EB* 11 xvii. 305, summarizing H. Hubert).

Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or even by its maleficent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that for the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and therefore their ceremonials, are heterodox. Even orthodox gods must be approached only by prescribed ceremonials.

This Græco-Roman retention of the primitive distinction between magic and religion is our only guide in establishing meaning and coherence in

the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of this criterion, so far as magic itself is concerned, is, so to speak, to define its social position. It does not necessarily destroy or even impair the belief in the reality and power of magic as such; on the contrary, from the very nature of the distinction, it takes them both for granted. Hence the persistence of magic in a civilization otherwise so advanced as was that of classical antiquity.

We must assume this test of orthodoxy, *e.g.*, in the case of Cato's cure for a sprained hip (*de Agr.* 160). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, *i.e.*, it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (Macrobius, *III. ix. 7*) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by official recognition. This device of naturalizing foreign cults and thereby embracing within the sphere of their influence heaven and hell as well as humanity, is several times illustrated in the religious history of the Romans.¹

All foreign religions, therefore, were classified as magic. The foreign cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if its possessors were an older nation or a nation far away in space or time. Despite their native good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them were the Romans by the complicated mummeries of the Etruscans. Nations living far away, particularly those who live at or near the place where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful factor than remoteness in space. When a faith has been superseded, it thereby becomes magic. In Italy the term *la vecchia religione* is known to be used as a synonym for 'magic.' So the elder and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact, and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Misrule.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theocritus, *ii. 162* and often), no magic like the imported brand. Helen's nepenthe (Homer, *Od. iv. 219*), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the native practitioner had no vogue as compared with that of his rival who was, or pretended to be, from Egypt, Chaldaea, Colchis, India, or any other place but Rome.

It is true, of course, that 'magic is prohibited, secret; at the most, not prescribed.' But, so far as classical antiquity is concerned, these distinc-

tions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Romans, in particular, disliked secret rites of any sort, above all, foreign rites with *mysteria*, like those Greek cults so much affected by the Greeks themselves. If the Greeks objected to the secrecy of magic, it could only have been because magic itself was heterodox. So far, then, as secrecy was felt to characterize magic as opposed to religion, the ultimate source of the distinction in Greece as well as in Rome was the criterion of orthodoxy. To the same criterion is due the fact that, as a rule, men turned to magic for the things which they could not or would not ask of religion. Nor, of course, was magic necessarily maleficent; on the contrary, it might be distinctly otherwise. So long as orthodoxy was the test, magic was magic whether it happened to be white or black—and this, of course, explains why the Roman law never made any attempt to distinguish between the two.

2. Magic and legislation.—The general reputation of magic at all times was due to the same criterion; it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in—as it did at an early date in both Greece and Rome—the orthodox and the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The history of magic before the law began at an early period, but, so far, at least, as Greece is concerned, our records are too incomplete to give a very satisfactory idea of the question. In Greece, however, as in Rome, it concerned itself most seriously with the matter of strange religions—a burning question as soon as communication with the outside world became more intimate and extensive; still more in Rome when, owing to rapid expansion after the Second Punic War, alien beliefs and rituals came pouring in from every side. From the Decemviri to Theodosius and beyond, the Roman laws against magic were affirmed and reaffirmed, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume and importance. And, so far as the legal aspect of magic is concerned, it may be emphasized anew that, whether in Greece or in Rome, the ultimate foundation and guide of procedure was always the old criterion of orthodoxy. It is clear, for instance, that the characteristic tendency of the law to extend its scope was both suggested and guided by this criterion. It was particularly useful whenever the law felt obliged to take cognizance of some system of activity more or less mental that was 'good in parts'—such, *e.g.*, as divination (*q.v.*), which stands on the border line between magic and religion, or alchemy (*q.v.*), which hovers in like manner between magic and science, or, again, certain types of mysticism (*q.v.*), which were more or less an amalgam of magic and logical thinking. In every case what was to be considered legal and what illegal was determined by official recognition. Above all, the inclusion of foreign rites and religions within the legal concept of magic was an obvious and entirely logical deduction from the test of orthodoxy. Not only so, but by the same test it was equally obvious that precisely those foreign rites were the most serious question in magic. How, *e.g.*, shall we define the legal status of the native religions of the provinces? The final solution was again entirely logical. The Emperor was the civil and religious representative of the State. He was therefore entitled to investigate them and to make such use of them as seemed proper. But this privilege was his alone, and only by virtue of his office. In the hands of private individuals it was

¹ E. Schmidt, 'Kultübertragungen,' in *RVV* viii. 2 [1909].

considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its illegality so sedulously kept alive.¹

The recorded history of Roman legislation on the subject of foreign rites begins with the *causa célèbre* of its type, the *Senatus consultum de Bacchanalibus* in 186 B.C. (Livy, xxix. 8-19),² in connexion with which it was ordered that all books of divination and magic should be destroyed. The history of Roman legislation on the subject of magic, whether directed against specific practices or against the art as a whole, begins with the Decemviri (*Leges XII. Tab.* viii. 8a).³ Notable in later days was the *Lex Cornelia de Sicariis et Veneficiis* in 82 B.C.⁴ Dio Cassius (xlix. 43) tells us that in 32 B.C. the triumvirs, Octavius, Antony, and Lepidus, banished the magicians and *astrologi*, and refers (lii. 36) to a speech by Mæcenas against foreign religions and secret societies for purposes of magic. In A.D. 16 Tiberius banished the magicians and *mathematici*, and in the same reign L. Pitunianus was thrown from the Tarpeian Rock and P. Marcius was executed 'more prisco' outside the Porta Esquilina (Tac. *Ann.* ii. 32), and Mamercus Scaurus committed suicide to escape a suit for magic (*ib.* vi. 29). Under Nero, Servilia, the young daughter of Soranus, was accused of selling part of her dowry to procure the means to save her father's life by magic rites (*ib.* xvi. 31). The prescriptions of Tiberius were renewed by Claudius (*ib.* xii. 52) and Vitellius (Suet. *Vitell.* 14), and the end of official paganism was marked by the laws of Diocletian against the *malefici*, *Manichei*, and *mathematici* (*Coll.* xv. iii. 1 [Huschke]). Sometimes the law prescribed special and severe punishments, and how far the law itself had extended by the 3rd cent. A.D. may be seen from the *Sententia* of Iulius Paullus⁵ on the *Lex Cornelia de Sicariis*:

'Qui abortionis aut amatorum poculum dant, etsi id dolo non faciunt, tamen mali exempli res est, humiliores in metallum, honestiores in insulam amissa parte bonorum relegantur; quod si ex hoc mulier aut homo perierit, summo supplicio adficiuntur. Qui sacra impia nocturnave ut quem obcantarent, defigerent, obligarent, fecerint faciendave curaverint, aut cruci suffiguntur aut bestiis obliciuntur. Qui hominem immolaverint exve eius sanguine litaverint, fanum templumve polluerint bestiis obiciuntur, vel si honestiores sunt capite puniuntur. Magicae artis conscios summo supplicio addici placuit, id est, bestiis oblici aut cruci suffigi. Ipsi autem magi vivi exuruntur. Libros magicæ artis apud se neminem habere licet; et penes quoscumque reperti sint, bonis ademptis ambustis his publice honestiores in insulam deportantur, humiliores capite puniuntur. Non tantum huius artis professio, sed etiam scientia prohibita est.' See also the *Cod. Theodos.* ix. 16, xvi. 10; *Cod. Justin.* ix. 18.

Doubtless the object of the law was or, at least, ought to have been merely to punish the abuse of magic (Plato, *Legg.* 933 D), but it went much further than that. All the old laws were revived and reinforced by new legislation as soon as, under Constantine, Christianity succeeded paganism as the official religion of the Empire. Of course, the moment the change was effected Christianity became the plaintiff and paganism the defendant in the ancient process of Religion *v.* Magic. It was Christianity now that was responsible for the welfare of the State in this world. But, among other things, Christianity differed essentially from paganism in the fact that it had also a keen interest in the welfare of every member of the State in the world to come. Between the two, the new representative of orthodoxy—in the hands of those who do not understand or appreciate its message and meaning, the most intolerant of all religions—thought fit to

proceed against its predecessor with a zeal worthy of a better cause and a rigour that amounted to persecution.¹

The practice of the courts naturally went hand in hand with the law and was regulated by it. The charge of magic in one form or another was always a cause of action. It was perhaps most common in cases in which our plea is 'undue influence.' In Greek testamentary law, *e.g.*, this plea was specified either as *ὑπὸ φαρμάκων* or as *γυναικὶ πειθόμενος* (*i.e.*, 'drugs,' in the ancient sense of the word, or 'persuaded by one's wife').

The best known case of this kind is the one brought against Apuleius, the famous rhetor and author of the 2nd cent. A.D., by the relatives of the impressionable old widow, Pudentilla, whom he had just married. The charge was that he had won her affections by magic, and specified practices were alleged.² The legal basis of the action was perhaps ultimately the *Lex Cornelia de Sicariis et Veneficiis* passed by Sulla in 82 B.C. The defendant conducted his own case and won it by a speech, the *de Magia*, which still survives and is a valuable contribution to our knowledge of magic in that period. It must be said, however, that for the most part the great rhetor does not touch upon the real point at issue.

Considering the comparative frequency of such litigation in everyday life, we can understand with what interest the Athenian audience listened to the famous scene in the *Andromache* of Euripides in which she is charged by Hermione, the wife of Neoptolemus, with winning his affections by the use of philtres. Her dignified and stinging reply,

'Not of my philtres thy lord hateth thee,
But that thy nature is no mate for his.
That is the love-charm: woman, 'tis not beauty
That witcheth bridgemen, nay, but nobleness'

(205 ff.; tr. A. S. Way, *Tragedies*, London, 1894-98),

is doubtless the poet's own protest against the folly of such a charge. But, if one may judge from cases still occasionally reported in the daily press, it is a charge which, old as it is, will never cease to be preferred in one form or another.

3. *Derivation and definition.*—All the words for 'magic' in Greek and Latin record some real or supposed fact in the history of the subject or else indicate that some particular manifestation of it was sufficiently prominent to stand for the whole.

The ordinary Greek words for 'magic' are *μαγεία*, *γοητεία*, and *φαρμακεία*. The last two are old and popular. The *γοητεία*, according to the derivation offered by the Greeks themselves—*ἀπὸ τῶν γοῶν καὶ τῶν θρήνων τῶν ἐν τοῖς τάφοις γινόμενων*—was specifically a necromancer in the original sense of that word, *i.e.*, like the Witch of Endor, he called up the dead (*νεκρομαντεία*)—a thing which in all ages has been one of the most important specialties of the magic art. It is true that the derivation just quoted is on the face of it equally descriptive of professional mourners, and, as Hubert observes,³ the two occupations are not incompatible. The *γοητεία* may very well have been both. But, as we shall see below, the old etymologist is not thinking of mourners; he is giving a very good description of a special and particular type of magic with which he himself was doubtless quite familiar. The *γοητεία* was, no doubt, much feared by the population in general, but he was also more or less a roadside charlatan, and in other respects the associations with a person of his type were such that of the three ordinary names of 'magic,' *γοητεία* appears always to have been the most distinctly pejorative. The prominence of *φαρμακεία* in this connexion is due to the primitive idea that the action of any drug (*φάρμακον*)—using that word in its most extended application—is due to magic power. In its original sense *φαρμακεία* means the science which deals with the magic properties of plants and simples. Hence the *φαρμακός*—in all countries the primitive ancestor of the doctor, the apothecary, and the toxicologist (amateur or professional)—was the magician whose specialty was this particular branch of the subject, and the *φάρμακον*, *i.e.* the 'drug' which he prepared, was a magic charm. As such, the efficacy of the *φάρμακον* is enhanced, if not actually conditioned, by the incantation which generally is associated with some stage of its history. In most cases, too, it must be discovered, prepared, or given under certain conditions or in a certain way. Of course, its effect may be helpful or harmful according to the intentions of the giver. Hence the secondary use of the word in the sense of either a 'poison' or a 'remedy.' Homer himself generally distinguishes by the use of an adjective (*Od.* iv. 280). The origin and use of *μαγεία* (Lat. *magia*), from which, through the substantivized adjective (*τέχνη μαγική*, *ars magica*), our own word is derived, are an

excellent illustration of the Greek and Roman attitude towards an alien faith to which allusion has already been made. In its original and restricted sense *magia* meant nothing more than the religion of the Persian Magi (so, e.g., Plato, *Alcib.* I. 123 A). It is well known that this faith, which was imported to Greece by the Magi (q.v.), takes rank as one of the great religions of the world. But it was imported, and had no official standing; even though impressive, it was unauthorized. Between these two facts *magia* became a general term for 'magic' as early, at least, as the 4th cent. B.C., as we see from Theophrastus, *Hist. Plant.* ix. 17, and, perhaps, Aristotle, *frag.* 361 (though this is only an indirect quotation by Diog. Laert. *proem.* vi 8), and thereafter retained no apparent traces of its specific and pretentious origin. *Magia* is perhaps the most colourless of the three words; *γοργεῖα*, except when it returns to its original and distinctive use, is a pejorative term for magic in general; *φαρμακεία*, when used generically, is possibly fuller than the others of vague and dreadful associations; but otherwise there seems to have been no great difference between them in current speech. Hesychius, e.g., defines *γοργεῖα* by *magia*, and for Porphyry the general term for 'magic' is *γοργεῖα* (pejorative) and whatever may be detached from it is religion. The Mystics (e.g., Porphyry, *de Abstinentia*, ii. 40) differentiated theoretically the use of these words; they distinguish between good magic and bad magic, and enter into all sorts of subtle speculations regarding the hierarchy of demons through whose aid the good or the bad magic, as the case may be, is able to accomplish its purpose. The Alexandrian school of philosophers undertook to draw a distinction between *γοργεῖα* and the particularly pretentious *theurgia* of later days. But Augustine (*de Civ. Dei*, x. 9) is too much of a practical, clear-headed Roman not to see the essential weakness of the entire theory. The worship of God, he says, is a matter of 'simplici fide atque fiducia pietatis, non incantationibus et carminibus nefariæ curiositatis arte compositis, quam vel magiam vel detestabiliorem nomine goetiam vel honorabiliorem theurgiam vocant, qui quasi conantur ista decernere et illicitis artibus deditos alios damnabiles, quos et maleficos vulgus appellat (hos enim ad goetiam pertinere dicunt), alios autem laudabiles videri volunt, quibus theurgiam deputant; cum sint utrique ritibus fallacibus demonum obstricti sub hominibus angelorum.' In other words, Christianity is orthodox; therefore all else is heterodox, i.e. magic. And, whatever we call it, however we disguise it, magic is—magic. This, of course, is nothing more or less than our familiar old criterion of orthodoxy, unimpaired and unaltered by the fact that Christianity instead of paganism happens to be the official and legal standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the difference between the *maleficus*, the *veneficus*, the *sega*, and the *magus* was only difference of degree.²

Pliny's opinion (*HN* xxx. 2) is that magic began with medicine, and that the chief causes of further growth were the admixture of religion and astrology (*ars mathematica*)—all with intent to deceive. In the same way magic is extended to alchemy and divination (Tert. *de Idol.* 9, *de Cultu Fem.* 1 f., etc.). Hubert rightly observes³ that, in spite of the fact that the Chaldaei and the plain magicians are in the same class, a sharp distinction should be made between astrology and magic. The business of astrology is to foretell the very things which it is the business of magic to prevent or, at least, to modify. If, therefore, magic enters into astrology, it is for that purpose (*Pap. Paris*, 2891, 2901, 2910). Hubert does acknowledge, however, that the astrologer's ceremonial in consulting the stars derives no small part of its efficacy from the fact that it has so much in common with the incantations of magic. We might, perhaps, add that the whole 'science' of astrology is based upon a type of reasoning so primitive, so nearly akin to that upon which magic itself is based, that one might be excused for failing to see sometimes where magic begins and astrology ends. There was at least one large and especially popular class of astrologers about whom there could be no doubt: the so-called *ἱερομαθηματικοί*, or astrological quacks, whose entire practice was founded on speculations regarding the mystic properties and powers of mere numbers. The Roman legislators were quite justified in believing that, if there was any distinction between this theory and the theory of magic incantation, it was a distinction without a difference.

It is also quite true, as Hubert insists, that alchemy should be reckoned *per se* as a science. We might add, however, that alchemy never had

a chance to be reckoned *per se*. Not until it assumed the *alias* of chemistry was it able to escape from its old associations with magic (see ALCHEMY).

It has already been noted that divination, even by the old criterion of official sanction, occupies a more or less indeterminate position between magic and religion. Indeed, *μαγεία* and magic are so thoroughly commingled that even in antique parlance the one is often merely a synonym for the other.¹ In others a fairly sharp distinction is supplied by official sanction. *Nekyomantia*, for instance, was religious if used in a family cult, i.e., it was presumed that a man has the right to call up his own ancestors if he pleases. By a somewhat similar presumption it was also sanctioned in the cult of the heroes.² Under any other circumstances it is not only magic, but one of the most formidable and characteristic operations of magic. The same distinction holds good in another very important and extensive branch of divination, one in which every one was interested and which all the schools of philosophy, especially the Stoics, investigated and discussed at great length—the source, valuation, and interpretation of dreams (*δνειροκρίσις*; see DREAMS AND SLEEP, vol. v. p. 30 f., and cf. Artemidorus, *Oneirocritica*, a curious treatise of the 2nd cent. A.D. which still survives). The method officially sanctioned for securing true and prophetic dreams (*δνειροπομπία*, *δνειρομαγία*) was *incubatio*, but the magic papyri (esp. the *Pap. Lugd. Batav.*, Leyden, 1843–85, v., vi.) are full of *δνειρομαγικά*, formulae and charms for obtaining such dreams. Hubert would also include within the sphere of magic such practices as divination *per sortes* with verses of Homer, Vergil, or the Scriptures, *φάρμακομαγεία* (Athen. vi. 80 [261 F]) and, in general, any ceremonial for purposes of divination which implies the use of magic rites in our sense of the word. By that criterion, of course, we should agree with Hubert that divination in private cults was strongly tinged with magic. The same was true even of official divination, although this was when the oracles were revived in the 2nd cent. and was for historical reasons. In all these cases, however, magic was distinguished from religion by the usual criterion of official sanction.

II. MYTHOLOGICAL PERIOD.—Until the age of Pericles the history of our subject is largely confined to what Hubert calls the 'mythology' of magic. This is partly due to the fact that our record is so fragmentary and that what survives belongs to types less likely to be concerned with such a subject. But it is fairly certain that not far from the time of Pericles magic itself rapidly assumed greater importance in the everyday life of the nation. By that time the average man's faith in the old gods was rapidly diminishing; and among the factors contributing to the growth and spread of magic and kindred ideas in any people the decay of orthodox belief is by no means the last to be considered.

1. The magicians.—Among mythical magicians, the Telchines (or Telchinæ), the Dactyli, the Curetes—and in connexion with the Curetes the Corybantes (see KOURETES AND KORYBANTES)—hold a position which amply illustrates the fundamental ideas about magic already mentioned. The first three were reckoned the primitive pre-Hellenic inhabitants of Greek lands—the Telchines, of Rhodes (Strabo, p. 472; Diod. Sic. v. 55, though here, as with the others, there is a tendency to confusion in names and places of origin); the Dactyli, of Cretan or Phrygian Ida (Strabo, p. 355; Apoll. Rhod. i. 1129); and the

Curetes, of Acarnania.¹ As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.² Even the Telchines, a synonym of spitefulness in the folklore of Greece, were in their time founders of cults (Diod. Sic. v. 55; cf. Paus. ix. xix. 5). But they all belong to the old order, they are all heterodox, they are all classed as γοήτεις (Nonn. xiv. 36 f.; Strabo, p. 601).³ Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nonnus, *Dionys.* xiv. 36); they are malignant sorcerers, who wither the plants, ruin the crops, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the servants of Hephaestus, so these semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape⁴ to the *Kobolde* of Germanic mythology. These clans of demoniac master magicians know all the secrets of nature. The Dactyli were masters of music and of the healing art. They taught Orpheus (Diod. Sic. v. 64) and, long afterwards, Pythagoras. Paionius, Iasius, Akesidas, the three great physicians of the epic, are all Dactyli. Later, they were regarded as inventors of the famous *Ephesia Grammata* (Clem. Alex. *Strom.* i. 15 [PG viii. 781]). The Centaurs Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curetes. Among all nations the most notable symptom of the power to prophesy is an ecstatic state of mind. The assumed origin and pattern of the Corybantic worship, the best known and most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dance of the Curetes around the baby Zeus—really a primitive spell, an ἀποτροπαιόν, to keep the child from harm (see KOURETES AND KORYBANTES).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 845; Val. Flac. vii. 356), Agamedes,⁵ Melampus (Apollod. ii. ii. 2), Cēnone (ib. iii. xii. 6), Pasiphae (ib. iii. xv. 1), Agamede or Perimede (Roscher, s.v.; Theoc. ii. 16 and schol.), Circe (Roscher, ii. 1193), and Medea (ib. s.v.). The special, though not the exclusive, interest of all is φάρμακα. Prometheus, the wise and kindly Titan, belongs to the old régime. Melampus comes from Thessaly, the distant land of magicians. All the rest (except Cēnone, and even she is a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamede is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Colchis, the distant land where the sun-god himself rises at dawn from the ocean stream.

Circe.—In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far away in the mystic and trackless seas. Cruel, but no more consciously cruel than the child who separates some luckless fly from its wings, this φάρμακίς, whose special power is metamorphosis, amuses herself with enticing such wandering mariners as come within her reach to drink magic potions which straight-

way turn them into swine. Like any other queen of the mermaids, Circe is unmoral rather than immoral. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Medea.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. *Theog.* 956 ff.; Alcman, cited by Athenag. *Legat. pro Christ.* 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrob. i. xii.; Serv. on *Æn.* vii. 750). Of all mythical magicians she is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,¹ she is evidently the most highly developed personality in a group of homonyms. It was therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in the long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful and awful Colchian, as awful as her mistress the goddess of the crossways, Medea παμφάρμακος, daughter of Æetes and granddaughter of the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a φάρμακίς. It is therefore particularly, though not exclusively, from her knowledge of φάρμακα that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 802, iv. 25), and in art she is often represented as holding it in her hand. Her charms are innumerable.² She can restore youth, bestow invulnerability, lull the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause in their courses, call down the moon from heaven, etc. Indeed, Apollonius's description (iv. 1665–72) of her procedure when, from the deck of the Argo, she cast the evil eye on the giant Talus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Seeliger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the Argonauts, cures Heracles of his madness, frees the Corinthians from a famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. On the contrary, the popular tradition of her continued to grow in its own way (Tib. i. ii. 51, note, ed. K. F. Smith, New York, 1913). Special feats of magic were supposed to have been her invention (e.g., Paus. ii. xii. 1), and, as the line just cited from Tibullus suggests, we may be sure that the *libri*

¹ carminum valentium

Refixa coelo devocare sidera

of Canidia to which Horace refers (*Epod.* xvii. 4) contained more than one charm claimed to be Medea's own. So, too, the magic plants and simples for which Thessaly was so famous were supposed to have sprung up in the first place from the box of charms lost by Medea as she was passing over that land with her winged dragons (schol. Aristoph. *Nubes*, 749; Aristides, i. p. 76 [Dindorf]). Her fame in the written word is unique. We are obliged to agree that she never lived among men; she was merely a child of popular fancy and the foster-child of a long line of literary artists few of whom were men of transcendent genius; and yet she emerges as perhaps the most wonderful woman in all classical antiquity. Poets, historians, orators, philosophers, even unimpressible grammarians

and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last feeble echoes of rhetoric, and again in the renaissance of the modern world, hers is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown old or lost its interest and charm.

As we might guess, Medea is the typical Græco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her *φάρμακα*, and the large preponderance of *φάρμακela* itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. *Their methods.*—*Φάρμακα* are either to be swallowed or to be applied outwardly as salves or plasters. The distinction is medical, but it is also Homeric, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (*Od.* x. 391 f.); Medea uses another to render Jason invulnerable (*Apoll. Rhod.* iii. 1041 ff.), and still another—in the form of an aspersion—to put the dragon to sleep (*ib.* iv. 156); in the old Lesbian folk-tale Aphrodite gave Phaon a box of salve which, when applied as directed, gave him youth and surpassing beauty (*Ælian, Var. Hist.* xii. 18; *Serv. on Æn.* iii. 279; *Palæphat.* 49; *Lucian, Dial. Mort.* ix. 2; *Roscher, s.v. 'Phaon'*). The shirt of Nessus and the robe of Creusa belong to the same type. Pamphila (*Apul. Met.* iii. 21) went so far as to have a box filled with little caskets, each containing a special salve for a given metamorphosis.

Quite as ancient and characteristic is the *φάρμακον* taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (*Od.* iv. 220-232); so Circe effected all her transformations (*ib.* x. 237); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of *φάρμακα* or *poecula amatoria*, i.e. drinks to inspire love—is perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here that in Circe's case the process is not completed until she touches the victim with her *πάσδος*, or magic wand. In art Medea is frequently represented with a wand; with a wand Athene makes Odysseus look young again (*Od.* xvi. 172); so Hermes overpowers our senses (*Il.* xxiv. 343; *Od.* v. 47); and, as every one knows, to this day no magician's outfit, even if he is nothing more than an ordinary sleight-of-hand performer, is complete without this ancient and dramatic accessory. The use of the wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Except, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the *φάρμακον*, and, as we have seen, the Græco-Roman theory of magic presupposes that Circe had already prepared her *φάρμακα* to the accompaniment of the proper charm, and that Helen's nepenthe had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for *φάρμακela* in the art of healing. The sons of Autolycus bind up the wound of Odysseus, and stop the flow of blood with an *ερασιδίη* (*Od.* xix. 457); the divine physician, Asclepius, follows the same methods (*Pind. Pyth.* iii. 52; cf. iv. 217; *schol. Isthm.* vi. 53; cf. *Soph. CEd. Col.* 1194 [Jebb]), and at all times the use of incantation with a remedy was so characteristic that one of our richest sources for the study of *φάρμακela* as magic is the works of the physicians

from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicine; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is going to succeed. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of pre-Periclean times is typical. The case of Iphiclus (*Apollod.* i. ix. 12; *Roscher*, ii. 306) is an excellent example.

For ten years Iphiclus could have no children. At last he consulted Melampus the seer. Melampus, whose specialty, like that of Mopsus the Argonaut (*Apoll. Rhod.* iii. 916 ff.), was the language of birds, consulted the vulture. The vulture said that ten years before, while castrating rams, Iphiclus had threatened his father Phylacus with the knife. It was then discovered that the knife had at that time, and presumably by Phylacus himself, been struck into the tree with which the life and well-being of Iphiclus were bound up, and that it had stuck there ever since. The knife was removed, the rust scraped off and prepared as a *φάρμακον*, and, when Iphiclus had taken it as prescribed, he immediately recovered his powers. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Græco-Roman magic, and still survives in our own homely saying that 'the hair of the dog cures his bite.'

Other branches of magic referred to in this period are equally typical. According to Homer (*Od.* x. 516 ff.), Odysseus learned from Circe how to call up the dead, and the ceremonial of *nekhyomantia*, as the poet pictures it, always remained practically the same. Indeed the antics of Empedocles, as described by *Diog. Laert.* (viii. 59, 62 ff.), show clearly that the type of the *γούρτης* became finally fixed at a very early period. Again, the bag of winds given by Æolus to Odysseus (*Od.* x. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries.¹ The same is true of the primitive rustic magic attributed to the Telchines. Finally, the love-charm known as 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to *Suidas*, was a contemporary of Xerxes. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (*Nubes*, 749) and was never afterwards forgotten.

III. *FOREIGN INFLUENCES.*—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Telchines, Dactyli, and Curetes—apparently, too, the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be such distant countries as Colchis, Egypt, Thessaly, and even the Islands. As time went on and the horizon of the known world became correspondingly wider, such local centres became *pari passu* more and more distant, and the strange tribes of the African deserts, the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the primacy always remained with Thessaly. In the time of Aristophanes as in the time of Apuleius, Thessaly was *par excellence* the realm of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflexion of average opinion in the world at large. Numberless passages might be cited to show that in the Athens of Pericles, as long afterwards in the Rome of Augustus, the average professional enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though *Pliny* (*HN* xxx.

¹ W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1877, p. 30 ff.

² *GB*, pt. i., *The Magic Art*, London, 1911, i. 319 ff.

1 f.) denies it, was another famous locality for magic. But Thracian magic, as Hubert warns us,¹ was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, it was not only a religious movement but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world (see ORPHISM). But it was heterodox and, therefore, 'magic.' This seems to be the first great and definite example within historical times of the impingement of a strange religion on Greek orthodoxy. Aristophanes and his fellow poets make all manner of fun of the Orphics, and such a passage as Euripides, *Cyclops*, 639 ff. (cf. Plato, *Rep.* 364 E), shows that Orpheus, like Musæus, had already become an inventor of magic, a sort of protomagician and doctor.² Finally, Orpheus the magician, as he appeared to the popular mind of the 5th cent. B.C., became a character of great importance in the mystic magic of later days,³ the rites of the Orphics were associated with those of the Chaldaei, the Ophiteæ claimed Orpheus as their founder, and he was even made one of the founders of astrology and alchemy. Indeed, as Hubert says,⁴ it is often difficult to distinguish between Orphic texts and magic texts. Further confusion was caused by the lustral ceremonies peculiar to Orphism, and to the association of Orpheus with the cult of Selene and Hecate. So far as the average man was concerned, the distinction between the *ἀγύρται* and the *μάντεις* and the unattached priests of Orphism (Plato, *Rep.* 364 B; Theophr. *Char.* xxx. [xvi.])⁵ was practically negligible. The standing charge against them was their emphasis on *mysteria*. But Orphism itself suffered from the fact that, being a strange religion, it was at once classed as mere magic. As such, it had no standing and inevitably began to deteriorate. It justified more and more its new name of ordinary magic, and its adherents assumed more and more the habits and point of view of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, as usual, by contact with new principles and methods of procedure. Here, of course, we have one important reason for the incomparable wealth and variety of Græco-Roman magic.

The Magi.—But of all these foreign influences on native magic the religion of the Persians, i.e. of the Magi, was perhaps the most important. At any rate, in the ordinary opinion of later times it was the type of all such influence in general. An almost immediate result, e.g., of absorption by its native rival was the designation of the new combination as *magia*. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroaster upon magic is characteristically reflected in the later history of the subject. Thus, as it was popularly believed in the ancient world that great scholars and sages—especially if, like Pythagoras, Epimenides, Democritus, and even Plato, they had also travelled in foreign parts and had been vouchsafed the ineffable mysteries of the Oriental religions—were thereby mighty magicians, if not actually the first to reveal their wondrous art to the world at large (Val. Max. viii. vii. 7, ext. 2; Solinus, 3; *HN* xxx. 3 f., xxiv. 156 ff., xxv. 13 ff.;

Plut. *Sympos.* viii. 8; Aul. Gell. x. 12; Apul. *de Mag.* 27, 31; Diog. Laert. ix. 7; Lucian, *Necymantia*, 6; Apoll. Tyan. *Ep.* xvi), we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told still later that he was also a pupil of Zaratas the Chaldaean (Lobeck, *Aglaophamus*, p. 471). Democritus broke into the tomb of Dardanus in order to secure the wondrous MSS buried with the defunct; and others say that, after being initiated by the Persian Osthanes, he became one of the fountain-heads of the tradition of alchemy.

Of these Persian sages associated with the tradition of Græco-Roman magic the most famous was Osthanes (*HN* xxx. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unutterably precious but, until his time, entirely oral tradition of ancient magic (*ib.*). The first book on medical magic was attributed to him (*ib.* xxviii. 6), and also certain apocryphal books on alchemy.¹ Of all the authors on magic he is the most frequently referred to, and his name may be found cited as an important authority in 'dream-books' still for sale.

As we shall see, all this foreign influence on magic was much discussed by the philosophers (Diog. Laert. *proem.* 1). One of the most notable contributions must have been the so-called *Μαγικός*, usually attributed to Aristotle (*Frag. Aristot.*, ed. Rose, frag. 32 ff.). Suidas (s.v. 'Antisthenes') does well to doubt Aristotelian authorship, for the symptomatically childish statements referred to it are eminently uncharacteristic of that residuary legatee of Hellenic thought, the hard-headed and highly intellectual Staggyrite.

IV. ITALIC MAGIC.—The traditional history of Italic magic is not so well attested, but the assumption that, generally speaking, it was quite the same as that of Greece is fully supported by such testimony as survives. The first Roman reference to magic is the law of the Twelve Tables ('*QVI FRVGES EXCANTASSIT. . . NEVE ALIENAM SEGETEM PELLEGERIS*')² which forbids the transference—by magic—of the crops growing in other people's fields to your own. This primitive and universal explanation of the reason why the wheat-eaters in your neighbour's field are full of grain and yours are not never died out among the Romans. It is illustrated by Pliny's typical anecdote of one Furius Chresimus (*HN* xviii. 41), and as late as the 6th cent. A.D. we are told by Agobardus of Lyons, *de Grandine et Tonitruis*, 2 (*PL* civ. 148), that in his time the belief was current that the witches had formed a sort of trust and were transporting all the crops in air-ships to a land with the significant name of 'Magonia.'

A certain amount of magic of this primitive type is preserved by the Elder Cato (*de Agr.* 70 f., 73, 96, 102, 127, 156–160) and Varro (*de Re Rust.* i. ii. 27) and is more or less discernible in later authors (e.g., *HN* xi. 5, xxviii. 4; Sen. *Quæst. Nat.* iv. 7; Serv. on *Ecl.* viii. 99; Aug. *de Civ. Dei.* viii. 10; Pallad. i. 35). It will be observed that the only difference here between magic and religion is that religion is officially sanctioned, while magic is not. The effect of the law of the Twelve Tables is simply to establish this distinction from the legal point of view.

Divination, as usual, occupies a more or less indefinite position between religion and magic. Hence *nekyomantia* was practised to a certain extent by private individuals, and Cicero's accusation of Vatinius (*in Vatini.* vi. 14) is not so extraordinary as it sounds.

⁴ *Op. cit.* p. 1499.

⁵ Lobeck, p. 625.

The usual term for a magician is *maleficus*, but the word does not occur in the law until Diocletian.¹ *Veneficium* is the generic name for any magic ceremony, whether legal or illegal, and *veneficus* or *venefica* as the epithet of a magician is used in the same way. The *magus* in Cicero's time was still more or less associated with his Persian origin, but with the first year of Tiberius² he comes under the ban of the law, and after Trajan's time the word was applied to any one who practised illegal magic (*Cod. Theodos. ix. 16. 4; Cod. Justin. ix. 18. 7*). *Saga*, 'wise woman,' is probably one of the oldest words for a 'witch' in the language, and the fact that it also means a 'bawd' is a sufficient indication of the *saga's* social position as well as of her specific functions as a magician. She is one of the standard characters of the Roman elegy. *Striges* (*striga*, Petron. 63; Ital. *streghe*), lit. 'screech owls,' was a name for witches which records the popular Roman explanation of vampires.

As the Greeks looked upon Thessaly, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etrurians knew how to call up the dead, bring on rain, and discover hidden springs (Wissowa, in Pauly-Wissowa, s.v. 'Aquilex'). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Paeligni were particularly famous for certain magic powers (Verg. *Aen.* vii. 758; Hor. *Epod.* v. 76, xvii. 29, 60, *Sat.* i. ix. 29 f.; *HN* xxi. 78; Ovid, *Fasti*, vi. 141 f.). The Romans saved the Etruscan *haruspina* at an early date by naturalizing it. Cato (*de Agr.* v. 4) classes it with the rituals of the *augures*, *haruoli*, and *Chaldaei* as a matter which any solid farmer would do well to avoid; but, although he himself was doubtless unaware of it, his own charm for a sprained hip has a suspiciously foreign sound. Even then Roman magic had been exposed for some time to the influx of foreign religions which set in soon after the Second Punic War; the overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principal Roman source for the details of magic practice is the poets—and the poets confine themselves for the most part to the Greek tradition. The result is that after Cato's time we are dealing not so much with Greek magic or Roman magic as with the magic of the Græco-Roman Empire.

Before referring to the ancient literature connected with this subject—originally enormous and still formidable—it should be observed that no small amount of magic of a certain type had already passed into the category of what Hubert aptly calls 'magic éternelle,'³ i.e. magic too old to have a definite origin, and so common that the fact that it was ever magic at all has long since been forgotten—in short, magic that has been secularized and is reckoned merely so much scientific knowledge already acquired. This explains why Pliny, a hard-headed Roman who had no use whatever for what he would define as magic, is for us a principal source for those magic formulæ and incantations which long usage had made a part of medicine and the various sciences with which he deals. And to a greater or less extent similar material may be found in any other ancient authority who deals with the same matters. One of the most important themes of Græco-Roman science was the tradition of the given subject. Perhaps this explains the curious fact that in the course of time the very word *φυσικός* itself acquired the secondary meaning of 'magic.'

For these as well as for other reasons already given, few sources are so valuable to the student of Græco-Roman magic as the ancient treatises concerned with medicine, especially if, like Pliny, the author is an inveterate collector of useful information, or if, like the *de Medicamentis* of Marcellus, the book is intended for home use. One of the most notable and characteristic develop-

ments of antiquity, especially during and after the Alexandrian age, was the extent to which every conceivable subject of a scientific or quasi-scientific nature was treated as literature, particularly as a theme for verse. In such cases whatever magic there was in the subject was rarely forgotten. Valuable sources for the magic of medicine, therefore, are the *Theriaca* and *Alexipharmaca* of Nicander (even more famous were the lost poems on the same subject by Æmilius Macer) and the long passage on snakes in Lucan, ix. 607-937, which doubtless owed much to Macer. Particularly valuable, too, are those writers who deal with some homelier branch of medicine, such as the art of the veterinary—like Palladius and the authors of *Hippiatrica* and the *Mulomedicina*. Especially notable among physicians are Ætius of Amida, Theophranes Nonnus, and Alexander of Tralles, but, above all, Cyranides and Dioscurides. Scribonius Largus and Serenus Sammonicus also might be considered. In short, any ancient doctor, however wise or learned, is likely to contribute something to medical magic.

The writers on agriculture and kindred themes (e.g., Cato, Varro, Columella, the author of the *Geoponica*, Gargilius Martialis), the writers on botany, beginning with Theophrastus (*Historia Plantarum*), the naturalists, and the writers of *φυσικά*, like Neptunalius, are valuable. The same is true of antiquarians like Gellius and Macrobius, of the *Paradoxographi*, of the *Agrimensores*, and of the *Parœmiographi*. In short, omitting for the present that large and important class of writers who deal with the subject merely as a literary asset, any ancient author, no matter what his theme may be, is likely to contribute something to our knowledge of contemporary magic.

It is the philosophers, however, especially the philosophers of a certain type, who are most intimately associated with the most remarkable phase in the history of our subject. We have already seen at how early a date the spiritual life of antiquity began to feel the impact of foreign ideas and systems. The Orphics, the Magi, the worship of Mithra, the Assyrians, the Babylonians, the Phœnicians, the Egyptians, the Hebrews—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory. Laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless. The classical world was a babel of creeds, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly *saga* to the impressive *Chaldaei*. As yet the average man of birth and education was not, as one might say, dangerously affected by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great tide of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was world-wide. Men needed new wine, and the old bottles could not contain it. The craving which for generations had been more or less vague grew in volume and intensity, and finally reached its acme not far from the beginning of the 2nd cent. of our era. There were creeds then—like those of Isis and Mithra—that would seem to have just missed becoming great religions of the future. There were men, too, in that period—e.g., Apollonius of Tyana and the Peregrinus of Lucian—who were philosophers of the contemporary type,

¹ Mommsen, *Strefrecht*, p. 640, n. 3.

² *Id.* p. 640, n. 7.

³ *Op. cit.* p. 1501.

and posed as the more or less inspired founders of creeds—all charlatans, of course, but not entirely so; and it is not altogether inconceivable that the names of some of these men might have gone ringing through the ages instead of being merely an object of occasional scholastic contemplation.

Mysticism.—The unusual prominence of magic in this period is symptomatic and due to a number of causes. There was, of course, the ignorant lower class, who always believe in magic. But there was also a higher class, fairly well educated—heavily recruited in a period like this—who had lost their faith in orthodoxy, but who lacked the character to seek the truth elsewhere and the continuity of purpose to attain it. They preferred to give themselves up to whatever promised the incredible—in a way sufficiently dramatic and interesting to gratify the taste for novelty. Under such circumstances there is always another class ready to cater to this form of intellectual and spiritual dissipation. Both these classes—the willing deceivers and the willingly deceived—are pictured to the life in Lucian's admirable skit, the *Philopseudes*, i.e. 'Liars for the love of it.' A few, of course, ridiculed the whole matter; the most notable example is Lucian himself, who has been well named 'the Voltaire of antiquity.' Others undertook to demolish magic by argument; chief among these were the Sceptics, the Cynics, and the Epicureans, i.e. those who did not believe in orthodoxy, and therefore, by our familiar criterion, were not logically driven to accept the reality of heterodoxy. Finally, however, there were also others—especially the Gnostics and the Alexandrian school of philosophy—who, after honest and conscientious investigation, became responsible for the most remarkable development of magic in Græco-Roman times. This is the magic of mysticism in its various forms. Among the most important authorities for this aspect of the Alexandrian school are Porphyrius (*de Abstinentia* and *de Mysteriis*) and Proclus (*de Sacrificio et Magia*). The theory, as Hubert observes,¹ is one in which the philosophical and the religious elements are still imperfectly differentiated. It is a synthesis of all the known methods of acting on the powers of the supernatural world. It is halfway between religion and ordinary magic, and capable of moving in either direction. The philosophers, of course, emphasized the religious character of the combination, but, as Augustine (*loc. cit.*) saw, and as Porphyrius himself acknowledged (quoted by Eus. *Præp. Evang.* v. 10), they could make no satisfactory distinction between *goetia*, *magia*, and *theurgia*. Their principal criterion was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their *theurgia* became dissociated from religion; its position in society, like that of the *theurgia* of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of magic. The attack on Apuleius was supported more by the various initiations of which he was so proud and the sanctity of the traditions which he invoked than by any specific acts of magic with which he was charged. *Theurgia* did afterwards enter religion, but it entered by the Gnostics, not by the philosophers—and this only in so far as the Gnostics who transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithra gave a religious character to theories and ceremonials that in Pliny's time (*HN* xxx. 17 f.) were described as magic. On the other hand, it was always difficult to distinguish between the Ophitæ and the regular associations of magicians.²

¹ *Op cit.* p. 1501.

² Dieterich, p. 149.

Theurgical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philostr. *Apoll. Tyan.* vii. 39). Among the most important works were the *Karà Máγav* of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his *Pseudomantis*), and the *Γοήτων Φωρά* of the Cynic Enomæus. The *Ἱπὸς Μαθηματικοῦ* of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (e.g., in his *Alexander seu Pseudomantis*, *Demonax*, *Philopseudes*, etc.), they attacked not only magic, but everything marvellous in either religion or mythology. Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians. All magic is a mere pretence, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (*de Civ. Dei*, xxi. 6); and, indeed, the Church Fathers in general are far from denying the existence and power of magic (Epiph. *Hær.* xxxiv. 1; Tert. *Apol.* 35, *de Anima*, 57; Eus. *Præp. Evang.* v. 14), especially in those early days when it seemed necessary to make the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians and their faith was magic (Iren. *Hær.* i. 13 ff.; Justin Martyr, *Apol.* i. 26). Paganism in any form was magic. For the Alexandrian *theurgi* the difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, *per se*. And the same old distinction carried with it the same old assumption that the one was just as real as the other. The Christians never seem to have realized any more than did their pagan forefathers that the difference between their gods and other people's gods might conceivably be the difference between gods who are and gods who never were. The only way to deal with the pagan gods was to classify them as evil demons (Tatian, *Orat.* viii.). They were just as real as ever; the marvels and prodigies attributed to them were just as real and just as readily believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still nodded and gave signs from time to time, just as they had always done; but that was a *magica operatio* wrought by the demons of the old religion (Iren. *Hær.* v. 28. 2; Eus. *HE* ix. 3). The persistence of this old prodigy of nodding, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous mediæval story of the 'Ring of Venus.'

Of particular interest to the student of magic of this strange period are such surviving treatises as the *Poimandres* of Hermes Trismegistus, *Asclepius sive Dialogus Hermetis Trismegisti*, the *Hieroglyphica* of Horapollon, and the astrological works

of Nechepso and Petosiris.¹ The literature of the magic oracles belongs to astrology as well as to magic. Another important source is the *Tabellae Devotivae*, so many of which have come to light in recent years.²

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert³ gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (*op. cit.*), L. Mitteis and U. Wilcken, *Papyruskunde* (Leipzig, 1912), the *Archiv für Papyrusforschung*, and the occasional reports in Bursian's *Jahresbericht des klassischen Altertums*.

The magic papyri belong for the most part to the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain habitual formulæ are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (*HN* xxx. 1 ff.) of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Osthanes. Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phœnician. (2) The second is the Jewish school, descended from Moses, Iamnes, and Iotapes (*Pap. Mag.* p. 755; *Apul. de Mag.* 9; *Ex* 7¹⁰⁻¹²), and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephotes to Psammetichus, a charm of Solomon, or a letter of Pitys, the Thessalian, to Osthanes. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brāhmanical elements in this strange compound. Assyro-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence,

and they doubtless encouraged the impression that they were the only depositaries of the genuine tradition of real magic. But, as Hubert remarks,¹ they brought no organized system to bear upon the Græco-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, which was presented in Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their god, as we should expect, is frequently mentioned in incantations, especially the different forms of his name (Aoth, Abaoth, Arbathiao, Abriao, Adonai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon² has explained 'Abraxas' as a corruption of the Hebrew benediction *hab-b'rāk'hāh dāb'h'rāh*, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequent in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so utterly strange, and an alphabet which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of any country as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the *Book of the Dead*,³ a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Græco-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Hebrew archangels. It is equally surprising to see Sabaoth approached with Greek rites. Often special efficacy is gained by issuing a sort of general call to all the pantheon or—which, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturally turns to the foreign religions. It also believes that the plural is more redoubtable than the singular. Hence the more or less chaotic pantheon of magic, especially in its more advanced stages, the symptomatic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. THEORY OF MAGIC.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. But the main ideas, the essential principles from which they all derive and upon which they

¹ See W. von Christ, *Gesch. der griech. Litteratur*, Munich, 1903, § 820, for editions, etc.

² See esp. W. S. Fox, 'The Johns Hopkins *Tabellae Devotivae*,' *AJPh*, Suppl. to vol. xxxix. [1912] and references.

³ *Op. cit.* p. 1503 ff.

¹ *Op. cit.* p. 1513.

² *Greek Papyri in the Brit. Museum*, London, 1893 ff., i. 63.

³ *Ed.* E. A. W. Budge, London, 1899, p. cli.

are all founded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (*κράτος*) is a constraint, any form of metamorphosis (such, *e.g.*, as lycanthropy) is a constraint, *fascinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, nailing down, and their opposites. A magic act is a *κατάδεσμος*, a *κατάδεσις*, a *defatio*, a *devinctio*; the removal of its effect is an *ἀνάλυσις*, a *solutio*, and the corresponding verbs are, *e.g.*, *καταδέω*, *defigo*, *λύω*, *solvo*. The language of charms and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

'The object of every magic act is to put beings or things into or take them out of a state in which certain movements, certain changes, certain phenomena must infallibly ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.'¹

1. The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy explains much, it should not be forced to explain all. This would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two different ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not apply it too rigidly. There are cases in which the characteristic features of both methods are more or less traceable. We must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form among the Greeks and Romans is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and *φάρμακα* of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the Greeks and Romans were concerned, the supernatural power had already intervened in the preparation of the given article; and the magician's characteristic method of pluralizing for power is naively illustrated by the rule that in preparing a *φάρμακον* one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, *i.e.* *φάρμακα*, helps to explain the magician's particular interest in the properties of plants and simples. For a similar reason the alchemist is particularly interested in the properties of stones and gems; some of them are sovereign for certain diseases, if ground up and taken inwardly with the appropriate ceremonial. Primitive medicine is a fearsome adventure for the patient. In rare cases the *mana* inheres in the object as such, but this is generally a secondary conclusion. As a rule, the *mana* is acquired, or merely accidental. Some objects are only conductors of *mana*—which explains why they can be

used for apparently contradictory purposes. Other staple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are selected according to the usual rules—some real or fancied resemblance, especially the association with some god, etc. A certain thing, *e.g.*, is yellow, therefore it is good for jaundice. Such odd names for plants as 'Jove's Beard' or 'Venus' Ears' record associations with gods, and were doubtless originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets.¹ Sometimes the decision is made from etymology, true or false; the *reseda* owes its power to its name only (*HN* xxvii. 131). The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism.² As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert³ defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in prefiguring the desired action and result (*Tib. I. vi. 53 f.*; *Soph. Aias*, 1175)—

e.g., apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (*HN* xxii. 140; *Marcellus*, xxvii. 128).

The same idea of contact and sympathy creates the familiar rule of magic homeopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *exuviae* of Aeneas had a special function and a special significance in the pretended *solutio amoris* of the unhappy Dido (*Æn. iv. 494 ff.*). Without assuming the active co-operation of this principle, we cannot appreciate the true inwardness of the most striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (*Tib. I. ii. 46*)—which is one important reason why witches were so often accused of haunting the graveyards (*Hor. Sat. i. 8*; *Lucan*, vi. 530), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (*Petron. 63*; *Apul. Met. ii. 21*). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (*Tib. I. ii. 57 f.*, with the present writer's note; *Macrob. iii. ix. 2*; *HN* xxviii. 18, iii. 65; *Plut. Quæst. Rom.* 61 [p. 279 A]; *Serv. on Æn. i. 277*; *Solinus*, 1; *Lydus, de Mens. iv. 73*), is only the *alias* of the great city with world dominion. The true name, *i.e.* the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been

¹ Dieterich, p. 171 ff.

³ *Op. cit.* p. 1507.

¹ Hubert, *op. cit.* p. 1506.

ceremonially named with the true name of the person whom it is meant to represent.¹

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (*Hippol.* 478 f.),

είναι δ' ἐπὶ τοῖς καὶ λόγοις θελήσειον
φανίσσεται τὴν τῆς φάρμακον νόσον,

echoed by Horace (*Epist.* i. i. 34 f.) in

'Sunt verba et voces quibus hunc lenire dolorem
Possis et magnam morbi deponere partem,'

are true not only of magic theory in general, but of the Græco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (*e.g.*, *HN* xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

'Salvum sit quod tango!' ejaculates Trimalchio piously (*Petron.* 63), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired result must ensue. But which words? Ancient formulæ connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Ephesia Grammata* attributed to the Dactyli.²

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Mere music, *e.g.*, as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Väinämöinen, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stridor* and *stridere*. The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek *γογγύεα*. The *γογγύεα* were specifically necromancers and, as we saw above (p. 271^b), they were supposed to have received their name from the most notable

peculiarity of their magic, viz. 'from their wailing and crying among the tombs.' So, long afterwards, in Græco-Roman times the charms described by *stridor* and *stridere* are very characteristic of *nekromantia*. If so, and we can hardly doubt it, the inarticulate magic charms connoted by these two words should be just those described as 'wailing and crying among the tombs,' and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stridor* and *stridere* outside the sphere of magic itself are illuminating. (1) One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

'Ecce inter tumulos atque ossa carentia bustis Umbrarum facies diro stridore minantur' (*Petron.* cxlii. 137); 'auribus incertum feralis strideat umbra' (*Lucan.* vi. 628; cf. *Stat. Theb.* vii. 770; *Sil. Ital.* xlii. 600; *Claudian.* in *Ruf.* i. 126; *Ovid.* *Fasti.* v. 458; *Verg.* *Æn.* vi. 492f.; *Hom.* *Od.* xxiv. 5; and *Hor. Sat.* i. viii. 40 f.).

By the doctrine, therefore, of sympathy the *stridores* of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) *Stridor* is regularly used to describe the hoot of the *strix*, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the *βαιοθάνατοι*, questing ghosts of those who died before their time (see *HECATE'S SUPPERS*). No wonder the *strix* is the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The *strix* is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on *Tib.* i. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Protesilaus is a case in point (*Roscher.* s.v.), also the story of the Lamia (*Philostr.* *Apoll. Tyann.* iv. 25) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (*Mirab.* 1) which is the prototype of Schiller's 'Braut von Korinth' and Gautier's 'Morte Amoureuse.'

But witches can turn owls whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor.* i. viii. 13-18, speaking of Dipsas, the redoubtable saga with eyes of different colours ('pupula duplex'),³ says:

'Hanc ego nocturnas versam volitare per umbras
Suspicio et pluma corpus anile tegi,
Suspicio, et famast; oculis quoque pupula duplex
Fulminat et gemino lumen ab orbe micat;
Evocat antiquis proavos atavosque sepulcris
Et solidam longo carmine findit humum.'

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pamphila in Apuleius (*Met.* iii. 21). She assumes the form of a *strix* to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *succuba*, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very marrow in his bones. Hence it is that the Græco-Roman screech-owl, who, even at her best, as Pliny substantially says (*HN* x. 34), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as

³ See K. F. Smith, in *Studies in Honor of B. L. Gildersleeve*, Baltimore, 1902, p. 287.

¹ E. Rohde, *Psyche*, Tübingen, 1907, p. 61; often in the papyri.

² See E. Kuhnert, in Pauly-Wissowa, v. 2771-2773, and references.

much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the *strix* is a real *strix* or a witch in the form of one (Ovid, *Fasti*, vi. 141)? Indeed, as early as Plautus (*Pseud.* 820; cf. Propert. iv. v. 17) *striges* already meant 'witches' as well as 'screech-owls,' and this designation of what is evidently the Roman parallel of the old Greek *γούρις* records a popular belief which showed no tendency to diminish in later days.

2. Sources of magic power. — Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert¹ remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing,² and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian *theurgi*. Here, of course, the characteristic Græco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The *theurgi* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religio-philosophical system permeated with the ideas and ceremonials characteristic of mysticism. Asceticism was recommended, but, above all, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. *de Idol.* 9 f., *Apol.* 35). Indeed, Maria the Jewess was instructed by God Himself.³ Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses'⁴ gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the *κοσμοποιία* (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, *i.e.* the universal powers. The magician, especially the magician-chemist, derives his power from the acquaintance with the forces of nature. He has established *rapport* with the universe; and, as there is also *rapport* between all the parts of the universe, he has extended his power over the entire universe as a whole. Thus, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.⁵

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of serious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the con-

struction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown or easily lost. Children, *e.g.*, merely as such, sometimes possess it.¹ Virginity has always been considered an important condition of the power to prophesy (*Geopon.* xi. ii. 4; Plut. *de Defectu Orac.* 46).² The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Demosth. c. *Aristog.* i. 17; Aristoph. *Nubes*, 749; Lucian, *Dial. Deor.* xx. 10, *Dial. Meretric.* i. 2, iv. 4, *Bus Accus.* 21). We have already seen how important they are in the mythology of Greek magic, and this is true of all magic. They are less prominent in the magic of the mystics and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, immemorial magic of everyday life in Greece and Rome they never lost their importance. As a *φάρμακός*, Medea was typical of her sex. The knowledge and practice of *φάρμακela* as a branch of magic were always more or less confined to women.

The distant, the foreign, the strange, the unusual, even the horrible, are all important factors. 'Magic' is a primitive name for anything abnormal. Those who come from distant countries, especially if, like the Brāhmans (Philostr. *Apoll. Tyann.* iii.), they are also the priests of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magnifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift. Any person with the evil eye is a magician; so, too, the ventriloquist (schol. Aristoph. *Vespæ*, 1014; Plato, *Soph.* 252 C; Plut. *de Defectu Orac.* 9). Anything abnormal about one's birth or pedigree is likely to give one magic powers. Persons born with a caul have the gift of prophecy. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catullus, xc.; Xanthus, frag. 28 [*FGH* i. 43]; Sotion, *ap. Diog. Laert. proem.* 7; Strabo, p. 735). Sometimes whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105);³ some—*e.g.*, the Thibii (*HN* vii. 17)—owe it to the possession of the evil eye; others have some particular speciality.

The Ophiogenes, the Psylli, the Marsi, etc. (ib. xxviii. 30, vii. 13-15), can kill snakes simply by breathing on them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Corinth could calm tempests (Hesych. and Suidas, *s.v.* ἀνεμοσίτρα), and so on. Many similar statements made by Alexandrian authors and others now lost are preserved by Pliny (*HN*, esp. bks. vii. and xxviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked. — But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as characteristic of the world at large as it was of Plato and his

followers (Plut. *de Defectu Orac.* 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Pena, Empusa, the Μοῖραι, Ἀράκαι, and Βασκοῦναι are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely ἀρρόποιαι, or emanations. The efficacy, e.g., of the ἰνυξ demands, as Hubert observes,¹ the creation of a demon or of a special god²—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremonial is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he can command. He calls on some appropriate god, e.g., to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite itself is due; hence the theory of the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to act upon and use the supernatural powers either as energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons. Plato himself (Suidas, s.v. μαγεία), as well as the average man, attributed to them the success of any magic rite.³ The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of inferiority to the great gods. In fact, as time goes on, the realm of the supernatural assumes more and more the aspect of an Oriental despotism with a thoroughly organized bureaucratic government, all in the hands of demons. There are secretaries and under-secretaries, guards, doorkeepers, messengers—a regular hierarchy of demoniac officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and the occasional person with 'influence,' i.e. the magician; and it is curious to see how soon and easily the latter assumes the methods and attitude of the influential citizen who lives under a similar government in this world. If he wishes to reach the ear of the all-highest at the other end of the line, he addresses the demon of lowest rank, the message is transmitted through the appropriate channels, and in time he gets his answer. Indeed, as in all such governments, the first demoniac underling may be so nearly human and, therefore, so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyrius (*de Mysteriis Aegypt.*), and, in fact, the prominence of it is particularly characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of γοητεία to the latter. The demons were identified with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to

the rank of demons, became messengers of the universal deity (Aug. *de Civ. Dei*, ix. 19), while the archangels, Michael, Gabriel, etc., take rank with the *archontes* of the Gnostics as tutelary gods of the planets (W. Anz, *TU* xv. [Leipzig, 1897] *passim*). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatives, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the *νεκυδαίμονες*, especially those who, like the *βαιοθάνατοι*, died violent deaths or otherwise before their time, or never received proper burial, and therefore cannot rest in their graves.⁴ The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.⁵

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves practised magic (Apollod. i. ii. 1, iii. vi. 8); indeed, Pindar says (*Pyth.* iv. 213 ff.) that it was Aphrodite herself who taught Jason how to 'draw down the moon'; and so the magician would naturally turn to them (Apul. *de Mag.* 31). The preference is, of course, for the *di inferi*—Hades, Demeter, Persephone, Baubo, the Praxidikai, the Erinyes, Gaia, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddess *par excellence* of magic and magicians throughout antiquity, is Hecate-Selene,⁶ the Dea Triformis of the cross-ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and φάρμακα. The most famous and dramatic incantations of antiquity are associated with her. The *lunula*, the ἰνυξ, the *selenitis*, the redoubtable *spuma lunaris*, and the *rhombus* are only a few magic objects and properties directly associated with her. The schol. on Apoll. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Musæus was called her son, etc. Next to her, perhaps, especially in the magic papyri, comes Hermes Chthonius, often confused with Hermes Trismegistus (Diog. Laert. *proæm.* 7; Porphyr. *de Abst.* ii. 16).⁷

But the *Κύριοι Θεοί*, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the babel of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who are supposed to be identical with him, or of using Ἰδω as the name of the god of gods, or Ἰδω, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaphroditic form for the same purpose—all these are so many illustrations of the magician's inveterate habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.'⁸ Nothing was left but the name, and even

this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompanying ceremonials had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of pluralizing for power, of summoning from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The *Διαβολή πρὸς Σελήνην* preserved in the *Papyrus Paris*, line 3622 ff., is an interesting example of what was considered efficacious against the wrath and vengeance of Πόρνια Σελήνη, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.¹ He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are *ἀγνεία*, 'purity,' ablutions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity² (cf. Tib. II. i. 11 f.; the regular *secubitus* so often referred to by the elegiac poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.³ The costume must be flowing, i.e. without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to).⁴ Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This

is vital. In most cases there are gestures which cannot be omitted.¹ Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Gargilius Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with Selene-Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.³

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard *nekyomantia*. Both are favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.⁵ It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connexions; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's *mana*. The divining rod,⁴ though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s.v. 'Aquillex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of *dactylomantia* (Amm. Marc. XXIX. i. 29 ff.), the lamps in *lychnomantia*, the basins of water in *lecanomantia*, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the *τύγξ* (Pind. *Pyth.* iv. 213, and often), the famous *rhombus*, *turbo*, or *vertigo*, i.e. the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

³ *Op. cit.* p. 1516 ff.

⁴ J. Heckenbach, 'De Nuditate sacra sacrisque vinculis,' in *RVF* ix. 3 [1911].

⁵ See Abt, *op. cit.* p. 148, n. 3, for literature on this point.

⁴ The examples of its use in classical literature are collected by E. Norden, *Jahrb. für Phil.*, Suppl. Bd. xviii. [1894] 317 ff., 319 n.

All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of *incubatio*.¹ The purpose of *incubatio* is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner's famous dissertation afterwards incorporated and extended in W. H. Roscher's *Ephialtes: eine pathologisch-mythologische Abhandlung über die Alpträume und Alpdrücken des klassischen Altertums*, Leipzig, 1901.² Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one's head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the *incubus*, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the *incubus* itself is to a surprising extent determined by the sleeper's surroundings, especially by the material and texture of his coverings. Such being the case, though L. Laistner³ goes too far in his theory that the *Uralptraum*, the primeval nightmare, is the father of all mythology, we may at least suspect with Roscher that Pan's legs were the inevitable result of the style of bed-quilts used by his primeval worshippers (cf. Latinus's method of securing an interview with Faunus in Verg. *Æn.* vii. 81 ff.), and, for that matter, that the *incubi*, *succubæ*, *striges*, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But of all magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. *Æcl.* viii. 74 f.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, e.g., wasting away to death with no apparent cause (Ovid, *Amor.* iii. vii. 29 f., *Heroid.* vi. 21, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Callisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Eus. *Præp. Evang.* v. 12 ff.).

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. *Sat.* i. viii. 25 f.).⁴ Occasionally even three figures appear to have been used (schol. Bern. on Verg. *Æcl.* viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (*loc. cit.*) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient.⁵ The value and philosophy of *exuvie* have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc.⁶ Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet⁷ (Apol. *Met.* i. 10, *de Mag.* 53).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator's instructions to the intervening demon in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a *devotio*, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.⁸

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.⁹

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic *rapport*, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development. From being a means to an end they became magic *per se*. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures.⁷ Examples still surviving are 'abracadabra,' and 'sator arepo tenet opera rotas' (see *Thesaurus Ling. Lat.*, s.v. 'Arepo'). The *Ephesia Grammata* belong to the same type (Porphyr. *de Myst.* vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power *per se*—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony,

gesture, or word (Eus. *Præp. Evang.* v. 14). Odd numbers have always been significant (Verg. *Ecl.* viii. 75, and often), three and multiples of three are sacred to Hecate, and certain special numbers like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the operator in acquiring the desired power (Theocr. ii. 3, 10, 159). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, the usage of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naive analogy set forth, for instance, in the old hexameter quoted by Eusebius (*Præp. Evang.* iv. 9)—

Φαίδρα μὲν οὐρανίους, χθονίους δ' ἐναλίγκια χροῖη,

'dark victims to the powers of darkness, light to the powers of light—

the gods to whom magic habitually addresses itself are the gods of the under world. So wine,¹ honey, milk, perfumes, meal (Theocr. ii. 18, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (Lucan, vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (Hor. *Epod.* v.; Philostr. *Apoll. Tyann.* viii. 5),² and, for that matter, against any heretical sect with secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with wearisome regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath.' In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it *in toto*. We can hardly expect such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic *per se*.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is,

therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the conditions of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a *devotio*), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The *καθάρματα*, for instance, the ceremonial remains of the sacrifice to Hecate (see HECATE'S SUPPERS), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (Verg. *Ecl.* viii. 102, with the notes of Conington and Forbiger). The *Μαρτεία Κρονική* (Pap. Paris. 3096) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

Ἀπέλθε, δέσποτα, κόσμον προπατήρ, καὶ χώρησον εἰς τοὺς ἰδίους τόπους, ἵνα συντηρήῃ τὸ πᾶν. Ἰλῆως μὲν, κύριε.

It will be seen, therefore, as Hubert observes,¹ that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for these elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the infernal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christian magicians (Iren. *Hær.* i. xiii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Græco-Roman paganism there seems to have been no such parodying of religious rites—above all, no such deliberate and malignant desecration of things considered divine as that of which we hear so much in mediæval magic and which appeared again in the modern cult of Satanism (*q.v.*), as described some years since by Jules Bois² and as utilized for purposes of fiction by J. K. Huysmans.³

Summary.—In so far as there was any real and essential difference between magic and religion in Græco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize those primitive doctrines—notably the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to re-arrange, re-interpret, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Græco-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured means for securing it. When it rose in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been carefully educated and refined, it was still haunted by the old ideas, and generally ended by infecting with them its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but, among other things, they show that, under the circumstances, the old rule of official recognition was eminently wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whether it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sins. If it had clung to the native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent. the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the æsthetic sense, it steadily degenerated into utter absurdity as pretentious and complicated as it was dreary and commonplace.

But, fortunately for us, Græco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and, as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival

of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib. I. v. 41; Propert. iv. vii. 72). Nor was the charge by any means always unfounded. *Pocula amatoria* were a regular specialty of the *lena*, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jerome, *Chron. Euseb.*, 1924; Sueton. *Calig.* 50).

VI. *MAGIC IN LITERATURE.*—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, sciences, and professions, in law, religion, and philosophical discussion, in history, anecdote, and any other record of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Græco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Romantic historians of the Alexandrian age, the Paradoxographers, the writers of *novelle* and tales of marvel, even the practice debates of the rhetorical schools, and, in later times, the throng of professional declaimers for whom those schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and department. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to its æsthetic possibilities than was Homer himself, and he created a tradition of its literary use which not even the semi-Oriental and unutterably dreary fooleries of the papyri were able entirely to destroy.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is *nekyomantia*, calling up the dead to ask them questions. *Nekyomantia* is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. I. ii. 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though by no means necessary, preparation for *nekyomantia*. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is

merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. *Cedip.* 571; Lucan, vi. 728). As we have seen, the literary use of *nekyomantia* begins with the famous passage of the *Odyssey* (xi. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Erichtho's special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. *Nekyomantia* had a long and brilliant tradition in the drama. Examples still surviving are Aeschylus, *Persae* (the ghost of Darius), and Seneca, *Cedipus*, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. *Klymares Xapwetois*, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the world below. *Nekyomantia* was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled *Nekyomantia*, and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, *Sat.* i. viii., and Lucian's *Nekyomantia*.

If we choose to emphasize the literary influence as such of the Homeric *Nekyia*, we can say that it is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the *Aeneid* and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the *Frogs* of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the *Kardbasus eis Aïdou*, which practically became conventionalized as a *mise-en-scène* for the presentation of doctrines and opinions. Allied to it are such examples as Horace, *Sat.* ii. v., Seneca, *Apocolocyntosis*, such works of Lucian as the *Dialogues of the Dead*, and Claudian's attacks on Eutropius. The *Epicharmus* of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Sotades used it to a notable extent.

But, while *nekyomantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.'¹ It is first mentioned in surviving literature by Aristophanes, *Nubes*, 750, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mime of Sophron in the time of Xerxes, the lost *Thettale* of Menander (*HN* xxx. 7), the second *Idyl* of Theocritus (founded on Sophron), and the eighth *Eclogue* of Vergil (founded on Theocritus). Certainly, too, Lucian, *Philopseudes*, 14 ff., is a

masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *milieu* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's' story of how his disciple, Glaucias, was saved by the great 'Hyperborean' magician. It seems that Glaucias, a rich young orphan whose father had been dead about a year, fell fairly ill with love for the disdainful Chrysis—a genuine prototype of Jemmy Grove and cruel Barbara Allen. His condition became so serious that the 'Professor,' as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minae had to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of *nekyomantia*, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Hecate came up, how the ghosts flocked around, how, at the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chrysis.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaucias's door, in rushes Chrysis, throws her arms around him, *ὡς ἂν ἐμυαδέραρα ἐπόρα* ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon to heaven, down sank Hecate to Hades, and all the ghosts disappeared.

But the 'Professor's' listener is not duly impressed. Besides, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborean magician, one goddess, and one clay ambassador to unite in overcoming the disdain of a girl who, as every one knows, is ready to follow a man to the North Pole and beyond for twenty drachmas.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Nights*. Transformation was Circe's speciality, and the Homeric account of her methods (*Od.* x. 212 ff.) has always remained the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those in which Apuleius (*Met.* iii. 21 ff.) and Lucian (*Asinus* [the common source of both was the lost romance of Lucius of Patras]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fotis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where the transformation is confessedly due to magic. Vergil's sorceress, e.g., says that she has seen the werewolf transformation with her own eyes and that it was done by magic:

Has herbas atque hæc Ponto mihi lecta venena
Ipse dedit Moeris (nascuntur plurima Ponto);
His ego sæpe lupum fieri et se condere silvis
Moerim' (*Eccl.* viii. 95 ff.).

But in all the famous werewolf stories of antiquity,¹ as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which Æolus gives the bag of winds to Odysseus (*Od.* x. 19 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apoll. Rhod. iv. 1652 ff.). Ovid (*Met.* vii. 160 ff.) gives a full and dramatic description of her charm for renewing the youth of Jason's father, Æson. More famous was her pretence of doing the same favour for the aged Pelias at the instance of his daughters (Apollod. i. ix. 27; Hygin. *Fab.* 24; Macrobi. v. xix. 9 f.). This was the theme of the lost *Περφόρου*

¹ W. H. Roscher, *Selene und Verwandtes*, Leipzig, 1903, with a plate reproducing a vase-painting of the process; M. Sutphen, in *Studies in Honor of B. L. Gildersleeve*, p. 316.

¹ J. Heckenbach, *op. cit.* p. 86; Kirby Flower Smith, *JHC*, 1893, *Publicat. Modern Lang. Assoc. of Amer.*, 1894.

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.¹

Creusa's robe was a famous theme. Euripides (*Medea*, 1156 ff.) merely described the awful effect of it upon the wearer; Seneca (*Medea*, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of *nekyomantia*. As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, *Met.* ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, *Epod.* v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (*Hor. Odes*, iv. i. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a savage wants snake-poison for his arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged agonizingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a *φάρμακον* secured in a special way for a special purpose.

The gathering of herbs is another preliminary of *φάρμακα*, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with *Medea* (Apoll. Rhod. iii. 843 ff.; Valer. Flaccus, vii. 323 ff.; Ovid, *Met.* vii. 224 ff.; special emphasis was probably laid on this by Sophocles in his *Πέρικλοισι*). She went out at night and by the light of the full moon cut her plants with a brazen sickle² held in her left hand and behind her back, i.e. *ἀνερστροπενί* (see *HECATE'S SUPPERS*).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty v. Magic in the court of Love.³ Its first appearance is in the scene between Hermione and Andromache (Eur. *Androm.* 205 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frag. 646 K.; Afran. 378 R.; Lucet. iv. 1278 ff.; Tib. i. v. 43, viii. 23; Ovid, *Med. Fac.* 35 ff., *Ars Amandi*, i. 299 ff.). At some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

ately magnanimous mother of a great conqueror—any great conqueror will do—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, *Conj. præc.* 23, the position is held by the mother of Alexander; the sands of Egypt have lately disclosed the fact that in Satyrus, *loc. cit.*, it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the *Metamorphoses* of Apuleius is a veritable treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given by way of illustration.

The first (*Met.* i. 11 ff.) is told by Aristomenes, and might be called 'The Witches' Revenge.' While travelling about Thessaly a short time previously, Aristomenes ran across one Socrates, an old friend whom he had not seen for several years. The man was a monument of rags, squalor, and wretchedness; he was also in a constant state of abject terror. He had drifted into a *haison* with a famous but elderly witch named Meroe, and, in fact, had been living with her, more or less perforce, for a number of years. Now he was trying to run away. Aristomenes decided to help his friend to flee the country. He took a room at the inn, made him presentable with a bath and some clothes, the two ate a heavy dinner, accompanied by too much wine, and retired early so as to be off betimes in the morning. Aristomenes barred the doors, and for greater safety pushed up his trundle-bed against them. Socrates fell asleep at once and snored loudly, but Aristomenes lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrible noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomenes still in it was turned upside down. Then he walked Meroe and her sister, Pantha, the one carrying a leathern bottle, the other a sponge and a naked sword, and gathered about Socrates, who was still plunged in his magic slumber. Aristomenes could see all this from beneath his trundle-bed and hoped he had escaped observation, but in vain. Meroe was anxious to kill him at once with the sword, but Pantha thought it better to tear him limb from limb. 'No,' said Meroe, changing her mind, 'let him live, so that, when the time comes, he may cover his friend with a little earth.' With that Socrates' head was drawn to one side, and Meroe drove the sword into his neck just behind the left collar-bone. Then she plunged her arm into the gaping wound, and plucked his heart out. Meanwhile she caught all the blood in her bottle so skillfully that not one betraying drop escaped. When this was done, Pantha pushed her sponge into the wound, with the words:

'Sponge, sponge, born o' the main,
Haste ye, haste ye back again!
When you reach the river-side,
In the water slip and slide;
Water, water, flowing fast,
Bears you onward home at last.'

Then, after heaping nameless insults on Aristomenes, the two women left the room, the doors flew back in place, the bolts shot to (a regular occurrence in witchcraft; cf. Apoll. Rhod. iv. 41 ff.), and all was as before—all but the murdered friend. How was Aristomenes to explain that in the morning? He tried to escape, but the porter was obdurate and even suspicious. Then he went back in despair and attempted to hang himself from the window-frame. But the rope broke, and, what made it more horrible, he fell on the corpse—whereat the corpse leaped up in high dudgeon at being so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and, when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Socrates was as pale as wax, but he ate heartily, and then, at the suggestion of Aristomenes, knelt down on the bank of the stream to drink. As he leaned over, his neck gaped open, and a sponge, followed by a few drops of blood, dropped out, fell into the water, and was swept away. In a moment he was dead. So then and there Aristomenes dug a shallow grave and 'covered his friend with a little earth.'

The second story (*Met.* ii. 32 ff.) is unique as a satirically exaggerated illustration of what can be accomplished by the doctrine of sympathy when it is really given a fair chance. During his stay at Hypata young Lucius, the protagonist of the book, was entertained by his father's old friend, Milo. The rest of the family consisted of Milo's wife, Pamphila, who was a redoubtable sorceress, and Fotis, a beautiful slave-girl, with whom Lucius immediately fell in love. One night he went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, the dim shapes of two great burly figures jostled up against him on either side. Thinking they were thieves, he leaped back, whipped out his sword, and ran them both through. He was barely awake the next morning, with a vague but awful memory of what had happened, when all the magistrates appeared, full of fear and office, and arrested him for murder.

The trial scene, which begins at once, is a masterpiece. It

¹ Abt, *op. cit.* p. 173 ff.

² *Ib.* p. 159.

³ Kirby Flower Smith, 'Note on Satyrus, Life of Euripides, Oxyr. Pap. 9, 157-8,' *AJPh* xxxiv. [1913] 62-73.

all seemed like a nightmare to the prisoner at the bar, and his impressions are fully shared by the reader. What surprised him—and it surprises us too—was that the trial was held in the amphitheatre. Stranger yet, every seat was taken, and people had even climbed up on the pillars to get a better view. After the trial had gone on for hours, some one suggested that the prisoner must have had accomplices, and that he be put to the torture and made to name them. At this point the poor old mother of the two murdered ones came forward, and insisted that the unfeeling assassin be compelled to look upon his innocent victims. The corpses were brought in, lying side by side, and decently covered with a cloth. Lucius was forced, much against his will, to raise the cloth, and discovered not two stalwart men cold in death, but two wine-skins—horribly gashed by his ruthless falchion blade, but unmistakably wine-skins. A huge roar of laughter went up from the crowd. Mystified, but relieved, Lucius was escorted home in triumph. The day, he was told, was the regular festival of Risus, the goddess of laughter. His own contribution on this particular occasion had been so original and successful that the city had unanimously voted him a bronze equestrian statue. Lucius was still mystified and, indeed, somewhat resentful. As soon, however, as Fotis had the opportunity, she let him into the secret.

As Pamphila was passing the barber's shop the day before the 'murder', she had caught sight of a blonde youth from Boeotia who was in the chair having his hair cut. She fell in love with him then and there, and went straight home and began preparing a charm to draw him to her. The necessary preliminary, of course, was the possession of something belonging to him. 'So,' as Fotis says in substance, 'I was sent out to steal a lock of his hair. But the barber caught me before I could get away, and our reputation in town is so bad that he made me give up the hair, which I had hidden in my dress. I was in despair. But on the way home I passed a shop in which a man was clipping the hair off some wine-skins. So, to save a beating, I picked up some of the yellowest locks I could find, and managed to palm them off on my mistress for the real thing. She took them, and began her charm about the time you started for the dinner-party. The charm worked only too well. The robbers whom you met and slew at our door were the original owners of those locks—two passionate wine-skins struggling madly to get at their love and melt at her feet. And so it comes that "non homicidam nunc, sed utricidam amplecterer." ("the lover now in my arms is after all not a homicide, but a jugicidus").'

But nothing, perhaps, is a clearer proof of the prominence of magic in everyday life than the fact that, as H. Reich has abundantly shown,¹ the favourite and most characteristic habitat of magic as a literary asset is the most popular type of drama in the ancient world. This is the *mimus* (see DRAMA [Roman], vol. iv. p. 904). Transformations of men and animals were frequent; all kinds of charms were performed; the effects of all kinds of powerful magic were represented. Witches, warlocks, magicians, prophets, ghosts, demons, popular divinities, Empusa, Mormo, Incubo, Anna Perenna, Ephialtes, etc., were all favourite characters. The play went on in fairyland quite as often as on the Imperial streets or in the Imperial country-side. And sometimes, no doubt, it was hard to tell which was which. And yet the *mimus* was realistic—the very name insists upon it. But the investigation of Græco-Roman magic emphasizes the undoubted fact that, after all, the realism of antiquity was not, and never could be, our realism. The native gifts of imagination and fancy were too enduring, the native inheritance of mythology and folklore was too rich and interesting, to allow it. Magic was one of those vices of intellectual youth which the Græco-Roman world never quite outgrew. But intellectual youth also has its virtues; and these two great Aryan races of the Mediterranean basin, in some other respects as well, retained to the last their unique and priceless gift of never really growing old.

LITERATURE.—This is given for the most part in the text. The best and most complete discussion of the subject is given by H. Hubert, in Daremberg-Saglio, s. v. 'Magia.' L. F. A. Maury, *La Magie et l'astrologie dans l'antiquité et au moyen âge*, Paris, 1880, is still valuable as a general survey. R. Heim, 'Incantamenta magica Græca Latina,' *Jahrb. für class. Philol.*, Suppl. Band xix. [1898] pp. 463-576, collects and discusses the actual texts of surviving charms and incantations. Particularly valuable for special topics is the *Religionsgeschichtliche Versuche und Vorarbeiten* (RVV), ed. R. Wunsch and L. Deubner, Giessen, now in its 15th volume.

VOL. VIII.—19

MAGIC (Indian).—I. *HINDU*.—Indian magic is essentially the profession of certain castes, though magical rites may be practised by laymen and magical properties are attributed to countless objects. The caste which is peculiarly devoted to magic as a vocation is that of the Yogis, which is primarily Hindu but has Muhammadan elements affiliated to it. The Yogi claims to hold the material world in fee by the magical powers which he has acquired through the performance of religious austerities, but this claim soon degenerates into superstition of the worst type, and the Yogi in reality is little better than a common swindler, posing as a *faqir*. Thus, in the tale of the magic boat, the gift of it comes from a *sādhu*, or religious mendicant.¹ Brāhmins, however, possess much magical lore, though the practice of magic is not a Brāhmanical function and the sections which make a profession of it tend to form sub-castes. The Brāhmins are said to have secret books on the subject which contain over 50 *vyāyas*, or figures, consisting partly of numbers and partly of mystic symbols, cabalistic words, and geometrical figures not unknown to free-masonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc.,² as well as to ensure easy parturition.³

The Yogis in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who personate them) to reap a great harvest from the credulous.

This power is said to have been discovered by the Yogi Dina Nāth, who, passing one day by a money-changer's shop, saw a boy with a heap of copper coins before him and asked for some in alms. The boy replied that they belonged to his father, but offered him some of his own food. Touched by his generosity and honesty, the Yogi prayed to Vignu for power to reward the boy, bade him collect all the copper coin he could find in his father's house, and then, melting it down, recited *mantras*, or charms, and sprinkled a magic powder over it, whereby it was changed into pure gold. This occurred in the time of Sulṭān Altamsh (A.D. 1210-36), who witnessed Dina Nāth's performance of a similar feat, and in commemoration of it had gold *mohars* struck with Dina Nāth's name on them as well as his own. These Dina Nāthi *mohars* are said to be still found. The secret of the *mantras* and the powder has been handed down, but is known only to the initiated.

1. *Occasions*.—Magical rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

(1) *Marriage*.—The magic practised at a wedding is often symbolical. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so at weddings a Telugu bridegroom of the Baliya caste performs a mimic ploughing ceremony, stirring up earth in a basket with a stick or miniature plough.⁴ Similar rites are in vogue among the Palli,⁵ Kamma,⁶ Sambadavan,⁷ and Tottiyān.⁸ The Kamma bride carries seedlings in her lap, apparently to be planted by the groom. Among the Kāpu a milk-post of *Odina Wodier* is set up, and, if it takes root and flourishes, it is a happy omen.⁹ An Unni bride plants a jasmine shoot, whose flowers she should present to the deity.¹⁰ The parting of the bride's hair with a thorn is probably an imitation of the ploughing rite.¹¹

The Indian conceptions that all life is one, and that life is something tangible or material, come out in several rites. Thus, at the beginning of a wedding, the Bedar scatter rice and gram (*dhāl*)

⁶ *Id.* iii. 108.

⁷ *Id.* vi. 355.

⁸ *Id.* vii. 193.

⁹ *Id.* iii. 235.

¹⁰ *Id.* vii. 226. The milk-post is sometimes made of twigs of other trees—e.g., among the Agamudāyan it is made of three kinds of tree, typifying Brāhmā, Viṣṇu, and Śiva (*ib.* i. 14).

¹¹ *BG* xxii. [1884] 45.

seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are culled by the pair, taken to the village well, and cast into it—obviously to ensure their fertility.¹ An Idaiyan couple sow nine kinds of grain in seven trays,² and the Māla groom digs with his knife a few furrows, which his bride fills with grain and waters after he has covered it up.³ Apparently the widespread custom of pounding grain at weddings has a similar origin. This is done by five women, *e.g.*, in Bombay.⁴

The grindstone is also used among the Bhondāri in Madras; the bridegroom stands on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dais, and a number of married women each touch seven times with a grinding-stone an areca nut placed on his head.⁵ A Bedar couple are invited by the Brāhman priest to stand on a grinding-mill placed beneath the *pandal*.⁶

Among the Agamudaiyan a grinding-stone and a roller, representing the god Siva and the goddess Sakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp.⁷ The grinding-stone is also used in Bombay.⁸

The future offspring of the union is symbolized among the Komati by a doll which is rocked in a cradle, but both the prospective parents profess lack of leisure to look after it.⁹ The Parivāram use a stone rolling-pin to represent the child, which the husband hands over to the wife, who accepts it as 'the milk is ready.'¹⁰ The Konga Vellāla bridegroom takes some fruit and a pestle to a stone, which he worships. It is supposed to represent the Kongu king whose sanction to every marriage used to be necessary, and the pestle represents the villagers; but the fruit is not explained, and the myth is probably aetiological.¹¹ A newly-married Bedar or Boya couple sit on a pestle, and are anointed after rice has been showered over them.¹² In Bombay the rice-powder is used to personate the baby.¹³

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one.¹⁴ On the same principle women whose husbands are alive are admitted to take part in marriage rites,¹⁵ more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites.¹⁶ Similarly, widowers are excluded from certain functions.¹⁷ Unmarried girls may, however, take the place of married women; *e.g.*, among the Badaga, married women or virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking purposes in decorated new pots.¹⁸

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of the ritual for both parties at weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Alitkar of Bombay a couple already married bring pots from a potter's house to that of each party to the marriage, and after an elaborate rite the boy pours water from a

jar. A jar also plays a prominent part in other rites, including a widow's re-marriage.¹

Fish being an emblem of fertility, they are often caught by the bridal pair—*e.g.*, among the Gudigāra of Madras;² the Holeya let the fish go after kissing them.³ But the Kṣatriya, in Madras, only pretend to catch them,⁴ as do the Nambūtīri Brāhmins.⁵

The potter's wheel, symbolical of the creative power which fashions the earth as it fashions clay, is also in evidence at weddings. The clay is formed into a revolving lump, like a *linga*, and wheel and clay together bear a strong resemblance to the conjunction of *linga* and *yoni*.⁶

The Pole-star (Dhruva in northern India) is called Arundhati in Madras, and, as the wife of the *ṛṣi* Vasistha, is pointed out to the bride as the model of conjugal fidelity.⁷

(2) *Birth*.—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyi woman sometimes throws a cock down in front of the cloth on which portraits of ancestors are sewn, and makes obeisance to it,⁸ and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seed.⁹ Pregnancy, moreover, involves peculiar risks necessitating the protection of magic¹⁰ and the avoidance of various acts, such as stepping over the heel-ropes of a horse,¹¹ which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Panjāb. In Travancore tamarind juice is dropped into a pregnant woman's mouth to cast out devils.¹²

When his wife's first pregnancy is announced, a Kota husband in Madras lets his hair grow long and leaves his finger nails uncut, and on the child's birth he is under pollution till he sees the next crescent moon.¹³ A Mukkuvan husband also lets his hair grow until the third day after the birth. A coco-nut, betel leaves, and areca nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own sept.¹⁴ A Nambūtīri Brāhman also remains unshorn while any of his wives are pregnant.¹⁵

Pre-natal divination to ascertain and magic to determine the child's sex are also common. Thus the Cheruman in Madras employ devil-drivers, who seat the woman in front of a tent-like structure with a coco-nut-palm flower in her lap. When cut open, the fruits predict the child's sex, the birth of twins, and the child's expectation of life or death. The goddess Kali is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman's body.¹⁶

Another rite which is believed to influence the child's sex is the so-called *simanta* of the Sūdras in Madras. In a first pregnancy, water or human milk is poured over the woman's back by her husband's sister.¹⁷

To ensure that the child shall be a male the *pumsavana* is performed in the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolizing the male organ. Sometimes curd is poured over them before she swallows them, and she also pours juice of a grass into her right nostril.¹⁸

Quite distinct from this Brāhmanical rite is one observed in the seventh month in Travancore.

The woman goes to the foot of a tamarind tree, where she receives a thread seven yards long. This she entwines round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a handful of tamarind leaves. On re-entering the house, he also gives her tamarind juice to drink, pouring it through his hands into hers. The priestess employed in this rite then pours oil on her navel, and from the manner of its fall divines the child's sex. As she drinks the juice, the woman leans against a cutting from a mango, which is then planted; and, if it fails to strike root, the child is doomed to adversity.¹

Among the polyandrous Kammālan the woman's brother gives her rice gruel mixed with juices of the tamarind, mango, and *Hibiscus*.²

In protracted labour the washings of a brick from the fort of Chākabu or Chakrabhyu Amin near Pehoa are potent, or it suffices to draw a plan of the fort and drink the water into which the picture has been washed off.³ The origin of this rite is obscure. The 'fort of Chākabu' is a game played by children: they make a maze on paper, and one child finds his way through it with a pencil. A dot within represents the treasure which it is supposed to contain. Vaiṣṇavas of the Vallabha *sampradāya*, or school, often make their *arti* in this shape.⁴

Difficult labour is dealt with in parts of Madras by calling in a woman who has had an 'easy time'; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass water from hand to hand until it reaches the woman who had the 'easy time,' and she gives some of it to the sufferer. Here the luck or quality of the one woman is transmitted to the other.

In one caste, the Mālas of the Telugu country, who are Pariahs, the placenta is put in a pot in which are *nim* leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.⁵

(3) *Death*.—A magical rite of resuscitation is practised by the Dāsaris, a class of priests who minister to Śūdras, in Madras. If a Dāsari is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, they display their magical powers by frying fish which come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the suicide to life again. The rite can fail only if the victim's wife is in pollution or when the rite is not carried out reverently.⁶

2. *Agents*.—First-born children have power to stop rain. Muslims say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it.⁷ A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it.⁸ Girls born in the asterism of Mūla are believed in S. India to place their mother-in-law in a corner, i.e., make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.⁹

Just as charms are made out of various natural substances, so such substances often possess magical powers. The acacia is inhabited by a *jinn*, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here

¹ Thurston, ii. 416. This rite cannot be said to correspond to the *pūṣāvāna*, which is intended to influence the sex of the child.

⁹ *Ib.* § 379.

the spirit in the tree appears to endue it with magical properties; a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his bondage.¹ The tree called *barkhar* (*Celtis caucasia*) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjāb, but in that very part the Gūjars use amulets of *batkar* (its usual Indian name) to ward off the evil eye (*naṣar*) from both men and cattle, and its fruit is also much relished.²

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite.³ To cure *sayā*, or consumption, in a child (said to be due to enchantment caused by ashes taken from a burning place and thrown over or near the child) the parents should give away salt equal to the child's weight.⁴ Toothache is cured by a magical rite which consists in spreading sand over a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, he will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.⁵

After a bad dream, a Gāro, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chastisement, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.⁶

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.⁷

Magic squares are in vogue among Hindus. Thus one which totals 90 lengthways cures quartan ague; one totalling 100 every way causes excess of milk in cows and women and of *ghī* in a churn; one totalling 130 every way will, if worn round one's neck or in one's *pagrī* (turban), bring any person under one's power;⁸ and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 20 each way should be placed under one's seat to ensure success at play.⁹

⁷ *Karnāl Settlement Report*, p. 181.

⁸ *PNQ i.* § 462.

⁹ *Ib.* § 537.

The power of magic is so great that by mere assertion of its potency a *bir*, or demon, may be brought into subjection.

Fast the whole of a ninth lunar day falling on a Friday, and in the evening eat sweet rice milk. At 8 p.m. don red clothes perfumed, and make a circle of red lead on the ground. Sit in its centre with four cardamoms, some catechu, betel-nuts, and eight cloves. Light a lamp fed with clarified butter and say: 'Incantation can break down the stars' 5000 times—and a demon will be at your service.¹

II. *ISLĀM*.—Muhammadans classify magic as high (*'ulwī*), divine (*rahmānī*), low (*syfī*), and satanic (*shaitānī*). In divine magic perfection consists in knowledge of the greatest of God's names—the *ism-al-a'zam*, which is imparted only to the elect, and by which the dead can be raised. But God's other names, and those of Muhammad and of the good *jinn*, are also efficacious, and written charms are composed of them or of passages from the Qur'ān, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan's aid and that of the evil *jinn*, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (*al-sihr*) is a branch of this magic; but, as it has been studied with good intent and with the aid of good *jinn*, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, affliction with irresistible passion, possession, or metamorphosis. Metamorphosis is effected by spells or invocations to the *jinn* accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other evils a talisman (*ṭīlism*), i.e. mystical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (*al-kihāna*), which is also practised by the aid of Shaitān, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: *ḍarb al-mandal*, inscribing the enchanter's circle,² *ḍarb al-raml*, the moving of sand, *'ilm al-nujūm*, astrology,³ and *al-zijr*, or augury from beast and bird.⁴

The Imām Zamānī rupee is said to be dedicated to that *imām*, and is worn by Muhammadans on the right arm when starting on a journey.⁵

The names of 'Alī and the *imāms* are used in magical squares according to the *abjad*, or letter-value system of computation. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Mughal court-ladies.⁶

Islāmic medicine is acquainted with the olive of Bani-Isrā'īl, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the *sang-i-Yāhu*, or 'stone of Jahweh,' or the *hajar al-Hunūd*, or 'stone of the Hindus,' in Arabia. Jasper (in Pers. *yashm*, Arab. *hajar al-bashaf*, or 'hard

¹ *NINQ* v. § 214.

² *Mandal* is doubtless from the Gr. *μάνδαλον*, and not connected with Skr. *maṇḍala*, a circuit or group of villages. The *μάνδαλον* was a kind of drum used to conjure up demons, hence an enchanter's circle.

³ It was taught by the two fallen angels Hārūt and Mārūt, who became enamoured of the songstress Zuhra, who ascended to the sky and mingled her splendour with the star Zuhra (Venus).

⁴ H. Wilberforce Clarke, *Dwān-i-Hāfiz*, Calcutta, 1891, ii. 616 f., citing the *Mishkāt-al-Maṣābiḥ*, ii. 394, 384, 385, 383, and *Mvāt al-zamān*, i. 1. For a charm to divine which of two rivals will prevail see the *Sirāj al-raml* by Maulavi Roshan 'Alī and the *Misdaq al-raml* by Muhammad 'Aṭfār Māl Lahorī, Lucknow, cited in *Dwān-i-Hāfiz*, ii. 831. It consists in writing the two names in *abjad*, and dividing by nine. Then, if both the quotients be odd or even, the lesser in number will conquer; if both are equal, the lesser in age; and if one be odd, the other even, the greater in number will prevail.

⁵ *NINQ* i. § 695.

⁶ *PNQ* i. § 686.

stone'), when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine. The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right wrist, he will be immune to witchcraft and the evil eye. Tied to a woman's thigh, it ensures painless labour; and, if by the light of *lailat al-qadr* (the night when Muhammad spake with God) a man be sketched over it and the picture worn over the head, the wearer will be safe from wounds in battle.¹

III. *MAGIC AND RELIGION*.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg² regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointment of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi³ observes of the sacrifices prescribed in the *Brāhmaṇas* that they have all the characteristics of a magical operation, effective by its own energy, independent of the divinities, and capable of producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. Thus the *Sāmavidhāna Brāhmaṇa* is a hand-book of incantations and sorcery, as is the *Adbhuta Brāhmaṇa* portion of the *Ṣaḍvīṃśa Brāhmaṇa*. M. Bloomfield⁴ also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad current of popular superstitions having penetrated into the higher religion of the Brāhman priests who were unable and possibly unwilling to cleanse it from the mass of folk-belief which surrounded it. W. Caland,⁵ in his introduction to the *Kausika Sūtra*, enlarges on the agreement between the magic ritual of the old Vedas and the shamanism of the so-called savage. Indeed, some authorities would derive Brāhman from *brahman*, 'a magic spell,' so that, if they are right, the Brāhman would seem to have been a magician before he was a priest.⁶

On the other hand, J. G. Frazer⁷ also points out how in India, from the earliest times down to the present day, the real religion of the common folk appears always to have been a belief in a vast multitude of spirits of whom many, if not most, are mischievous and harmful. This belief subsists under the great religions, like Brāhmanism, Buddhism, and Islām, which may come and go; and in support of this thesis he cites Oldenberg for the Vedic and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthly waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected

¹ *PNQ* ii. § 17, quoting from the *Makhzan al-Adunyāt*, or 'Treasury of Medicine,' of Muhammad Husain of Delhi, 1761, published by Newal Kishore, Cawnpore and Lucknow.

⁷ *GB*, pt. ii, *The Magic Art*, London, 1913, i. 228 f., pt. vi, *The Scapegoat*, do. 1913, p. 89 f., citing Oldenberg, p. 89 f., and Monier Williams, *Religious Thought and Life in India*, do. 1883, p. 210 f.

with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magical, but religious. By the part of the stake which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of the three worlds is conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (*yūpa*), as prescribed by the *Satapatha Brāhmaṇa*, there is no trace of magic or of magical practices.¹

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Nearer East. The Skr. word *śilpā*, 'black magic,' may be the original form of *siḥl*, or, conversely, the Arab word *siḥl* may have been Sanskritized as *śilpā*. A typical rite in *śilpā* illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as *chel*, or *ghāt*, in the United Provinces. A vessel is filled with iron nails, knives, etc., and sent by certain incantations through the air until it descends on the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called *ghatbar* (lit. 'ferryman'), which is supposed to guard the river, must be made to induce him to let the vessel cross.² Thus black magic has to reckon with the spirits, however it works and whatever its origin.

LITERATURE.—1. The Hindu literature is vast, but mostly unpublished. It comprises many treatises on special topics—e.g., the *Kashṭakūṭi* (?) *Sukdeo*, a Gurmukhi MS, contains only magic squares for all kinds of ailments.³ It commences with the *Atharvaveda*, upon which and other texts is based Alfred Hillebrandt, *Ritual-Literatur: Vedische Opfer und Zauber* (= *GLA P* iii. 2), Strassburg, 1897.

2. The Shi'a Muhammadans, who are prone to occultism, have six books on magic: the *Ja'afar Jāma*, *Safinat al-najāt*, *Tuhfat al-awām*, *Mahaj al-da'wat*, *Mukārim al-ikhṭāḡ*, and *Amwār i-Na'māniya*. The Sunnis also have books on magic: such are the *Mujarrabāt-i-Darvī* and the *Nāsh-i-Subasmān*.⁴

H. A. ROSE.

MAGIC (Iranian).—1. Religion and magic.—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common; but nowhere are they so intricately commingled as in Mazdeism.

First of all, a clear line of demarcation has to be traced between the real doctrine of Zoroaster, as it is expounded in the *Gāthās*, and the Later Avesta.

In the *Gāthic* hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower beliefs and the magical practices of the people of the time. The cult of the *daēvas* in general and the nocturnal orgiastic sacrifices in which *haoma* (*q.v.*) was drunk by the worshippers were specially condemned.⁵

The Later Avesta also anathematizes the sorcerers (*yātu*) and witches (*pairika*), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dualism (*q.v.*). It is based on the assumption that there are two cosmic elements, the one created by

Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his foe is evil. Each creator has thus communicated to his creatures his own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the incessant struggle which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he neutralizes the evil deeds of his opponent, acts, after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites. The only difference between such an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Mazdean religious acts, the concern is mostly supra-terrestrial, being the religious purity of the faithful (*asavan*) as a preparation for the future happiness of the blest. The contrary state, the impurity of the imps of the *druj* (*dregvants*), has to be destroyed.

2. **Purification.**—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death likewise results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently good element of Mazda's creation. Besides water, other substances—e.g., *gaomaēza* (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the *druj* is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—e.g., the great purification of the nine nights (Pahl. *barašnūm nū šaba*) expounded in *Vend.* ix.; the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual; *gaomaēza* is put into the holes, the patient rubs the ground, and is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to

⁵ Moulton, *Early Zoroastrianism*, p. 71 f.

¹ Moulton, p. 144.

neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure, assumed—wrongly, of course—to date back to the Prophet's teaching, and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazdaism from Zoroaster to the Later Avesta period.

Moral beings, like the *amesha spentas* ([*q.v.*] justice, good spirit, piety, etc.), have been turned into—or, rather, identified with—the genii of fire, cattle, earth, etc., and Sraosha, 'obedience,' has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (*Bund.* xix. 33).¹

3. Sacrifice.—Of sacrifice we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg² is quite right when he says that sacrifice is in Vedic times a gift to the god, which, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes described as being mastered by the sacrificer.

Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the *Satapatha Brāhmaṇa*³ says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Irān, where the sacrifice is given its place in the general cosmic conflict, so that it

'is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When not strengthened by the sacrifice, they fly helpless before their foes.'⁴

Sacrifice has thus a value of its own independently of the will of the gods. It is an act of war, helping God in His struggle against the evil creation, so much so that gods also have to practise cult:

'Aūharmazd performed the spiritual Yazīn ceremony with the archangels (*ameshaōspendān*) in the Raptvīn Gāh, and in the Yazīn he supplied every means for overcoming the adversary.'⁵

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (*ganj*) of merits.⁶ The sacrifice of the *haoma* (=Ind. *soma*), although itself not really magical in principle, was specially prone to develop in that direction. The *haoma*=*soma*, in the thought of the proto-Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on *ambrosia*, and of giving a superexaltation of life to man, in whom it

caused intoxication. As was said above, the *haoma* orgiastic sacrifice had been banished from Gāthic religion in company with the magical procedure of the *daēva*-worshippers. In the post-Gāthic period we see it reappear, but it has been deprived of its savage character and turned into a mystical drink.¹ Not only was it supposed to confer a greater intensity of human life, but it was regarded as a highly beneficial spirit, imparting to man also the gift of spiritual life and a title to the supra-terrestrial reward.² It led to a division into two *haomas*.³ The one, the actual plant, was the yellow *haoma*, the other, supra-terrestrial, called the white *haoma*, was identified with the tree *gaokerena* (Pahl. *gōkart*) 'that stands in the middle of the sea *Vouru-Kaša* . . . that is called "the All-healer" and on which rest the seeds of all plants.'⁴ It is by drinking the *gaokerena* that men on the day of the resurrection will become immortal. For that reason it was customary to put a drop of *haoma* on the lips of a dying Zoroastrian. *Haoma*, having been made the principle of all life and fecundity, was supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of life is an approach to magic, although it is extended to domains to which healing and vivifying power cannot normally attain—*e.g.*, the gift of swiftness to horses in races, of healthy children to pregnant women, and of bridegrooms to girls. Moreover, it is, in the traditions of the Indo-Iranians, closely connected with a mystical bird which took the *soma*=*haoma* from the place where it lay hidden and brought it to gods and men.⁵ The Avesta speaks of the bird Saēna, which is the Simurgh of the Persians, who make him play the same part as the bird Vārengana in *Yt.* xiv. 35 f.—a part which is completely magical.⁶

'Get thee a feather of the wide-feathered bird Vārengana, Oh Spitama Zarathushtra. With that feather thou shalt rub thy body; with that feather thou shalt curse back thine enemy. He who hath a bone of the mighty bird or a feather of the mighty bird gaineth (divine) favour. No one, (however) magnificent, smiteth him or turneth him to flight; he first gaineth homage, he first (gaineth) glory; the feather of the bird of birds bestoweth help.'

Thus we have here to do with a real amulet.

4. Spells.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a *manthra*, a noble word which properly means 'utterance,' 'word,' 'ordinance,' but has in the Later Avesta the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are chanted in a dialect obsolete for ages, and have degenerated into mere spells, the exact pronunciation of their words achieving what their author sought by pure life and diligence in a noble calling.⁷ The finest Mazdean prayers, such as the *Ahuna Vairya* ([*q.v.*] *Pārsāi*, *honovar*)—a kind of profession of faith—have stiffened into a mechanical repetition of formulae, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. The *Bundahishn* (i. 21) narrates how Aūharmazd, having recited the *Ahunavar* and uttered its twenty-one words, confounded the evil spirit and secured the victory over him, in the first days of creation. The power of the same prayer and of some others is also expounded in *Vend.* xix. (cf. also *Yt.* xvii. 20). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is

primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the *manthra* is mentioned as a regular means of curing diseases. *Vend.* xx. distinguishes healing by plants, by the knife, and by the *manthra*, the last being the most powerful. A series of formulæ is to be found there for repelling both diseases and evil beings. The prayer contained in *Vend.* xx. 11 is supposed to be peculiarly powerful. It is directed to Airyaman, the healing god *par excellence*. *Vend.* xxi. 18-23 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the *Vendidad* and of some very well known prayers. These are the means that Airyaman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the bane of mankind (*Vend.* xxii.). Airyaman is an old Indo-Iranian god: in the Veda he is an *āditya* (Aryaman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the character of a healing god. He survives in Parsism as the *izad* of heaven, but, in his quality of healing god, he is replaced by Faridūn (=Thraetaona), who, having killed the dragon Azi Dahāka, is supposed to be a powerful enemy to the works of evil spirits. The Iranians knew, moreover, of a healing fruit, which, according to *Bund.* iii. 18, Ahura Mazda pounded up before his coming to the ox, 'so that its damage and discomfort from the calamity (*zanišn*) might be less.'¹ On the same footing as the *manthra* for healing diseases must, of course, be put the numerous incantations and mystical formulæ for removing the pollution inflicted upon anything which has come into contact with a corpse. *Vend.* viii. 14 ff., e.g., explains that a road whereon the dead bodies of dogs or men have been carried cannot be traversed again by men or flocks, till the yellow dog with four eyes or the white dog with yellow ears has gone three times across it and an *ātharvan* has gone along it, saying aloud the fiend-smiting words of the *honovar*. *Vend.* vii. 28 ff. contains the method of purifying wood which has been in contact with a corpse, and formulæ for all kinds of good elements infected by the same pollution (cf. *Vend.* x., xi., etc.). In such cases the *Gāthās* had become a mere spell (cf. *Vend.* x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdean system. It is the old conviction of mankind that death, like illness, cannot occur without the maleficent intervention of some spirit, which has therefore to be averted. For a Mazdean to die was to pass into the power of the *druj* Nasu. Hence it was necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of maleficent beings and the utility of spells were felt in many other circumstances—e.g., in the case of a woman on the eve of child-birth (*Vend.* xxi. 8, 12, 16), or when some accident occurred to cattle.²

5. Fire.—Among the elements which have to be kept carefully from any pollution, fire occupies a prominent position. It is well known that among the Parsis it enjoys a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical belief which is common to many nations, but which is specially Indo-Iranian (cf. art. FIRE, FIRE-GODS, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off bitter cold and wild beasts, and, as such, is the great enemy of demons and

the friend and ally of man. It repels diseases, and it plays an important part in the proceeding of Indian magic, as is expounded in the *Atharvaveda*¹—a name which is taken from the *ātharvans*, who were originally priests of fire. The Iranian myth of Atar's victory over the serpent Azi Dahāka (*Yt.* xix. 45 ff.) belongs to the same order of thought. Indeed, fire, in the conception of the Persian *ātharvan*, keeps closer to its original part, inasmuch as it does not become, as in India, the agent which conveys to the gods the substances of sacrifice. It remains the great averter of everything impure, and must on no account be put in contact with anything that is not pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, godly light, the purest offspring of the good spirit, the purest part of his pure creation,² the weapon of Ahura (*Ys.* ii. 9). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda.³ We can distinguish several forms of it, among which the *bahrām* fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protection of the land against foes and fiends.⁴ It took its name from Verethraghna (Skr. *vrtrahan*), in Indian myth the genius of victory and the slayer of the demon Vrtra.

6. Influence of stars.—Astrology, as is well known, was the chief concern of the Magi, as the ancients describe them to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with Babylonian religion.⁵ We have, however, the cult of Tistrya, the star (Sirius) which was regarded as a good genius (that brought rain after having slain the drought demon Apaoša (*Yt.* viii. 20 ff.)). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tistrya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The *Great Bundahishn* says:

'The plague created against Saistān is abundance of witchcraft; and that character appears from this, that all people from that place practise astrology: those wizards produce . . . snow, hail, spiders, and locusts.'⁶

On the other hand, it was a current belief among Iranians that planets had a malign influence; but this does not oblige us to admit that they had any belief in the influences of stars upon men's fate (cf. art. FATE [Iranian]).

7. Recent superstitions.—Among the superstitions prevalent among the Parsis and the Muhammadan Persians many customs, no doubt, go back to old Mazdean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mazdeans, to plants in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi,⁷ of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitious customs attached to the ancient Persian festivals as described by Persian writers⁸—e.g., rubbing with olive oil on the day of Naūruz as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mihr (Mithra) to avert dangers, hitting

an eating animal with an orange on the day of Adar in November as a way of securing happiness, giving garlic to one's friends on the Gōs rūz (14th Dec.), and boiling herbs on the same day, in order to get rid of demons, fumigation with liquorice on the day of Di-mihr rūz in order to avoid starvation or misery, eating apples and daffodils on the same day in order to secure success in one's enterprises, placing betel, walnuts, etc., on a pregnant woman's bosom, to make her fertile,¹ etc.

The power of fire against evil beings is illustrated by the lighting of a fire on the night of the Bahmān (Vohu Manah) festival (10th Jan.). This fire, on which perfumes were thrown, was lit under the image of the genins in order to repel wild beasts. During the whole night it was guarded by standing Persians.² Anquetil du Perron reports that on 15 Spēndarmat the Parsis used to hold a spell, written on a sheet of paper, in the smoke of a fire, in which they had put pieces of horn from an animal killed on the festival of Mihr, cotton seed, resin, and garlic, in order to remove the *dēvs* (*daēvas*) from their houses.³ The magic for rain has survived in the custom of pouring out water on 30th Jan. in order to obtain rain during the year.⁴

In the last days of the Persian year the souls of the departed are said to come and pay a visit to their relatives, who prepare a sumptuous meal for them. The souls—or, rather, the *fravashis* (*g.v.*)—are supposed to gaze at the food and smell it.⁵ This also, no doubt, is a survival of the beliefs concerning the *fravashis*.

The use of the Gāthic hymns and of the chief Zoroastrian prayers as spells against diseases or against the evil eye is current to this day among the representatives of the Mazdean faith.

'In order to avert the influence of the evil eye or to cure a child of some disease, a parent will occasionally hire the mobeds . . . to read from the Yasna, the Yashts, or the Khordah Avesta, and when women are childless, they will sometimes pay to have the Vendidad Sadah recited by the priests, in order that the curse of sterility may be removed.'⁶

J. J. Modi knows of charms for diseases of the eye⁷ or for avoiding pollution from contact with all that comes from the human body—*e.g.*, hair or nails.⁸ Amulets are also used for the same purpose.⁹

LITERATURE.—There is no special book on Iranian magic. The general bibliography on Mazdaism has to be consulted, especially the translation of the Avesta by J. Darmesteter (*AMG*, Paris, 1892-98); J. H. Moulton, *Early Zoroastrianism*, London, 1913. For spells and charms see literature at end of art. CHARMS AND AMULETS (Iranian). For Parsis cf. J. A. Decourdemanche, in *RTP* xxii. [1908] 209 ff.; D. Menant, *Les Parsis*, Paris, 1898.

A. J. CARNOY.

MAGIC (Japanese).—Japanese magic is such a vast subject that, if we were to treat it systematically, with all its logical divisions and subdivisions, it would be almost impossible to give even a bare index to the volume that would have to be written to describe it. We shall, therefore, dismiss everything that springs from foreign influences, and even in Japanese magic proper we shall ignore the general classifications under which the innumerable details supplied by the rich literature of the country might be arranged. We shall confine our attention to emphasizing the essential point, viz. the existence of magic in the very heart

of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rituals (*norito*) collected in the *Engushiki* in the 10th cent., although several of these—and precisely those that contain most of the magical element—were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the *Kojiki* and the *Nihongi*, which were written in the 8th century. By glancing over the most typical of these *norito*, and explaining them with the help of certain related passages in the *Kojiki* and the *Nihongi* or in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulæ, solemn incantations, and we shall see that at the same time they were enveloped in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, *Toshigohi no Matsuri*, which was said every year at seed-time to obtain a good harvest. The chief priest (*nakatomi*), who recited it in the name of the emperor, addressed the gods in these words:

'I believe in the presence of the sovereign gods of the Harvest. If the sovereign gods will bestow in many-bundled ears and in luxuriant ears the late-ripening harvest which they will bestow, the late-ripening harvest which will be produced by the dripping of foam from the arms and by drawing the mud together between the opposing thighs, then I will fulfil their praises by setting up the firstfruits in a thousand ears and many hundred ears, raising high the sake-jars, filling and ranging in rows the bellies of the sake-jars, in juice and in ear.'

Other offerings are then enumerated, among which we notice a white horse, a white pig, and a white cock. Now, a 9th cent. document, the *Kogoshūi*, gives the legendary origin of this detail: Mi-toshi no Kami, 'the god of the august harvest,' had cast his curse on the rice fields; but the diviners obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found again, in the same words, towards the end of this document, where the officiant invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, *Kasuga Matsuri*, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence' of these offerings that the gods are asked to protect the sovereign and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-mika-dzuchi and Futsu-nushi, were represented by magical swords (cf. *Kojiki*, tr. B. H. Chamberlain, 2nd ed., Tokyo, 1906, p. 36), and that the other two, Koyané and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words,' helped to bring back the sun-goddess (*Kojiki*, 64).

There is the same spirit in the 3rd ritual, *Hiroso Oho-imi no Matsuri*, devoted to the goddess of food.

Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 4th ritual, *Tatsuta no Kaze no Kami no Matsuri*, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods have bungled all the crops, and the diviners have not been able to discover who these gods are. Then the sovereign himself 'deigns to conjure them,' and they reveal themselves to him in a dream. They are 'Heaven's Pillar's augustness and Country's Pillar's augustness,' the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple at Tatsuta, and a liturgy, by means of which they 'will bless and ripen the things produced by the great People of the region under heaven, firstly the five sorts of grain, down to the least leaf of the herbs.' Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recollection of past calamities has left some mistrust, for, when making the present offerings, they announce future gifts for the autumn: if, between now and then, the gods have deigned not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will grant them the firstfruits of it. This will be their small commission.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Ohoto-no-Hogahi*, i.e. 'Luck-bringer of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *ama tsu kusushi ihaiki-goto*, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced; for, in another passage, certain 'corrector'-gods (*naho*) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *G-shiki* of the 9th cent. (see E. Satow, in *T.A.S.J.*, vol. ix, pt. ii, [1881] p. 192 f.). A priestly retinue, in which we distinguish chiefly the *nakatomi*, the *imibe* ('abstaining priests'), and the vestals, goes through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the emperor's privy, the vestals sprinkle rice and *sake*, while the *imibe* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sammar*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (*tsuji-ura*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was also strewn, in order to take afterwards as an oracle the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown at random in the air to disperse the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans—

jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred *clevera*, and whose brilliance recalled the sun (*Kojiki*, 64); jewels which, in another famous story, enabled their possessor to make the tide flow or ebb at his will (*ib.* 150); jewels which even aimed at resuscitating the dead, as we shall see below. We can, therefore, easily understand the magical rôle of the red jewels which, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the *imibe* recite the ritual 'in a low voice.' Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tone, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the harp (*koto-ura*), one of the practices of the officiant was a complicated whistle. All this magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the propitiatory rites which the *imibe* have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical recollections which assure beforehand the efficacy of the formula recited. Then the protector-gods of the palace are entreated to ward off certain calamities, several of which—e.g., serpent-bites, or the droppings of birds falling through the smoke-hole in the roof—are ritual 'offences.' Lastly, in the same way as it invokes the corrector-gods for every possible omission, the text insists on this fact—that the 'innumerable strings of luck-bringing grains' have been made by sacred jewellers 'taking care to avoid all pollution and to observe perfect cleanness.' The care in all these details shows the magical importance attached to each of the rites of the ceremony, and to the most insignificant words of the incantation.

We shall omit the 9th ritual, *Mikado Matsuri*, 'Festival of the Sublime Gates,' devoted to the gods who guard the entrance of the palace against the evil influences of the 'crooked' gods (*maga*), and come to the 10th, which is much more important. This is the 'Ritual of the Great Purification' (*Oho-harahi*). This ritual was recited by the chief of the *nakatomi*, at the end of the 6th and the 12th months, to blot out all the transgressions, both moral and ritual, that the whole people had committed in the interval. The choice of these dates is in itself significant: the summer ceremony recalls the lustrations formerly practised on the Eve of St. John in different countries of Europe, and the ceremony at the end of the year corresponds with the need of renewal experienced by the majority of men at this time, and which, in Japan, still takes the popular form of a dramatized exorcism called *tsuina*, 'expulsion of the demons.' The Great Purification included various rites; but the ritual is often mentioned as if it itself formed the whole ceremony—which proves the magical power ascribed to the words recited. This ritual begins by stating clearly that it is the emperor who 'deigns to purify and wash away' (*harahi-tamahi kiyome-tamafu*) the offences committed—from which we see that the gods who, a little later, are to be invoked to intervene really play a part inferior to that of the emperor, and act only, so to speak, at his command. The right of absolution which he exercises thus arises from the general sovereignty conferred 'respectfully' upon him by the celestial gods at the beginning of the dynasty, as the continuation of the text immediately recalls. Then follows the enumeration of ritual crimes, voluntary or not, which are to be effaced (see Revon, *Anthologie de la littérature japonaise*, Paris, 1910, p. 28 f.). We may select from this list at least two offences con-

nected with our subject. The one is the 'planting of wands' (*kushi-sashi*) in rice-fields, probably with incantations—a process which an ancient native interpretation explains as the erecting of magic boundaries on the field of which one claims to be proprietor, though perhaps it is an example of pointed wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retarded the pursuit of his adversaries by this means. The other offence (*mayi-mono seru tsumi*) is the 'performing of witchcraft,' either in a general way (cf. *Kojiki*, 326 f.) or in particular against a neighbour's animals (if we connect this passage with the expression *kemomono-tafushi*, 'to kill animals,' which precedes it). In any case the Chinese character employed shows that it is a question of black magic; and that is why the *norito*, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great *nakatomi* has to prepare some twigs in a certain way, doubtless intended to form a sort of purificatory broom, then to recite 'the powerful ritual words of the celestial ritual' (*ama tsu norito no futo norito-goto*). The native commentators tried for a long time to find out to what mysterious incantation this passage could possibly allude, without seeing that it simply referred to the *norito* itself. This is the 'celestial' ritual which the gods revealed on high to the ancestor of the emperors, and whose 'powerful words' his descendant causes to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high priest recites it thus, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the goddess of the torrents, swallowed by the goddess of the sea-currents, driven to the nether regions by the god whose breath chases before it all impurities, and there they will be seized at last by a subterranean deity who will banish them for ever. Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great *nakatomi*, the magician who knows the sacred words which even the gods obey. As for the rest, to make more certain, they bring a horse whose erect ears will incite these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the eclipse (*Kojiki*, 63-65)—would recall the sun, or as, in another account of the old Shinto annals (*Nihongi*, tr. W. G. Aston, London, 1896, i. 106), one had only to whistle to raise the wind. Then an order is given to the *urabe* ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual along with this one. It is an invocation which the hereditary scholars of Yamato pronounced immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins committed and their material support.

Another ritual which is plainly magical is the 12th, the title of which, *Ho-shidzume*, 'Appeasing of the Fire,' shows that its purpose was not to worship the god of fire, but to banish him from the palace. As in the 10th ritual, the text first recalls

the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. *Kojiki*, 32-33); and tells how Izanami herself, cursing this son who had caused her death, came up from the nether regions to give birth to the water-goddess, the gourd, the river-plant, and the pincess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may deign not to be terribly lively in the palace of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the *urabe* in the four outside corners of the precincts of the palace, with the primitive apparatus (*hi-kiri-usu*) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, *Michi-ae*, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character caused them to be looked upon as 'preventive gods' (*sahe no kami*) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do:

'Whenever from the Root-country, the Bottom-country, there may come savage and unfriendly beings, consort not and parley not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting us against pollution with a night guarding and a day guarding.'

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous assemblage of rocks,' and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the *Oho-nihe*, 'Great Offering of Food.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called *Nihi-name*, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (*Uga no Mi-tama*). The *Oho-nihe* was a more solemn *Nihi-name*, celebrated some time after the accession of the emperors, and constituting a sort of religious coronation for them. The ritual relating to this festival contains nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled *Mi-tama shidzumuru*, which shows that its purpose was 'to appease the august spirit,' i.e. the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony called *Chinkonsai*, which was celebrated at the end of the year in the sanctuary of the priests of the court (see *Nihongi*, ii. 373). Now, the gloss identifies this festival with an ancient ceremony called *Mi-tama furishiki*, 'shaking of the august jewels,' which again plunges us into deep magic. The *Kiwjiki* (ii. 2) says, in fact,

that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

'one mirror of the ofing, one mirror of the shore, one eight-hands-breadth sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel road-returning [evil things by the road they came], one serpent-scarf, one bee-scarf, and scarf of various things.' She added: 'In case of illness, shake these treasures and repeat to them the words: *Hi, fu, mi, yo, tsu, mu, nana, ya, kokono, tari*, and shake them *yura-yura* (onomatopoeia). If thou doest so the dead will certainly return to life.'

The objects enumerated by the sun-goddess are talismans, several of which occur in the most ancient Japanese mythology (see *Kojiki*, 86, 150, 324, etc.). As for the incantation, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same incantation was recited at this festival by young sacerdotal virgins (*mi-kamu-ko*), who performed the sacred *kagura*, in imitation of the dance of Uzume in the eclipse myth (*Kojiki*, 64-65), while a *nakatomi* knotted threads, which were clearly meant to retain the imperial soul, and which he shut up in a closed vessel.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formula of the 23rd ritual, for the installing of a princess as vestal:

'The offering of a sacred princess of the blood imperial to serve as the deities' staff, having first, according to custom, observed the rules of religious purity for three years, is to the end that thou mayst cause the Sovereign Grandchild to live peacefully and firmly as long as Heaven and Earth, the Sun and the Moon may last. I, the Great Nakatomi, holding the dread spear by the middle, with deepest awe pronounce this dedication of her by the Mikado to the end that she may serve as an august staff.'

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism assured on pain of death the good fortune and health of the village, in the same way as here the sacrifice of the imperial virgin is to guarantee the happiness and long life of the sovereign (cf. art. ASCETICISM [Japanese]).

The 25th ritual, of a more general interest, is entitled: *Tatari-gami wo utsushi-tatematsuru norito*, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 13th ritual the gods of roads were made to intervene against these wicked gods; now they themselves are directly addressed. It is, therefore, a real formula of exorcism. The text begins by recalling how the supreme council of the celestial gods, wishing to 'pacify' the country before the descent of the future emperor, sent Futsu-nushi and Take-mikadzuchi, who triumphed over the terrestrial gods and 'silenced the rocks, trees, and the least leaf of herbs likewise that had spoken.' After this warning, undisguised and all the more plain because, according to the ritual, the wicked gods know well, 'by virtue of their divinity, the things which were begun in the Plain of high heaven,' numerous gifts are made to them to win them over—and not only the usual offerings of cloths, fish, game, vegetables, rice, and *sake*, but also, in a naïve form, 'as a thing to see plain in, a mirror; as things to play with, beads; as things to shoot off with, a bow and arrows; as a thing to strike and cut with, a sword; as a thing which gallops out, a horse.'

Lastly, after having thus loaded them with numerous toys and abundant dainties, which they beg them to accept 'with clear hearts, as peaceful offerings and sufficient offerings,' they earnestly ask these 'sovereign gods' to be good enough, 'without deigning to be turbulent, deigning to be fierce, and deigning to hurt, to remove out to the wide and clean places of the mountain-streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 26th), we come at length to the last document of the collection, the 27th ritual, which is called

Idzumo no kuni no miyakko no kamuyogoto, 'The Divine Words of Good Fortune of the Chiefs of the Country of Idzumo.' These local chiefs, after having lost their civil sway, had preserved their religious power. It is they who to this day in this old province hand down the primitive fire-kindler which their legendary ancestor, the god Ame-no-hohi, had received from the sun-goddess herself, and which each chief priest of Idzumo bequeaths to his successor by the ceremony called *Hi-tsugi*, 'perpetuation of fire.' In this ritual the *miyakko* first announces that he will recite the formula, after many ritual preparations, to bring happiness to the reign of the 'visible god,' i.e. the sovereign. He then relates how Ame-no-hohi and, later, other celestial ambassadors were sent to earth to prepare for the descent of the son of the gods; how Ohonamochi, the divine king of Idzumo, who achieved the 'making of the country' with the help of a stranger magician, and who was the first to found a government in this important region of the archipelago, was persuaded by the celestial envoys to abandon his temporal rule to the son of the gods; how he then divided his souls, by a curious application of the Japanese idea which allows the possible separation of the multiple souls of man, attaching his 'gentle spirit' (*nigi-tama*) to a fetish-mirror which he caused to be placed in a temple of Yamato, while his 'rough spirit' (*ara-tama*) went to rest in the great temple of Idzumo; and how at length Ame-no-hohi received from above the command to bless the sovereign henceforth, that his life might be long, healthy, and happy (cf. *Kojiki*, 54, 58, 113-124). It is while carrying out this command that the descendant of Ame-no-hohi intervenes, as he himself declares. He brings to the emperor 'divine treasures,' whose magical rôle—fortunately for us—he clearly defines. There are, first of all, sixty jewels, white, red, and green.

'These white jewels are the great august white hairs [to which your Majesty will reach]; the red jewels are the august, healthful, ruddy countenance; and the green-estuary jewels are the harmonious fitness with which your Majesty will establish far and wide, as with a broad sword-blade, his lasting great august reign over the Great-eight-island-country which he governs.'

We have here, therefore, a typical case of the action of like upon like, which is one of the essential doctrines of primitive man, and which, in the present case, attaches to the different jewels a power corresponding to their colour. The formula continues by other applications of this principle of imitative magic:

'As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under-Heaven,' etc.

It is possible that at some time these rites may have become symbols; but it is impossible not to recognize in them, especially at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on the same universal principles.

Ancient Shinto, therefore, as it appears to us in its most authentic liturgies, is a religion in which the magical element still prevails over the religious sentiment. The rituals are essentially magical formulae, addressed to magician gods (as is demonstrated by all their mythical exploits) by magician-priests (the *nakatomi*, the *imibe*, and the *urabe*), and encircled in magical rites. Magic is, therefore, at the base of the national cult of the Japanese, and it appears there with all the characteristics familiar to the student of comparative religion.

To finish with a vivid illustration, which, after the necessarily short descriptions given above, will show this magic in application in a typical and exact case, we shall choose as an example sorcery,

as it was practised in the most ancient times. The following is the curious account of the subject given in the *Kojiki* (326 f.):

"The Deity of Idzumi [the country of the 'sacred stones'] had a daughter, whose name was the Deity Maiden-of-Idzumi. So eighty Deities wished to obtain this Maiden-of-Idzumi in marriage, but none of them could do so. Hereupon there were two Deities, brothers, of whom the elder was called the Youth-of-the-Glow-on-the-Autumn-Mountains, and the younger was named the Youth-of-the-Haze-on-the-Spring-Mountains. So the elder brother said to the younger brother: "Though I beg for the Maiden-of-Idzumi, I cannot obtain her in marriage. Wilt thou be able to obtain her?" He answered, saying: "I will easily obtain her." Then the elder brother said: "If thou shalt obtain this maiden, I will take off my upper and lower garments, and distil liquor in a jar of my own height, and prepare all the things of the mountains and of the rivers, in payment of the wager." Then the younger brother told his mother everything that the elder brother had said. Forthwith the mother, having taken wistaria-fibre, wove and sewed in the space of a single night an upper garment and trousers, and also socks and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wistaria-blossoms. Thereupon the Youth-of-the-Haze-on-the-Spring-Mountains hung up the bow and arrows in the maiden's privy. Then, when the Maiden-of-Idzumi, thinking the blossoms strange, brought them, he followed behind the maiden into the house, and forthwith wedded her. So she gave birth to one child. Then he spoke to his elder brother, saying: "I have obtained the Maiden-of-Idzumi." Thereupon the elder brother, vexed that the younger brother should have wedded her, did not pay the things he had wagered. Then when the younger brother complained to his mother, his august parent replied, saying: "During my august life the Deities indeed are to be well imitated; it must be because he imitates mortal men that he does not pay those things." Forthwith, in her anger with her elder child, she took a one-jointed bamboo from an island in the River Idzumi, and made a coarse basket with eight holes, and took stones from the river, and mixing them with brine [*shio*], in the sense of 'hard salt', wrapped them in the leaves of the bamboo and caused this curse (*tokohi*) to be spoken [by her younger son]: "Like unto the becoming green of these bamboo-leaves, do thou become green and wither! Again, like unto the flowing and ebbing of this brine [again the word *shio*], but here with the meaning of 'sea-water'], do thou flow and ebb! Again, like unto the sinking of these stones, do thou sink and be prostrate!" Having caused this curse to be spoken, she placed the basket over the smoke [apparently on the hearth of the elder son]. Therefore the elder brother dried up, withered, sickened, and lay prostrate for the space of eight years. So on the elder brother entreating his august parent with lamentations and tears, she forthwith caused the curse to be reversed. Thereupon his body was pacified. This is the origin of the term "a divine wager-payment."

In this text we have a case of original sorcery, founded on sympathetic magic (a conception so well expressed by the Japanese word for 'magic,' *majinahi*, which conveys the idea of 'to mix'), but before the time when the progress of the arts and foreign influences could have given the idea of exercising sorceries on the effigy of an enemy. (For this later development see, e.g., the popular ballad of Shuntoku Maru, in *TASJ*, vol. xxii. pt. iii. [1894] pp. 294-308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic element. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that they have come; and the nature of the rite demands that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the sorcery can be accomplished. The only thing that remains to be done is to pronounce the formula whose powerful words will act on all these things.

The victim will wither like the leaves of bamboo, in the same way as, in another legend (*Kojiki*, 238), the magical imprecation (*ukebi*) of a chief had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general malediction, man, formerly immortal, was condemned to die as the flowers of the cherry-tree fade (*Kojiki*, 140-142). Then, as the high water falls back, the guilty one will be abased. Lastly, he will be seen foundering as a stone sinks when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed. Yet in the end the mother's heart hears the repentance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. *Kojiki*, 238), and immediately the body of the young man is 'pacified'; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which a mysterious harmony exists between the life of man and the flowing and ebbing of the sea. In this belief, it is when the sea is flowing in that one is born, becomes strong, prospers; it is when it is ebbing that one loses his energy, falls ill, and dies. The Japanese sorceress, the depositary of primitive traditions, is well aware of this secret agreement. She knows that, even far from the seashore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the salt element these river-pebbles, into which the consecrated words will bring the very existence of her son; and the cursed one is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightnesses of life, then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the strange unity observable even in the most curious beliefs of humanity in general.

LITERATURE.—This has been cited in the article.

M. REYON.

MAGIC (Jewish).—The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as documents of the OT and Jewish tradition allow as to what is to be understood by the term.

It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHARMS AND AMULETS [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to 'witchcraft.' The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do primarily with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless it is the result of some 'operation'; the magician must 'act' in one way or another in order to accomplish his purpose; and herein lies the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he

seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes or *vice versa*; he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature. The magician will kill, he will create strife—his activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'operation'; he must 'do' something in order to bring about the desired result. Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician's evil work by certain spells, songs, formulae, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumscribing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by other magicians who know the secret of the action and the means by which it has been achieved. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of superhuman powers. This is the very root and basis of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.

Jewish magic presupposes the existence of such spirits, and occupies the borderland between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the line of demarcation shifts according to the change of theological views in the course of development and transition. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as mere negative forces that are also creatures of God and yet unwilling, by their own innate wickedness, to do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his behest.

The Hebrew term for 'magic' is *keshef*, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of *keshef*, in the view of the present writer, is apparently 'hidden,' 'obscure,' 'a thing done in a secret manner,' which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word *keshef*, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while of the references in the Prophetic writings some are to Assyria as well as to Palestine itself. In 2 Ch 33⁸ Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 3⁹); the wizards of Egypt are mentioned in Ex 7¹¹ 22¹⁸; in Babylon there is only one allusion to them, in Dn 2².

The LXX translates *keshef* by *φάρμακον*, which does not mean 'poison,' but, as in later Greek, a 'spell' cast by a magician. *Keshef* has remained the technical term in Hebrew literature. Witchcraft is called *kishshuf* in the Mishna and Talmud, and no words have been more widely used, and yet with a very definite meaning attached to them, than *kishshuf* and *m'khashshēf*, nor is there any doubt that the real meaning of this 'magic' is exactly witchcraft. It is clearly stated (*Sanh.* vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that witchcraft is mentioned in connexion with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian *m'khashshēfīm* in Ex 7¹¹ 22¹⁸ perform precisely the acts defined above as the work of the magicians; they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from Is 47^{9, 12}, Mic 5¹², Mal 3⁵, Nah 3⁴, Jer 27⁹, and 2 K 9²² it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lewdness, possibly through the performance of some action by the magician. That some of the witches performed such acts in a state of absolute nakedness is an attested fact throughout the history of magic, and it is possible that the prophets had this in view when in speaking of witches they placed them on the same plane as harlots. It is noteworthy that the witch, and not the wizard, is mentioned in Ex 22¹⁸, Dt 18¹⁰. The sin of the *m'khashshēfāh* must have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Mic 5¹²); it was characterized as an 'abomination' (Dt 18¹⁰), and was also described as *z'nūnīm*, 'lewdness' (Nah 3⁴, 2 K 9²²).

The scanty references in the OT, which show that the practice could not have been wide-spread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through what powers the magicians were able to carry on their operations; the spirits become, as it were, more materialized.

The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of Babylon, and the Jewish belief of the period endeavours to account for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the *Pirkē Abhōth*, v. 9 (cf. C. Taylor, *Sayings of the Jewish Fathers*², Cambridge, 1897, *ad loc.*) and *Gen. Rab.* 7, *mazzikīm* were created by God Himself at the close of the sixth day; but, as the Sabbath supervened before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediate between angel and man, and mostly of an evil inclination.

How they are to be used—i.e. the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to a legend found in the *Book of Enoch*, the *Chronicles of Jerahmeel* (tr. M. Gaster, London, 1899), and other Jewish Haggadic collections, the two angels Uzza and Azazel, who showed their discontent at the creation of Adam, and afterwards were sent by God, at their own request, to see whether they could withstand temptation, both fell in love with a woman and were punished by God. One of them hangs head downwards from heaven, and the other is chained behind the dark mountains; it was the latter who taught women the arts of witchcraft and cosmetics (*Jerahmeel*, ch.

25, and notes, p. lxxiii).¹ The Kenites, the descendants of Cain, were the pupils of these angels, and, according to the *Book of Jubilees*, corrupted the descendants of Seth and brought about the Flood. According to another tradition, the *mazzikim* and *shedhëm* were the children of Adam and Lilith, the *shedhëm* who leads the procession of *shedhëm*, and who, during the one hundred years that Adam was separated from Eve, consorted with him (*Zohar*, i. 176; cf. *ERE* iv. 614^a). Lilith plays a great rôle in magical literature; she later becomes the demon who kills infants at birth and, together with her companions, is constantly mentioned in Aramaic inscriptions on magical bowls from Assyria and Babylon (see below). The demons are both male and female, and they also endeavour to consort with human beings—a conception from which arises the belief in *incubi* and *succubæ*—and it is through these demons that the magician is believed to be able to carry on his work.

In apocryphal and legendary literature we get a clearer glimpse of the beliefs prevalent among the Jews concerning magic and magical operations. Faith in demons and demoniacal powers seems to have been established by that time; at any rate, these beliefs are far more in evidence, and do not seem to be seriously contested. The character of these spiritual potencies is somewhat indefinite, except in the *Book of Enoch*, where, as we have seen, angels who had fallen in love with human women use such powers as instruments for deception and sorcery. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic which ranked as pure paganism, and which probably would fall under the category of the witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself helping, by means of fumigation, to counteract the work of a demon who, falling in love with Sarah, had become an *incubus*, and would, therefore, kill any one who intended to approach her. The spirit thus exorcized was Asmodeus, who is recognized in the later demoniacal hierarchy as the king of the evil powers.² The position of Beliar, or Belial (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the *Ascension of Isaiah* and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit approximating to the character of Satan in the book of Job (cf. BELIAL, BELIAR).

To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides,³ in interpreting Dt 32¹⁷, 'they sacrificed to *shedhëm*,' says that the gift most acceptable to the evil spirits was blood, and that their willing help was obtained by giving them the blood of the sacrifice as food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all best understood as sacrifices; just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits, who are not sufficiently materialized to enjoy material food (cf. the Biblical parallelism of

magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black handle which is mentioned by Rashi to *Sanh.* 101a, and which can be understood only as a symbolical sacrificial knife. Philtres must be served in glass bowls (*Bäbhä m's'ä, 2a*). Fasting and other ceremonies are all intended to propitiate the evil spirit, and this is what made magic and magical operations objectionable to Jews and an 'abomination' to Judaism. Yet Rabbis made allowance for weaknesses of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the action of the *shedhëm* and *mazzikim* and produced a large literature of invocations and magical formulæ for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it seems to have been believed that some *shedhëm* were harmless, and, though they were looked upon as evilly inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted in a dispute between two *shedhëm*, in which one who had taken unlawful possession of a place belonging to the other was vanquished and a few drops of blood were found floating on the well where they dwelt (*Levit. Rab.* 24); but, on the other hand, Abaya saw a seven-headed monster coming out of a well and killed it.¹ The attitude of the Rabbis was justifiable so long as it did not lead to real idolatry.

The belief in the power of the Ineffable Name (see CHARMS AND AMULETS [Jewish], NAMES [Jewish]) was as old as any belief in witchcraft. As soon as the existence of evil spirits could not be denied, they also were given mysterious names, and it was held that, the moment the magician possessed the secret of their names, he could win their assistance, provided it was not contrary to the will of God. Legend says (*Pal. Targ.* to Gn 25¹²) that among the first who obtained mastery over these demons and the knowledge how to deal with them for their own purposes were the children of Abraham by his wife Keturah, to whom he had imparted the knowledge of the mystical names of the demons (the names of the unclean). It was through the names of these evil spirits that 'the prophet of the heathen,' as Balaam is called, was able to perform his witchcraft and was expected to harm the Israelites. He was considered to be the greatest magician of old, and, according to *Pal. Targ.* to Nu 25¹, he taught the daughters of Moab to practise sorcery and witchcraft and thus entice the young men to idolatry and immorality, which brought the plague upon Israel. It is also said that Balaam tried to escape by flying in the air, but Phinehas, through the Holy Name, was able to fly higher and smite him. The magicians in Egypt who unsuccessfully withstood Moses were Jannes and Jambres (so already in *Pal. Targ.* to Ex 1), well known in apocryphal literature as the great magicians at the court of Pharaoh (cf. also 2 Ti 3⁸). According to the Samaritan *Apocrypha of Moses*, the sorcerer who predicted the birth of Moses was a certain Palti. The Samaritans trace the origin of sorcery and witchcraft to the 'Book of Signs' given to Adam before he left Paradise; but in Jewish and Christian

¹ For an Egyptian parallel to this legend ascribing the origin of magical art to the teaching of an angel who had fallen in love with a woman see M. Berthelot, *Collection des amulettes alchimiques grecs*, Paris, 1887-88, i. 31.

² Later the host of *shedhëm* had other rulers and princes besides Asmodeus (cf. *Jerus. Sh'k.* v. 49b, *Gen. Rab.* 20, *Levit. Rab.* 6, and later Midrashic compilations).

³ *Guide*, iii. 56.

¹ This is one of the earliest mentions of a seven-headed dragon, which plays such an important rôle in fairy-tales.

apocryphal literature it is the 'Book of Adam,' or the 'Book of Rāzīl,' a title afterwards given to a handbook of practical *kabbālā* full of such mystical names of angels, rulers, princes, stars, planets, and sublunar worlds. Still less could the Rabbis object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the *shēdhīm*—a legend which rests on a peculiar interpretation of the word *shuddāh*, occurring in Ec 2^d. So firm was the later belief in Solomon's power over the *shēdhīm*—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (*Ant.* VIII. ii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Solomonic cycle Asmodæus is mentioned as their king, and Lilith, Mahalat, and Agaron are also described later as leaders of evil spirits, while even a demon Meridianus has been evolved out of Ps 91^o. Once the grouping of spirits was conceded, numbers came from various quarters to swell the host. Among these we find reference, in the Talmud, to the princes or rulers over oil and eggs,¹ rulers over the thumb or, rather, thumbnail, and over crystal—all shining objects used, no doubt, for crystal-gazing (*q.v.*). It was a time of syncretism, in which everything that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formulæ by which these various spirits and invisible powers were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulæ are extant, but very little of the operations. Much more seems to have been preserved in the Hebrew *Sword of Moses* (ed. and tr. Gaster, *JRAS*, 1896, pp. 149-198), of extreme antiquity, and in some MSS of practical *kabbālā*, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in these is given below). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of making the incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (*Aramaic Incantation Texts from Nippur*, Philadelphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

'This bowl is prepared for the sealing of the house and the wife and the children of Dinōi, son of Ispandarmēd, that the Terri-
fier (fright) and evil Dreams may depart from him. The bowl I
lifted up and I have watered (drained) it, an operation like that
which was established by Rab Joshua bar Perahyah, who wrote
against them—a ban against all Demons and Devils and Satans
and Liliths and curses which are in the house of Dinōi, son of
Ispandarmēd. Again: he wrote against them a ban which is
for all time, in the name of ARND, Atātōt Atōt, within T, Atōt
Atōt, the name a scroll within a scroll. Through which are
subjected heaven and earth and the mountains; and through
which the heights are raised (lifted) up; and through which are
fettered the magician, Demons and Devils and Satans and
Liliths and curses; and through which he passed over from this

world and climbed above you to the height (of heaven) and
learned all counter-charms for hurt and for healing to bring you
forth from the house of Dinōi, son of Ispandarmēd, and from
everything that belongs to him. I have dismissed you by the
ban, and it is bound and sealed and countersealed, even as
ancient lines (of writing) which do not fail and men of old who
were not surrounded (tied). . . . Again: bound and sealed and
countersealed is this ban in the name of YHWHYHWH, YHWH,
YHWH, A. (Amen), Amen, Amen, Selah.

Sealed and protected are the house and dwelling of Dinōi, son
of Ispandarmēd, from the Terri-
fier (fright) and evil Dreams
and the Curse. And sealed and protected be [his wife and son]
from the Terri-
fier and evil Dreams and Curses and Vows and
. . . Hallelu, Amen.'

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Perahyah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Shetah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Perahyah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jerus. *Talm.* (*Sanh.* vii. 19, fol. 25d) tells a curious legend concerning this same R. Joshua, who is made the contemporary of R. Eleazar and R. Gamaliel. These three came to a place where they found a young man whose manhood had been taken away by a witch. R. Joshua sowed flax seeds on the table, and they sprouted in an instant and grew up. Out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua seized her and ordered her to loosen the spell, but she refused, whereupon he threatened to divulge her name. She then answered that she could not undo the spell, because the things had been thrown into the sea. R. Joshua then ordered the angel of the sea to throw them up, and thus the young man was restored to health, and later became the father of R. Judah b. Bethera.

In the light of the Babylonian bowls, it is not improbable that this is a story of Joshua b. Perahyah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi also named Joshua.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to *Kiddushin*, 49b, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practised in Jerusalem, among them being Yōhānā, the daughter of Rābī (Sōtāh, 22a), famous as a witch affecting childbirth.

One day, whilst she was assisting a woman in travail, a neighbour came into her house. Hearing a noise in a vessel like that of a child in the womb, she lifted the cover; the noise ceased, and the woman was easily delivered. Hence it was recognized that Yōhānā was a witch.¹

Evidence of the Egyptian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—is seen in the Talmudic story of Ze'ēri.

He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plank the instant it touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his discomfiture, but he recovered the money which he had paid for the ass. Another Rabbi, Jannai, being offered a drink of water, poured some of the liquid on the ground, whereupon the rest turned into scorpions. He then compelled the witch to drink and she was transformed into an ass, on which he rode into the market. There another witch, recognizing her, broke the spell, and the Rabbi was then seen to have the witch for his steed (*Sanh.* 67b).

As soon as magical operations came to be regarded as idolatry, sterner measures were taken, one of the foremost opponents of magic being R. Simeon b. Shetah (*Sanh.* 44b, and Rashi, *ad loc.*), who lived in the time of King Jannæus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eighty pupils, he caught eighty witches actually practising their magic arts, and he hanged them all in one day.

¹ This idea of a witch who holds the soul, or the eyes, or the heart in close imprisonment in certain vessels which, when broken (the contents being restored to the owner), restore life, health, and sight occurs frequently in fairy-tales and is derived from Egyptian tradition.

¹ The rulers of the egg must mean those who obtained an insight into the work of the spirits or mastery over them through looking intently into the yolk of an opened egg (*Sanh.* 67b).

The details are of much interest, for they show a complete continuity of practice from that day onward. The women procured food and drink in a miraculous manner, and in the midst of their feasting did not disdain to invite the Rabbi's pupils to share in their banquet. Each of the young men then took one of the witches in his arms and lifted her from the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she touched the earth.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not fall under the ban of the Law, while a Jew was strictly forbidden to follow such practices, and, *vice versa*, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbis, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 20²⁷) was inflicted only on those who practised magic and performed magical operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but were not punished. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magic) and the names of the clean ones (*kabbālā*). By the former are meant demons and spirits, by the latter angelic powers. At the same time mastery over demoniacal beings might be obtained through the mediation of heavenly powers.

Thus, when R. Simeon b. Yohai and other sages went to Rome, they caused a demon, ben Temaliōn, to enter the emperor's daughter; and, when they arrived at the city, they were able to cure her by expelling the spirit (briefly told in *Me'illah*, fol. 17, a-b, enlarged form in A. Jellinek, *Bēi ha-Midrash*, Vienna, 1853-78, vi. 128-130; also Rashi, *ad loc.*; Gaster, *Exempla of the Rabbis*, London, 1896, no. 19; M. Seligsohn, in *JE* xi. 360 f.).

Thus was established a compromise which was facilitated by the manifold meanings attached to the word *ruah*, 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the Lord, possessing man and departing from him. So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Mishna, a light might be extinguished on the Sabbath if an evil spirit was feared (*Mishn. Shab.* ii. 5); and in the Bible *ruah* is already occasionally applied to evil spirits, demons, and devils (Jg 9²³, 1 S 16¹⁴⁻¹⁶, 23 18¹⁰, 1 K 22²², Zec 13²).

Despite the stern attitude taken by the Rabbis, magic flourished among the Jews, for the adepts of this science often deluded themselves as to the true character of their art. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formulæ they introduced names of spirits and demons gathered from every form of warring creed and ancient tradition, and gods and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, and Egyptian names, and even such appellations as Soter, Alpha, Omega, and Evangelion are found side by side with Š'bhāōth and Shaddai. Actual specimens of these conjurations are very rare, for the magician would never disclose his mode of operation, but the following example (taken from the present writer's Cod. no. 443, fol. 136) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called "the princes of bdellium." Take bdellium and write upon it with olive oil¹ 'AUNGIL (or) AUNGILIA;² and take a boy seven years old and anoint his hand from the top of the thumb to the end of the finger, and put the bdellium into his hand in the anointed place and seize his hand; and you shall sit upon a three-legged stool and put the boy between your loins so that his ear shall be against your mouth and you shall turn your face towards the sun and say in his ear: "Aungil, I adjure thee in the name of the Lord God, God of Truth, God, Keeper of the Hosts, ALPHA, AIDU,³ that thou shalt send from thee three angels." Then the boy will see (a figure) like (that of) a man; and say (the charm) twice more, and he will see two (figures); and the boy shall say unto them. "Your coming be in peace!" And then tell the boy to ask of them that which you wish. And if they will not answer him, the boy shall adjure them, and say: "KASPAR, KELEL, 'EMAR (or) BLEITFISAR,⁴ the master and I adjure (you) with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and in winter time at mid-day.'

The most remarkable product of this type of syncretism is the *Sefer Maftēah Shlōmōh* ('Key of Solomon'), a complete facsimile of which has been edited by H. Gollancz (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician, and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (*amgūshā*) (*Shab.* 75b), yet his help might be invoked to break a spell in the case of a man who had become seriously ill through witchcraft. This was done almost to modern times (*Tur, Yōreh dē'ah*, § 179, and the commentary of R. Joseph Karo [see QARO, JOSEPH], *ad loc.*).

Belief in magic received an additional impetus through the mysterious teachings of the *Zōhār*, which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the *shēdhīm* are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. Halls of the nether world and their demon rulers are fully described in the *Zōhār* (Ex. 246b-268a) and exorcism of the *shēdh* or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such expulsion of demons by holy and pious men, such as Heliodorus in Catania in the 8th cent. (L. Zunz, *Zur Gesch. und Lit.*, Berlin, 1845, p. 486); and others are mentioned by Manasseh in his *Nishmat Hayīm* (Amsterdam, 1652), bk. iii., which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purpose. Even the scholarly and learned Rabbis of the 17th cent. clung to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (*q.v.*), Ibn Ezra (*q.v.*), R. Judah the Pious, Rashi, and Nahmanides (*q.v.*) were all credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's *Notre Dame de Paris* as a wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay famulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraved. The Ba'al Shēm (+1760), who founded the sect of the Ḥasidhīm, had many encounters with the *shēdhīm*, as described in his biography (*Shibhē Ba'al Shēm Tob*, Berdichev, 1815 ff.), and a collection of miraculous deeds performed by him and after him by wonder-working Rabbis of the Ḥasidhīm as detailed in the *K'hal Ḥasidhīm* (Lemberg, 1864); nor should we forget the legendary contest, de-

³ Οὐρεα (?).

⁴ The three kings from the East, Kaspar, Melchior, and Baltazar—a curious invocation in the mouth of a Jewish magician. It is evident, from the corrupted form of the names, that the copyist did not understand what he was writing.

scribed in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sambat-yón, for upon the issue of the struggle depended the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as fumigation, libations, and offerings of oil, bread, and lighted candles, which are put in the four corners of an empty house to propitiate the *shēdhm* before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the *shēdhm* is waning, and the literature of practical *kabbālā* is slowly but steadily being discarded. Indeed, much of Jewish magic to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Karo (commentary on *Tūr, Yōreh Dē'āh*, ch. 179), that, although there was no basis of fact for the procedure, such an appeal might soothe and comfort the patient, and therefore he saw no objection to it. This is practically the answer which is given in modern times when the people are asked why they continue to believe in the harm done by demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are loath to give up old beliefs which are now recognized as vain imaginations.

LITERATURE.—In addition to the books mentioned in the text see the Literature at artt CHARMS AND AMULETS (Jewish), DIVINATION (Jewish), and BIRTH (Jewish). M. GASTER.

MAGIC (Slavic).—The Slavic countries are a peculiarly rich field for the study of folk-lore, as they were not Christianized until the 10th cent., remained isolated from Western influences, and have conserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unwonted and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the drear monotony of his plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was envired by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound science, but good rationalism. A. N. Rambaud¹ says that the primitive Slavs adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly

influenced Slav myth and magic. The word Rügen is derived from the same root as the English 'rough,' and is called in Early Russian Ruyán. Now the word Buyán comes from a synonymous root, and looks like a translation of the Teutonic name Rugen; and it is thus a safe and probable theory to identify the fabulous island of Buyán with the historical shrine of Rügen—all the more so as the mysterious stone Alátyr is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible patter, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illcit or hellish; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masseurs; but, where all nature consists of discontinuous miracles, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian sorcerer lived alone; he had learnt the magic formulæ, and had been instructed by the woodsprites (*leši*), the goblin of the hearth (*domovóy*), the fairies of the fields and the water (*polevóy, vodyanóy*). Such practitioners are known by many names—e.g., *znákhar, koldun, kudésnik, vedún, vorozéy*, etc.; the women-witches are called *vedíma*; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the *znákhar* has physical marks—a troubled eye, a grey complexion—that he mutters, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have marvellous muscular strength and a spotted skin. They are said to forgather in the gusts and whirls of snow at cross-roads; a pious man should cross himself when he comes upon such whirling columns, for in them the witches dance. If a knife be thrust into such a column, it will drop to the ground blood-stained; and it then becomes an implement for sorcery—e.g., a man crossed in love may use its broad blade to wipe out the track of his maiden in the snow.

The wizard is believed to have terrible powers; among the Galician Rusins, e.g., if the *znákhar* inserts a knife under the threshold of his intended victim's dwelling, the victim is snatched away by a whirlwind, and detained until the knife is removed.

The magical formulæ are very curious. They are framed for every occasion of need; and, to be efficacious, they must be spoken in one breath without any departure from the text—only thus can the powers of nature be quelled, and the wizard be the lord of creation. The following is the text of a charm against lead, copper, and iron bullets:

'In the lofty chamber, at the river mouth, beyond the river Vólga, a fair maiden stands, stands and decks herself, commends herself to valorous folk, glories in deeds of war. In her right hand she holds bullets of lead, in her left bullets of copper, on her feet bullets of iron. Do thou, fair maiden, ward off the guns of the Turks, the Tatars, the Germans, the Circassians, the Russians, the Mordvins, of all tribes and foes;

¹ *La Russie étiologique*, Paris, 1876, p. 215.

smite with thy invisible might the hostile weapons. If they shall shoot from their guns, may their bullets not hit, but strike the moist earth, the open field. May I be whole and uninjured in this war, and my steed whole and uninjured, and my dress stouter than armour. I close my decree with a lock, and I hurl the key into the Ocean-sea, on the burning stone Alátyr. And, as it is not to the sea to dry, as the stone may not be seen, the keys not be reached, so may I not be hit by bullets for all my life."

A charm against fever runs as follows:

"On the Mountains of Athon there is an oak, and under the oak thirteen sages with the Sage Pafnúti. To them there go twelve maidens, fair, with simple tresses, and simple bells. And the Sage Pafnúti with the thirteen sages says: "Who are these who have come to us?"—And the twelve maidens say, "We are the daughters of King Herod, we journey across the earth to freeze up bones and torture the body." And the Sage Pafnúti spake to his sages: "Break off three rods, and we will beat them on for three dawns and three gloomings." The twelve maidens besought the thirteen sages with the Sage Pafnúti; but in vain. And the sages began beating them, saying: "Hail, ye twelve maidens! Be ye turned into water-sprites, and weakened, and live in the chilled water; nor enter the world, nor afflict bones, nor torture bodies." The maidens fled into the cold water as water-sprites, etc

These charms contain weird mixtures of legend: beyond the sea of Khvalynsk (probably the Baltic), on the isle of Buyán, on the mystic stone Alátyr, or on a sacred oak magical maidens sit; or there is a mighty sword, a man with a huge bow, a gigantic raven, or a castle with seven locked gates. In fact, the epic portion of the incantations is a medley of all the ancient myths, the one common feature being the locality of the island, and, occasionally, distinct recollections of the ritual practised at Rugen by the Pomeranian Slavs in the 12th century. These incantations also contain, as necessary parts, an invocation in which the 'servant of God,' the suppliant, states his request, and a conclusion, such as 'my word is strong,' 'a seal on my words,' to ratify, as it were, and assert the mastery over nature ensured by the spell.

Incantations must be pronounced in the traditional manner and at the right time and spot—e.g., on midsummer's day, facing east, on the threshold, etc., during the offices at church (to contrive murder, a candle should be held upside down during the hearing of Mass). The professional enchanter expresses his desires forcibly and effectually to the natural powers whom he has under his sway, by means of formulæ which are a farrago of ancient Finnish magic, Aryan folklore, and Christian apocalypse. The incantations contain words of action, such as 'I stand up,' 'I wash myself,' 'I shroud myself in the clouds,' 'I surround myself with the crowded stars'; and the expression creates an illusion of the reality of the action.

Among the incantations against toothache, one invokes the dawn-goddess to cover the aching teeth with her veil against the attacks of the fiend Limar; the epic part goes on:

"In the field there is a hare, in the sea there is a stone, in the depths there is Limar."

Another invokes the horned moon to cure the affliction. A third invokes, literally in the same breath, the Christian saints Martha, Mary, and Pegalea, and the water-demon. A fourth runs as follows:

"I go neither on the road nor on the street, but on empty lanes by copses and canals. I meet a hare. Hare, where are your teeth? Give me yours, take mine. I go neither on a road nor a path, but in the dark forest, a grey wood. I meet a dusky wolf. Wolf, dusky wolf, where are your teeth? I will give you mine, give me yours. I go neither on earth nor on water, but on the open plain, the flowery mead. I meet an old woman. Old woman, where are your teeth? Take out your wolf-like teeth, take out my falling teeth."

In an incantation to stay the flow of blood the *znáchar* squeezes the wound and recites three times in a breath:

"In the Ocean-sea, on the Isle of Buyán a fair maiden was weaving silk; she did not leave off weaving silk; the blood ceased flowing."

Again, in another formula, the Holy Virgin is depicted, like Svantovit, one of the principal gods worshipped at Rugen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse—an unmistakable reminiscence of the chariot of the sun on the rainbow.

There are charms to lull a child to sleep, and these sometimes invoke mysterious beings—Kriks, Plaks, and Ščekotuna—as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of an empty wine-cask, dried, and then steeped anew in wine, whilst this formula is recited:

"Lord of the sea-depths! Carry the mettlesome heart of thy servant out of the shifting sands, the burning stones; breed in him a winged brood!"

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring invocations:

"Thou, Heaven, hearest, thou, Heaven, seest what I wish to accomplish on the body of thy servant X. [There follow four words unintelligible. An unintelligible pater is sometimes found, which looks very like a tradition of a lost language.] Thou Moon, turn away the servant of God from wine, thou little Sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the wedding-cup! But in my cup be there water from the mountain-well! Ye stars, do ye wean X, the servant of God, from wine. My word is potent!"

"Thou bright Moon, come into my net! But in my net there is neither bottom nor cover! Thou generous Sun, approach my door, my courtyard, but in my courtyard there are neither men nor beasts."

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Sakharov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitively some origin to part of the magic ritual, at any rate, of Russia.

In the 18th cent. Russian magic became specifically demonological. An infernal hierarchy was foisted upon it with anti-ecclesiastical ritual. These late charms impress the reader as being identically artificial, like the imitative ballads of the same period; in form they copy the mediæval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive vague and inchoate nature-worship of the Slav Aryans was profoundly influenced and deflected by the subject races of the Finns, Cuds, and other Turanian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slavs originated in a greater intermixture of race, and, when suppressed, was soon forgotten; but it lingered on in tradition and folk-lore, in the incomprehensible patter of the spells, and especially in the legend of the isle of Buyán and the stone Alátyr.

As Christianity spread, the ancient gods of thunder, spring, and progeny, the sun and moon, etc., were duly canonized, whilst the pagan soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second mediæval stage, merged in and with the incantation are village science and medicine, village nature-poetry, and primitive *religio loci*. The specialization of the medicine-man, the healer, the priest, and the minstrel came with advancing civilization, the herbalist degenerating into the magician and enchanter. Post-mediævally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.

L. A. MAGNUS.

MAGIC (Teutonic).—In all ages and in all localities the belief in magic is found to have sprung from the same roots: panvitalism, *i.e.* the conception of nature as alive in every part; the incapacity of primitive man to distinguish persons or things from their names or representations; the belief in the transferability of the powers of nature and of human souls; and the dread of soul-spirits and demons, as also of such hostile persons as were believed to be in league with these supernatural existences. We need not wonder, therefore, if the means by which the various peoples of the earth have sought to defend themselves from all sinister influences of the kind should likewise show a large degree of uniformity. Naturally the most effective mode of securing immunity from the machinations of magic was to counteract them, if possible, by a magic still more potent. From the earliest times the amulet and the spell have been specially resorted to as protective expedients. While the former, however, was employed exclusively as a prophylactic, the magic formula was used in the practice of other kinds of the occult art, whether its design was beneficent or the reverse.

With reference to the ideas and customs associated with the belief in magic, the Teutons formed no exception to the general rule. Among them, as among other races, are found the belief in the soul and the various forms of superstition developed from and dependent upon it. The souls of the departed were believed to pervade and animate all nature; they could assume at will human or animal forms, and bring good or evil fortune to men. From the soul of the sorceress came the powers of the witch whose devices could work injury upon other human beings. Many of the nature-demons, whose place of origin was the physical environment, were regarded as being endowed with magical powers. Among the Germans, likewise, the practices of soothsaying and magic were intimately connected with the belief in soul-spirits. The prophetic faculty was attributed to women as well as men. In the north of Europe the *Völven* had a great reputation as prophetesses and sorceresses. The practice of magic was on the whole more fully developed among the Northern Teutons than in Germany, being fostered in the former case by the shamanism of the neighbouring Finns, a people famous over the entire North for their magic. The most powerful and formidable sorceresses mentioned by the Norse sagas belong, for the most part, to the Finnish race, which, again, in its religion, its demonology, and its magic, is very closely allied to the ancient Sumerian peoples. It is possible that many elements in the magic and demonology of the Northern Teutons were borrowed from the Finns. At all events, the practice of resorting to the latter people in order to acquire their magic arts became so prevalent that at a later time the Christian Church found it necessary to enact laws prohibiting it. But this was not the only channel by which the Teutons became acquainted with the magical ideas and usages of foreign, and especially of the Roman, Greek, and Oriental, peoples. The Northern Teutons visited the Mediterranean Sea

both as Vikings and as peaceful merchants, while the Southern Teutons were the near neighbours of the Romans, and were sometimes in their pay as mercenaries. In point of fact, however, the occult art and its adepts are found among the Teutons from the outset. Here, just as on Greek and Roman soil, the idea prevailed that it was possible to work changes in the nature of objects simply by the magical virtues of the spoken and written word or of the symbol. The magic utterance and the magic rune—the engraved talismanic symbol—were used for the most varied purposes. According to the *Ynglinga Saga*, runes and spells owed their origin to Odin, while the rune-master of the *Edvamáli* knows the right method of engraving the characters, as well as the songs which effect cures, restrain enemies, render weapons harmless, quench fires, subdue winds and waves, call up the dead, and awaken a maiden's love, though the words of the songs are not given. Other magic songs are referred to in the *Sigrdrífumál*. That a similar profusion of magic songs was to be found among the Southern Teutons is shown by the *Homilia de sacrilegiis*, which came into existence in the Southern Frankish kingdom under the Merovingians. Alike in the North and in the South these songs were in great part employed as expedients for the cure of disease in man and beast; nor is this to be wondered at when we remember that disease itself was regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of magic.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and ligatures. There was not the slightest misgiving as to the efficacy of the appropriate amulet. Discoveries in tombs furnish ample information regarding the objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, belemnites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called *bracteates*, which were imitated from Roman coins, and brought to the North in the early centuries of our era. These were mostly of gold. The images of the gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they found ideas and practices quite similar to what had prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, *i.e.*, they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbade all worship of them, as also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, synods and councils had found it necessary to forbid even the priests to pander to the people's craving for amulets, written spells, adjurations, and magic potions; and, as late as the 8th cent., clergy in Thuringia, the missionary district of St. Boniface, were making amulets of small cards inscribed with Biblical verses of supposed protective or remedial powers, and hung from the neck by a cord, just as if they had been pieces of amber or agate. The use of incantations was also vigorously assailed from the pulpit, while other ecclesiastical enactments against amulets and spells are found among the rules for penance and in the ecclesiastical or Christian codes. Among the various collections of penitential regulations—which, it is true, prohibit many non-Teutonic

superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against 'divinationes,' 'auguria,' 'somnia,' 'mathematici,' 'emissores tempestatum,' and especially against 'incantationes diabolicæ,' 'filacteria,' and 'ligaturæ.' As yet excommunication was the extreme penalty for transgression. The Venerable Bede (*HE* iv. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjurations and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work *de Synodalibus Causis* (A.D. 906; *PL* cxxiii. 187 ff.), and from that work much has been borrowed by Burchard of Worms, who wrote about the beginning of the 11th century (*PL* cli. 537 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Ælfric's *Passio S. Bartholomei Apostoli*, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a 'magic song.' The ecclesiastical ordinances of Eadgar and the Northumbrian priests' laws contain regulations to the same effect. Among the Northern Teutons likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the use of spells and amulets and the evils arising from them. Thus can. 9 of a papal bull enacts for the Lateran Council of 1514 that *sortilegia* made by invoking demons, by incantations, or by other superstitious practices are unlawful. Clerics who offend are to be punished at the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with such offences, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the *lex Visigothorum*, enacted (bk. vi. tit. 2, 4) that those who 'quibusdam incantationibus' bring hailstorms upon the fields and the vineyards 'ducentenis flagellis publice verberentur et decalvati deformiter decem convicinas possessiones circuire cogantur inviti.' Rotharis, king of the Longobardi, sternly prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Teutons. The older Icelandic canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment.

The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (*maleficium*). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches' flights was ex-

plicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, notwithstanding all its exertions, was by no means successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the recrudescence of the old neo-Platonic—in reality, the Babylonian-Egyptian—doctrine of demons. At an early period medicine had become the monopoly of the cloister; the demons of disease were exorcized by the priest; and to relics, to the rosary, and to the 'Agnus Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the amulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adjurations were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. But in the 13th cent. came a momentous change in the Church's standpoint. The doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of human beings into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent. the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated with each other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (*Sachsenspiegel*) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the users of incantations, amulets, or other magic devices) was still pleaded for by the councils and by certain outstanding men among the clergy. But the Inquisition at length silenced every stricture against its competence to deal with magic. By the civil legislation of the 16th cent. those who dealt in magic and soothsaying were punished mainly by fines; the death-penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1508 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation—the 'peinliche Gerichtsordnung Kaiser Karls v.'—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th century. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry VI. But in England the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent.; in Scotland cases are found as early as the beginning of that century. With regard to Sweden, we are not in a position to say whether witches were burned

before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to destroy it, though the delusion certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their age, and the final deathblow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formulæ supposed to secure protection and advantage; (2) magic formulæ intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object might be either (a) to drive away an existent evil, to 'exorcize' it, or (b) to avert a possible evil by means of a 'blessing.' This dichotomy of the first main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formulæ were used not only for the purpose of dislodging present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (c) prophetic magic (as it may be called) had often to do with things which lay in the future, it comes into close touch with the class of magic formulæ designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four *genera*, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulæ were meant to serve.

Magic can be overcome only by counter-magic; such was at one time the universal postulate of the occult art. In primitive times, however, all sorcery consisted in words and symbols, generally conjoined with actions. Thus, with reference to the Germans, Tacitus (*Germ.* x.) states that, when the deity was consulted by means of the lot, the priests held aloft the magic wand engraved with symbols, muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisite symbolic actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: 'wið færstice feferfuige and seo reade netele, ðe þurh ærn inwyrð, and wegbrade: wyll in buteran'; then at the end, 'nim þonne pæt sæx, ado on wætan.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all accessories or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—and hence, no doubt, the oldest—vehicle of direct influence is the express command, and, accordingly, such command must have formed the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula from the 9th–10th cent., which has come down to us bearing the title 'contra vermes'

(C. von Müllenhoff and W. Scherer, *Denkmäler deutscher Poesie und Prosa*², i. [1892] 17):

'Gang út, nesso, mid nigrum neskifinon
út fana themo marge an that bæn,
fan themo bène an that fleg,
út fan themo flegge an thia hûd,
út fan thera hûd an thesa strála,
drohtin, uerthe só!'

With this may be associated the Anglo-Saxon 'blessing of bees,' the 'wyð ymbe,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and a verse explanatory thereof, it continues (C. W. M. Grein and R. P. Wulker, *Bibliothek der angelsachs. Poesie*, i. [1883] 319 f.):

'Sitte ge, sigewif, sigað to eorpan!
næfre ge wilde to wudu fleogan!
Beo ge swaagemindige mines godes,
swa bið manna gehwile metes and epeles.'

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (*ZDA* xxxvii. 259):

'Probable as it is that at a certain stage of civilization the action of the *galdr*, i.e. the spell in the proper sense, or of certain species of it, was produced in connexion with the narration of a particular mythical incident, yet there is not the slightest doubt that in other periods the epic narrative and the magic formula are disjoined, and may each maintain a separate existence.'

Besides these adjurations strictly so called, which were complete in themselves, and which may be regarded as the earliest Teutonic spells, there comes down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the witch is constructed on similar lines. The substance of the introductory portion—the narrative—is generally borrowed from mythology. The procedure was to relate some incident traditionally associated with an effect identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon the narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this must, accordingly, be reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of a short narrative before the actual formula is not peculiar to the Teutons—let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. It was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models may have been largely instrumental in propagating the narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting of a prose narrative followed by a rhythmical formula, as adopted by Schröder (*loc. cit.*), is beside the purpose. The primordial element was certainly the formula, the narrative being added later; and, as we have seen, each could

be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation 'saying and singing' came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence—and not from Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz. the purely imperative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulæ, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulæ, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their place. These new formulæ were generally composed in verse, and were embellished with rhyme. Their narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen formulæ composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a comparison or allegory, and its rubric ran thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulæ were formed on the pattern of the 'exorcisms,' 'benedictions,' and 'consecrations,' or these were simply translated into the vernacular. This species is probably not older than the 13th century.

Mention must also be made of a type of magic formula in regard to which the monks played merely an intermediate rôle. This group consists mainly of formulæ handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulæ were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, accordingly, comprises the most ancient type of spell, which, it is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributory source of the superstition which is concerned with words and letters—and, it may be added, numbers also. This was the religious philosophy of the Jews, as set forth in the works of the *Ḳabbālā* (q.v.).

These leading types will suffice to classify the great majority of magic formulæ, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the

course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulæ of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formula proper; and examples of this type become numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulæ which in themselves had formerly done duty as blessings, so that the formulæ of blessing, being supplemented by invocations of God and multiplied petitions, often actually approximated to the character of prayer itself.

When we consider the mass of Teutonic formulæ—even with the 16th cent. as the ulterior limit—in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the *Hávamál*, the *Sigrdrífumál*, and the *Homilia de sacrilegiis* is by no means an exaggeration. Adjurations against disease certainly constitute the largest class. Many maladies were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz. the domestic animals. In their case also, therefore, magic formulæ were used to ward off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from wild beasts. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, 'ad pullos de nido,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent opiate stone, and to be obedient to all commands. The tooth and the right forepaw of the badger acted as charms against all kinds of injury, and with the shoulder of a toad a man could win the love of whomsoever he chose.

In the therapeutics of ancient and mediæval times an important place was assigned to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulæ were believed to ensure this. The practice was to adjure either the whole world of herbs,

or a definite number of them (cf. the Anglo-Saxon 'nine-herb spell'), or, again, some particular herb. But still further manifestations of the potency of herbs could be elicited. They could be made to secure the traveller against fatigue, to act as a defence against weapons, and to protect the cattle from sorcery and the crops from hailstorms. They could also help one to win love, to open locks, to ascertain truth, and to read both the future and the past.

Then the magic formulæ served to protect men not only against disease, but also against the malice of their fellows and the threat of misfortune. By their aid a person sought to safeguard himself—especially when on a journey—against the artifice of his enemies, to blunt their weapons, and to free himself from prison. By the same means he could defend himself against malefic magic, and against the bewitching of his food and drink. Other formulæ possessed the power of procuring friendship, love, and favour, and of gaining justice before a legal tribunal. Wives sought, through the medium of magic, to turn the harshness of their husbands into love. An astute merchant of the 16th cent. would even try by a spell to induce people to buy up his stock of stale wares.

Human life was thus surrounded by a rampart of spells, and property likewise was in similar fashion made proof against evil influences. Houses were secured by spells against burglary and fire, and corn in the granaries was kept from decay. If anything was lost or stolen, the magic formula could restore it, and even lead to the discovery of the thief. The same means were also used to protect, and to increase, the fruits of gardens and fields.

The number of extant magic formulæ designed to work harm is quite insignificant—a circumstance which is, no doubt, due to the rigorous treatment meted out from the earliest times to the practice of malefic magic. Such hurtful spells might be used by the malicious to sow dissension between old friends, to change the love of a married couple into hatred, to bring every conceivable disaster upon another, and even to overwhelm with destruction all that he possessed.

MAGIC (Vedic).—1. Definition.—The sphere of cult and ritual has two aspects in Vedic literature—religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential character of Vedic religion, therefore, is propitiatory and persuasive. Magic, on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its essential character is, therefore, coercive. Both aim at the same result, but in different ways. Religion achieves its purpose indirectly by inclining the will of a powerful ally through prayer and gifts, for instance, to destroy an enemy; magic does so directly by operating with the impersonal (and imaginary) causal connexion between the means which it employs and the effect to be attained, as burning the effigy of an enemy in order to burn the enemy himself. Its practice was in part auspicious and beneficent, as the ritual for the obtaining of offspring or luck, of rain or victory, but it was largely maleficent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by themselves.

2. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and which are intended to accompany the ritual of the Soma sacrifice (cf. art. HYMNS [Vedic], § 7 f.). Only a dozen of its 1028 hymns are concerned with magic, about one half of them being auspicious, the rest maleficent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. HYMNS [Vedic], § 11); it is a collection of metrical spells, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. HYMNS [Vedic], § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formulæ, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formulæ are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The great development, in this period, of an intricate ritual and the concentration of sacerdotal thought on its perfect performance had led to the new conception that sacrifice was not meant to propitiate the gods, but directly to control the natural course of things.

The prose theological works called Brāhmanas,

which represent the next stage of Vedic literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which the sacrificial ceremonial was permeated. The Upaniṣads, though a continuation of the Brāhmaṇas, are philosophical rather than religious, but their speculations on the nature of *brahman* and on the supernatural powers acquired by knowledge and asceticism are charged with magical notions.

The final phase of Vedic literature, which comes down to c. 200 B.C., is represented by the Sūtras. These concise manuals, especially those dealing with domestic life (*gṛhya*), and to a less extent those concerned with customary law (*dharma*), show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 8-12).

3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which can, from that time onwards, be historically studied in continuous successive literary stages, extending over more than 1000 years. Such facilities are afforded by no other ancient literature as regards either the antiquity or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from scanty and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character found in the Rigveda are very few and late. It must, however, be borne in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even in them the belief in magical power independent of the gods is to be found. Thus in one hymn (X. xcviii.) the sacrificing priest Devāpi begins with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: 'the sage Devāpi sat down to the

duty of Hotr priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain' (v. v.). Every page of the Brāhmaṇas and of the ritual Sūtras shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifice exercised power over gods and, going beyond them, could directly influence things and events without their intervention. An incipient form of this notion already appears in the Rigveda, where exaggerated sacrificial powers are in several passages mythically attributed to ancient priests; e.g., 'with mighty spells the Fathers found the hidden light and produced the dawn' (VII. lxxvi. 4); 'the Fathers adorned the sky with stars, like a black steed with pearls; they placed darkness in night and light in day' (X. lxxviii. 11); 'with their kindled fire the Angirases (ancient priests) found the cows and steeds hidden by (the demon) Pani' (I. lxxxiii. 4); they 'by their rite caused the sun to mount the sky' (X. lxii. 3); '(the ancient fire priest) Atharvan by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born' (I. lxxxiii. 5). The ancient priest Viśvāmitra, by directly invoking the rivers, made them fordable for the tribe of the Bharatas (III. xxxiii. 1-12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always definite, but that the two are often intermingled. Thus the morning sacrifice at sunrise, of which we read in the Rigveda (e.g., IV. li. 7), when the fire is kindled and an offering is made to the fire-god, in the *Satapatha Brāhmaṇa* (II. iii. 1. 5) assumes a magical character, the fire being kindled to produce sunrise: 'By offering before sunrise he (the sacrificer) makes him (the sun) to be born: he would not rise, if he were not to sacrifice in it (the fire)'. A similar view seems already to be expressed in a verse of the Rigveda: 'Let us kindle thee, O Agni, that thy wondrous brand may shine in heaven' (v. vi. 4). Again, there are several passages in the Rigveda (e.g., IX. xlix. 1, xcvii. 17, cviii. 9 f.) in which the Soma ritual is spoken of in the magical character of producing rain direct, without influencing the goodwill of the gods that shed rain.

The blending of a sacrificial and a magic rite may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which is offered for the attainment of a special purpose.

There can be little doubt that only food eaten by man originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (*barhis*) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the *barhis* was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to profane contact. To the *barhis* corresponds, in the ancient Persian ritual, the *barsman* (a bundle of twigs; see art. *BARSON*) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the oblation in fire was an Indo-Aryan innovation, and that the burning of the *barhis* not improbably formed the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrifice receiving a magical turn by the employment or addition of a non-eatable substance; as when a man wishing for cattle offers the dung of a couple of calves (*Gobhila Gṛhyasūtra*, IV. ix. 13f.); or when poison is added to an offering in order to destroy ants (*Kausika Sūtra*, cxvi.). On the other hand, objects suitable for direct magical manipulation could easily be turned into an offering by those habituated to the sacrificial idea in order to invest magical acts with the garb of sacrifice. Thus the

burning of injurious substances would become a sacrifice; for instance, arrow tips might be offered in order to destroy an enemy (*ib. xlvii. 44*). In this way the sacrifice came to assume the rôle of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies or to return from exile; and of producing many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifice to assume this character in the later Vedic period.

Various causes contributed to this result. The belief in the divine presence at the sacrifice, and in the mysterious success produced by the sacrifice, encouraged an increasing application of magical practices as the ceremonial system became more elaborate. Secondary observances of the sacrificial ritual might already have belonged to the sphere of magic from the beginning. Efforts to explain accidental features of the ceremonial would lead to the discovery of effects allied to magic. Priests would also foster belief in the magical power of sacrifice in order to secure their own indispensableness. The magical tendency would be increased by the mixture of prayer and spell; if in the prayer accompanying the sacrifice the magical effects of a spell were assumed, such effects would naturally be attributed to the sacrifice also.

5. Predominantly magical ritual.—There are several groups of rites which, though belonging to the sphere of sacrifice, are predominantly magical in character. They are partly connected with family and partly with public life. The most important of these are:

(1) *The wedding ceremony.*—What little worship of the gods is found in this group of rites is almost restricted to the cult of Agni, the domestic god, who was constituted a witness of the marriage, and who, in the form of the domestic fire, was to accompany the young pair through life. On the other hand, the ceremony was surrounded by magical acts, of which the following were the principal. The bride's hand was grasped that she might be delivered into the power of her husband. She stepped on a stone to acquire firmness. She took seven steps with him in order to establish friendship. She ate the sacrificial food with him to create community of life. When she reached her husband's house, she sat down on a red bull's hide to ensure fertility. The son of a woman who had borne only living male children was placed on her lap in order to fulfil the hope of healthy male progeny. Later, during pregnancy, a magical powder was placed in her nose to secure the birth of a son.

(2) *Initiation.*—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (*upanayana*). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Avestic ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as being the entry into a new life, when the boy was introduced to a religious teacher with a view to Vedic study. The outward signs of the initiation are the girdle, which is wound three times round the pupil's waist, and the sacred cord, worn over the left shoulder and under the right arm, with which he is invested. The ceremony includes a number of observances and involves various tabus in regard to food, some of which will be mentioned below (see also *VEDIC RELIGION*, § 6*h*, and cf. *INITIATION* (Hindu)).

(3) *Public rites.*—The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as such, but of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (*abhiṣeka* [*q.v.*]) the king sits on a throne made of wood from the *udumbara* fig-tree, which to the Indian was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The contents of a cup made of *udumbara* wood, filled with butter, honey, and rain-water, were poured over the king in order to communicate to him their strength and abundance. The royal inauguration (*rājastuya*) is a further series of rites, chiefly of a symbolical character (cf. 12*b*) intended to ensure a successful reign. A still more imposing ceremony was the Vājapeya, the two main features of which, a conventional race and another symbolic observance, have a magic purpose (12*b*); cf., further, art. АЖИЖЕКА. Finally, the horse sacrifice (*āśvamedha* [*q.v.*]) was the highest sacrificial expression of regal power, which was undertaken for the fulfilment of all the most ambitious wishes of the king, and in which the victim indicated the desire to transfer the swift might of the horse to the sacrificing monarch.

6. Priest and magician.—The magician of pre-historic ages, who manipulated only the lower ritual concerned with demons and natural forces, had long before the time of the Rigveda (at least as early as the Indo-European period) developed into the priest, who dealt with a higher cult in which

he invoked and sacrificed to gods. In the later Vedic period of the Yajurveda, however, we find the priest to a considerable extent reverting to the rôle of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells and other expedients of sorcery. In various lesser rites the priest acts quite in the style of pre-historic times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he produces an imitation of rain that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffective and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of some hymns of the Rigveda which, although late, form part of its canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession, doubtless because alliance with evil spirits and the use of maleficent magic were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: 'May I die to-day if I am a sorcerer (*yātudhāna*), or if I have harassed any man's life; then may he lose his ten sons who falsely calls me "sorcerer"; he who calls me, that am no sorcerer, a practiser of sorcery, or who, being a demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature' (*vii. civ. 15f.*). It was because the Atharvaveda contained a body of maleficent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (*e.g.*, *v. viii.*, *vii. lxx.*) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when he desires to give his sacrifice a magical turn for the purpose of inflicting injury. The post-Vedic *Code of Manu* even contains the express statement (*xi. 33*) that the magic spells of the Atharvaveda are the Brāhman's weapon, which he may use without hesitation against his foes. In the Upaniṣads the magician-priest has become a philosopher who has passed from the path of ritual (*karma*) to that of knowledge (*jñāna*); but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. Of such a nature are his conceptions of the world-soul (*brahman* [*q.v.*]) and of the identity with it of the individual soul (*ātman* [*q.v.*]), as well as his speculations on the sacred syllable *om* (analogous in sense to 'amen'). Such, too, is his doctrine of *karma* (*q.v.*) as an impersonal power which, free from any divine influence, rules future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises of Yoga, which is an inextricable blend of philosophy and magic. By the aid of Yoga he believed himself capable of acquiring the ability to make himself minute and invisible, to increase his size infinitely, to multiply his body, to remember his former existences, and so forth.

7. Asceticism and magic.—There is evidence that from the earliest Vedic period ascetic prac-

tices (*tapas*, lit. 'heat'), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the Rigveda says (X. cxxxvi. 2) of those who are in such a frenzied condition that 'the gods have entered into them.' A poet of the same Veda tells (VIII. lix. 6) how, in a vision produced by austerity (*tapas*), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages ascribing similar powers: dream is born from the soul filled with austerity (Atharvaveda, XIX. lvi. 5); speech born of austerity penetrates to the gods (*Taittirīya Aranyaka*, V. vi. 7); he who has practised great austerity reaches the sun (Rigveda, X. cliv. 2); after practising austerity Indra won heaven (X. clxvii. 1); the magical power of austerity peculiar to the Brāhman will bring calamity on the man who injures him (X. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess Aṣṭakā, performing austerity, produced the greatness of Indra (Atharvaveda, III. x. 12); the seers were born of austerity (XI. i. 26, XVIII. ii. 15, 18). In many passages of the Brāhmanas the creator Prajāpati is described as gaining by the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in one place (*Satapatha Brāhmana*, X. iv. 4. 2) he appears as practising such asceticism that from all his pores came forth lights, which are the stars. The Brāhmanas also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is required as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (*dikṣā*) of the sacrificer in which he practises austerity lasting, according to some authorities (*ib.* XIII. i. 7. 2), till complete physical exhaustion ensues.

8. Magical conditions and agencies.—Magical effect is largely, if not altogether, based on contact (very often impalpable), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the practice of magic, except when it is an element of the sacrificial ceremonial, is generally a lonely one. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divest oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. Thus the south is the home of demons and *manes*; hence performers of rites connected with them must face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other uncanny ceremonies the direction is invariably reversed, the performers moving from north to south.

(a) *Spirits and demons.*—Some of the lesser spirits are concerned only with one activity, such as presiding over the fields and helping at harvest; others, with Arbudi at their head, are invoked to spread terror and death among enemies on the field of battle (Atharvaveda, XI. ix. 1 ff.). The characteristic of most of the rest is to cause damage and destruction in the sphere of human life. These demons are usually called by the

generic name of *raksas*, *yātu*, or *piśācha*, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they not infrequently have an animal or bird shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they intrude in the form of the souls of the ancestors to whom the offering is made; and they approach women in various disguises. The sorcerer himself (as well as the spirits serving him) might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as becoming birds and flying about at night (VII. civ. 18). Setting demons in motion is regarded as letting them loose against an enemy. Thus in the Rigveda (X. ciii. 12) the demon of disease Apvā is let loose against a hostile army with the spell: 'Go forth, Apvā, to confuse their minds, to seize their limbs; attack them; burn them with thy heat in their hearts; let the foe fall into deep darkness.' Such spells might be accompanied by magical acts, such as letting loose a white-footed ewe, in which the power of disease was supposed to be embodied, against the hostile army.

Evil spirits are thought to be everywhere—in the sea, in the air, but most of all in human dwellings; otherwise they especially infest the place where four roads meet. The time of their activity is chiefly evening and night; at night they seek to kill the sacrificer who has undergone consecration (*dikṣā*). But they are particularly active during the night of new moon. Their usual mode of attack (mentioned in both the Rigveda [VIII. xlix. 20] and the Atharvaveda [V. xxxix. 6-8, VII. lxxvi. 4]) is to enter into a man, especially through the mouth; they then eat his flesh, suck his marrow, drink his blood, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—at births, weddings, and funerals. One of the main objects of their attack is the sacrifice: the Rigveda speaks (VII. civ. 21) of the Yātus that seize the sacrificial food, and the Atharvaveda contains (VII. lxx. 1 f.) the spell of a magician desiring to destroy the sacrifice of an enemy through the wiles of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formulæ directed to defence against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity.

(b) *Injurious substances.*—Closely allied to these demoniac enemies are the numerous substances—the most general expression for which in the Vedic language is *tanū*, or 'body'—which, conceived chiefly as impersonal, though sometimes still tinged with personality, perhaps represent an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term *pāpman*, 'evil power,' as a masculine is used in the former, as a neuter in the latter sense. Nor are even injurious creatures like snakes, ants, and worms clearly distinguished from evil spirits, being often spoken of as demons to be driven away. Examples of impalpable agencies are the 'substance' of disease, of hunger and thirst, of guilt, even of such abstractions as sonlessness; or the intangible influence proceeding from auspicious or baneful stars and from the waning or waxing of the moon. These are supposed to fly about in the air and to affect man by various forms of contact. The sphere of magical operations is greatly extended by the belief that, if a 'substance' or power is embodied in any creature or object—e.g., irresistible strength in a tiger—that power is inherent in all its parts and in all that is connected with it. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants like the *avakā* (*Blyxa octandra*), and in aquatic animals like the frog; the nature of the boar is present in the soil

that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one's native land exists in a clod taken from it; a man is connected with the earth by his footprints; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, for thus the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them: one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a he-goat, plenty; on that of a tiger, invincible power.

9. *Magical procedure.*—The operations of magic are mainly directed against hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, are often only another aspect of offensive magic, and will, therefore, be treated under the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. *Defensive magic.*—This type of magic, though consisting in warding off injurious powers, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (I. xii. 2) deterrent homage is paid to a demon of disease: 'Thee, lurking in each limb with burning, we, paying homage, would worship with oblation'; lightning is similarly addressed (I. xiii. 2): 'Homage to thee, child of the height, whence thou gatherest heat; be merciful to ourselves; do kindness to our offspring'; also instruments and ministers of death: 'To those weapons of thine, O Death, be homage; homage to thy benediction, homage to thy malediction; homage to thy favour, O Death; this homage to thy disfavour' (VI. xiii. i. 2). Again, sacrifices to demons are often mentioned (*Baudhāyana Dharmasūtra*, II. i. 32); and in the general sacrificial cult they receive their share, which, however, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often accompanied by spells expressive of homage. *Hiranyakeśin Gṛhyasūtra* contains a direction (I. xvi. 20f.) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, 'Thou art mighty, thou carriest away.' In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (*Sarpabali*, xi.). A ceremonial intended to ward off ants (*Kausika Sūtra*, cxvi.) begins with propitiatory offerings and spells; but, if these fail, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

i. *PREVENTIVE MAGIC.*—On the principle that prevention is better than cure the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) *Avoidance of contact.*—The touch of beings in which maleficent spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirṛti, the

goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus listening to impure sounds involved risk. Precautions were taken not to see impure or dangerous persons or things; the sight of offerings to the dead or to the uncanny god Rudra was to be avoided; and those who were departing from a place where inauspicious ceremonies had been performed, such as those concerned with the dead, with demons, with the goddess Nirṛti or the god Rudra, abstained from looking back. On occasions when evil spirits were likely to be in the neighbourhood care was taken to prevent their coming too near. Thus a bundle of twigs was tied to the corpse on the way to the burning ground in order to efface the footsteps and so hide the path from the demons; and the sacrificial fire of the departed, having by his decease become a seat of death-bringing powers, was removed by some aperture other than the door.

(2) *Fasting.*—One of the chief precautionary measures against the attacks of hostile powers was abstention from food, in order to prevent them from entering the body. It is, therefore, a leading element in the preliminary consecration (*dikṣā*) for the Soma sacrifice. With reference to this, one of the Sūtras remarks (*Āpastamba Śrautasūtra*, X. xiv. 9): 'When an initiated man (*dikṣita*) grows thin, he becomes purified for the sacrifice.' A special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or the kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day; while the student himself has to refrain from eating salted food and drinking milk for three days after the ceremony; he must also abstain from food altogether for three days, or a day and a night, before he enters upon a particularly holy part of his Vedic course. A newly married couple must, during the first three nights following the wedding ceremony, avoid all salted or pungent food. The efficacy of fasting is illustrated by the precept (*Gobhila Gṛhyasūtra*, IV. vi. 13) that one who desires to gain a hundred cart-loads of gold should observe the vow of fasting during one fortnight.

(3) *Abstinence.*—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place; for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Sabali sacrifice; during the course of the Dikṣā by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

(4) *Asceticism.*—This expedient appears in various forms. One of them is exposure to heat; it is an element in the Dikṣā ceremony, a special formula being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstinence for the newly married couple, the Vedic student, and the performers of the Dikṣā consecration, of the new and full moon ceremony, and of the Sabali sacrifice. As a safeguard against demons dangerous to the sleeper, watching through the night is enjoined during the Dikṣā ceremony, and on the eve of setting up the sacrificial fires and of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the Dikṣā consecration, by the man about to set up the three

sacrificial fires, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that austerities of various kinds had to be undergone by one preparing to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect the recovery of the patient.

(5) *Concealment*.—Another means of guarding against the attacks of hostile powers was concealment of one's person or of its parts, as seclusion in a shed and covering the head during the observances of the *Dikṣā* ceremony; or putting on garments to make oneself unrecognizable; or hiding the hair of the head and beard or nails out off at sacramental rites, such as the initiation of the Vedic student (cf. § 8 (b)).

(6) *Amulets*.—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one's person (amulets) and for the positive purpose of attracting prosperity (talismans). Sometimes the same charm serves both purposes; thus the pearl destroys demons, disease, and poverty, and at the same time bestows welfare and long life. Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of repulsion inherent in them, and is not infrequently spoken of as imparted by the gods. They are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, who co-operate with them; the gods themselves are described as having once been successful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, x. iii. 11). Their potency sometimes emanates from their names. An amulet derived from the *varāṇa* tree (*Crataeva Roxburghii*) destroys enemies because, according to the meaning attributed to the name (*ib.* x. iii. 5), it drives off (*vārayati*). An amulet made of this wood is thus addressed in the Atharvaveda (x. iii. 14, 11): 'As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this *varāṇa* upon my breast, the kingly, divine tree, shall smite asunder my foes, as Indra the demons.' One of the amulets most frequently mentioned in the Atharvaveda is that made from the *jaṅgiḍa* tree, which protects from diseases and demons. Again, a long hymn of the same Veda (viii. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the *śrakṣya* tree, which destroys foes, demons, and sorceries. Cf., further, art. CHARMS AND AMULETS (Vedic).

ii. *REMEDIAL MAGIC*.—Magical operations are performed not only to ward off maleficent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedies with which their use was accompanied; but the evidence of the Sūtras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of diseases are the following: 'As the rays of the sun swiftly fly to a distance, thus do thou, O cough, fly forth along the flood of the sea' (vi. cv. 3); and 'The disease that racks and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to the far distance, overcome by my charm' (v. xxx. 9). Curative spells are, however, more usually accompanied by the express employment of material objects, chiefly plants. The hymns of the Atharva-

veda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magic and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were doubtless as ineffective as the hair-restorers of modern times). The following are two charms from the Atharvaveda intended for this particular cure: 'That hair of thine which drops off, and that which is broken root and all, upon it do I sprinkle the all-healing herb' (vi. cxxvi. 3); 'Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head!' (vi. cxxxvii. 3). The Atharvaveda contains many spells in which the *kustha* plant (probably *Costus speciosus* or *arabicus*) is invoked to drive out fever; two of its hymns (i. xxiii. f.) are meant to cure leprosy by the use of a dark plant; one (vii. lvi.) operates with a herb that destroys snake poison, and another (vi. xvi.) with a plant against ophthalmia. Fractures are cured by the plant *arundhatī* (iv. xii.), and wounds by the use of the peppercorn (vi. cix.). The use of ointment is associated with one hymn of the Atharvaveda (iv. ix.), of which this is one of the spells: 'From him over whose every limb and every joint thou passest, O salve, thou dost, as a mighty interceptor, drive away disease.' Water not infrequently appears as a magical remedy, and its general curative powers are thus expressed by the following spell of the Atharvaveda (vi. lxi. 3): 'The waters verily are healing, the waters chase away disease, the waters cure all ailments; may they prepare a remedy for thee.' It also cures individual diseases, as excessive bodily discharges: 'The spring water yonder which runs down from the mountains, that do I render healing for thee, in order that thou mayest contain a potent remedy' (ii. iii. 1); or heart-disease: 'From the Himavat mountains they flow forth, in the Indus is their gathering place: may the waters, indeed, grant me that cure for heart-ache' (vi. xxiv. 1). *Pārashara Gṛhyasūtra* (iii. vi. 2) describes how water is used in a magic operation for the cure of headache: the performer moistened his hands and passed them over the eyebrows of the sufferer with the spell: 'From the eyes, from the ears, from the whiskers, from the chin, from the forehead I drive away this disease of the head.' Another remedy is the horn of an antelope, used against a hereditary disease named *kṣetriya*: 'Upon the head of the nimble antelope a remedy grows! He has driven the *kṣetriya* in all directions by means of the horn' (Atharvaveda, iii. vii. 1).

ii. *Offensive magic*.—Aggressive operations against maleficent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expedients adopted are to some extent the same for both purposes.

i. *MEANS EMPLOYED*.—(1) *Fire*.—Fire was one of the chief direct means of driving away demons and all hostile sorcery. Thus in the Rīgveda Agni, the god of fire, is frequently invoked (i. xii. 5, xxxvi. 20) with such verses as: 'Burn, O Agni, against the sorcerers; always burn down the sorcerers and the allies of the demons.' This use of fire, probably the earliest in cult, though overlaid with its later and much more extensive sacrificial application, still survives in the Vedic ritual. Thus a special fire called the 'lying-in fire' (*sūtikāgni*) is introduced into the lying-in chamber (*sūtikā-grha*). Of this fire the author of one of the domestic Sūtras remarks (*Hiranyakesin Gṛhyasūtra*, ii. iii. 6 f.):

'Sacred rites, except fumigation, are not performed with it; he fumigates the child with small grains mixed with mustard seeds'; he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and eyes. At the sacramental ceremony of cutting the child's hair a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it was presumably meant to ward off demons. Of similar significance were the fire employed at the investiture of the Brāhman student, behind which both he and his teacher step, and that kindled when the pupil entered upon his course of Vedic study. That this was the significance of the fire beside which the Soma sacrificer watched during the night in the Dikṣā ceremony is certain, because it is expressly said (*Taittirīya Saṃhitā*, VI. i. 4. 6) that Agni is here appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispelling demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them approach. In the funeral ritual a brand was taken from the southern fire and laid down pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

(2) *Water*.—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (*Maṭirāyaṇī Saṃhitā*, IV. viii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dikṣā, to remove supernatural substances that might be inimical to their success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to obviate the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dikṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to uncanny beings, such as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (*tapas*), aims at acquiring special magical power.

(3) *Plants*.—We have already seen that plants were frequently used along with spells as a magical

cure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and of promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But they are also resorted to for other objects. Thus some are employed against demons and sorcerers, others to counteract curses, and several are associated with battle-charms. Aquatic plants, together with frogs, as representing water, are combined with spells to quench fire. Bdellium (*guggulu*), the fragrant exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) *Stones, etc.*—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clod of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against calamity,' was pronounced (*Kaushika Sūtra*, lxxxvi. 14). A wooden fence was placed round the sacrificial fire, the purpose being 'to strike away the demons' (*Taittirīya Saṃhitā*, II. vi. 6. 2).

(5) *Lead*.—This metal was frequently employed in magical operations, as, e.g., in wiping off dangerous substances. The Atharvaveda contains a hymn (I. xvi.) in which lead was used against demons and sorcerers, this being one of its spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) *Weapons and staves*.—These appear on various occasions as a protection against demons. Thus a man who woos a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little staves are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (*Mānava Grhyasūtra*, I. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (*Kātyāyana Śrautasūtra*, XV. vii. 6). The staff is a part of the ritual equipment in the Dikṣā ceremony, its significance here being explained by the *Satapatha Brāhmaṇa* (III. ii. 1. 32) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as peculiarly liable to the attacks of evil spirits, is provided with a staff at the rite of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hosts of enemies on every side' (*Hiranyakeśin Grhyasūtra*, I. xi. 8). A wooden implement shaped like a sword, technically called *spṛya*, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the *spṛya* is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (*Saṅkhāyana Śrautasūtra*, IV. iv. 2).

ii. *MAGICAL ACTION*.—Certain types of action are regarded as producing a magical effect in various rites. They may be grouped as follows.

(a) *Hostile*.—(1) To make a noise is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to

be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcizing the demon of epilepsy. At the funeral ceremony a din was produced by shattering pots.

(2) A frequent method of removing injurious influences is to *wipe them off*. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apāmārga* (*Achyranthes aspera*) plant (popularly interpreted to mean 'wiping out') was most variously employed in this sense. The Atharvaveda contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (IV. xviii. 8): 'Having wiped out all sorcerers, and all grudging demons, with thee, O Apāmārga, we wipe all that evil out.' The *Satapatha Brāhmaṇa* remarks (V. ii. 4. 14) that by the aid of this plant the gods wiped away fiends and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious powers is to *shake, cast, or strip them off*. The black antelope skin used at a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken away are the goblins' (*Vājasaneyi Saṃhitā*, I. 14). After feeding the souls of the dead, the officiant shakes the hem of his garment in order to remove the souls that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footsteps of death, is thrown away for fear of the dangerous substance which it may have derived from those footprints. For similar reasons clothes worn at uncanny rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the Rīgveda (VIII. lxxx. 7), where Indra is said to have cured the girl Apālā, who suffered from skin disease, by drawing her through an opening in a car. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere riddance, but is often also a transference to remote places or to other objects animate or inanimate. The Rīgveda and the Atharvaveda contain several formulae or spells to relegate evil agencies to particular places or persons in the far distance. Thus hostile magics expelled beyond the ninety streams (Atharvaveda, VII. v. 9, x. i. 16); the disease Takman (a sort of fever) is sent away to far-off peoples, such as the Gandharians and the Magadhas (ib. v. xxii. 14); evil deed and evil dream are banished to the divine being Trīta Aptya in the remotest distance (Rīgveda, VIII. xlvii. 18-17). Injurious agencies are also transferred to others at particularly uncanny spots, especially crossroads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, XIV. II. 49f.). Snake-poison is removed to a firebrand, which, being then thrown at a snake, returns the danger to its source (*Kausika Sūtra*, XXIX. 6). Fever is transferred to a frog as an antidote representing water (Atharvaveda, VII. cxvi. 2); while jaundice is conducted in a homeopathic manner to a yellow bird (ib. I. xxii. 4).

(b) *Auspicious*.—(1) A very prominent part is played by *eating* in the communication of beneficial influences; contact with injurious substances, which would, of course, be equally well effected by eating, is avoided by fasting (cf. § 10. i. (2)). The Vedic ritual contains innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrificial substance conveys the special kind of power implied in a particular sacrifice. Thus, when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula, 'May Agni place his wisdom in thee.' On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the

same colour and dung, bdellium, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard seed (or two beans), one of which has been laid on each side of it (as symbolizing a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater is the correspondence in sex, colour, and other qualities between the victim and the god to whom it is offered. To Indra a bull or (less often) a buffalo, to which he is often compared, is sacrificed; to the Ásvins, twin gods of the morning, a reddish he-goat, for 'of reddish colour, as it were, are the Ásvins' (*Satapatha Brāhmaṇa*, V. v. 4. 1); to the goddess Sarasvatī a ewe of certain qualities; to Agni, with his column of dark smoke, a he-goat with a black throat; to the Sun and to Yama (god of death), two he-goats, one white, the other black. A cognate magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the nature of rain; with that which is its nature he wins rain' (*Taittirīya Saṃhitā*, II. i. 8. 5). When the destruction of enemies is intended, a blood-red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several ceremonies in which *anointing* is applied for the attainment of auspicious ends. In the Dīkṣā rite the sacrificer is anointed with fresh butter to give him unimpaired vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicate to him the powers and abundance inherent in them. At the same ceremony the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the Sautrāmaṇi rite, an expiatory part of the Soma sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essence of cattle, with the highest kind of food, he thus sprinkles him' (*Satapatha Brāhmaṇa*, XII. viii. 3. 12).

(3) *Charms*, made for the most part of wood, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wood from the *parṇa*-tree (*Butea frondosa*) was worn in order to strengthen royal power (Atharvaveda, III. v.); a bridegroom, while reciting a hymn of the Atharvaveda, fastened to his little finger, by means of a thread coloured with lac, a talisman made of liquorice wood to secure the love of his bride (*Kausika Sūtra*, lxxvi. 8 f.); at the full moon ceremony the sacrificer tied on his person talismans made of lac, together with all sorts of herbs, for the attainment of prosperity; while sowing seed, the husbandman put on a talisman of barley. The Vedic student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of *badara* (*Zizyphus jujuba*) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skirt of his garment, and finally inserts them in his ears. A talisman of gold secures long life: 'He who wears it dies of old age,' in the words of the Atharvaveda (XIX. xxvi. 1). To ensure conception a woman puts on a bracelet with the spell, 'An acquirer of offspring and wealth this bracelet has become' (VI. lxxxi. 1).

(c) *Indifferent*.—(1) *Burying* was a frequent secret method of conducting magical substances to others, generally with hostile intent. The Atharvaveda is full of spells expressing fear of magic buried in sacrificial straw, or fields, or wells, or cemeteries. Objects belonging to a woman who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones

in a mortar (a symbol of crushing) and buried. The luck of a person thus attacked might be restored by digging up the objects, while an auspicious spell was uttered. The *Satapatha Brāhmaṇa* relates (III. v. 4. 2f.) a myth how the demons buried charms in order to overcome the gods; but the latter, by digging them up, made them inoperative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This idea of burying things sometimes has an auspicious intention, as when a mixture of milk, dung, bdellium, and salt is buried in order to promote the welfare of cattle (*Kausika Sūtra*, xix. 19).

(2) The action of *looking* at an object may be either beneficial or injurious. It has the former effect, e.g., when the sacrificer says (*Vājasaneyi Sāmhitā*, v. 34) to the priest, 'Look at me with the eye of Mitra' (the sun-god); or when a guest addresses the sweet food that is offered to him, saying, 'With Mitra's eye I regard thee' (*Āśvalāyana Grhyasūtra*, i. xxiv. 14). But the evil eye (q.v.), e.g. of the serpent, brings disaster on him towards whom it is directed. At the wedding ceremony the bridegroom secures himself against the evil eye of the bride by anointing her eyes and saying, 'Look not with an evil eye, bring not death to thy husband' (*Pāraskara Grhyasūtra*, i. 4; *Sāṅkhāyana Grhyasūtra*, i. 16). In the *Atharvaveda* (iv. ix. 6) ointment is conjured against the evil eye with the spell, 'From the evil eye of the enemy protect us, O salve'; the *jungīḍa*-tree is invoked against the evil eye of the hostile-minded (XIX. xxxv. 3); and a certain plant is employed with the spell, 'Of the enemy who bewitches with his eye we hew off the ribs' (II. vii. 5; cf. XIX. xlv. 1). On the other hand, the evil effect produced by an inauspicious object on him who sees it is shown by innumerable directions enjoining avoidance of such sights. Thus the Vedic student who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look round after performing an inauspicious ceremony, such as an offering to the goddess Nirṛti or a rite for the slaughter of demons.

(3) The action of *circumambulation*, which occurs very frequently in the Vedic ceremonial, is regarded as having a magically auspicious effect when the performer walks round an object in sunwise fashion by keeping his right hand towards it (*pradakṣiṇā*). Both living and inanimate things are three times circumambulated in this manner; e.g., priests thus walk round other priests or the victim, and the wives of the king walk round the dead sacrificial horse. Sacrificial altars and temples, the ground where a house is built, as well as houses (as a protection against serpents), are circumambulated. This rite is especially often performed with the sacrificial fire, as at the wedding ceremony and at the initiation of the Vedic student. Water is circumambulated at a wedding, as also a new house, while water is at the same time sprinkled round it. When the ceremony is inauspicious, the direction is reversed, the left hand being kept towards the object. This is done especially in funeral rites at the burying ground and at cross-roads. Thus the mourners walk three times round the unlucky fire deposited where four roads meet, with their left sides towards it, beating their left thighs with their left hands. When a patient is to be cured of snake-bite, the priest walks round him to the left. When a servant who is disposed to run away is asleep, his master, making water into the horn of a living animal, walks three times round him to the left, sprinkling the water round him with the spell, 'From the mountain on which thou wast

born, from thy mother, from thy sister, from thy parents, and thy brother, from thy friends I sever thee' (*Pāraskara Grhyasūtra*, iii. vii. 2). Movement both in the auspicious and in the reverse direction is not restricted to walking. Thus in the sacrifice to the dead the officiant grasps a water jar with his left hand and pours out its contents from right to left; he also holds the ladle in his left and deposits the offering on the grass in the same direction (cf., further, art. CIRCUMAMBULATION).

12. *Sympathetic magic*.—A special type of magic is that which has been called 'sympathetic,' being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficial or injurious.

(a) *Effigies*.—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by transfixing his shadow. His death is also produced by melting a wax figure of him over the fire, or by killing or burning a chameleon as representing him. The elephants, horses, soldiers, and chariots of a hostile army are imitated in dough, and sacrificed piece by piece so as to bring about its destruction. The magician annihilates worms by stamping on or burning twenty-one roots of the *uṣīra* plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn their faces with fire' (*Atharvaveda*, v. xxiii. 13). In order to exterminate the field vermin called *tarda*, a single *tarda*, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its eating grain (*Kausika Sūtra*, i. 19). With a view to smashing the limbs of evil spirits pegs are driven into the ground. One who pounds the Soma-shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation.

The sympathetic connexion is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an exiled prince receives food rendered magical by being cooked with wood that has grown from the stump of a tree, symbolizing the restoration of fallen fortunes. At a ceremony for the removal of troublesome ants a sacrificial ladle of *bādhaka* wood is employed simply because the name of the tree means 'remover.' At a rite to destroy demons the dipping spoon is made of wood from the *palāśa* (*Butea frondosa*) tree as representing the magical spell (*brahman*), which is a slayer of demons. When the sacrifice for the restoration of an exiled prince is performed, earth and other material from his native country are employed. At a sacrifice for victory in battle, soil torn up by a boar is taken for the altar (*vedi*), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made.

(b) *Imitative processes*.—The higher cult concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by an imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dripping of the Soma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain for him speed and victorious might. On various occasions in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the solstitial ceremony an Āryan and a Śūdra (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the Soma and the horse sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as a frog and the aquatic plant *avakā*, are deposited on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the particular form of *rain-making*. Such is the purpose when, at the solstitial festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra's release of the waters by piercing the rain-clouds (which frequently appear as cows in the Rigveda). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is *divination*, the aim of which is to find out what is hidden or future, largely from the occult correspondence between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be interpreted by spiritual persons who possess inner illumination, strengthened by the power of asceticism and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in a special way between two armies about to fight prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an unborn child will be a male, the son of a Brāhman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain whether a girl will make a good wife, she is bidden to choose between various clods taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognostication is the foretelling of weather by old Brāhmins from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolic process is that derived from gods or spirits, by interpreting the movement, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyæna, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xlii. 2). Again, in one of the Sūtras, the owl 'that flies to the abode of the gods' is addressed with the words, 'Flying round the village from left to right, portend to us luck by thy cry, O owl' (*Hiranyakeśin Grhyasūtra*, I. xvii. 1. 3). The direction from which the wooer will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolical method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulæ are usually

accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical effect by itself.

(a) *The spell*.—The spell has generally a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being mentioned or invoked in it; e.g., 'Between the two rows of Agni Vaiśvānara's teeth do I place him that plans to injure us when we are not planning to injure him' (Atharvaveda, IV. xxxvi. 2; cf. XVI. vii. 3); 'Thy ninety-nine spirits, O Night, shall help and protect us' (XIX. xlvii. 3-5). It is, indeed, characteristic of the hymns of the Atharvaveda to contain the names of numerous deities, while the panegyrics of the Rigveda are addressed to one only; e.g., 'Heaven and Earth have anointed me; Mitra has anointed me here; may Brhaspati anoint me; may Savitr anoint me' (VII. xxx. 1). The magician very usually threatens or commands in his own person; e.g., 'I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge' (IV. xxxvi. 6); 'As the lightning ever irresistibly smites the tree, so would I to-day beat the gamblers with my dice' (VII. 1. 1); 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the mind; the Maruts shall harness thee; Tvaṣṭr shall place fleetness in thy feet' (VI. xcii. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; e.g., 'With the light with which the gods, having cooked porridge for the Brāhmins, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light, to the highest firmament' (XI. i. 37); 'As one pays off a sixteenth, an eighth, or an entire debt, thus we transfer every evil dream to our enemy' (VI. xli. 3); 'As the rising sun robs the stars of their brilliance, so I rob of their strength all the men and women hostile to me' (VII. xiii. 1); 'The cows have lain down in their resting-place; the bird has flown to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station' (VII. xvi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is aimed at, is the enumeration of a whole series of possibilities; e.g., 'Out of eyes, nose, ears, brain, neck, back, arms I drive the disease' (II. xxxiii. 1 f.). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; e.g., 'This is thy name; we know thy birth; this thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (*Pāraskara Grhyasūtra*, III. xiii. 6): 'If he should think, "This person will do evil to me," he addresses him with the words, "I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me."' Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the sacrifice, he has only to murmur 'Adoration to Viṣṇu' as an expiation. The daily repetition of the single sacred syllable *bhūh* averts death from him who utters it; 'he has nothing to fear from serious diseases or from sorcery' (*Gobhila Grhyasūtra*, IV. vi. 1). Again, the mere mechanical repetition of a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated Gāyatri verse of the Rigveda (III. lxi. 10)—'We would attain that excellent glory of Savitr the god, that he may stimulate our prayers'—if

muttered 3000 times, frees a man from the sin of accepting unlawful presents. Even the formulae use of a stereotyped dialogue secures the desired result. Thus, when the rite of parting the hair of a woman is performed, the husband asks her, 'What dost thou see?' 'Offspring,' she replies.

(b) *The curse*.—A special form of the magically effective spoken word is the curse. The earliest examples of it in Vedic literature are mythological. In the Yajurveda (*Taittirīya Samhitā*, II. vi. 6. 1) Agni curses the fish for betraying his hiding-place in the waters, predicting that men shall kill it by means of various artifices: 'Hence men kill fish with various artifices, for they are cursed.' In *Tāndya Brāhmaṇa* (VI. v. 11) the gods curse the trees with the threat that they shall be cut down with an axe the handle of which is made from themselves. That the employment of actual curses was also common in early Vedic times is obvious, and is confirmed by the occurrence of many spells intended to counteract them or to make them recoil on him who utters them. The Atharvaveda contains several such; e.g., 'Avoid us, O curse, as a burning fire a lake; strike him that curses us, as the lightning of heaven the tree' (VI. xxxvii. 2); 'Let the curse go to the curser, we crush the ribs of the hostile eye-conjurer' (II. vii. 5; cf. V. xiv. 5, x. i. 5). Plants, such as the *apāmārga*, are invoked to free from the calamity consequent on a curse. The *Satapatha Brāhmaṇa* contains several passages showing the potency attributed to curses. Thus it is there said (II. i. 4. 19, III. ii. 1. 9) that, 'if any one were to curse him, saying, "May the sacrifice turn away from him," then he would indeed be liable to fare thus'; 'Were any one to curse him, saying, "He shall either become demented or fall down headlong," then that would indeed come to pass.' It is there also said that he who curses a Brāhman possessed of certain knowledge leaves this world bereft of his strength and the result of his good deeds. In other Sūtras those who raise their hand to pronounce a curse are said to be one of the seven kinds of assassin (*Viṣṇu-smṛti*, v. 191).

(c) *The oath*.—This is really a curse directed against oneself, as is indicated by the verb *śap*, which in the active means 'to curse,' but in the middle 'to curse oneself,' 'to swear.' It calls down on oneself and one's belongings loss of life or possessions in this world and the next as a penalty for telling an untruth or breaking one's word. Thus, in the ceremony of royal inauguration the priest causes the king to swear the following oath (*Āitareya Brāhmaṇa*, viii. 15): 'All the merit of my sacrifices and gifts from the day of my birth to the day of my death, my position, my good deeds, my life, my offspring shall belong to thee, if I deceive thee.' If the oath is broken, the punishment ensues; e.g., the Yajurveda (*Taittirīya Samhitā*, II. iii. 5. 1) relates how, when the moon-god did not keep the oath which he had sworn to the Creator Prajāpati, he was attacked by the disease of consumption.

MAGICAL CIRCLE.—For the 'operation' of 'conjuring' spirits the mediæval sorcerer sat in the centre of a circle described on the ground. This formed a spiritual barrier, protecting him from ghostly attacks, while enabling him to question his 'familiar' or other spirits from a coign of supernatural vantage.

'Circuli sunt munimenta quaedam quae operantes a malis spiritibus reddunt tutos.'¹

The concepts of circle, circular, and encircling lend themselves naturally to dramatic ceremonialism, and ideas of continuity, finality, and eternity have been appropriately expressed by circular symbolism.

In Scandinavian mythology a serpent engirdles the earth. Popilius Lænas, delivering an ultimatum from the Senate of Rome to King Antiochus, drew with his staff a circle round himself in which he awaited the reply.²

The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—e.g., from the contagion of leprosy—whereas a square house does.³ Possibly the sacred number 3 renders the three-cornered house immune; possibly, again, the three corners represent the points of supernatural weapons.⁴ In the case of the round house the idea may be that nothing can cling to its smooth outline.

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, from the earliest examples to the latest, importance is usually attached to the material or the instrument with which the circle is traced.

Among the Shuswap Indians the bed of a mourner is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person.⁵ The Bellacoola Indians, also of British Columbia, have a similar practice. Besides surrounding the bed with thorns, mourners cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost.⁶ Here the mystic *zargha* depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent bulwarks both in human warfare and in spiritual conflict, and, possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Laotians had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after child-birth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held in the circle by 'stout young fellows.'⁷ In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried

⁷ J. G. Frazer, in *JAI* xv. [1886] 841.

round the mother till she was churched, and round the child till it was christened. In some parts of Scotland a fir-candle was whirled three times round the bed where mother and child lay.¹

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the patient from external evil, though the fire-treatment of childbed may have originated simply in a primitive clinical intention of producing comfort or obviating complications.

In China candles are kept alight round the coffin to 'give light to the spirit,' or to light him on his way.² The Caribs burned a fire round the grave.³ A Chinese charm consists in laying a circle of ashes round the dead man; it is supposed to resuscitate him.⁴ The Romans carried water or fire round mourners on their return from the funeral.⁵

The curious custom of circumambulation as a mark of honour was practised by Hindus, Greeks, and Celts.

In ancient India, walking round a person three times to the right (sunwise) was a ceremony of honour,⁶ as it was among the Jauls and Celts.⁷ The ancient Indians walked round the funeral pyre, as Achilles drove round the pyre of Patroclus⁸ (see art. CIRCUMAMBULATION). The ancient Indians also practised the rite as a cure for a sick person.⁹ Possibly the idea of protecting a person with a mobile, living ring is behind the honorific variety.

In Nias a candidate for the priesthood consorts with spirits in the mountains; when he returns home, he splits a young tree and creeps through the fissure, 'in the belief that any spirit which may still be clinging to him will thus be left sticking to the tree.'¹⁰ Highlanders of Scotland used to send their sheep through hoops of rowan to 'ward off the witches.'¹¹ Similar customs are found in N. Europe and England as cures for sickness.¹²

The Lepps wore a brass ring on the right arm by way of protection against the ghost of the dead person.¹³

Frazer instances superstitions about rings—arm or finger rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples.¹⁴

'To keep the soul in or the demons out' is a question where convergence of practice is natural. In ancient India the medical magician encircled the bed of a woman at child-birth with black pebbles to ward off demons.¹⁵ This is in line with primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous constituent of the mediæval magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that the points of the star pierce the invisible enemies.¹⁶ The Indian data alone show a connexion, by means of this astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of mediæval Europe, along with a considerable body of astrological magic, was developed. This is a remarkable case of permeation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a left-handed compliment to Semitic religion and the conquest of Europe by the Bible.

The Babylonian texts continually refer to the *usurtu*, which Thompson justly identifies as 'the prototype' of the magical circle, possessing the properties of a 'ban.'

The *asipu*-priest recited over the sick an incantation: '(The man) of Ea am I, . . . the messenger of Marduk am I, . . . the circle of Ea is in my hand.'¹

In more detail, the sick person was safeguarded by an enchanted circle (of the nature of a tabu-mark) made with flour or other material, 'as a kind of *haram* through which no spirit could break.' The priest first performed a ceremony of atonement, in which a kid was sacrificed. He flung the kid away, and then described the circle. 'Enclose the man with kusurra (flour), flour of lime, surround the shut gate right and left. The ban is loosed.'² A mixture of meal and lime seems to be intended; both substances possessed virtue. The 'flour of Nisaba (the corn-god)' was the 'ban of the great gods.'³ In another ceremony, before the god Nergal, the priest described with lime a circle round seven winged figures,⁴ and in yet another flour and water were used for drawing the circle.⁵ Here Thompson compares the mediæval use of the Host as a protection against vampires and witches. The Babylonians described the mixture as the 'net of the corn-god.' Similarly the Jews of Jerusalem employed the virtues of food against evil influences, scattering a mixture of food round the bed of a sick person.⁶ A Semitic parallel to the idea of stripping off evil by passing through a ring, or arch, or other circumscribed opening is found in a cure for headache, which consisted in making a circle round a desert-plant with meal, plucking it up before sunrise, and tying it on the head. When the plant was removed, the headache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then casting this away, along with the sickness.⁷

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun,⁸ were bound up with Semitic animism, or rather daemonism, if the distinction may be observed. The causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the invariable employment of the magical circle for the conjuration of spirits is typical of the culture of those ages. The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants whom he called up.⁹ At the same time the geometrical possibilities of the circle appealed to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. Kabbalistic lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the universal concepts of the figure, made it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, the astrological elements of the zodiacal system were applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a *Hecatinus circulus*, 'Ἐκατίνος στροφάλος', calls for notice, though its meaning is confused. He writes:

'Hecate's circle is a golden sphere, enclosing a sapphire in the centre, turned by a thong of bull's hide, and having characters through the whole of it. They made conjurations by turning this; and they are wont to call such things *tyrpes*, whether they have a spherical or triangular or any other shape whatever. Shaking these, they uttered unintelligible or beastlike sounds, laughing, and striking the bronze. It accordingly teaches the operation of the rite, or the motion of such a circle, as possessing secret power. And it is called "Hecate's" as being dedicated to Hecate; and Hecate is a divinity among the Chaldeans.'¹⁰

⁹ *Ib.* ii. 105; the circles 'are certain fortresses.'

¹⁰ *Expositio oraculorum Chaldaeorum* (PG cxlii. 1183).

This account may be simply confusing the Babylonian magical circle with the Greek magical wheel (*τροχός, torquilla*); but, just as the mediæval circle was made material and portable in the form of metal amulets and talismans, so it is possible that Græco-Chaldean superstition may have developed the circle into a wheel like the *τροχός*. The fact that such 'wheels' were sometimes triangular or of other shapes is an interesting hint in the direction of the pentagrams and other figures with which the mediæval circles were filled. Psellus notes that the object of the *invocatio* was oracular, the idea, no doubt, being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the *τροχός*, wryneck, was tied, there is considerable doubt as to its nature.¹

The magical circle of mediæval occultism had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operator. The following may be considered typical examples of the method of description and formulæ of blessing and of invocation. The magician, after purifying himself, collected his paraphernalia, including his magic wand, blessed candles and holy water, magical sword or knife, and so forth, and traced the circle, usually 9 ft. in diameter,² with his wand or sword. He then blessed the circle, a typical blessing being:

'In the name of the holy, blessed, and glorious Trinity, proceed we to our work in these mysteries to accomplish that which we desire; we therefore, in the names aforesaid, consecrate this piece of ground for our defence, so that no spirit whatsoever shall be able to break these boundaries, neither be able to cause injury nor detriment to any of us here assembled; but that they may be compelled to stand before this circle, and answer truly our demands.'³

More elaborate formulæ include such terms as:

'Sanctify unto myself the circumference of nine feet about me, . . . from the East, Glavrab, from the West, Garron, from the North, Cabon, from the South, Benth.'⁴

Good spirits seem to have been invoked but rarely; necromancy was also rare, though two forms of this were used, one in which the body and the other in which the 'shadow' of the dead was conjured. Evil spirits of power were the usual object of conjuration, and extraordinary precautions were taken in the process.⁵

'Now, if any one would call any evil spirit to the circle he must first consider and know his nature and to which of the planets it agrees and what offices are distributed unto him from the planet. This being known, let there be first sought out a place fit and convenient and proper for his invocation according to the nature of the planet and the quality of the offices of the same spirit as near as it can be done; as if their power be over the sea, rivers or floods, then let the place be the sea-shore, and so of the rest. Then chuse a convenient time for the quality of the air (being serene, quiet, clear, and fitting for the spirits to assume bodies). . . . Let the circle be made at the place elected, as well for the defence of the invocant as the confirmation of the spirit. And in the circle write the divine general names and all those things which do yield defence to us; and with them those divine names which do rule his planet, and the offices of the spirit himself; likewise write therein the names of the good spirits, which bear rule in the time you do this and are able to bind and constrain that spirit which we intend to call.

We may add characters and pentacles⁶ . . . frame an angular figure with the inscription of such convenient numbers as are congruent amongst themselves to our work. . . . Further, we are to be provided with lights, perfumes, unguents and medicines, compounded according to the nature of the spirit and planet which agree with the spirit by reason of their natural and celestial virtue . . . holy and consecrated things necessary not only for the defence of the invocant and his companions, but also serving for bonds to bind and constrain the spirits; such as holy papers, lamens,⁷ pictures, pentacles,

swords, sceptres, garments of convenient colour and matter. Then let the exorcist (*sic*) and his companions enter the circle.'¹ If, after a prayer to God and an invocation, the spirit refuses to appear, 'reiterate the same three times, from stronger to stronger, using contumelies, cursings, punishments, suspension from his power and office, and the like.' If the spirit make a doubtful assertion, it must be tested by oath; the operator stretches his sword out of the circle and swears the spirit by laying his hand on the sword.²

At last, when the operation is beginning to have effect, 'there will appear infinite visions, apparitions, phantasms, etc., beating of drums, and the sound of all kinds of musical instruments; which is done by the spirits, that with the terror they might force some of the companions out of the circle.' At this point, 'holding the pentacle in his hand let him [the operator] say, Avoid hence these iniquities.'³ The spirit invoked would now normally appear,

A plain circle was the exception. In some, two diameters were drawn in the form of a cross,⁴ but, as a rule, the circle included a pentagram or combination of pentagrams. Two intersecting pentagrams, viz. two equilateral and equal triangles cutting each other so that their segments are equal, constituted Solomon's Seal;⁵ this seems to have been often regarded as more efficacious than the circle itself. These triangles were described before the circle, a frequent method being to draw a 9 ft. square, then the diagonals, and then the circle round the square.⁶ An inner circle was described at a distance of a foot from the outer, and between these were inscribed various 'names of power,' or injunctions to the spirits, Alpha, Omega, On Adonai, El-Zebaoth, Tetragrammaton, Elohim, Jahweh; 'I forbid thee, Lucifer, to enter within this circle,' 'Obey me, Frimost,' being examples of these.⁷ The mystic combination *Aglá* was a favourite. Dove's blood, especially that of a white dove, was sometimes used for writing these names and formulæ.⁸ The circle, figures, and names might be described with holy water, charcoal, or consecrated chalk; when the magical knife was used for the drawing, the lines were sprinkled with holy water. This knife, which also served to frighten the spirits,⁹ should have a black handle of sheep's horn, and the steel should have been tempered in the blood of a black cat and the juice of hemlock. For more important operations, especially in black magic, as when using the 'great kabbalistic circle,' the tracing should be done with the magical stone *Ematille*.¹⁰ A curious refinement was a gate in the circumference, by which the operator and his associates might go out and in; on leaving the circle, they closed the gate by inscribing names and pentacles.¹¹ The more elaborate circles were filled with names and kabbalistic figures and 'characters.'¹² Candles and vervain crowns were placed within the circle, and the operator had with him gold or silver coins to fling to the spirit when evoked, the 'seals' to be shown to the spirit, and talismans, generally made of coloured satin embroidered with silver. Incense was burned within the circle, or it was perfumed with musk, and holy water was sprinkled over it. When the preparations were complete, the operator and his associates stood or sat in the centre of the circle, often in small circles marking their places, and the operator began his invocation of the spirit required.¹³

The 'great kabbalistic circle' was made with strips of the skin of a sacrificed kid. These were

⁶ Pentacle (properly = pentagram) is used of any talisman with figures (not necessarily angular) incised or embroidered within a circle.

⁷ Linen or vellum plaques inscribed with figures.

fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective circumference. A triangle took the place of the pentagram, and three small circles were described for the stations of the operator and assistants.¹

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno writes:

'O! quanta virtus est intersecutionibus circularum et quam sensibus hominum occulta! Cum caput Draconis in Sagittario existerit, diacedio lapide posito in aqua, naturaliter spiritus ad dandum responsa veniunt.'²

Consultation of the stars and seasons was essential.

'Oportet in constituendo circulo considerare quo tempore anni, qua hora circulum facias, quos spiritus advocare velis, cui stellae et regioni praesint, et quas functiones habeant.'³

For summoning chance spirits or seeing visions generally, a circle was made (probably at cross-roads) and perfumed, and the operator had to walk round its circumference, east to west, till he was giddy.⁴ For necromancy the churchyard was an appropriate site.⁵ The operator wore elaborate vestments, and was anointed with holy oil.

The circle was invariably obliterated on the conclusion of the operation.⁶ A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive culture.

The talismans, pentacles, or seals, used freely by the magician, depended largely upon the magical circle which was described round them. Here, as in the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, 'presiding with wonderful influence.'⁷ They were exhibited to the spirit on its appearance; by their means the operator bound the spirit, and was able to prevent it from departing 'without a licence.' The issue of the licence was an important detail; if it was omitted, the death of the operator might result.⁸ The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold, if the planet were the sun, of iron, if the planet were Mars.⁹ Seals 'of the names of God' were most powerful. Others had the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those which may be distinguished as pentacles proper had a Solomon's Seal surrounded by a circle.¹⁰ The most usual form had enclosed within the circle the 'table' of a planet. These tables, it is interesting to note, were 'magical squares' in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical squares.¹¹ The Seal had an obverse and a reverse, and was the size of a large medallion.¹² In connexion with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points.¹³

The 'characters' of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described just outside the circle.¹⁴ When a spirit appeared, it was asked to place its hands on its 'character' and swear.¹⁵

Mediaeval amulets for general use were frequently stamped with the magical circle in its numerous

varieties, as also were talismans of various make. The latter were effective, as a rule, only in co-operation with a ring engraved with 'characters.' This was worn on the finger, and the talisman on the arm or body.¹ The magician's wand was sometimes plant and could be made into a circle, the ends being joined by a gold chain.² Described on parchment, the magical circle served as a basis for astrological calculations. This use was prevalent wherever Arabic culture penetrated. Thus, in Malaysia at the present time the circle is employed for all kinds of divination. To select a lucky day for a journey or business, a circle enclosing a heptacle is used, but every alternate day is skipped, the lines of the continuous heptacle running from, e.g., Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on.³ This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.⁴

As a mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic science. The latter is a square divided into smaller squares in each of which a number is written, and so arranged that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radial divisions, possessing the same property as the rows in the magical square.⁵

LITERATURE.—In critical literature, R. C. Thompson, *Semitic Magic*, London, 1908, and G. C. Horst, *Zauber-Bibliothek*, Mainz, 1922, are the best of a very few. Francis Barrett, himself an adept, remains the most useful of the uncritical exponents, in his *Magus*, London, 1801.

A. E. CRAWLEY.

MAGYARS.—See HUNGARIANS.

MAHĀBAN (Skr. *mahā*, 'great,' *vana*, Hindi *ban*, 'forest').—A sacred town in the Mathurā District of the United Provinces and Oudh, on the left bank of the river Jumna; lat. 27° 27' N., long. 70° 45' E.; famous as the scene of the adventures of Kṛṣṇa as a child.

Here and at Gokul (*q.v.*), as might have been anticipated, the places where the young god was attacked by the witch Pūtana, where he played his pranks in the dairy and was saved from the falling wooden mortar, and where he overcame the demons Tṛṇāvarta and Śakata are now shown. Mahāban was, in reality, only the water-side suburb of Gokul, which has now appropriated much of its sanctity, possibly because Mahāban never recovered from its sack by Mahmūd of Ghazni in A.D. 1017 (H. M. Elliot, *Hist. of India*, London, 1867-77, ii. 458, 460). In the fort are found fragments of Buddhist sculptures, and it is believed that Mahāban was the site of some of the Buddhist monasteries which, in the time of the Chinese pilgrim Fa-Hian, stood on both banks of the river. The existing temples are modern and mean. Only one is of any importance, that dedicated to Mathurānāth, Kṛṣṇa as lord of Mathurā. The most interesting building, however, is that known as Assī Khambhā, 'the eighty pillars,' which also has the name Chhathī Pālā, so called because women come here to be purified on the sixth day (*chhathī*) after child-birth, and here the cradle (*pālā*) of the infant god is exhibited. In its original form it seems to have been a Buddhist building, afterwards used for Hindu ceremonial, and finally converted into a Muhammadan mosque.

The style of the colonnades closely resembles that of the more famous building of the same class near the Qutb Minār at Delhi (*q.v.*), and both buildings have been ascribed to the same age, the close of the 12th cent. A.D. The most remarkable feature in this building is that one half of the southern end consists of the shrine of a Hindu temple almost undisturbed, with the original roof still in position.

LITERATURE.—The history, legends, and architecture of the place have been fully described by F. S. Growse, *Mathura*, Allahabad, 1883, p. 272 ff., and A. Fuhrer, *Monumental Antiquities and Inscriptions in the North-West Provinces and Oudh*, do. 1891, p. 103 f.; *IGI* xvi. [1903] 427 f.

W. CROOKE.

MAHĀBHĀRATA.—The *Mahābhārata* is an epic poem of India in eighteen books, containing altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into stanzas (called *śloka* and *tristubh*) of four verses each, so that the Hindus call it a poem of a lakh (100,000) of stanzas. The books are of very unequal length, varying from a few hundred to several thousand stanzas, and there is also a supplementary book—the *Harivamśa*—of 16,000 stanzas. The matter of the poem is partly narrative and partly didactic. The epic proper contains about 20,000 stanzas embedded in and embellished by moral, political, religious, and metaphysical dissertations, the whole forming a heterogeneous mass of tale and teaching, which gradually accumulated around the epic kernel. As a tale the *Mahābhārata* ('Great Bharata' story) represents in its oldest form the *purāṇa*, or ancient tale, in distinction from the *kāvya*, or studied, elegant poem, of which the other epic, called the *Rāmāyana* (*q.v.*), is the representative. It is probably older in its oldest parts than the *Rāmāyana*, and yet in its entirety much later. It belongs rather to western ('Midland') India, while the *Rāmāyana* belongs to the east. It celebrates Kṛṣṇa as representative of Viṣṇu on earth, while the *Rāmāyana* celebrates Rāma. Finally, it has not the unity of the *Rāmāyana*, nor was it written by one poet, as was the *Rāmāyana*. According to a tradition still extant in the work itself, the *Mahābhārata* at first contained only 8800 stanzas and was subsequently increased to 24,000, after which it was again enlarged by the addition of numerous episodes till it reached its present size. The chief individual characters in the poem are known in part in ancient literature, but not the popular characters, the heroes of the winning side in the story as now extant. The war waged was between the old and the new; the date of the poem as it stands cannot, therefore, be that of the antique characters of the Brāhmanic age. As a whole, the poem dates from about the 2nd cent. B.C., extending to the 2nd cent. A.D., or, with the margin allowed by some scholars, its period extends from 400 B.C. to A.D. 400, this representing the centuries during which the whole poem was developed into its present shape. The additions since A.D. 400 must have been slight, though it is possible that one of the most probable references to Christianity in the poem, contained in the story of the White Island (xii. 335-339), was among such 'latest additions.' The material wrought into the poem is in part older than the poem itself, probably by centuries, especially the narrative and didactic episodes, some of which seem to be of Buddhist origin. But the mass of the poem is greater than the epic narrative itself, and this mass, being largely didactic, led to the theory that the epic was originally didactic only, the narrative of human conquest being utilized as a frame on which to hang innumerable sermons. This theory, put forth by Dahlmann, was further burdened with the thesis that the encyclopædic epic dated from pre-Buddhist times and was the work of one author;

but neither this most improbable hypothesis nor the basic theory—to wit, that the epic proper was merely ancillary to the didactic mass—has obtained general recognition. It is merely the exaggeration of a truth not denied by any one, viz. that moral and narrative poetry have always been more or less commingled in India. If the hypothesis of Dahlmann could be established, it would, of course, tend to show that Buddhism had been very much over-rated as an originator of ethical teaching. Very simple critical tests show, however, that no such great antiquity can be assigned to the *Mahābhārata*; the metre alone proves that it belongs to a period much later than that of Buddhist beginnings. The epic is first mentioned in the *Grhyasūtras*, withal not the earliest (*Āśvalāyana Grhyasūtra*, iii. 4), to which there is no cogent reason to ascribe an antiquity greater than the 3rd cent. B.C., and it is not impossible that even this reference may be interpolated. In the 2nd cent. A.D. the Greeks refer to an Indian Homer (Dio Chrysostom, *Orat.* liii. 6), and this perhaps implies the supposititious author or compiler Vyāsa, to whose activity the Hindus give the name of authorship of the epic, as they say that Vyāsa compiled or arranged the Vedas—a story without any historical importance. Not more successful has been the counter-theory of Holtzmann, who holds that the epic was much later than the Christian era. He would date the *Mahābhārata* from the 5th to the 9th cent. A.D., and thinks that the story as we have it is an inversion of an older epic, in which not the Pāṇḍus but the Kurus were the characters originally besung by some earlier poet, and that it is due to the retention of older material that sins ascribed to the Pāṇḍus and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find recognition, in part because it ignores the weight of inscriptional evidence, which shows that, half a millennium before the *Mahābhārata*, according to this theory, had been completed, it was already of the size it is now.

The completed *Mahābhārata* represents an age well acquainted with foreign nations, even Greeks, Scythians, Persians, and Chinese being occasionally referred to in it (*e.g.*, v. 19); it represents also a time of empire, when, however exaggerated, the conquest of all India was regarded as quite a possible feat. It shows a superficial knowledge of the extreme north and south and a very intimate knowledge of Middle India. Castes are recognized as orders of society naturally, or, rather, divinely, established (*e.g.*, xii. 72, 297). Heterodox beliefs are freely discussed; outlandish morals are gravely reprobated (*e.g.*, viii. 45). *Satī* is approved, but is not regarded as imperative; the ethical standard is high. Buddhist remains and Hindu temples are mentioned (*e.g.*, iii. 190). Different epochs have amalgamated their beliefs in regard to the gods. In one episode the Vedic gods are paramount; in another the authority of Brahmā is supreme; elsewhere Viṣṇu is the one great god, or Śiva alone is God and Viṣṇu is his representative. Only one late passage recognizes the Trimūrti, or triad of Brahmā, Viṣṇu, and Śiva, as three forms of one god (ii. 272).

The *Mahābhārata* begins with an Introduction, or Book of Beginnings, which tells how the childhood of the heroes was passed and gives their origin, and also, incidentally, the origin of gods and men in general. For the story, it may be compressed into the following statements. Two brothers, Dhṛtarāṣṭra and Pāṇḍu, are educated by their uncle Bhīṣma. The former brother grows up and marries a western woman, Gāndhārī, who has a hundred sons, called Kurus. Pāṇḍu has two wives, one of whom, Mādri, commits *satī* at his

death; the other, Prthā or Kuntī, survives Pāṇdu and brings up his five children, called the Pāṇdus, who are really sons of the gods, whom Kuntī and Mādrī had invoked. These sons are Yudhiṣṭhira (son of the god Dharma, or Right), Bhīma (son of the wind-god), Arjuna (the chief hero of the epic, son of Indra), and the twins Nakula and Sahadeva (sons of the Āśvins, or Dioskouroi). After this Introduction, which, like most childhood-recitals, is in general late, comes the 'Sabhā,' the title of the second *parvan* (book), taken from the assembly in the gaming-hall (*sabhā*), where the epic drama begins. At Hastināpur (about 60 miles north of Delhi) the Kurus hold an assembly, to which they have invited the Pāṇdus, who, after various adventures, had built a town at Indraprastha (near Delhi). The Kurus intended to cheat the Pāṇdus out of their kingdom by a game of dice, since they were afraid of the waxing power of their cousins. Yudhiṣṭhira plays away all his wealth and kingdom, and finally his brothers and himself. Then he plays Kṛṣṇā, the daughter of Drupada, polyandrous wife of the five brothers, and loses her. Once more he plays, all that he has lost against a term of exile, and on losing again he and his brothers and wife are driven ignominiously forth to live for twelve years in the forest. The third book is called 'Vana' ('Forest'), and narrates the life of the exiles. It is a storehouse of legend and tales, such as the story of Sāvitrī, and that of Nala and Damayanti, told to relieve the tedium of exile. The fourth book receives its name 'Virāṭa' from the name of the king with whom the Pāṇdus take refuge at the close of the twelfth year. They stay in town collecting allies and assisting Virāṭa against attacks by the Kurus. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a late part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). Kṛṣṇa (Viṣṇu) is now enlisted upon the side of the Pāṇdus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named from the leaders in the battle which now takes place, 'Bhīṣma,' 'Droṇa,' 'Karna,' and 'Salya.' Bhīṣma and Droṇa are the uncle and teacher respectively of the cousins now at war. Into the 'Bhīṣma Parvan,' at the beginning of the battle, is inserted the long poem called *Bhagavad-Gītā* (q.v.). This book ends with the fall of Bhīṣma, and Droṇa then assumes the leadership of the Kurus. Numerous encounters are described with wearisome iteration, and Śiva is lauded as the great One God. Karna, the half-brother of the Pāṇdus, son of the sun-god, had been insulted by the refusal of Kṛṣṇā to recognize him as a worthy knight when she chose her husband, and had taken part with the Kurus against his brothers. He now leads them into battle, but is slain by Arjuna. This leads to the 'Salya Parvan' (ninth book), in which Salya is made leader of the Kurus; but, with the exception of a few warriors, they are all routed and slain, and the chief Kuru prince is killed (after the battle) by Bhīma. The tenth book is called 'Sauptika' ('Night-Attack'), and describes how the surviving Kurus make an attack by night on the camp of the victors, killing all the army except the Pāṇdus themselves. It is followed by a short book called 'Strī' ('Women'), which gives an account of the lamentation of women over their dead. The war is now over; but Bhīṣma has miraculously survived, and in the long didactic books called 'Śānti' and 'Anuśāsana' he is resurrected to preach religion and philosophy, and give rules of ethical behaviour. Yudhiṣṭhira is crowned emperor, and in the fourteenth book, called 'Āśvamedhika' ('Horse-Sacrifice'), he performs the horse-sacrifice,

which is the sign of undisputed lordship (see art. *Āśvamedha*). Into this book is inserted (16-51) the *Anugītā*, a poem imitative of the *Bhagavad-Gītā*. The fifteenth book, called 'Āśramavāsika' ('Hermitage'), takes up the life of Dhṛtarāṣṭra and his queen, who, with Kuntī, the Pāṇdus' mother, retire into the woods, where they are burned. The sixteenth book, called 'Mausala' ('Club-Battle'), tells of the death of Kṛṣṇa and his brother Baladeva, and the fate of their city Dvārakā, which was flooded by the sea. The family of Kṛṣṇa, the Yadus (Yādavas), are cursed by a Brāhman, and destroy each other. The seventeenth book, 'Mahāprasthānika' ('Great Renunciation'), tells how the Pāṇdus give up their kingdom and climb to heaven by way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svargārohaṇa' ('Ascent to Heaven'), describing the journey. To this is later added the *Harivamśa* ('Genealogy of Viṣṇu'), a long account in three sections of the life and family of Kṛṣṇa as a form of Viṣṇu. It has, in part, the characteristics of a Purāṇa (q.v.), and is, without doubt, a subsequent addition, dating perhaps from the 2nd cent. of our era, though generally regarded as still later.

The *Mahābhārata* may be viewed as a rich store of philosophical and religious lore as well as a tale, and as embodying important geographical and historical data. It undoubtedly reflects some real contest, which may have taken place about a millennium before our era. It extols the lunar race (the other epic, the *Rāmāyaṇa*, extols the solar race), and derives the heroes from kings who descended from Soma, the moon-god, himself the son of the seer Atri. Budha, son of Soma, had as wife Ilā, a daughter of Ikṣvāku of the solar line. Their son was Purūravas, whose son, Ayus, was the father of Nahuṣa, the father of Yayāti, from whom came Pūru and Yadu, the ancestors of all the lunar race, Yadu being the ancestor of Kṛṣṇa, and Pūru being the ancestor of Bharata and Kuru, whose descendant, Śāntanu, was the father of Bhīṣma (above) by the goddess Gaṅgā (the river Ganges). Śāntanu's wife, Satyawatī, was also the mother of Vyāsa and of Vichitravīrya, who died without children; but Vyāsa raised up children for him, and these were Dhṛtarāṣṭra and Pāṇdu. If these legends be reconstructed historically with the aid of the Purāṇic lists of kings, they show that a real historical background is reflected in the maze of myth. The polyandry of the Pāṇdus is a trait of certain hill-tribes, and is not unknown on the plains; it is undoubtedly a genuine bit of tradition which serves to mark the Pāṇdus as a ruder race than the old and long-respected Kurus.

An attempt to group the participants in the great war according to their place of origin has been made by F. E. Pargiter (*JRAS*, 1908, pp. 309-336, and 1910, pp. 1-56), who seeks in this examination to determine whether the theory of successive invasions leaving inner and outer rings of Aryans in India can be substantiated thereby; but the result seems to leave considerable doubt as to such invasions having left traces in the poem, though the theory of successive invasions may be substantiated on other grounds. The didactic teaching of the epic is not confined to any one part of the work, and from a general view of this teaching it is evident that a later pantheistic system has become amalgamated with the dualistic doctrines of the Sāṅkhya philosophy in its later theistic tendency as represented by the Yoga. This mixed system is represented not only in the *Bhagavad-Gītā*, but in the *Anugītā* and in the philosophical chapters of the twelfth and thirteenth books. The outcome of the systematic speculation is in accord with the teaching of the Vedānta, but the terminology and basic ideas are those of the

Sāṅkhya system throughout. The chief interest of the religious doctrine lies in the insistence upon the loving devotion of the worshipper and the saving grace of the supreme spirit (see BHAKTI-MĀRGA). Kṛṣṇa as a form of Viṣṇu is not revered (as later) in his child-form, nor is anything made of his being the lover of milk-maids, though both traits are recognized. They come out strongly in the *Harivaṃśa* and later Purāṇas, and it is perhaps not unjustifiable to conclude that they did not form part of the worship as originally adopted into Brāhmanism.

Directly opposed to Kṛṣṇa-Viṣṇuism is the Śiva-cult also found in the epic, as already indicated. This cult appears to have been set against that of the Kṛṣṇa-worshippers by the more orthodox upholders of Brāhmanism, although neither Śiva nor Kṛṣṇa was a Vedic god. But Śiva had long been recognized as a form of the Vedic Rudra, and, though probably at first a popular god, like Kṛṣṇa, he was already accepted by the Brāhman priests. The parts of the poem exalting Śiva as All-god or as the One God are not early; on the contrary, they bear the marks of later composition and the trait now so familiar, that of phallus-worship, appears only in a few late passages. As this aspect cannot be in itself a late feature, it must have acquired the seal of respectability only by degrees, being probably repugnant to the orthodox priests of Brāhmā. The special sectarian cults or forms of cults as advocated in the Purāṇas are unknown in the epic. The cult of Viṣṇu is that of the pantheistic All-god; the cult of Śiva is that of the only One God. But, with the opposing claims of each sect, each god gradually assumes the distinctive attributes of the other. Viṣṇu is the one theistic god and Śiva is the pantheistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brāhmā also, though originally creator-god, becomes destroyer as well, till all three, the sectarian Kṛṣṇa-Viṣṇu and Śiva and the older Brāhmā of Brāhmanism, coalesce into the 'one god with three forms,' or, as the Hindu says, 'three gods and one form.' Besides these great gods it is noteworthy that a revival of sun-worship leads to strange exaltation of the sun as supreme god (but only in late passages), probably because of the identification of Viṣṇu with the sun on the one hand and the later Persian sun-worship on the other; for, though the epic was probably rounded out to its present size by the 2nd cent. of our era and was virtually complete in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous episodes and laudatory hymns have been added at all times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to Durgā and probably also the exaltation of Skanda as the great army-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the Bharata war may also have been of priestly rather than of popular origin, though 'hero-lauds' sung by hired minstrels are not unknown in early literature. But it was part of the business of the king's chaplain to recite laudations in his honour, and it is not impossible that some chaplain of the epic kings may have expanded the theme, for not only the king living but 'dead kings and their glory' formed the topic of lays and eulogies. The completed *Mahābhārata* was intended for recital, but this was in dramatic form, so that even to this day it is acted as well as recited by the purveyors of amusement at country fairs.

LITERATURE.—M. Monier-Williams, *Indian Wisdom*, London, 1876; J. Dahmann, *Das Mahābhārata als Epos*

und Rechtsbuch, Berlin, 1895; *Genesis des Mahābhārata*, do. 1899; Adolf Holtzmann, *Das Mahābhārata*, Kiel, 1892-95; C. V. Vaidya, *The Mahābhārata: a Criticism*, Bombay, 1904; R. Garbe, *Die Bhagavadgītā*, Leipzig, 1905. See also for general analysis and extracts: J. Muir, *Original Sanskrit Texts*, London, 1858-72; A. Weber, *Indische Literaturgeschichte*, Berlin, 1876; A. A. Macdonell, *History of Sanskrit Literature*, London, 1900; M. Winternitz, *Gesch. der indischen Literatur*, Leipzig, 1909, i.; L. von Schroeder, *Indiens Literatur und Kultur*, do. 1887; for special studies see E. Washburn Hopkins, *The Great Epic of India*, New York, 1901, and *Epic Mythology*, Strassburg, in press; A. M. Pizzagalli, *Nāstika, Cārvāka e Lokāyata*, Pisa, 1907, and *La Cosmogonia di Bhṛgu*, Milan, 1910, has contributed useful studies of epic problems. Otto Strauss, *Ethische Probleme aus dem Mahābhārata*, Florence, 1912, gives a careful survey of the didactic material regarding the better life on earth. H. Jacobi, *Mahābhārata*, Bonn, 1903, provides a table of contents, index, and concordance. V. Fausbøll, *Indian Mythology according to the Mahābhārata in Outline*, London, 1903, furnishes a good epitome of epic mythology. See also S. Sørensen, *Index to the Names in the Mahābhārata*, do. 1904 ff. A critical ed. of the *Mahābhārata* is still a desideratum. The best edd. are, for the Northern text, Bombay, 1890, and for the Southern, do. 1906-11; the only complete trs. are by Protap Chandra Roy, Calcutta, 1884-96, and Manmatha Nath Dutt, do. 1895-1905.

E. WASHBURN HOPKINS.

MAHĀBODHI.—See GAYĀ.

MAHĀR, MHĀR, MEHRĀ.—One of the menial or depressed castes of W. India and the Deccan, numbering 3,342,680 at the Census of 1911. Their name is very doubtfully connected by G. Oppert (*Orig. Inhabitants of Bhāratavarsa or India*, London, 1893, p. 28 ff.) with that of the ancient Indian Malla; and, according to J. Wilson (*Indian Caste*, Bombay, 1877, ii. 48), they gave their name to the country of Mahārāstra, from which the Marāṭhās take their title. They are practically all Hindus by religion. Another caste, the Dhed or Dher, is sometimes included with them, and, if not identical, they are allied, with the Holeyā menials of the Madras Presidency (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 329 ff.).

In the Central Provinces 'the Mahārs say they are descended from Mahāmuni, who was a founding picked up by the goddess Pārvatī on the banks of the Ganges. At that time beef had not become a forbidden food; and when the divine cow, Tripād Gayatri, died, the gods determined to cook and eat her body, and Mahāmuni was set to watch the pot boiling. He was as inattentive as King Alfred, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahāmuni ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the flesh of dead cows' (R. V. Russell, *Central Provinces Ethnographic Survey*, pt. ix., Allahabad, 1911, p. 84; cf. E. J. Kitis, *Census Report, Berar*, 1881, p. 114 n.).

Their religion is of the primitive animistic type, with a veneer of Hinduism. In the Khāndesh District they keep the regular Hindu fasts and feasts, and worship the popular gods of that country—Viṣṇu, or Vithobā; Śiva as Khandobā; Mahāsobā, an evil spirit who abides in an unhewn stone smeared with red lead; Bhairoba, or Śiva in his terrible Bhairava form; and the Mother-goddess in the form of Āi Bhavānī, whose image they keep in their houses. Besides these they worship snakes and the spirits of their dead ancestors (*BG* xii. [1880] 118 f., xvii. [1884] 172 ff.). At a temple in Kāthiāwār the Dheds worship what is really an image of Viṣṇu reposing on his serpent Śeṣa as Hānī, who is said to have been a deified woman of the caste. Women who are unable to nurse their babies and owners of cows which give a scanty supply of milk vow to wash this image in milk if their milk be increased (*BG* xiii. [1884] 415).

In the Central Provinces 'the great body of the caste worship the ordinary deities Devī, Hanumān, Dūhā Deo, and others, though, of course, they are not allowed to enter Hindu temples. They principally observe the Holi and Dasahrā festivals and the days of the new and full moon. On the festival of Nāgpanchmi they make an image of a snake with flour and sugar and eat it. At the sacred Ambālā tank at Rāmtek the Mahārs have a special bathing-ghāt set apart for them, and they may enter the citadel and go as far as the lowest step leading up to the temples: here they worship the god and think that he accepts their offerings. They are thus permitted to

traverse the outer enclosures of the citadel, which are also sacred. In Wārḍha the Mahārs may not touch the shrines of Mahādeo, but must stand before them with their hands joined. They may sometimes deposit offerings with their own hands on those of Bhimsen, originally a Goṇḍ god, and Mātā Devī, the goddess of smallpox.¹

In Berār they worship a curious collection of deities, among whom are included the archangels Gabriel, Azrael, Michael, and Anāḍin, all of whom, they say, come from Pāṇḍharpur. In Berār the worship of these archangels was probably borrowed from the Muhammadans; but in Gujarāt it was apparently taken from Christianity.

It seems that the attraction which outside faiths exercise on the Mahārs is the hope held out of ameliorating the social degradation under which they labour, itself an outcome of the Hindu theory of caste. Hence they turn to Islam or to what is probably a degraded version of the Christian story because these religions do not recognise caste, and hold out a promise to the Mahār of equality with his co-religionists, and in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahārs are the warmest adherents of the Muhammadan saint Sheikh Farid, and flock to the fairs held in his honour at Girār in Wārḍha and Prataṅgarh in Bhandāra, where he is supposed to have slain a couple of giants (Russell, p. 90 ff.).

LITERATURE.—Besides the authorities quoted in the art. see *Census Report, Central Provinces*, 1901, i. 182, Bombay, 1911, i. 287; A. Baines, *Ethnography* [= *GLA.P.* n. 5], Strassburg, 1912, p. 76 f. W. CROOKE.

MAHATMA.—See THEOSOPHY.

MAHĀVASTU.—The *Mahāvastu*, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends 'on the origins of Buddhism, on the persons of its founder [up to the gift of the *jetavana*] and his first disciples—in a word, on that *ensemble* which, with infinite varieties of detail, crossed and ramified in every way, is the common property of all Buddhists.' Besides all this, it includes a gnomic treasure, which is also traditional, an enormous mass of *jātakas* ('birth-stories') and tales, certain dogmatic speculations (see below, § 3), interminable lists of Buddhas—'needless digressions, mere padding—two, three, four accounts and more of the same episode, from different sources, sometimes contradictory, sometimes following one another, sometimes scattered through the book, dovetailed into one another, dismembered, lacerated.'¹

The interest attaching to the *Mahāvastu* is of many kinds: (1) it is a book of *vinaya* ('discipline') of one of the ancient sects, and its history, so far as it can be traced, is instructive; (2) it is a vast repertory of legend and folklore, which, when compared with Pāli literature, supplies innumerable documents on the nature and primitive state of Buddhist tradition; (3) the *Mahāvastu*, from the point of view of dogmatic ideas, marks a period or a transition stage between the Hinayāna and the Mahāyāna; and (4) its language, too, deserves attention.

1. History and contents.—The *Mahāvastu*, or, according to the colophon (which is open to suspicion), *Mahāvastu-avadāna*, claims to be a part of the *Vinayapitaka*, of the 'recitation' (i.e. the canon) of the Lokottaravādin Mahāsāṅghikas of the Madhyadeśa.

(1) The Mahāsāṅghikas are one of the old sects or branches of the Order, the other branch being that of the Sthāviras or Theras (see SECTS [Buddhist]); from the beginning it probably had special rules of *vinaya*, or 'discipline.' (2) The expression Lokottaravādin, 'believer in the supernatural character of the *bodhisattva*' (see below, § 3, and art. BODHISATTVA), indicates a dogmatic school. It is possible that there were Mahāsāṅghikas who were not Lokottaravādins. It would not be difficult to eliminate from the *Mahāvastu* the passages which have a Lokottaravādin tendency. (3) The Madhyadeśa, or 'middle country,' of the Buddhists

¹ Barth, *Journal des Savants*, 1899, pp. 463, 623.

comprises N. India, Magadha, Kōśala, and Videha; but there were Mahāsāṅghikas outside of the Madhyadeśa, notably the Pūrvasāilas and the Aparasāilas, who were also Lokottaravādins.

In order to understand the word *mahāvastu* and to see how the *Mahāvastu*, in which discipline takes only a very small place, can belong to the section on 'discipline,' it is necessary to go far back.

The disciplinary literature (*Vinaya*) was from the beginning composed of two parts: (1) the formula of confession (*prātimokṣa*, *pātimokkha*), a list and classification of grave and venial faults, to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvāstivādin school this commentary is called *Vibhāga*, in the school of the Pāli language *Vibhanga*; and (2) the statutes of the Order, a collection of the texts (*karmavākya*, *kammavāccha*) relating to ecclesiastical acts (ordination, fortnightly confession, etc.) and of rules referring to ordination, confession, the cenobitic life during the rainy season, to parishes, medicines, beds, and schisms. These texts and rules were also embedded in a historical commentary. In the Pāli canon they are divided into two sections (*khandhaka*), in two chapters or books (*vagga*)—the 'Great Vagga' and the 'Little Vagga' (*Mahāvagga* and *Chullavagga*), the latter being devoted to subsidiary questions. There is the same division in the canon of the Sarvāstivādins, under different titles: the *Kṣudrakavastu* (*vastu*, 'thing,' 'topic,' 'point of discipline or doctrine,' 'story'), corresponding to the *Chullavagga*, and the *Vinayavastu*, which, although it does not bear the title 'Great,' corresponds to the *Mahāvagga*.

One of the characteristics of the *Mahāvagga* (and the *Vinayavastu*) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly justified as an introduction to the *vastu* of ordination: it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—his illumination, his first sermon, etc. The editors of the *Vinayavastu* (which is, as we have said, the *Mahāvagga* of the Sarvāstivādins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical treatment of monastic discipline; but the last chapter (devoted in principle and in title, like the corresponding chapter of the *Mahāvagga*, to the internal strife of the Order) contains not only a fresh statement of the biographical elements of the first chapter, but also the history of Śākyamuni from the beginning of time, related in a continuous account down to the schismatic intrigues of Devadatta; a list of the *chakravartin* kings, the creation of the universe and life of primitive men, and the history of the Śākyas (ancestors of Śākyamuni); legends of the birth of Śākyamuni, his education, his departure, his mortifications, etc.—a *summa* of ancient traditions among which are to be found documents which have an independent existence in the Pāli canon (e.g., the *Ajaññasutta*). Of the five hundred pages in the eleventh chapter of the *Vinayavastu*, little more than forty are devoted to the schism which gives its name to the chapter, and which, in all probability, was at first its only *vastu*, its one subject. In a word, the *Vinayavastu*, as a whole, is a faithful replica of the *Mahāvagga*; but it shows a very wide use of interpolation.

It is different with the *Mahāvastu*, and the manifest contradiction between the title and the contents raises a delicate question. Such a title

implies that the book was, like the *Mahāvagga* and the *Vinayavastu*, meant to be a history of disciplinary rules. As a matter of fact, of thirteen hundred pages about twenty treat of discipline (especially at the beginning, two lines on ordination), and certain parallelisms with the *Mahāvagga* cannot be mistaken; e.g., there is 'a series of stories in the *Mahāvastu*, in the Pāli *Mahāvagga*, and in the Tibetan *Vinaya* which hold together, and really seem faintly to reproduce a common prototype' (Barth, *loc. cit.* p. 464). But, on the whole, the *Mahāvastu* is a collection of legends without any connexion with discipline.

One can easily understand how a primitive *Mahāvastu*, a historical treatment of discipline, would be fed (Barth says *nowru*) by a mass of heterogeneous materials, differing in date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present *Mahāvastu*. This task of enlarging and of 'feeding' was carried on in all the Buddhist sects, for a longer or shorter time, with more or less moderation; and what is true of the literary units is still more true of the canonical collections. Although we at present know nothing about the library of the Mahāśāṅghikas, we may suppose that it had no shelves in which the *jātakas*, *suttas*, and stanzas would be arranged. The only course was to gather together in the *Mahāvastu* all that seemed precious.¹ The development of the *Mahāvastu*, therefore, if it had remained to any extent a history of discipline, and if some pieces of the framework of the *Mahāvagga* were perceptible, would seem quite simple. Must it be admitted that the last compilers of the *Mahāvastu* systematically cut away the elements of *vinaya* already sunk in the legendary mass? Or that, in the fearful disorder in which the literature of the *Mahāśaṅgha* was weltering, these elements fell into oblivion? Or that the *Mahāvastu* was never in any respect, except its title, a replica of the *Mahāvagga*? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the *Dvyaśvadāna*. E. Huber (and after him S. Lévi²) has proved that this book is, above all, a collection of anecdotes and legends taken from the *Vinaya* of the Sarvāstivādins. The extracts have not always been made very consistently, and some fragments of *vinaya* proper—disciplinary rules—are to be found in the *Dvyaśvadāna*. The history of the *Mahāvastu* is probably similar. The ocolophon gives it the name of *Mahāvastu-avaśāna* is this to be translated 'the narrative part of the *Mahāvastu*'? In the Pāli *Vaggas* the various episodes are linked to the history of the *Vinaya* by explicit references or allusions; these, without exception, are wanting in the *Mahāvastu*: 'So those same episodes which in the *Mahāvagga* and the *Chullavagga* are more or less prolix and discursive chapters of a treatise on discipline are here mere narratives, which end by making the *Mahāvastu* a book of stories.'³

However this may be, 'the materials which have entered into the composition of the *Mahāvastu* are of widely different ages; . . . the source of the compilation is certainly ancient, since it forms part of the canon of one of the ancient schools. It must be admitted, therefore, that it took a long time to be formed, for it is certain that it was not completed until very late.' The mention of astrologers under a Western name (*horāpāṭhaka*) and that of the writings of the Chinese and of the Huns, Peliyaṣa (Felix?), Ujjhebhaka (Uzbek?), indicate the 4th or 5th century. At that date, however, 'the persistence, in the prose, of the ecclesiastical jargon, which will be discussed below [§ 4], is an astonishing fact.'⁴ We must, therefore, admit late interpolations and carry the date of the compilation a little further back. In order to realize the character of this compilation, it must be

noticed that 'the editors do not allow themselves to invent anything, and do not dare even to correct the most flagrant contradictions.'¹

2. Comparison with Pāli canon.—There are numerous parallel passages in the *Mahāvastu* and Pāli literature. Minayeff, Oldenberg, above all Senart and Barth, and, lastly, Windisch, have called attention to many, but not to all. Differences which seem to be marks of sect are rare. We are able to study the unsettled state of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials.

'In these examples, the amount of similarity is of all degrees, from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attained, and never for long. . . . The similarity, especially in the verses, is to a large extent an exterior one; it is shown in mode of expression, in general assonance, in words more than in matter, in sounds more than in words; the stanza is the same, when the meaning is sometimes quite different, like an egg of which nothing remains but the shell. . . . They all go back to one original. . . . The probabilities are not always in favour of the Pāli edition. But for the *ensemble* of the fragments as well as for the detail of their rendering, it is the Pāli that is the best on the whole and that gives the best representation of the original version.'²

It is well known that all the comparisons set up between the Pāli canon and the other canons arrive at the same conclusion. The Pāli writings were fixed and codified first.

3. Relation to Mahāyāna and Hinayāna.—The *Mahāvastu* may be said to form the bridge between the Old Vehicle and the New. As is seen in art. MAHĀYĀNA, the two Vehicles are not incompatible, and the book may present certain characteristics peculiar to the Great Vehicle while remaining unacquainted with the others.

(1) The 'Buddhology' of the *Mahāvastu* marks a stage between the conception of Buddha as a simple mortal (Little Vehicle) and that of Buddha as a quasi-eternal god sending illusory images down to this world (Great Vehicle). The Buddha of the *Mahāvastu* is a superman. He feels neither hunger nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the world (*lokānuvartanā*), that he behaves as a man, or that he gives to men the false impression that he is behaving as a man. In technical terms, he is *lokottara*, 'superior to the world.'³

(2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānist tendency. It must be noticed, however, that the Sarvāstivādins, who are reputed to be free from Mahāyānism, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

(3) Much more marked is the tendency of one of the chapters of the *Mahāvastu*, entitled *Daśabhūmika*, 'the book of the ten bhūmis'—successive steps by which the future Buddhas have to mount up to the state of Buddha.

'It is to the beings who aspire resolutely to the condition of Buddha that the *Daśabhūmika* ought to be set forth . . . for they will believe; the others will only cavil' (i. 193).

The *Mahāvastu*, therefore, has incorporated a book which is addressed, in so many words, to the men who wish to become, not *arhats*, but Buddhas, i.e. to the men who enter the Vehicle of the future Buddhas, the Mahāyāna.⁴

¹ Barth, *loc. cit.* p. 624.

² *Ib.* p. 627.

³ The text says that his body is *manomaya*, 'mind-made.' This expression has been discussed by E. Senart and A. Barth (see art. BODHISATTVA). According to the *Abhidharmakośa*, it means, not 'mental body,' 'body formed of mind,' but 'body created by the mind,' without intervention of seed and blood. Such is the body of the creatures called *āyupapādika*, 'apparent,' one of whose characteristics is that, on dying, they leave no trace.

⁴ Several other instances of Mahāyānist tendency are discussed by Senart and Barth (*loc. cit.* p. 526). Different interpretations may be suggested from that of these two scholars for

¹ See the Introductions and notes of E. Senart, and cf. Barth, *Journal des Savants*, 1899, p. 623 f.

² *T'oung-pao*, n. viii [1907] 105 ff.

³ Barth, *loc. cit.* p. 529.

⁴ *Ib.* p. 629.

On the other hand, Amṛtābha, Avalokita, Mañjuśrī, the *dhāraṇīs* ('spell'), and the *śūnyatā* ('voidness')—and, we may add, *kāruṇā* ('compassion')—are unknown in the *Mahāvastu*, which remains 'a book of the Hinayāna in its mythological and legendary part,' as Barth remarks (p. 527), and which is really Mahāyānist only in the considerable interpolation of the *Dasabhūmika*.¹

4. **Language.**—The ancient religious literatures of India—with the exception of the Brāhmanic—were written in popular and spoken dialects. In course of time these dialects became 'fixed languages,' subject to rules. This happened with the Jains (*ardhamāgadhī*), and with the church which was afterwards that of Ceylon (Pāli). The Buddhist school of the Sarvāstivādins adopted Sanskrit, and Sanskritized both the ancient nomenclature and the traditional texts in prose and in verse. The language of the Mahāsaṅghika school remained 'in an unsettled state: it was neither Sanskrit nor Pāli, nor any of the known Prakrits, but an arbitrary and unstable mixture of all these.'

It is a literary language, says Senart, 'and it is certain that it was no longer [i.e. at the time of the compilation of the *Mahāvastu*] a spoken language, and not less certain that, for several centuries before and after that time, inscriptions and books were written in much the same way. But, in the *Mahāvastu*, is it still a language? At bottom, there is undoubtedly the substance of a real idiom, akin to that of the most ancient inscriptions and to that which has come to us so admirably fixed in the Pāli texts,' but this idiom remained without grammar and without orthography, and, especially in the prose, 'it was indefinitely open to the influence of Sanskrit.'²

Such is the language of the *Mahāvastu* in the present state of the text—more Prakrit in the poetry than in the prose, and extremely interesting for the linguistic history of India. This language has received the name of 'language of the *Gāthās*,' because it was first studied in the books of the Great Vehicle, the prose parts of which are in Sanskrit or quasi-Sanskrit, and the verses or stanzas (*gāthās*) in this peculiar jargon. This difference of treatment does not exist in the *Mahāvastu*, in which the Sanskritisms seem to be unconscious.

LITERATURE.—E. Senart, *Le Mahāvastu* (Skr. text, introduction, and commentary), i.-iii., Paris, 1882-97; A. Barth, *RHR* xi. [1885] 160, xli. [1900] 61, and *Journal des Savants*, 1899, pp. 459, 517, 623; E. Windisch, 'Die Komposition des Mahāvastu,' *ASG*, phil.-hist. Klasse, xxvii. [1900] 467-511; M. Winternitz, *Gesch. der ind. Literatur*, ii. 1. (Leipzig, 1913) 187. The remarks of P. Minayeff and H. Oldenberg are quoted by Barth.

MAHĀVĪRA.—See ĀJĪVIKAS.

MAHĀYĀNA.—I. **DEFINITION AND DESCRIPTION.**—1. In order to define Mahāyāna, we must first notice certain characteristics of the Hinayāna.

Buddha has said that, as salt is the only flavour of the sea, the only flavour (*rasa*) of his doctrine, the true doctrine or religion (*saddharma*), is the flavour of deliverance (*mokṣa*, *mukṭi*), or of *nirvāṇa*. Buddhism, therefore, can be looked on as a path (*mārga*, *pratipad*) leading to *nirvāṇa*, as a supramundane (*lokottara*) path leading to the end of the

two passages in which they think they discern references to the two sects of the Mahāyāna—the Yogācāras and the Mādhyamikas. (1) *Yogācāra*, in *Mahāvastu*, i. 120, means simply 'he who practises yoga, "contemplation." It is by this name that the *Abhidharma* (ch. vi. *ad. int.*) designates the ascetic who practises 'meditation of the horrible' (*akūḥabhāvanā*, contemplation of the corpse, etc.), the *smṛtyupasthāna*s, etc. (2) As regards the 'middle path' described in iii. 443, it is certainly Mādhyamika, but it is also 'canonical' (*Samyuttamāyā*).

¹ We know that one of the chief books of the Mahāyāna is called *Dasabhūmika* (tr. into Chinese, A.D. 265-316). The Yogācāras claim it as patronizing their doctrine, because it teaches that 'all things are only thought' (*chitta*)—a theory which does not appear in the *Dasabhūmika* of the *Mahāvastu*. The *bhūmis* of the two works have been compared in art. *BODHISATTVA*. The scholars of the Mahāyāna argue from the fact that the theory of the *bhūmis* is taught in the *Mahāvastu*, a Hinayāna book.

² Barth, p. 459.

constant succession of re-births (*samsāra punarbhava*) which constitutes the 'world' (*loka*) or existence (*bhavaloka*), or as a vehicle (*yāna*) conveying those who mount it to the same goal, 'the town of *nirvāṇa*, the island of *nirvāṇa*.'

The first metaphor has been adopted by primitive Buddhism; the second one by the new Buddhism. The adherents of this later Buddhism found fault with the earlier Buddhism; and, accordingly, while styling their own creed *mahāyāna* ('great vehicle'), true, great, and profound (*gambhīra*) doctrine of salvation, they characterized the creed of their predecessors as *hinayāna* ('little vehicle'), an inferior, imperfect, inefficient doctrine of salvation. Another name for the older Buddhism, a more polite one, is *śrāvakayāna*; in the old scriptures the disciples of the Buddha who have entered the path are called *śrāvaka* ('disciples,' 'auditors,' or 'preachers' of the Law), or *āryaśrāvaka* ('noble disciples,' 'true disciples'). The term *śrāvakayāna* conveys the idea that the old doctrine is nevertheless an efficient means of salvation. Moreover, it marks a contrast between the two Buddhist creeds; for the adherents of the new Buddhism style themselves *bodhisattva* (future Buddhas) and employ the term *bodhisattvayāna* ('vehicle that conveys the *bodhisattvas*') as a synonym of Mahāyāna.

(1) The Hinayāna asserts that salvation can be quickly gained; it is a vehicle drawn by deer (*mrggaratha*). It professes to lead, when duly practised, to *nirvāṇa* in this existence (*dṛṣṭa-dharma*). One has to become an *arhat*, i.e. a *jīvanmukta* (q.v.), a man freed even in this life. In fact, the *arhat* has already obtained *nirvāṇa*, the *nirvāṇa* called *sopadhīṣeṣa*, the liberation from desire and lust, the machinery of life continuing automatically until it runs down. When dying, he says: 'I have nothing more to do. I shall not be re-born here again,' and he enters into *nirupadhīṣeṣa nirvāṇa*, 'absolute *nirvāṇa*.'

It is mysticism, but a perfectly coherent mysticism. It involves no elements that are foreign to the end which it has in view, viz. the destruction of desire or thirst, the suppression of all activity (*karma*) liable to induce a new existence. It consists essentially in contemplation (*darsana* = 'sight') and meditation (*bhāvanā*) on the four truths: everything is painful, etc. These four truths may be summarized in a philosophical dogma: what we call the 'soul,' or the 'ego,' is only a complex of incongruous, transitory elements (*skandhas*), which endures by means of desire (or thirst) alone; and an ethical dogma: desire can be rooted out and the consequences of action can be suppressed by meditations which emancipate and deliver from existence.

(2) This method of salvation (the method of supramundane meditations) cannot be practised except by a person who observes, and has observed for some time, 'morality'—i.e. the laws that make an action or a thought good (see art. KARMA)—and, what is very important, a person who practises continence (or the religious life *brahmacharya*) as a Buddhist monk.

(3) Although the Buddha is neither a god nor a supernatural being, he is nevertheless very different from the other saints. The saints, like the Buddha, have attained *nirvāṇa* in this life, because they have attained *bodhi* ('illumination'); but it was the Buddha who discovered the truths of salvation which potentially contain *bodhi*, and who showed the 'path'; and he was able to do so because in the course of his innumerable existences, with a view to saving human beings, he had accumulated good works and acquired infinite knowledge.

(4) The cult of the Buddha is not distinguished by what is properly called 'devotion' (*bhakti*)—

this sentiment implies a living god—though the *Abhidharmakośa* employs the term. Veneration of relics, *stūpas*, etc., is useful and recommended; it is good, it is helpful, as penance (*tapas*) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of *nirvāṇa*; it also teaches how to be re-born in heaven, in the world of Brahmā.

Three Vehicles are usually distinguished: (1) the Vehicle of the Śrāvakas, (2) the Vehicle of the Pratyekabuddhas, (3) the Vehicle of the *bodhisattvas*. The first two together constitute the Little Vehicle, the third the Great Vehicle (see E. Burnouf, *Le Lotus de la bonne loi*, Paris, 1852, pp. 52, 315, 369; H. Kern, *SBE* xxi. [1884] 80, *Manual of Indian Buddhism*, p. 61; *Dharmasāṅgraha*, ed. F. Max Müller and H. Wenzel, Oxford, 1885, p. 2, and sources cited on p. 53), E. J. Eitel, *Handbook of Chinese Buddhism*², London, 1888, s.v. 'Triyāna'; cf. *Buddhāvamsa* [PTS, London, 1882], Commentary, p. x f., where the Śrāvaka-Pratyekabuddhas are opposed to the Samyaksambuddhas). There is no difference between the Vehicle of the Śrāvakas and that of the Pratyekabuddhas; both arrive at the same *bodhi*, or illumination, and the same *nirvāṇa*; but, while the Śrāvakas appear at a time when the Law of the Buddha is known, and profit by the teaching of others, the Pratyekabuddhas attain to *bodhi* themselves at a time when the Law of the Buddha has disappeared, while the Śrāvakas preach (*śrāvayanti*; *śrāvaka*, translated 'hearer', means rather 'preacher' [see *SBE* xxi., *Saddharmapuṇḍarīka*, iv. 53]), the Pratyekabuddhas do not convert except by miracles. There are still other differences, but they are of no importance to the Vehicle of salvation (see *Abhidharmakośabhāṣya*, ch. iii, Fr. tr., London, 1915, p. 103 and notes; Chandrakīrti, *Madhyamakāvatāra* (Fr. tr., *Muséon*, new ser., viii. [1907] 2 ff., quoting literary authorities). It is natural, then, for the Vehicle of the Śrāvakas and the Vehicle of the Pratyekabuddhas to be fused in the Little Vehicle (Hīnayāna [q.v.]).

2. Great Vehicle.—The new Buddhism adopts the name of *mahāyāna* ('great vehicle'). The word *yāna* ('vehicle') is used to express the same idea as that conveyed by the 'supramundane path' (*lokottaramārga*), the 'path leading to *nirvāṇa*'. But, as we shall see, there are various kinds of *Mahāyāna*, and this fact explains the diversity of definitions and the evident difficulty in which early writers—e.g., the Chinese pilgrims—found themselves when they tried to explain the difference between the Little and the Great Vehicle.

The Great Vehicle consists of (1) the practice of the virtues (*pāramitās*) of a *bodhisattva* or future Buddha (i.e. *pāramitāyāna* [*naya*] or *bodhisattvayāna*); by it one becomes a Buddha (*buddhayāna*); (2) the wisdom or knowledge of vacuity (*prajñāyāna* or *jñānamārga*); (3) devotion; it is the path of devotion (*bhaktimārga*).

(1) *Career of the bodhisattva*.—The books which profess to belong to the Great Vehicle (*Mahāyāna-sūtras*) tend to assert that *nirvāṇa* cannot be attained by the ancient method. To obtain deliverance from desire, ignorance, and existence it is necessary to practise all the virtues and acquire all the knowledge of the Buddhas, to enter on the career of a future Buddha (*bodhisattva-charyā*) and pursue it for centuries. Instead of 'Great Vehicle,' it may therefore be called 'Vehicle of the future Buddhas' (*bodhisattvayāna*), or 'Method of the perfect virtues, charity, patience, etc.' (*pāramitānaya*).

Now the Buddha Śākyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the 'Vehicle of the future Buddhas' although married. Nothing, however, prevents monks from making the 'vow to become Buddhas'; by this vow they mount the 'Vehicle of the future Buddhas,' but by their monastic observances they belong to the 'old Buddhism,' and form part of one of the disciplinary schools of the Śrāvakas. Young laymen often take the vows of monks, and, after acquiring merit in this way for a time, renounce them in order to take the vows of a future Buddha.

(2) *Vacuity*.—The books that treat of philosophy explain that the ancient dogma, 'The soul is nothing but a complex of transitory elements (*skandha*),' is perfectly accurate, but unsatisfying; they would

add that these elements themselves do not exist in themselves, but are 'void' (*śūnya*). (For the two ways of understanding vacuity, and the two schools of the Great Vehicle, see artt. *MADHYAMA* and *VIJÑĀNAVĀDINS*.) The doctrine of vacuity (*śūnyatāvāda*) is the second characteristic of the Great Vehicle. But a layman or a monk can perform the 'vow to become a Buddha' without thinking out the doctrine of vacuity. The 'theologians' themselves declare that, as the beginning of the saintly career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e. to universal nothingness. On the other hand, an adept of the Little Vehicle who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of vacuity and become imbued with it, in order to attain *nirvāṇa* as an *arhat*, i.e. in this present life. Some texts even explain that, if the doctrine of vacuity is really indispensable to the attainment of *nirvāṇa*, it is sufficient, without the career of the future Buddha.

(3) *Devotion*.—A third characteristic of the Great Vehicle is the worship of the Buddhas and 'future Buddhas' of high rank (see art. *BODHISATTVA*). The Buddhas are great gods, almost eternal, who sit upon thrones in heavens surrounded by saints, and send 'magic bodies' down to earth to save men. The worship of the Buddhas may exist independently of any desire to become oneself a Buddha and independently of philosophic speculation.¹ There is therefore a Great Vehicle that is merely devotional: (a) the Buddha (*Amitābha*, e.g.) is a god in the full meaning of the word, eternal or almost so (*Amitābha*, 'infinite splendour,' is sometimes called *Amitāyus*, 'infinite life'); (b) the only concern of the faithful is to be re-born in the paradise of this god, 'the blissful world' (*Sukhāvātī*), the western paradise, by the grace of the god and with the help of the holy saints *Avalokīta*, etc.²

This *Mahāyāna*, purely devotional and with monotheistic tendencies, is not a 'Vehicle of future Buddhas.' In the books discussing it (*Sukhāvātīyāna*, etc.) there is practically no reference to *nirvāṇa*. This Vehicle is a Buddhist form of the Hindu *bhakti*, or devotion. *Bhakti* must be accompanied by highly orthodox acts of worship, which are recommended in the *Hīnayāna*: worship of *stūpas*, *maṇḍalas* in honour of the Buddha, abstinence from food before worshipping Buddha, etc. But the *Mahāyānist bhakti* is laden with litanies and formulae; it declares that rites efface sin, and attributes salutary virtue to the reading of the *sūtras* and the repetition of the name of the Buddhas—which is not quite orthodox.

It is to be noticed that the worship of Buddhas, *Tārās*, etc., is compatible with the strict orthodoxy of the *Hīnayāna*, as has been remarked in regard to Java, which is very idolatrous and yet attached to the *Hīnayāna*.³

3. *Vedāntic and Tāntic Vehicle*.—The *Mahāyāna*, as analyzed above, is, from the philosophical point of view, a phenomenalist system, and, from the religious and mythological point of view, polytheism with monarchical and devotional tendencies. From early times phenomenism and polytheism led to conceptions of immanence and monism.⁴ In the days of *Asaṅga* (A.D. 4th cent.) men believed in an *Ādibuddha* (q.v.) who would play the part of *Brahmā* in his various aspects as *Brahmā*, or *Kṛṣṇa* divine, or *Kṛṣṇa* incarnate. These speculations upon immanence and emanation, which often mingle with the doctrines of the *Mahāyāna* proper,

¹ For the combination of the cult of the Buddhas and compassion, or charity, with meditation on vacuity, see art. *BODHISATTVA*.

Matsumoto Bunzaburō, *Gokuraku jōdo ron* ('Study of the Pure-Land Sukhāvātī'), Tokyo, 1909, and *Miroku jōdo ron* ('Study of the Pure-Land of Maitreya'), do. 1911 (Fr. tr., M. N. Péri, in *Bull. de l'École franç. d'Extrême-Orient*, xi. [1911] 439 ff.).

³ A. Barth, 'Le pèlerin chinois I-tsing,' in *Journal des Savants*, 1898; cf. the remark of Winternitz, *Geschichte*, ii. 157, on the Buddha in *Buddhaghosa*: 'eine Art Halbgott wie in den *Mahāyānasūtra*.'

⁴ See Poussin, *Bouddhisme, Opinions sur la dogmatique*, p. 391; also his papers on the three bodies of a Buddha and allied subjects in *JRAS*, 1910, p. 129, and *Muséon*, new ser., xiv. [1913] 257; cf. D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907.

are the basis of the 'Vehicle of formulae' (*mantrayāna*), the 'diamond method' (*vajrayāna*), also called the 'Tantric Vehicle' (*tantrayāna*). This Vehicle is Vedānta in Buddhist disguise as regards its doctrine, and Śaivite and pagan as regards its mythological representations and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his inmost nature, a Buddha, and (2) every being can, by meditation, spells, (*sādhana*), and theurgic practices of all kinds (often erotic), 'realize' this Buddha nature at little expense (see TANTRISM).

4. Is the Mahāyāna the only Vehicle?—This is an interesting question and worthy of our attention. Do the Mahāyāna teachers regard the Mahāyāna as the only Vehicle of salvation? I-tsing's remarks may be accepted as giving the general opinion:

'These two systems [Mahāyāna and Hinayāna] are perfectly in accordance with the noble doctrine [of the Buddha] . . . Both equally conform to truth and lead us to Nirvāṇa.'¹

But the scholastic literature and the *Mahāyāna-sūtras* of course give different and often narrower views. Maitreya-Asaṅga says that 'the meditation (*dhyāna*) of the Hinayāna, though impure, leads to salvation';² but for Śāntideva the Hinayāna is of only relative truth, and its followers are upon a path that has no issue;³ Chandrakīrti sees no virtue in the Hinayāna except its teaching of 'vacuity' (see MADHYAMAKA): there are old *sūtras* which proclaim vacuity (*śūnyatāpratisamyukta*); in an extreme case *arhat*ship and *nirvāṇa* may be attained by meditation on these *sūtras*⁴—in an extreme case, we say, because the follower of the Hinayāna has no part in the spiritual aids that are reserved for the future Buddha; he does not have the great 'means' (*upāya*) of salvation, compassion, great compassion (*mahākaruṇā*), i.e. the desire and the vow to save all creatures; the possession of wisdom (*prajñā*) is unavailing, since he lacks the great 'means' of remission of sins and elimination of passion. In fact, there is only one Vehicle, as the *Lotus of the True Law* (g.v.) and several *sūtras* teach very clearly. The only way to salvation is to become a Buddha. But this demands a long career; so the Buddha has shown men a nearer goal, the *nirvāṇa* of the *arhat*, that they may not lose heart—like a caravan-leader who creates a magic town in the midst of the forest, far from the end of the journey, that the travellers may think they are near their destination, and take heart to advance.⁵ 'The men who mount the Vehicle of the Śrāvakas cannot obtain deliverance by the Vehicle of the Śrāvakas'; embracing a false *nirvāṇa*, they are like a lover who embraces his mistress's corpse; they have, however, advanced nearer to the true *nirvāṇa*. At death, they falsely think that they have attained deliverance and exemption from re-birth; they are re-born, for they are not yet delivered, but they are re-born beyond the world (*tridhātu*), in the 'pure realm' (*anāsravadhātu*), in lotuses which open their petals to the rays of Amitābha and other Buddhas. There they learn the true Vehicle, make the *bodhi* vow, and enter, through numerous lives, upon the career of a future Buddha.⁶

The Chinese texts studied by J. J. M. de Groot (*Code du Mahāyāna en Chine*, Amsterdam, 1893, p. 94) reduce the Hinayāna to the observation of monastic rules, taking no notice, either purposely

or through ignorance, of all the Noble Path and meditation on the truths. They say that the Little Vehicle, thus understood, leads to re-birth in the very inferior paradises of the world of Kāma (see COSMOGONY AND COSMOLOGY [Buddhist]); it is therefore a Vehicle that leads to the gods (*devayāna*), according to de Groot's translation), and not a Vehicle of salvation.

5. Speculative doctrines of the Mahāyāna.—These are examined in the artt. MADHYAMAKA and VIJÑĀNAVĀDINS, which discuss the two chief philosophic schools of the Great Vehicle. The doctrines connected with the 'career of the future Buddha' (*bodhisattvacharyā*) are treated in artt. BODHISATTVA. Many details might be added on the technique of meditations; but the works on this subject (*Abhisamayālaṅkāraloka*, *Bodhisattvabhūmi*) have not been published, and present very serious difficulties.

6. Discipline (Vinaya) of the Mahāyāna.—The Indian schools of devotion (*bhakti*) are often not strict as regards morality and discipline. There existed, accordingly, lax Mahāyāna, inclining to Tantrism, which preached salvation and the remission of sins by the recitation of formulae, etc., independently of rules of conduct.

But there is also a rigid Mahāyānist 'monachism,' sometimes adhering to the ancient *Vinayas*, sometimes introducing new ones.

(1) The *Ākāśagarbhasūtra* says:

'If a Bodhisattva [i.e. an adept of the Great Vehicle] begins to think: "The Bodhisattva does not require to study the law which forms part of the Mahāyāna; he need not make it a rule for himself. What is the use of accepting this rule? What is the use of this rule?"—if he thinks in this way, he is guilty of error, and renders himself very culpable.'

Śāntideva speaks in the same strain:

'The adept of the Great Vehicle will never give his hearers the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulas, while abandoning the rules of conduct.'¹

One fully realizes I-tsing's statement:

'Which of the eighteen schools [of the Hinayāna] should be grouped with the Mahāyāna or with the Hinayāna is not determined. . . . Both [Mahāyāna and Hinayāna] adopt one and the same discipline (Vinaya).'²

Monks and convents practising the strict monastic observance of the ancient *Vinayas* adopted the dogmas and worship of the Mahāyāna; Yuan Chwang therefore mentions monks who were 'Mahāyānists of the Sthavira-school and all perfect in Vinaya observance.'³ It has been supposed that the *Vinaya* of the ancient Mahāsāṅghika sect was the most popular in Mahāyānist convents, because it was in a Mahāyānist convent that Fa Hian found the Mahāsāṅghika *Vinaya*,⁴ because the Mahāsāṅghikas seem to have been the forerunners of the Mahāyāna.⁵

(2) The Mahāyāna apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvāstivādins (Hinayāna) allowed the use of meat under certain conditions; the Mahāyānists condemned it. I-tsing tells a touching story of a young Mahāyānist, Chittavarman, who was refused ordination in a Hinayāna convent until he renounced, in tears, his principles of diet.⁶

Sooner or later, however, the Mahāyāna created a new *Vinaya* for itself—a *Vinaya* that was independent of the ancient *Vinayas*, that had a different purpose in view and that could be, and was often

expected to be, used together with the ancient *Vinayas*. The ancient *Vinayas* were for the use of monks; the Mahāyāna *Vinaya* is the 'Vinaya of the future Buddhas,' or, more exactly, 'of incipient future Buddhas' (*ādīkarmika bodhisattva*). (a) It was while making the vow to become a Buddha that Śākyamuni, prostrating himself at the feet of a Buddha, became a 'future Buddha'; this vow is valid, not only for present existence, but also for numerous future existences; like the vows of a *bhikṣu* (see KARMA), it creates 'discipline' (*samvara*), the obligation and, to a certain extent, the 'grace' (the moral power) to perform certain duties. We have no longer a Buddha in our midst to receive such a vow from us; we must be content to take the 'discipline of a son of Buddha' (*sugatātmaśaṁvara*) before a qualified person (*sāṁvarika*), or, in the absence of such, before all the Buddhas of the quarters.¹ (b) The future Buddha must practise the perfect virtues (*pāramitās*); theologians have therefore to explain how he is to fulfil the virtues of giving, energy, and meditation. (c) He commits errors; he must know how to confess them, before whom (i.e. Buddhas of confession), and how to obtain pardon. (d) The ancient devotional practices, worship of *stūpas*, etc., are not sufficient for devotees of Avalokita, Amitābha, and Tārā; fixed rules of worship must therefore be made.²

We have no exact information regarding the oldest forms of the *Vinaya* for *bodhisattvas*. But documents which give an accurate idea of the rules of life of the Mahāyānist monk will be found in the *Brahmajālasūtra* (tr. de Groot, *Code du Mahāyāna en Chine*), and in the 'Daily Manual of the Shaman' (S. Beal, *A Catena of Buddhist Scriptures*, London, 1871, p. 239). The ritual of the office in honour of Avalokita (Beal, *Catena*, p. 398) indicates the nature of the cult.

(3) The Mahāyānist monks belonged to one of the Hinayāna schools, and fulfilled the obligations of future Buddhas³ in addition to those of their own school. Later, there were monks who adhered solely to the monastic code of the Mahāyāna (the type given in de Groot, *Code du Mahāyāna en Chine*), which became a complete code in itself, a conglomeration of different *Vinayas*. Finally, it is always possible for a monk to renounce his vows and return to the world; the Great Vehicle favoured this tendency inasmuch as it had a special 'code of the future Buddha' for the use of married people.⁴ It is understood, however, that ordination to future Buddhahood can be granted only to persons who are at least Upāsakas, 'devotees,' who have taken the three refuges and are ritually bound by the five vows (not to kill, etc.).⁵

(4) The relative importance of duties for monks who are at the same time 'future Buddhas' is not always clear. I-tsing declares that he is not writing 'concerning those who claim to follow the practice of a Bodhisattva rather than the Vinaya rules.'⁶ Śāntideva cites an extreme case—the story of the monk who had practised continence for a long

¹ See *Bodhisattvabhūmi*, i. 10, fol. 62, and the fragments of the *Bodhisattvapratimokṣa* (B. Nanjio, *Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883, nos. 1096-1098), quoted in *Śikṣāsamucchaya*, p. 11. On the vow of the future Buddha see Srijñāna, *Bodhipathapradīpa* (JETS i. [1893] 39), and art. *BODHISATTVA*, vol. II, pp. 746, 748 f. The *Bhadracharapradīdhāna* has been published by Watanabe, Strassburg, 1912. The *Vinayas* of the Mahāyāna were first placed under the patronage of Upālī (*Upālikapariṣhekhā*); later they were more completely cut off from the tradition of the Hinayāna.

² See, e.g., *Ādīkarmapradīpa*, in Poussin, *Bouddhisme*, Paris, 1898.

³ De Groot, *Code du Mahāyāna en Chine*, p. 8.

time (84,000 years) consenting to satisfy the desires of a woman so that he might fulfil the requirement of benevolence and kindness that is the essential law of future Buddhas.¹ For them the sins of hatred are very serious, while the sins of desire are venial. The very spirit of the Mahāyāna, therefore, may perhaps be responsible for the singular development of Kashmir monasticism, viz. married monks.²

II. HISTORY AND ORIGINS OF MAHĀYĀNA DOCTRINES.—As we have seen, the Mahāyāna differed from the ancient Vehicle in three points: (1) the substitution of the 'career of a future Buddha' for the 'conquest of the quality of *arhat*'; in other words, the substitution of the *bodhisattva*, who might be a layman, for the *bhikṣu*, 'monk'; (2) the creation of a new ontological theory, 'the doctrine of the void' (*śūnyatā*) or of 'the non-existence in themselves of the constituent elements of things and of the human ego' (*dharmaśāntātmā*), superimposed upon the doctrine of 'the non-existence in itself of the human ego' (*puṅgalanāirātmya*); and (3) the transformation of the Buddhas into great mythological gods, almost eternal; the dedication of 'future Buddhas' as helping providences; and, by a parallel development, the practice of devotion (*bhakti*) towards these 'great beings' (*mahāsattva*) instead of the respect and meditation practised by the ancients towards the Buddha; what was formerly venerated in the Buddha, what men 'took refuge in' (*śaraṇa-gamana*) when taking refuge in the Buddha, was the complex of the moral and intellectual qualities in virtue of which a certain person is Buddha. To admire and meditate on these qualities is an excellent means of gaining morality, tranquillity, *nirvāṇa*. The Mahāyānist addresses himself to living, gracious, paternal gods.

There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development and inter-relation of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view. We may safely attempt to give the scheme the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the bodhisattva.—Ancient Buddhism holds that Buddhas are very rare, but the Mahāyāna invites all who desire salvation to enter on the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a corresponding change in morale: in short, the monk believed that the quickest way to reach *nirvāṇa* was by meditation; he worked entirely 'for himself' (*svārtham*); the activity of the future Buddha, on the contrary, is, above all, altruistic (*parārtham*).

Our literary evidence on the stages of this transformation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

(1) The ideal of ancient Buddhism, the *arhat* useless to others and an utter egoist, to the extent of insensibility, appeared mean when compared to the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while

¹ *Śikṣāsamucchaya*, p. 167.

² See M. A. Stein, *Kaṭhān's Rājataranginī, a Chronicle of the Kings of Kashmir*, London, 1900, p. 74: 'In one half of the monastery she placed those Bhikṣus whose conduct conformed to the precepts; and in the other half those who, being in possession of wives, children, cattle and property, deserved blame for their life as householders' (on the date see Inlrod. p. 81). Cf. Hodgson, *Essays*, p. 62, and various predictions of the *Mahāyānasūtras* as to the decadence of Buddhist law.

still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of so many lives consecrated to the world, reveals tendencies in ancient Buddhism towards the doctrine of the 'career of the *bodhisattva*' open to all.¹

(2) The question arose, further, whether the *arhat* actually obtains *nirvāṇa*. Formerly the *arhat* was required to show, not only 'morality,' 'harmlessness,' but also 'feelings of benevolence' for the mass of human creatures, as it is only just to mention, but his 'equipment of merit' appeared somewhat slight, and we may suppose that men were even then tempted to ask whether his 'equipment of knowledge' was sufficient. Metaphysics and psychology had made progress. Many existences are necessary, they may have said, to obtain 'knowledge' sufficient for deliverance; just as, in order to achieve deliverance from desire, love of self, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in *nirvāṇa* was shaken, or that, not knowing exactly what *nirvāṇa* was, men were somewhat afraid of it, and devoted their attention rather to the acquisition of celestial powers and the bliss of the Buddhas (now transformed into very happy and long-lived personages) (see below, 3).

The *Dasabhumika*, a very technical work on the 'career of the future Buddhas,' was translated into Chinese between A.D. 265 and 316; the *Mahāvastu* (g.v.), of much earlier origin, gives a lengthy account of the stages or degrees (*bhūmi*) of this career. According to Chandrakīrti (*Mādhyaṃkāvatāra*), the Hinayāna knows nothing of the 'Vehicle of the future Buddhas,' which is the characteristic trait of the Mahāyāna.

2. Vacuity.—We have more extensive information on the philosophic doctrine. Here we are dealing with a development rather than with a transformation: (1) the principles of analysis and speculative annihilation applied by ancient Buddhism to the ego and the great unities (the body, the chariot) were now applied to the *dharma*s ('elements of things'), the minute elementary realities constituting the ego and the great unities; this is the Mādhyaṃika system (see art. MADHYAMAKA); and (2) the ancient idealist tendencies were developed which saw in thought the cause of all: 'All that we are is the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts' (*Dhammapada*, i. [SBE x. (1898) 3]). Hence the conclusion that matter does not exist; thought alone exists.²

The two philosophical schools of the Mahāyāna (Mādhyaṃika and Vijñānavādins) are both in line with the most ancient tradition. Nāgārjuna, the great master of the former, is placed in the 2nd cent. A.D.; but there is a great deal of Mādhyaṃika philosophy in the Pāli canon,³ and the *sūtras* of the *Prajñāpāramitā*, where this philosophy is predominant, are ancient.⁴ Chandrakīrti establishes

¹ The *Chariyāpitaka*, not one of the most ancient books, is the first in Pāli literature to mention the doctrine of the *pāramitā*s, 'perfect virtues' necessary for making a Buddha, a doctrine that plays no part in the older books' (Rhys Davids, *Buddhist India*, London, 1903, p. 177). The doctrine of the *bodhisattva*, the theory of his charity, merits, etc., is relatively highly developed in the *Abhidharmakosa* and its sources (Sanskrit Buddhism of the Hinayāna).

² But its existence is not *paramārthika*, 'absolute'; it is only *samvṛtyavahārika*, 'contingent,' as will be seen in art. VIJÑĀNAVĀDINS.

³ H. Oldenberg (*Buddha*, Stuttgart, 1914, p. 328) disagrees with the present writer on this point.

⁴ The *Prajñāpāramitā* was translated into Chinese between A.D. 147 and 164. We are told that the Pūrvaśāilas and the Aparāśāilas possessed a *Prajñā* in Prakṛit (Wassiljeff, *Buddhismus*, p. 291), which is quite possible. They were Lokottaravādins (see art. BODHISATTVA, vol. n. p. 742b). But what is the date of this *Prajñā*?

the fact that the true doctrine of the void was known to the Hinayāna, or, to be more exact, that the Buddha had already taught this doctrine in his first revelation, in the *sūtras* of the Hinayāna. But, it will be asked, if this Vehicle, the Vehicle of the Śrāvakas, teaches the non-existence in themselves of the elements of the ego (*dharmaṇairātmya*), where is the need of the Mahāyāna? The Mahāyāna, replies Chandrakīrti, teaches not only the *dharmaṇairātmya*, but also the stages of the career of the future Buddha, the perfect virtues (*pāramitā*), the resolutions or vows to save all creatures, the application of merit to the acquisition of the quality of Buddha, the great compassion (*Mādhyaṃkāvatāra*, tr. in *Muséon*, new ser., viii. 272), whence the Mahāyāna was necessary.

3. Devotion.—As regards the deification of Buddhas and worship of Buddhas and *bodhisattvas*, we have a sure date in the Chinese translation (between A.D. 148 and 170) of the *Sukhāvatīvyūha*, the book in which the monotheistic religion of Amitābha (see above, I. 2. (3)) is formulated.¹ The Gandhāra monuments, the exact date of which is not known, but which can hardly be later than the 1st cent. A.D., take us back even further than the earliest date of the Chinese translation. They show, or at least may be held to show, the worship of the *bodhisattvas* associated with that of the Buddhas.²

On the other hand, we know from the documents of the Hinayāna that the worship of the Buddha is of great antiquity. In the art. ĀDIBUDDHA the present writer has mentioned some of these documents, and (although he no longer sees in certain passages the quasi-deification of the Buddha which he saw in 1908) they show that the Buddhists, or at least certain Buddhists, came to the conclusion that Śākyamuni did not descend in person to the earth, but was content to send his image (cf. DOCTISM [Buddhist]). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the *Kathāvatthu* as a whole are compelled to locate this belief before the time of Aśoka. Without believing in the authenticity of this very composite book, the present writer would willingly admit that the deification of the Buddha and his 'almost' eternity belong to a period long before the formal documents.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on Hindu soil. The resemblance between the Buddha reigning peacefully in a paradise and sending images of himself down to this world, on the one hand, and Kṛṣṇa, gladdening beings in his own world (Goloka) and appearing in a human form, on the other, is striking, and contains a valuable lesson.

Nevertheless, it must be noted that, although Śākyamuni plays an important rôle in the *Lotus of the True Law* and in the Mahāyānist literature of which he is the revealer, he does not seem to have such a leading part in the religions of the Great Vehicle. In the first rank are Maitreya,³ the future Buddha, more living than Śākyamuni, and especially personages of obscure origin, Avalokiteśvara (see art. AVALOKITEŚVARA), Amitābha,⁴ Vairocana, Vajrapāṇi, and many others, whose Buddhist character is not very marked.

Several scholars, moreover (and no mean ones), regard the origin of the devotion to the Buddhas as a real 'puzzle' (Max Muller), and believe that it is to be found in the influence of the 'barbarians,' notably the Mazdaeans—an influence which was exercised especially in Northern India, the Panjāb, and Kashmir, where religious statuary reached such high development. The pre-historic mythology of the Great Vehicle is veiled in obscurity, and future researches may perhaps confirm this hypothesis; but the comparisons to which attention has been called up to the present have little value and do not prove that Amitābha is an Ahura Mazda or an Apollo disguised. In any case it is useless to explain the worship of the Buddhas by the influence of Greek sculptors who, it is believed, were the first to make images of Buddhas. The whole 'theology' of the

¹ See the tr. of Max Muller and Takakusu in SBE xlix. (1894).

religion of Amitābha is Indian; the belief in the providence of Amitābha and of Avalokita, the belief in their saving grace, has very little in common with ancient Buddhism, but is excellent Kṛpāism. The paradise of the west (Sukhāvati), and the name of Amitābha, 'infinite light,' which probably are in reality 'solar,' have not up to the present been sufficiently studied and explained. The idea of multiple universes, however, each ruled by a Buddha, is very authentic Buddhism (see, e.g., the *Mahāvastu*).

III. HISTORY OF THE SCRIPTURES OF THE MAHAYANA.¹—I. Controversy on the authenticity of the books and legends concerning them.—We know that the books of the Hinayāna appeared surrounded with a very definite ecclesiastical history. Whatever may be the value to modern scholars of the tradition referring to the Councils (e.g., R. O. Franke, *Dighanikāya*, Gottingen, 1913, p. xlii), the Buddhists of the Mahāyāna and of the Hinayāna admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayāna did not recognize the books of the Mahāyāna for the simple reason that these books were unknown in ecclesiastical history:

'This is the word of the Buddha which is found in the Sūtra, which appears in the Vinaya, which is in harmony with religion, with Truth (*dharma*),'² This old text of the *Dīgha* is, according to them, the condemnation of the Mahāyāna, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahāyānists is the speculative argument. The Mahāyāna, they say, is in harmony with the *dharma*; it is the only vehicle of *nirvāṇa*. The Hinayāna is indeed authentic, but the Buddha taught it only as provisional truth, taking into consideration the weakness of mind of his hearers. Besides, if the doctrine of the Mahāyāna is not found in your *sūtras*, it is found in ours; if you do not admit our *sūtras*, we admit them. But, the Hinayānists reply, our *sūtras* are authentic since you admit them; yours are not authentic, and that is why we reject them. To this the Mahāyānists answer that there are far more reasons for admitting the *sūtras* of the Mahāyāna, since they are the true path to salvation.³

The Mahāyānists further maintain that the Mahāyāna is not new, and that the Hinayānist tradition shows that the Mahāyāna is authentic. (1) The *Samyuttanikāya* (ii. 17 and iii. 142) proves that even in the Hinayāna the Buddha taught the non-existence in themselves of the elements of the ego (see above, II. 2; *Madhyamakāvatāra*, p. 22). (2) The doctrine of the multiple teaching of the Master, of his 'accommodation to the ideas of the world' (*lokānuvartana*), is taught in the Canon of the Pūrvaśailas, a sect of the Hinayāna (*Madhyamakāvatāra*, Fr. tr., *Muséon*, new ser., xi. [1910] 134); which is also (3) said to have possessed the *sūtras* of the *Prajñāpāramitā* edited in Prākṛit. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the 'reserved questions' (see art. AGNOSTICISM [Buddhist], vol. i. p. 221^b; *Madhyamakāvatāra*, p. 251). (4) The *Mahāvastu* (a book of the Hinayāna) teaches the stages in the career of a *bodhisattva* and the perfect virtues.⁴

¹ For a description and analysis of the literature of the Great Vehicle see Wassilief, *Buddhismus*, pp. 157-207, and Winternitz, *Gesch. der ind. Literatur*, ii. 187-250; see also Winternitz on the *Lalitavistara* and the *Mahāvastu*—works which belong to both Vehicles. Among translations see 'The Lotus of the True Law,' *SBH* xxi., 'The Sukhāvati, etc.,' *SBH* xlix.

² *Dīgha*, ii. 124; Mañjuśrīhṥasavañra, *Siddhānta*, i. 128b; *Sūtrālamkāra*, ed. S. Lévi, Paris, 1907, i. 20.

³ See *Bodhisattvacharyāvatāra*, ix. 42f., Fr. tr., *Introduction à la pratique des futurs Bouddhas*, p. 120; *Sūtrālamkāra*, i. 1; Poussin, *Bouddhisme, Opinions sur la dogmatique*, p. 137f.

⁴ Arguments 3 and 4 are given in the Tibetan work, the *Siddhānta* of Mañjuśrīhṥasavañra, p. 128b, in the Uṛga ed., tr. by Wassilief in *Buddhismus*, p. 264 (291). The connexion of the Mahāyāna with the Mahāśāṅghika school, of which the Pūrvaśailas are a branch, is beyond doubt; but the antiquity of the doctrine of this school is rather doubtful.

If the whole of the Mahāyāna was not known to the ancients, it was because the doctrines were too sublime to be understood by the compilers of the Hinayāna. But it was the Buddha who taught them, and they were heard by the *bodhisattvas* Samantabhadra, Mañjuśrīhṥasavañra, Guhyeśvara, Vajrapāṇi, and Maitreya. In fact, immediately after having obtained illumination, the Buddha preached to the gods (in the heaven of the Thirty-three) and to the *bodhisattvas* (J. Edkins, *Chinese Buddhism*, London, 1880, p. 18; A. Foucher, *Iconographie bouddhique*, p. 86).

The *bodhisattvas*, throughout the course of the ages, have revealed the Mahāyāna to men; Mañjuśrī took the form of a *bhikṣu* and, it is said, made known the *Prajñāpāramitā* in 80,000 articles (Tāranātha, tr. A. Schiefner, Petrograd, 1869, p. 58). It was Maitreya, the future Buddha, who explained the *Prajñāpāramitā* to Asaṅga, and who is the author of the treatises of the Vijñānavādin school (*Muséon*, vi. [1905] 145, xv. [1914] 42). According to a Japanese tradition, interesting as an example although without historical value, Mañjuśrī and Maitreya had published the Mahāyāna in the year 116 of Nirvāṇa: 'If these books had not existed before, whence would they have been obtained?'—a very childish argument.¹ This Mahāyāna is said to have been completed in 200 of Nirvāṇa, notably by the publication of the *Avatamsaka* (= *Gaṇḍavyūha*). All these revelations took place before Nāgārjuna (R. Fujishima, *Le Bouddhisme japonais*, Paris, 1888, p. 54).

Nevertheless, it is to Nāgārjuna that our most trustworthy documents give the honour of the revelation of the Mahāyāna. The *Laṅkāvatāra* and a *Mahāmeghasūtra*² put into the mouth of the Buddha words like the following:

'Four centuries after my *nirvāṇa* this Ananda will be the *bhikṣu* called Nāga; he will teach the Great Vehicle.'

It is said that Nāgārjuna obtained the *Prajñāpāramitā* or the *Avatamsaka* from the Nāgas (Wassilief, *Buddhismus*, p. 118f.). We cannot give an account of all the legends referring to the revelation of the books of the Mahāyāna (see Tāranātha, p. 61f.); what has already been said will give a sufficient idea of the beliefs that arose in the Buddhist world concerning the origin of these books. Apart from a few ardent partisans of the Hinayāna, all Buddhists readily believed all that appeared as the 'word of Buddha.'

2. Criticism of the legends and conjectures.—The library of the Mahāyāna consists of two parts, which the Tibetans have carefully distinguished: first, the *sūtras*, divine works, uttered by Bhagavat himself, which are arranged in the *Kanṣūr* (= *bka hgyur*, 'word of the Master'); and, secondly, the commentaries on the *sūtras* and the treatises (*śāstras*) properly so called, human works, the greater number of which were written by the scholars to whom tradition ascribes them; all this literature forms part of the *Tanjūr* (*bstan hgyur*, 'instruction, scholasticism'). This distinction has not always a historical value. Many *sūtras* are frankly scholastic works, and it is probable that some of them are later than the signed treatises whose doctrine they contain and authorize.³

We know that Asaṅga wrote five treatises which he gave as a revelation of Maitreya. Although revealed, these treatises are included as part of the *Tanjūr*, because in form they are not *sūtras*, but mere treatises (*kārikās*, mnemonic verses, with a

¹ Maitreya-Asaṅga believes (*Sūtrālamkāra*, i. 7) that the two Vehicles are contemporaneous.

² See *Madhyamakāvatāra*, p. 76; Fujishima, pp. 32, 55; for the prophecies of Laṅkā, which are wanting in the first Chinese version, see Max Müller, *India, What can it teach us?*, London, 1883, p. 298f.

³ We must confine ourselves to a few remarks here. This subject will depend for a long time yet upon monographs.

prose commentary). Presented with the formula, 'Thus have I heard. Bhagavat was on the Mount of Vultures, surrounded by thousands of Bodhisattvas . . .', they might have made good *sūtras*. There is therefore some truth in the legends which we were discussing above: the scholars of the Mahāyāna forged the *sūtras* in order to publish their philosophic doctrines, to glorify their chosen saints, to authorize their beliefs in the saviour Amitābha, and so on. In the same way, whether at the same time, earlier, or later, the thaumaturges and the magicians first made collections of magical formulæ and then compiled the *Tantras*, attributed to demi-gods or semi-demons, whom they were believed to evoke. The work of editing and compiling the *Sādhanas* (magic rituals) and the *Tantras* took a very long time—Tāranātha abounds in really historic stories on this subject—and the Mahāyāna probably developed by similar processes.

The scholastic character of the *Lankāvatāra* is very definite. This *sūtra* implies the existence of a strong Vijñānavādin doctrine; it is full of controversy. The *Daśabhūmika*, which, augmented by résumés in verse, became transformed into the *Daśabhūmīśvara*, sets forth a theory of the ten stages of the future Buddha which is quite in the manner of a 'treatise.' One of these *sūtras*, invoked by Chandrakīrti to confirm a Mādhyamika formula, seems to have been written according to the same formula (see *Mādhyamakavṛtti*, p. 249). Careful study will probably prove the close connexion between the *sūtras* and the treatises.

What exactly was the rôle of Nāgārjuna in the elaboration of this literature? It is thus defined by Kern:

Nāgārjuna may have been one of the most talented and influential leaders of the movement rather than its originator. . . . An influential person, the first eminent leader of a school imbued with Hinduism and the methods of Indian scholastic philosophy. He then became 'a comprehensive name of the activity of Mahāyānism in the first phase of its onward course' (*Manual*, pp. 6, 123).

Nāgārjuna's importance lies in having discovered the doctrine of the 'void,' which showed the inferiority of the ancient Vehicle. His name is inseparable from the *Prajñāpāramitā*. It may well be that Nāgārjuna, being the author of the treatises which are the scholastic working-out of the principles of the *Prajñāpāramitā*, is of some account in the redaction of the *Prajñāpāramitāś*, the revelation of which tradition attributes to him.

There are many ancient materials in the *sūtras* of the Mahāyāna.

¹ Not a few elements of the Mahāyānist scriptures are taken bodily from the Tripiṭaka, with such omissions and additions as deemed necessary' (Kern, *loc. cit.*).

Whole passages, e.g., of the *Lalitavistara*, recur almost word for word in the Pāli scriptures. The work that H. Oldenberg has done for the *Divyāvadāna* and E. Windisch for the *Mahāvastu*¹—in comparing these two works of the Sanskrit Hīnayāna with the Pāli canon—might be done with advantage for several *sūtras* of the Mahāyāna. The comparison would also be very fruitful between the Mahāyāna and the Sanskrit Hīnayāna. The *Abhidharma* of the Sarvāstivādins (Hīnayāna) is accepted by the Mādhyamikas (Mahāyāna); the Sautrāntikas (Hīnayāna) have opened the door to the Vijñānavādins (Mahāyāna); the *Daśabhūmika* (Mahāyāna), we may believe, depends on the *Mahāvastu* (Hīnayāna); the scholars of the Mahāyāna know and quote the Hīnayāna.² When they

L. DE LA VALLÉE POUSSIN.

MAHDĪ.—The title Mahdī was first associated with 'Alī's son Muhammad b. al-Hanafīyyah, and, apparently, given him by the adventurer Mukhtār b. Abī 'Uбайд, who, after the death of Ḥusain at Kerbela, ostensibly championed the claims of this personage to the khalifate. The word is ordinarily interpreted 'the divinely guided,' from a verb which frequently occurs in the Qur'ān in the corresponding sense, though this particular derivative is not found there; yet this explanation did not give universal satisfaction, and several others were current (see Yāqūt, *Geographical Dictionary*, ed. F. Wustenfeld, Leipzig, 1866-73, IV, 693, 4). Mukhtār clearly used it as analogous to a title attached to the name of 'Alī, calling him 'the Mahdī, son of the Waqī' (Tabarī, *Chronicle*, ed. Leyden, 1879-1901, II, 534), where the latter title means 'the legatee,' i.e. he to whom the Prophet had bequeathed the sovereignty; it is, however, often interpreted as 'the trustee.' It is doubtful whether this Muhammad used it himself, as a letter purporting to be from him, in which it is prefixed to his name, was condemned as spurious by one of his correspondents on that account (Tabarī, II, 611 [66 A.H.]). After the death of 'Alī's two sons by Fāṭima, the Prophet's daughter, it would seem that some Muslims were ready to recognize the claim of this Muhammad, 'Alī's son by another wife, to the sovereignty, but he himself acted with extreme caution in the matter of asserting it; he was, however, imprisoned for a time by the partisans of 'Abdallāh b. Zubair, who endeavoured to wrest the throne from the Umayyads; but, when their supremacy was restored, he accepted a governorship, and appears to have ended peacefully. Some uncertainty existed with regard to both the time and place of his death, and a sect arose called the Kaisāniyyah, who declared that he remained alive in his supposed tomb in Mt. Raḍwa, whence he would one day emerge; and the poet of this sect, the Sayyid Himyari, fully expected this occurrence, though the Mahdī had disappeared for sixty years (*Aghāmī*, Cairo, 1285, viii, 32). The poet Kuthayyir asserts that his reappearance had been foretold by Ka'b al-Aḥbār ('34 A.H.), whose name is often mentioned in connexion with matter drawn from the Jewish Scriptures. This prophecy may well owe its origin to that of the return of Elijah; but how the Mahdī came to be substituted for that prophet is not clear; if the reference to Ka'b be genuine, we should gather that the word had been used before Mukhtār's time with a religious import. The poet further asserts that this Mahdī's book was studied by the Kaisānis in Mecca; but such a work must assuredly have been a forgery.

With this personage the idea of an awaited deliverer is first connected in Islām, and this notion is expressed by the name Mahdī, to which the participle 'expected' (*muntazar*) is sometimes attached. The various pretenders from the house

of Ali received the title—e.g., Zaid (after whom the Zaidis are called); he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Umayyad satirist said that he had never before seen a Mahdī hanging on a tree (Mas'ūdī, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, *Les Prairies d'or*, Paris, 1861-77, v. 471). When the pretender Muhammad b. 'Abdallāh first made his appearance, the people of Medina cried out: 'The Mahdī has come forth' (Tabarī, iii. 159 [A.H. 144]). It was to be expected that prophecies of the appearance of such a personage should be attributed to the Prophet Muhammad, and such were current, though of questioned authenticity, the best, according to Muṭahhar b. Ṭāhir, who wrote about 325 A.H. (*Le Livre de la création et de l'histoire*, ed. C. Huart, Paris, 1899-1903, ii. 161), being

'The world shall not pass away until my nation be governed by one of my house whose name agrees with mine.' This tradition is also found in the collection of Tirmidhī († 279; ed. Cairo, 1292, ii. 36), where it is followed by another in which the Mahdī is mentioned:

'We were afraid of some trouble occurring after the Prophet's death, so we asked him, and he said: In my nation there is the Mahdī who shall come forth; he shall live five (or seven or nine) years; a man shall come unto him and say, "O Mahdī, give me!" and the Mahdī shall pile into his lap as much as he can carry.'

The author of this fiction appears to have interpreted the word as 'the giver,' which should rather be Muḥdī. Somewhat more information is to be found in the contemporary collection by Ibn Mājah († 273; Cairo, 1313, ii. 269): the tradition just given is repeated with some variations, indicating that under the Mahdī men would enjoy greater blessings than they had ever experienced; to it is prefixed one to the effect that certain persons with black standards (i.e. the Abbāsids) would come from the East,

'who shall ask for good and not be given it, and shall fight and be victorious and be offered what they asked and not accept it until they hand it [the sovereignty] to one of my house who shall fill it with justice as they filled it with injustice.'

Another tradition states that the Mahdī is to be a descendant of Fātima; another gives as the list of lords of paradise the following members of the family: the Prophet, his uncle Ḥamzah, his cousins 'Alī and Ja'far, and his grandsons Ḥasan and Ḥusain and the Mahdī. The last is:

'Men shall come forth from the East, and shall prepare the way for the Mahdī.'

It seems clear that the authors of these fictions had somehow heard of an expected Mahdī, and made up traditions calculated either to encourage the munificence of princes or to win adherents for some political party. Muṭahhar adds another, that the only Mahdī to be awaited was 'Isā b. Maryam, i.e. the Christian Saviour; and, since orthodox Islām looks forward to His returning to judge the world—according to the law of Muhammad—it is not quite easy to find room for another Deliverer. One of the etymologies suggested for the name, viz. the man of the *mahd*, 'cradle,' favours this view, the reference being to Qur'ān, xix. 30 ff., where Christ speaks 'in the cradle.'

There is little reason for supposing that the Prophet Muhammad contemplated the appearance of a Mahdī, however interpreted; but the outbreak of the civil wars within a generation after his death, and the perturbed condition of Islām which followed, led to the adoption of the idea from Jews or Christians, who look forward respectively to the appearance and reappearance of the Messiah; why the title Mahdī should have been adopted for the expected Deliverer is, as has been seen, an unsolved puzzle. To the etymologies suggested we should be inclined to add one more, viz. from *haddā* in the sense 'to give,' making the

word mean 'He to whom has been given,' as in Mt 28¹⁸ the Risen Saviour says, *ἐδόθη μοι πᾶσα ἐξουσία ἐν οὐρανῷ καὶ ἐπὶ γῆς*, and a similar interpretation was current for the name Shilōh in Gn 49¹⁰, 'until Shiloh come,' viz. *shel-lō*, 'whose is.' Thus the Shī'ite author of the *Fakhrī* (ed. W. Ahlwardt, Gotha, 1860, p. 58), speaking of the Mahdī Zaid (executed in 122 A.H.), curses those who deprived him of his 'right.' However this may be, the function of the expected Mahdī was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islām, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been accepted as the Mahdī by various writers up to his time Muṭahhar (*loc. cit.*) mentions 'Alī himself, the pious Umayyad 'Omar II., and the 'Abbāsīd al-Mahdī, who reigned A.D. 775-785.

About the signs whereby the Mahdī was to be recognized when he appeared there were differences of opinion; a common theory was that he should have the name Muhammad and the patronymic Abū'l-Qāsim, and that he should belong to the Prophet's house; yet not all demanded the fulfilment of these (not very difficult) conditions. To all—save the few who suppose that the Mahdī has come already—he is *δ ἐρχόμενος*, 'he that shall come'; and, on the whole, the Sunnī view is that his appearance will be that of an ordinary man whose career is that of a reformer and conqueror, while the Shī'ite view is that he is in hiding somewhere, and has been concealing himself for an unlimited period. In our times there were in the Sūdān two Mahdīs simultaneously, representing these different opinions. The line between the two is not quite easy to draw, except where some definitely historical personage is expected to reappear; for it has been found possible to adopt the theory that the Mahdī is some one in hiding, without any suggestion of supernatural concealment. In more than one case of a successful revolution the victory has been won by a commander in the name of an obscure individual, who has been brought forward only when success has been assured. Thus the author of the *Fakhrī* (p. 171), describing the rise of the 'Abbāsids, remarks that, while the Khurāsānites under the brilliant leadership of Abū Muslim were fighting for the *imām* Ibrāhīm (representative of the 'Abbāsids), he was himself in retirement somewhere in Syria or Arabia, attending to his devotions and the affairs of his family, the greater number of his adherents being unable 'to distinguish between his name and his person,' i.e. knowing nothing at all about him.

The rise of Mahdīs from time to time, then, was due to the disordered state of Islām in normal circumstances, but also to the wide-spread sentiment that the sovereign should be a descendant of either the Prophet or 'Alī, for with some communities the latter was regarded as the more important personage, and indeed the master whom the former betrayed (see Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913 ff., i. 302). The pretenders of the house of 'Alī were repeatedly supposed by their adherents to have escaped death, notwithstanding their ostensible execution, and the Shī'a sects were to a certain extent divided by their loyalty to different pretenders whose return they expected. Such pretenders were Muhammad b. 'Abdallāh, executed 145 A.H., whose return was awaited by some of the Jarūdīyyah sect; Yahyā b. 'Umar, executed

250 A.H., expected to return by others of the same sect; Muhammad b. al-Qāsim, who revolted in the year 219, was captured, but escaped and disappeared; and Mūsā b. Ja'far, who died of poison in Baghdad in 186 A.H. Several others are mentioned with these by Ibn Ḥazm (*Kitāb al-Fisal*, Cairo, 1321, iv. 179f.). The sect called Qat'iyyah got their name from making sure of the death of this Mūsā b. Ja'far, without having ascertained it (Mas'ūdi, *Tanbih*, ed. M. J. de Goeje, Leyden, 1894, p. 232). Believers in the continued existence of Muhammad b. al-Qāsim were to be found in the time of Mas'ūdi (332 A.H.; *Prairies d'or*, vii. 117) in the district of Kūfah, in the mountains of Ṭabaristān and the Dailam, and the districts of Khurāsān. The person ordinarily acknowledged to be the 'expected Mahdī' is Muhammad b. Ḥasan al-'Askari, whose father died 260 A.H. There was, however, great doubt as to the age of this Muhammad at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahrastāni locates him in Sāmarrā (ed. W. Cureton, London, 1842-46, p. 128); but at some time in the 7th or 8th cent. A.H. he appears to have taken up his abode at Ḥillah. The traveller Ibn Baṭūta († 780 A.H.; ed. and tr. C. Defrémery and R. B. Sanguinetti, Paris, 1853-58, ii. 98) gives a weird account of the ceremonies which he found there, and which seem to be relics of some pagan cult.

'There is a mosque with its door covered by a silken curtain, called the sanctuary of "the Lord of the Age." Each afternoon a hundred of the inhabitants come out of their houses armed with drawn swords; going to the governor, they obtain from him a horse with saddle and bridle, or else a mule; beating drums and playing musical instruments, they then proceed, fifty of them in front of the charger and fifty behind. Others arrange themselves on either side. Coming to the mosque that has been named, they halt before its door, and say: "Bismillah, O Lord of the Age, come forth. Mischief is rampant, and wrong abundant; this is the time for thee to come forth, that God may distinguish by thee between the true and the false." Thus they continue till the prayer of sunset, playing their musical instruments the whole time.'

Ibn Khaldūn, a contemporary of Ibn Baṭūta, who has no high opinion of his veracity, tells the same story, with some variation. According to him, the people of Ḥillah hold that their Mahdī entered a cellar in their habitation, and every night they appear with a mount before the entrance to this cellar, and keep calling him to come out, from the prayer of sunset until the stars are all shining (*Prolegomena*, Beirut, 1900, p. 199). It is surprising that in the *Ta'rikh-i-Guzidah* (compiled 730 A.H., ed. E. G. Browne, London, 1910, p. 208) the connexion of this Mahdī with Ḥillah appears to be unknown.

'In his ninth year he disappeared in Sāmarrā, and was never seen since; the people of the Shī'ah, however, believe that he is the Mahdī of the end of the world, is still alive, and will come forth when the time arrives.'

Probably even the revised version of Ibn Baṭūta's story requires further redaction.

The majority of the Mahdis have thus played a larger rôle in the imagination than in reality; there have, however, been cases wherein the character has been assumed with very considerable and even permanent success. The first capital of the Fātimids in Africa was called Mahdiyyah after the Mahdī who founded the dynasty (297 A.H. = A.D. 909). The conquests which prepared the way for his sovereignty were all achieved by an agent, who had ultimately to produce the person to whom he had preached allegiance; and, according to the statements of his enemies, the person produced was an impostor, suddenly called to play the part, the real Mahdī having perished on his way to Africa. According to an author of weight (Nizām al-Mulk, † 485; see C. Schefer, *Chrestomathie persane*, Paris, 1883-85, i. 165), the propaganda of this sect began at least a century

before, and proselytes to whom the mysteries had been communicated were forbidden to divulge them until the Mahdī appeared. Probably with this community (in theory at least) the Mahdī, called also, as has been seen, 'the Lord of the Age,' was the legitimate occupant of the Fātimid throne; when the sovereign al-Ḥākim disappeared, doubtless through assassination, his continued existence and future reappearance became the dogmas of a sect.

Another Mahdī whose efforts resulted in the foundation of a dynasty was Ibn Tūmart (*q.v.*; † 524 = A.D. 1130), who started the empire of the Almohads. Of this personage there is an unusually full and interesting biography by Ibn Khallikān (tr. W. M. de Slane, Paris, 1843-71, iii. 205 ff.), which is doubtless somewhat coloured by prejudice. He appears to have started genuinely as a religious and moral reformer, and to have taken the title Mahdī when opposition and danger induced him to draw the sword; he is likely then to have been influenced by the prophecy of the appearance of such a reformer, which, as we have seen, had already found its way into an authoritative collection of traditions. The pedigree which brought him into connexion with 'Alī may well be an invention later than his time, and as such his biographer appears to regard it. Some stories told by Ibn Khallikān are characteristic of such adventurers, though not perhaps true in this case; he got access to the *Book of Ja'far*, in which 'Alī had prophesied all that was to occur till the end of time (see art. DIVINATION [Muslim]), whence he obtained the letters which formed the name of the person destined to be his chief helper and successor, with a description of his appearance. In order to be armed with a miracle, he persuaded a learned associate to feign illiteracy and ignorance of correct Arabic; one day this person claimed to have learned the Qur'ān by heart in a dream, and this miracle convinced the most stubborn; the confederate then proclaimed Ibn Tūmart the Mahdī, whereas he had previously been called *imām*. According to Ibn Khaldūn (*History*, Cairo, 1284, vi. 229), the only heresy of which he could be convicted was his agreeing with the Imāniyyah sect that the sovereign was infallible. In his treatment of opponents he appears to have been as ruthless and intolerant as any religious leader; but a singular feature of his career as a Muhammadan saint was that, besides asceticism in diet, he observed strict chastity. His creed, which has been published (*Majmū'at al-rasā'il*, Cairo, 1328, p. 44 ff.), does not appear to differ from the orthodox *kalām*.

The prophecy of a Mahdī assumed special importance at the commencement of the century preceding the first millennium of Islam, especially in India. According to the details collected by H. Blochmann (*Āin-i-Akbarī*, i. [Calcutta, 1873] p. iv ff.), the Mahdist movement started in Badakhshān, where one Sayyid Muhammad Nūrbakhsh gained numerous adherents, defied the Afghan government, was defeated, and fled to 'Irāq, where he maintained himself till the end of his life. In India it assumed a definite form through the action of Mir Sayyid Muhammad of Jaunpur, who found an adherent in Gujarāt in Sultan Maḥmūd I. Apparently this personage was, like Ibn Tūmart in his early days, a preacher and reformer, whose doctrines gave offence, and who was forced to leave one place after another. Ultimately he decided that the burden of Mahdīship was too heavy for him to bear, and that, if he returned home, he would recant; he died in 911 (= 1505) at Farah in Baluchistān, where his tomb became a place of pilgrimage. An interesting account of another Indian Mahdī of this century is given by the historian Badā'ūnī in his *Muntakhab al-Tawārikh*

(tr. G. Ranking, Calcutta, 1898, p. 507 ff.). This person was named Shaikh 'Alā'ī, and was born in Baiāna in Hindustan. To the same place there came one Miyān 'Abdallāh, who had come under the influence of Muhammad of Jaunpur.

'He adopted the manners of a Mahdī [which would seem to have been settled by Ibn Tūmart, for they consisted in extreme asceticism]; making his dwelling in the corner of a grove far from the haunts of men, on the borders of a tank, he used to cast water on his head; and when the times of prayer came round, he used to gather together certain of the labourers who had to pass that way, and compel them to form an assembly for prayer, with such a degree of asceticism that, if he met any man disinclined for the meeting, he would give him a few coins and encourage him.'

Shaikh 'Alā'ī was much impressed by this example.

He too, 'trampling under foot his self-esteem and concert, devoted himself to the poor of his neighbourhood, and, entering the valley of self-renunciation and abnegation, he bestowed all his worldly possessions, even to his books, upon the poor.'

He became a disciple of Miyān 'Abdallāh; the two formed a community of ascetic socialists or communists, consisting of three hundred householders, who, abandoning all other source of gain and traffic, agriculture, and skilled labour, spent their time with them. In spite of their asceticism, they were in the habit of keeping arms and implements of war always with them as a protection against their enemies, but also in order to interfere with any proceeding in the city or the market of which they disapproved.

'They would go and call the offenders to account by main force, admitting no investigation by the governor, and on most occasions they got the best of it.'

After a time the place came to be too hot for Shaikh 'Alā'ī, who, along with his followers, whose numbers had now reached six or seven hundred heads of families, migrated to Khawāspur, near Jodhpur; but here, too, he interfered seriously with the government of the place, and he was compelled to go back to Baiāna, accompanied by his disciples. Islam-Shāh had by this time obtained possession of Agra, and he summoned Shaikh 'Alā'ī to his court, whither the Mahdī proceeded with a party of select companions fully armed; according to the chronicler, the Shaikh nearly effected Islam-Shāh's conversion to his views, but he was presently expelled and sent to the Deccan. Meanwhile, his former teacher and associate had started a sect of his own, which with some difficulty was suppressed by the authorities; and the Shaikh 'Alā'ī was himself ere long summoned again to Agra, and requested to abandon his claims to the Mahdī-ship; refusing to do this, he was tortured to death. His followers, however, were numerous, and increased, and were known as the Mahdawīs; they were persecuted, but not exterminated, in the reign of Akbar.

Blochmann observes that these Indian Mahdis were men of considerable eloquence, who by their preaching obtained great influence over the populace, and that they regularly came into conflict with the authorized expounders of the law at the Muhammadan courts. Badā'ūnī takes evident pleasure in narrating how Shaikh 'Alā'ī triumphed over the official theologians who were employed to argue with him. They endeavoured to bring the practice of their co-religionists into harmony with the strict principles enjoined by the Sunni codes, and especially to banish practices which had been borrowed from their pagan neighbours.

The Mahdī who acquired the greatest fame in Europe was the personage whose enterprise led to the Anglo-Egyptian conquest of the Sūdān. The best account of the early stages of the movement is given by F. R. Wingate in *Mahdism and the Egyptian Sudan* (London, 1891). After the strong hands of Zubair Pasha, Samuel Baker, and General Gordon had been withdrawn from the Sūdān, that country was subject to violent oppression, and the 'broad basis of the Mahdī's appeal was the injustice

and cruelty of every sort which sprang up the moment Gordon's wholesome discipline was withdrawn' (p. 12). Muhammad Ahmad, who took this title, was born at Dongola in 1848 of a family of boat-builders; at the age of 22 he was already a shaikh with a great reputation for sanctity, and became a powerful preacher; he denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdī, with whom he presently identified himself, and, indeed, in the Shi'ite sense; he claimed to be the twelfth *imām*, the son of Hasan 'Askari. His claims were first recognized in 1881 at Abba Island, 150 miles south of Khartum, when a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdī. News of his 'issuing forth' having come to Khartum, the governor sent to have him arrested; but he declined to obey, and, when troops were sent to enforce the order, he succeeded in annihilating them. He evidently possessed some skill both as an organizer and as a military leader, for he soon enrolled among his followers tribe after tribe of Sūdānese, and proceeded from victory to victory until, at his death on June 22, 1885, shortly after the historic fall of Khartum, his empire extended from lat. 5 to 21 S., and from long. 23 to 38 E. of Greenwich. Wingate suggests as an epitome of Mahdism the sentence 'Your money or your life'; in practice it was an enforced communism, maintained by plunder, divided arbitrarily by the Mahdī. Success also appears to have made of the Mahdī a coarse voluptuary. Like some of his predecessors, he seems to have aimed at reproducing what were supposed to be the conditions of early Islam, and to have insisted on a sort of asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Darwīsh ('poor'), for which at a later period the Mahdī substituted the appellation Anṣār ('helpers'), which had been given by the Prophet Muhammad to his entertainers in Medina. The Mahdī himself clearly aimed at reproducing the career of the Prophet, since he had a *hijrah*, or 'migration', viz. from Abba, where he first came forward, to Masat in the Nuba mountains; and he assigned four chairs to persons representing the eminent associates of the Prophet who became the first successors. The chair of Abū Bakr, the first khalīf, was filled by 'Abdallāh al-Ta'aishī, who afterwards became famous as the Mahdī's successor, or *khalīf*, and is said to have suggested the rôle of Mahdī first to Zubair Pasha and then to Muhammad Ahmad (*Muqtatīf*, xxiv. [1900] 5).

The asceticism of the Mahdī, like that of the Wahhābīs, included the tabu of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leanings towards Sūfism, and would gladly have obtained recognition from the head of the Sanūsīs; this being refused, he abolished all 'orders' except his own.

After the fall of Khartum the Sūdān was gradually evacuated by the Anglo-Egyptian government, and the *khalīf* extended the Mahdī's empire by fire and sword till it reached the bounds of Egypt; in 1896 the reconquest of the country began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The new State had achieved nothing but devastation and destruction.

The success of the Sūdānese Mahdī encouraged many others to play the part. It seems that the title 'al-Mahdī' in the case of the head of the Sanūsī community was originally a proper name; its holder, however, gave it the familiar applica-

tion, and even claimed to have on his body the 'seal of prophecy,' i.e. the *nævus* between the shoulders which had indicated the office to which Muhammad was born (the Sūdānese Mahdī also bore a mark, but it was a mole on his right cheek). In the oracle which foretold his appearance the beginning of the 13th Islamic cent. (1301=1883) was specified as the date. His theories will be found in the art. *SANŪSIS*. He was rarely seen by strangers himself, having a 'double,' *Si Ahmad b. Biskrī*, who resembled him very closely, to play the part before them. In 1884 he enjoined the Muslims to pay no attention to the Sūdānese pretender, who was merely 'an impostor and a liar.' In 1888, when an appeal was made to the Sultan of Borgo to assist in the suppression of Mahdism by revolutionaries in the Sūdān, the Sanūsī Mahdī, to whom the matter was referred, advised the Sultan to abstain from interference with Sūdānese affairs and fight with the *khalīf* only if himself attacked.

The measures taken by the Protectorate of Nigeria in recent years to regulate taxation, emancipate slaves, and introduce other reforms led to the rise of numerous Mahdis; between the years 1900 and 1905 there were a dozen in Sokoto, and as many in the other provinces. In 1905 Mahdis arose simultaneously in Saturu, Bauchi, and Kottagara. Most of these were caught, tried, and executed, the government regarding such severity as necessary for the preservation of order. In 1907 there was one Mahdī at Bima in Bauchi, 'but the situation was in general satisfactory' (*Revue du monde musulman*, iv. [1908] 144).

While the tradition, which, as we have seen, has been admitted into some authoritative works, is likely to produce aspirants to the Mahdī-ship from time to time, it is probable that the general introduction of good and stable government will render their appearance constantly rarer and their adherents fewer. To the question whether there were any relics of Mahdism in the Sūdān, the Cairene journal *Muqtatīf* as early as 1902 (xxvii. 1126) replied that the introduction of security and justice in place of the long reign of terror which that system had produced had effectually destroyed its traces.

LITERATURE.—The authorities have been cited throughout the article.
D. S. MARGOLIOUTH.

MAIMONIDES.—*i. Life.*—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, born at Cordova, 30th March 1135, died at Cairo, 13th Dec. 1204, is known in Jewish literature as 'Rambam' (the letters r, m, b, m being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Abū 'Imrān Mūsā ben Maimūn ibn 'Abd Allāh. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to embrace Islam. He, together with his father, chose the former course, and settled at Fez. Here they led for a time the dual life of Muslim and Jew. But, the Muslim authorities growing suspicious of their *bona fides*, father and son determined to leave Fez. Accordingly, in April 1165, they boarded a vessel bound for Palestine. Acre was reached after a month's stormy voyage, and after a short stay there they went on to Jerusalem; but, as Palestine had just been the scene of the Second Crusade, and the Jews there were few in number and poor in goods as well as in culture, Maimonides fixed upon Egypt as a more congenial centre. A home was made in Fostat, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Maimonides died, and, becoming financially reduced in consequence, Maimonides took up the practice of medicine as a means of livelihood.

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undaunted while following out the exacting duties of his profession. The eminent position which he has ever held in Jewish estimation is expressed in the popular Jewish saying, 'From Moses to Moses¹ there was none like Moses.'

2. Works.—Maimonides' works can be classified under the following heads.

i. PHILOSOPHY AND THEOLOGY.—(a) *Dalālat-al-Hairin* ('Guide of the Perplexed'), known in Heb. as *Môrêh Nêbhukhim*. The Heb. tr. was effected in 1204 by Samuel ibn Tibbon, and another and less popular Heb. tr. was made by the celebrated Hebrew poet Al-Hariz in the 13th century. The Lat. tr. by the younger Buxtorf (Basel, 1629) is based on the Heb. of Ibn Tibbon. Salomon Munk published a Fr. tr. of the Arabic original entitled *Guide des égarés* (8 vols., Paris, 1856-66), and there are two Ital. trr. of the whole work and several Germ. trr. of parts. An Eng. rendering of pt. iii. was brought out by J. Townley (London, 1827) under the title of *The Reasons of the Laws of Moses*. The standard Eng. ed. with commentary and introduction is that of M. Friedländer.

(b) A work on the terms used in logic entitled *Makālah fi-Sina'at al-Manṭiq*, popularly known in its Heb. tr. (by Moses ibn Tibbon) as *Milloth Haggayōn*. Sebastian Munster published a Lat. tr. (Basel, 1527). There are two Germ. renderings, and the most noteworthy Heb. commentary is that of Moses Mendelssohn.

(c) *Makālah fi al-Taḥdīd*, on the unity of God, known in Heb. as *Ma'amar hay-Yḥūd*.

ii. COMMENTARIES ON TALMUD AND MISHNAH.—(a) Commentary on the Mishnah known in Arabic as *Sirḡ* ('Light'). The component parts of the work were translated into Heb. by various mediæval scholars. W. Surenhusius rendered the Heb. into Lat., and E. Pococke published parts with a Lat. tr. (Oxford, 1654). The section known as 'The Eight Chapters' (*Shemoneh Perakim*) was edited with an excellent Germ. tr. and valuable annotations by M. Wolf (Leipzig, 1863). A new ed. with a very good Eng. tr. and notes is that of Gorinkle (Columbia University Press, 1912). Various edd. of small sections have been brought out by other scholars, and there is much that still awaits the light.

(b) *Kitāb al-Farā'id*, rendered into Heb. under the title of *Sēfer Ham-Miswōth* by Ibn Tibbon. Moses Bloch brought out a complete ed. with a Fr. tr. (Paris, 1858), entitled *Le Livre des préceptes*. (The book might also appropriately be classified under iii.)

iii. HALAKHĀ OR CODIFICATION OF RABBINIC LAWS.—*Mishneh Torāh* ('Repetition of the Law'), known also as 'The Strong Hand' (*Yād hā-hazakah*). It is divided into fourteen component books, and was written by the author in Hebrew. Extracts were translated into English by H. Bernard and E. Soloweyczik in 1863. The work is of gigantic proportions, and was meant to be an easily intelligible compendium of Jewish ritual law.

iv. LETTERS AND OCCASIONAL ESSAYS.—(a) *Iggereth hash-Sh'mād* ('Letter on Conversion'), written in Arab. and translated anonymously into Hebrew. It deals with the subject of forced conversions. Maimonides maintains that a Jew who outwardly through compulsion professes to embrace Islam does not thereby forfeit his claim to be considered a righteous Jew. But the authenticity of the 'Letter' has been doubted by scholars.

(b) *Iggereth Teman* ('Letter to Teman,' i.e. Yemen), written in Arab. and translated into Heb. by Ibn Tibbon and others. The Jews of Yemen are given advice as to how to conduct themselves in times of religious persecution.

(c) *Ma'amar Tehiyōth ham-Metim* ('Essays on the Resurrection of the Dead'), written in Arab., translated into Heb. by Ibn Tibbon and also by Al-Hariz (see Steinschneider, *Hebräische Uebersetzungen*, p. 431). He maintains a spiritual view of resurrection as opposed to the largely prevalent material view of the resurrection of a united body and soul.

(d) 'Letter to the men of Marseilles,' written in Arab. and translated into Heb. by Ibn Tibbon, a discussion on astronomy and astrology, in which Maimonides upholds the truth of the former, but rejects belief in the potency of the stars.

(e) 'Letter to Rabbi Jonathan of Lunel,' in which Maimonides, while replying to certain queries on ritual topics, discloses much of his private and personal life. A similar note is struck in a letter to Ibn Tibbon (translated into Eng. from the Heb. by H. Adler, in the *Miscellany of Hebrew Literature*, i., 1872).

v. MEDICINE AND ASTRONOMY.—(a) An essay on the Jewish calendar, called *Sēfer Hibbur* (written at the age of twenty-three), composed in Arab. and translated into Heb. by an anonymous writer, to be found in the collection *Kōbbēḡ Teshūbhōth hā-Rambam* (Leipzig, 1859).

(b) Various minor works on detailed points in medicine. These were all written in Arab., and were translated into Heb. by Jews of the Middle Ages. There are also Lat., Fr., Germ., and Span. trr. of several.

vi. RESPONSE.—Maimonides' correspondence embraced nearly all the Jewish communities of the Middle Ages. They were translated at an early date into Heb., and comprise the collection known as *Kōbbēḡ Teshūbhōth hā-Rambam*.

3. Place in philosophy.—Maimonides holds a

¹ i.e. Moses Mendelssohn (q.v.).

significant place both in Jewish and in general philosophy, his importance in these respects resting mainly on his three larger works—the 'Guide of the Perplexed,' the *Sirāj*, or Commentary on the Mishnah, and the *Mishneh Tōrah*. The most essentially 'Jewish' of the three is the *Mishneh Tōrah*. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the whole Rabbinical literature previous to Maimonides. What prompted the author to write it was the fact that the Talmud and the Rabbinical literature generally are a large, unwieldy, unsystematized mass of opinions and rules, laws, counsels, prescriptions, permissions, and prohibitions, with no vestige of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of those intricacies, he is puzzled to know what is, and what is not, Judaism as laid down by the Rabbis and sanctioned by orthodox tradition. Maimonides felt the necessity of aiding Jews in this cardinal respect. Judaism appeared to him to be in danger of losing itself in mazes of its own invention; he therefore planned a work in which both the letter and the spirit of the Talmud should reappear in a simple, orderly, and systematic guise. All the controversies, disputations, and doubtful points in the original are omitted. The faithful Jew who wishes to know the settled Rabbinical view on any subject of ritual or belief need no longer wade for the information through oceans of unnecessary details. It is given him in definite, clear-cut, and brief language. As can be understood, this good service rendered to Judaism was not without an admixture of evil. Talmudic law, once flexible, became rigid. Maimonides, by aiming at laying down opinions which were to be the norm of all future religious practice and belief, was felt to have exercised a too arbitrary dogmatism. He made development impossible and chained Judaism to the letter, instead of leaving it free to the eternally unfolding life of the spirit. The numerous attacks—very often virulent and abusive—which were hurled against him both in life and after death on account of this dogmatism, and on kindred grounds, constitute a substantial chapter in Jewish mediæval history. On the other hand, the book was well received in many Jewish communities, though the hope of the author that it would one day become the authoritative code for all Israel was never realized.

In the making of 'codes' or 'compendia' of Jewish law, Maimonides had both predecessors and successors. But his work stands out from all these in two commanding respects: (a) a greater variety of subject, a broader interpretation of the scope of Judaism as a system both of 'law' and of 'theology'; (b) the metaphysical [Aristotelian] colouring pervading his treatment of religion and ethics, as well as the addition of dissertations on such subjects as the calendar, idolatry, and free will. He was no mere codifier in the sense that others were. His was the genius of the literary artist working out his own original conception of divine truth as understood by the Jew. Hence, whereas to-day resort is had to other codes only when enlightenment is sought on points of strict 'legalism' or strictly orthodox ritual—what is forbidden and what is not forbidden by the 613 precepts of the *Tōrah*—the code of Maimonides is a source of edification to the theological student generally, quite irrespective of its relation to the Jewish life. The first of the fourteen books comprising the *Mishneh Tōrah* is entitled 'Maddā' ('Knowledge'). Maimonides feels that, before a man can be ordered to worship God, he should first be informed of what God really is; so he sets out

with proofs of the existence of God, of the impossibility of a plurality of gods, of the impossibility of a world without God, of the various grades of animate and inanimate existence—angels, 'spheres,' men, plants, minerals (introducing, of course, the 'four elements,' viz. earth, air, fire, water). He shows how all these have their places in the cosmos, and how all reveal God in their several ways and degrees. In the framework of such a treatment he discusses the Rabbinic views of prayer, divine worship, Sabbath, feasts and fasts, repentance, and the whole host of ethical and civil prescriptions which the Talmudic Rabbis had deduced from Scripture and had laid down for observance by the Jewish commonwealth. It is all done in a way which shows that, while Maimonides defended what he considered the eternal sanctity of 'ceremonial,' he was too spiritual, too mystical a thinker to omit giving due prominence to the ethical and spiritual aspects of Judaism—the aspects which justify and transfigure the rest.

The *Sirāj*, or Commentary on the Mishnah, has not as yet had full justice done to it by scholars and students. It has been in many senses overshadowed by the more popular commentary of Obadiah Bertinoro, an Italian Rabbi of the 15th century. But there can be no doubt that, with the growing modern recognition of the necessity of studying the Rabbinical literature on strictly scientific lines, the *Sirāj* will yet come into its own.

The object of Maimonides was to enable the layman to understand the Mishnah—its technical phraseology as well as its general drift—without the necessity of working through the involved disquisitions of the Talmud. The Talmud is *par excellence* the commentary on the Mishnah, but its elaborations and criticisms of the Mishnah, instead of throwing light on the latter, often render the darkness all the greater. Further, Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignores these glosses. He incorporates them—and largely too—in the commentary. But he sometimes adopts an independent view; and this is just one of the facts that make his work serve as a really valuable introduction to the study of the Talmud. It is also very valuable for the many long dissertations which it contains on points in theology, philosophy, history, and exegesis. Thus, commenting on Mishnah xi. in the Treatise *Sanhedrin* on the words 'All Israelites have a portion in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see *ERE* iv. 246*), being the first 'Rabbanite' (i.e. as opposed to 'Karaites') Jew to ask the Synagogue to accept a set, formulated creed of Judaism. For this he was severely criticized by a famous 15th cent. Jewish philosopher, Ḥisdai Crescas, in his *Or Adhōnai* ('Light of the Lord'). But, as subsequent history proves, there was no necessity for attaching any really serious importance to these 'Thirteen Principles of Faith,' seeing that the Synagogue at no time did, and even at the present time does not, attach any canonical validity to them. In all probability Maimonides promulgated them with no dogmatic intent. They are useful as a literary monument of the often-forgotten fact that Judaism emphasizes inward belief as well as outward conduct.

Another remarkable excursus is that known as

'The Eight Chapters.' Just as Philo attempted to expound the OT on the basis of Plato, so Maimonides here attempts to present Judaism in the dress of Aristotle. Rabbinical ethics are viewed through Greek spectacles, and Aristotle's doctrine of 'the mean' (*μεσότης*) is shown to underlie the sacred moral truths of Judaism.

'This perfect Law does not teach us to subject the body to useless and uncalled-for tortures. On the contrary, its aim and intention is that man according to the dictates of nature should pursue the path of moderation, eat and drink moderately and according to his means' (opening words of ch. iv.).

Adopting this standpoint and with the aid of the Aristotelian psychology, Maimonides shows how the Jew's path to ethical perfection lies only through the adoption of the mean. With all its Greek colouring, the spirit and teaching of the book are thoroughly Hebraic. OT and Talmud contain the highest wisdom and are man's surest guide to God.

Maimonides' greatest contribution to metaphysics, however, is his 'Guide of the Perplexed.' It is designed, as he himself says, 'for thinkers whose studies have brought them into collision with religion,' for men who 'have studied philosophy and have acquired sound knowledge, and who, while firm in religious matters, are perplexed and bewildered on account of the ambiguous and figurative expressions employed in the holy writings.' Thus the book is not meant to convince the unbeliever, but, rather, to correct the believer. His introductory motto is, 'Ye who have gone astray in the field of the holy Law, come hither and follow the path which I have prepared. The unclean and the fool shall not pass over it.'

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the standard? No one but Aristotle's. What is faith to Maimonides? Belief in the Torah, which is for all time the one true embodiment of the divine word. There is no contradiction between divine revelation as entrusted to the Jews and the metaphysical truths given to the world by the brains of the philosophers. For not only is it a fact that both in the last resort emanate from God, but it has also to be borne in mind (so argued Maimonides) that the prophets of the OT received a twofold divine message. Besides the message which is manifest to us in their written prophecies, they received oral revelations of a philosophical kind. The written prophecies are really instinct with these oral philosophies; and Scripture enshrines, in ways and degrees which can be detected only by the student of philosophy, a body of metaphysical truth. As the average Jew, through the dulling effect of the repeated persecution of his race, fails to grasp this metaphysical truth, Maimonides conceived it his duty to devote the major portion of the first book of the 'Guide' to an exhaustive examination of the anthropomorphic expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysics, viz. that God is incorporeal, and that all the Scriptural passages which talk of 'the eye' or 'the hand' or 'the foot' of God, or which describe divine movements such as 'passing,' 'dwelling,' 'coming,' 'standing,' etc., must be understood allegorically, seeing that they express transcendental metaphysical truths about the deity. But there is another leading consideration. What about the Scriptural 'attributes' of God? Is not the misunderstanding of these liable to lead to an infringement of both the incorporeality and the unity of God? Maimonides saw real danger here, and, therefore, after a severe examination of the meanings and inter-relationships of the different attributes of God, he proves the inapplicability of them all to God. All that can be predicated of God is

that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, power, wisdom, eternity, will, is inadmissible. But how, then, can we justify Scripture? By assuming, he says, that, owing to the poverty of language, these terms must be understood as describing not a positive quality but a negative of its opposite. Hence to say that 'God is one' is merely tantamount to saying that God is not a plurality. Hence the deity can be described only by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unquestionably active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere obvious. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimūn, or philosophers of the *kalām* (q.v.). As against Aristotle, who maintained the eternity of the universe, these Arabian philosophers defended the *creatio ex nihilo*. Maimonides, while as a Jew differing on this fundamental point from his teacher Aristotle, agreed with the Mutakallimūn, but differed from the latter again on several other fundamental propositions of theirs. Maimonides' originality of mind as well as his fearless liberality of spirit in the investigation of religious truth can be clearly gauged in this connexion. He rejects, as has just been said, the propositions of the Mutakallimūn—but only as propositions, i.e. theories or methods of proof. For he accepts their results. He believed, just as much as they believed, not only in the *creatio ex nihilo*, but also in the existence, incorporeality, and unity of God. On the other hand, while opposing Aristotle on the question of the *creatio ex nihilo*, he practically employs the whole paraphernalia of the Aristotelian cosmology in order to prove the *creatio ex nihilo*. The latter came about through the work of a Primal Cause, who is identical with the Creator alluded to in the Scriptures. From this Primal Cause there emanate the intellects of the spheres (these 'intellects' are identified with the angels of Holy Writ). All changes on earth are due to the revolutions of the spheres, which have souls and are endowed with intellect. God created the universe by producing first the intellects of the spheres, which give to the spheres the faculties of existence and motion and are thus the *fons et origo* of the entire universe. It is of deepest interest to both the theologian and the mystic to note in this connexion the quaint Maimonidean exegesis of Gn 1 (*Mā'āseh Bereshith*) and Ezk 1 (*Mā'āseh Merkābhāh*). His whole theory of emanation (*hashpā'ā*) is a wonderful combination of what are usually regarded as two diametrically opposite frames of mind, viz. rationalism and mysticism.

Aristotle believed in the eternity of matter. Maimonides argues against this at great length in pt. ii. of the 'Guide,' in favour of the *creatio ex nihilo*—not that he believed that the latter thesis was really provable from Scripture, but because he felt it a necessary peg on which to hang the essentially Jewish doctrines of miracles, revelation, and prophecy. On the latter subject his views are strikingly original but highly debatable. There is a strong element of passive ecstasy in prophecy. The prophet is wholly the passive instrument in the divine hand. Imagination is an essential element in all prophecy. Prophecy is an impulse descending from the Active Intellect to man's intellect and imagination. Can any man become a prophet? No, because, while it is in the power of many a man to bring himself to the high pitch

of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will, i.e. divine inspiration. A man may be intellectually and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

Maimonides' subsequent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical narratives, on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unvarying optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 1st, 'And God saw every thing that he had made, and, behold, it was very good,' the Midrashic comment upon which is, 'No evil thing descends from above' (*Brishith Rabba*, xviii. 9). Divine providence extends to individual human beings, but not to animals, plants, or minerals. Here Maimonides differs from Aristotle, who held that Providence took no account of particulars, because His knowledge was limited to universals. Scriptural passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the fact of divine omniscience, seeing that the latter must imply predestination? Numerous passages from Scripture are quoted in illustration of the difficulty of the problem. Maimonides bases his answer on the words of Is 55th, 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake that men always make is that they persist in thinking and speaking of God's knowledge in the same senses as they think and speak of man's. It is identical with His essence, and is independent of existence or of time—past, present, and future are all the same to God.

The object of the divine precepts is 'to give man true knowledge or to remove wrong knowledge, or to give a correct ordering of life or to remove oppression, or to give a training in good morals or to exhort against bad morals.' Man's final consummation of 'knowing' God can come about only after man has perfected himself, not only inwardly, but in all his external relations to society, to the State, to the world. Maimonides discusses every precept of the Torah with the object of showing how their rightful understanding and practice lead to this goal. By an ingenious adaptation of Scripture he shows that the reason why God 'led the people about, by the way of the wilderness by the Red sea' (Ex 13th), instead of leading them straight to the Promised Land, was in order to give them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of danger, and in all the social and martial qualities which a self-governing nation needs. Even so, says he, is it with man. Before he can live on the high level of knowing God, he must live on the lower level of an obedience to all the divine precepts which are the training-ground for his more exalted rôle. 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding generations of Jewish thought by his introduction of what we nowadays call 'the scientific spirit' into

the study of Judaism. Henceforward an anthropomorphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the carrying out of the 'laws' of the OT as interpreted by the Rabbis—is not a series of mechanical performances, but a movement of the human spirit towards its divine source. Man's intellect is his greatest asset. Hence Judaism, rightly understood, can never really become fossilized, seeing that the application of the intellect to it cannot but result in a continuous chain of development in consonance with the changing phases of human thought as time goes on. Although much of the substance of the 'Guide' is now obsolete, its encouragement to a freedom of spirit in the handling of religious problems will always, unlike the dogmatism of the *Mishneh Tôrah*, make its appeal to the thinker and the moralist. Maimonides the liberal philosopher will live on long after Maimonides the dogmatic ritualist is forgotten.

The influence of Maimonides on general European thought has not yet been adequately appraised. The Latin translations of the 'Guide' in the 13th cent. affected the great Franciscan, Alexander of Hales, as well as his contemporary, William of Auvergne. The great Christian scholastics, Albertus Magnus and Duns Scotus, drew inspiration from its pages. Thomas Aquinas's whole theological system is permeated with the theological viewpoints of Maimonides. What debt, if any, Spinoza's philosophy owes to him is a moot point, but that the reading of the 'Guide' influenced Spinoza's mode of life is certain.

LITERATURE.—The *editio princeps* of the *Mishneh Tôrah* is undated, and the place of publication is unknown. Numerous subsequent edd are those of Soncino, 1490; Constantinople, 1690; Amsterdam, 1702; Heb. and Eng., H. H. Bernard, Cambridge, 1832; Heb. and Germ., Vienna, 1839; Eng., J. W. Peppercorne, London, 1838, 1863. The *editio princeps* of the 'Guide of the Perplexed' appeared first without place or date; then in Heb., Venice, 1551; Berlin, 1791; in Lat., Paris, 1520; Basel, 1629; in Germ., Krotoschin, 1839; in Arab. and Fr., S. Munk, 3 vols., Paris, 1866-66; Ital., Leghorn, 1879-81; Eng., 3 vols., M. Friedlander, London, 1885, 2nd ed. in 1 vol., do. 1904. The commentary on the Mishnah was first published at Naples, 1492, and is accessible in the Lat. tr. of W. Surenhusius, in his *Mishna*, Amsterdam, 1698-1708.

MAJHWĀR, MĀNJHĪ.—A non-Aryan tribe numbering Majhwār 14,210, Mānjhī 4933, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces, Berār, and Assam. The name is usually derived from Skr. *madhya*, in the sense of 'headman,' and ethnologically they are closely connected with the Gonds and Kharwars (*q.v.*).

In the United Provinces the Majhwār possess a well-marked system of totemistic exogamous divisions, some being named from trees, animals, or birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of their forefathers by a tortoise; they therefore worship the tortoise, and will not injure or kill it. Their death rites recognize the survival of the soul after death, and they take measures to prevent the return of the malignant spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be re-incarnated in their descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spirituous liquor are offered to ancestors, and in their honour the *patārī*, or tribal priest, offers a fire sacrifice (*homa*). Among the special tribal deities of the Majhwār may be mentioned Dulhā Deo, the spirit of a bridegroom who in the olden days perished in a specially tragic way. As is the case with the cognate tribes, there is, in their beliefs, a clear distinction between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former worship, under the title of Mahādeva, 'the great god'—a name of Śiva—a deity who seems to be identical with Barā Deo, 'the great god' of the Gonds, both of whom are believed to use the ox as a 'vehicle' (*vāhana*). This cult has a basis of phallicism, which is more clearly seen in the worship of Lingo or Lingal (Skr. *linga*, the phallic symbol). The *patārī*, at his periodical visits to his parishioners, worships Mahādeva by rattling a number of iron rings fixed on a staff. The collective village-gods are impersonated by a male deity Dih (Pers. *dih*, 'the village'), whose name at least is of modern origin, while his female counterpart is known as the Deohārīn (Hindi *deuhārā*, Skr. *devagrha*, 'house of the gods'), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the *sāl* (*Shorea robusta*). More advanced members of the tribe identify her with the Hindu Devī. The shrine contains a water vessel, over which a red flag is hung, and the seat of the deity is a little mud platform on which offerings are laid and a fire sacrifice is performed. The officiant at these rites is the *baigā* (*q.v.*), the village medicine-man, who holds a goat or fowl facing the east and sacrifices it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest then and there cook and eat the flesh. No blood sacrifice is offered to ancestors, but flesh cooked by the wife of the eldest son (perhaps a survival of mother-right) is offered in the family kitchen, where the honoured dead are supposed to live. When they eat they throw a little food on the ground for the earth-goddess. Women may be present at the worship of the higher gods, but not at that of the village-deities. They also propitiate a number of demons or evil spirits, such as Turkin, the ghost of a Turk or

Muhammadian woman, and her consort Barwat, who rule all the mountain-spirits of the neighbourhood. Other spirits inhabit streams and water-pools, and with these are joined the snake-gods—the Nāg and his consort, the Nāgin. A special tribal rite is the worship of the sacred *kaarama* tree (*Nauclea parvifolia*), which is ceremonially cut down and brought into the village, where the people dance round it to the beating of drums. The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (*GB*, pt. i., *The Magic Art*, London, 1911, i. 247 ff.), a form of symbolical or imitative magic to promote the fall of rain and the fertility of the people, their crops, and cattle (W. Crooke, *PR* ii. 94 ff.). Only the more Hinduized members of the tribe employ Brāhmans, the real priests being the *patārī* and *baigā*, who are usually drawn from the more primitive allied tribes, which are believed to preserve unimpaired the knowledge of the local cults. Fetishism, so called, appears in the reverence for the sacred chain (*gurdā*) hung in the village shrine, with which hysterical girls are beaten in order to drive out the evil spirit supposed to cause such attacks. The belief in witchcraft, the evil eye, and omens is wide-spread.

LITERATURE.—W. Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, Calcutta, 1896, iii. 413 ff.

W. CROOKE.

MĀL, MĀLĒ, MĀL PAHĀRIĀ.—A non-Aryan tribe, containing various groups, numbering, Māl 2,135,329, Māl Pahāriā 54,069, at the Census of 1911, and found in the greatest numbers in Madras, Haidarābād, and Bengal.

The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, to a large extent, pure Dravidians, and those in the Rājmahāl Hills in Bengal are closely allied to the Orāons (*q.v.*). The Māl, a cultivating caste in W. and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-goddess, Manasā, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rājmahāl Hills is that by Shaw, which has been supplemented by Risley and Dalton.

'At the head of their system stands the Sun called Dharmer Gosan, and represented by a roughly-hewn post set up in front of each house. He is worshipped with offerings of fowls, goats, sundur (red lead), and oil at the commencement of the harvest season, and at other times when any misfortune befalls the family. When people are gathered together for this purpose, the village headman, who acts as priest, goes round the congregation with an egg in his hand, and recites the names of certain spirits. He then throws away the egg, apparently as a propitiatory offering, and enjoins the spirits to hold aloof and abstain from troubling the sacrifice' (Risley, *TC*, ii. 57).

Shaw describes various gods inferior in rank to the sun-god. Whenever a tiger, smallpox, or any other plague attacks the village, Ruksey or Raksi is supposed to desire that a shrine should be raised for him. Accordingly the *demāno*, or tribal priest, is directed to search for the god. He gets a branch of the *sidi* tree, and gum benjamin is burned, which he smells. He is thus enabled to point out a place where he directs the people to dig, and the god, in the shape of a sacred black stone, is discovered. The *mānjhī*, or headman, then sets out in search of a large tree, under the shade of which he places the stone, and encloses it with a stone fence and hedge. A fowl and a goat are sacrificed, and the headman or some other worthy person does worship to the god and then retires (*Asiatic Res.* iv. 46 f.). This god at the present day is the tutelary deity of strong drink, who is worshipped by the headman before he begins to distil liquor from the fresh crop of *mahuā* (*Bassia latifolia*) (Risley, ii. 57). Chal, or Chalnād, presides over a group of villages, but he is not worshipped until some

plague attacks the people, when the *demāno* dreams that a shrine should be raised, and the god, when found in the shape of a stone, is placed under a *mukmum* tree near the village, the stone undergoing no change in form from the chisel (*Asiatic Res.* iv. 48 f.). Goats and pigs are usually offered to him, but the triennial sacrifice of a cow, mentioned by Shaw, seems now to have fallen into disuse (Risley, ii. 58).

The first worship performed by young men is offered to Pāṇ Gosāin, god of the road, but it is not undertaken till some accident has induced the worshipper to consult an exorcist, who decides whether a sacrifice will be acceptable.

On the day of thanksgiving at harvest he proceeds to a high road, and clears a space under the shade of a young *bel* tree (*Egle marmelos*), in the centre of which he plants a branch of the *mukmum* tree. Round it he makes marks with red paint and, laying some rice and an egg decorated with three streaks of vermilion near the sacred branch, he invokes the god of the highway to protect him on his journeys. A cock is sacrificed, some of the blood being dropped on the branch, and the offering is cooked and eaten by the worshipper and his friends. The rite concludes with the breaking of the egg, and is never repeated unless the person concerned should meet with an accident in travelling (*Asiatic Res.* iv. 51 f.).

At present the offering prescribed for the god is a white goat, and the sacrifice is very expensive, owing to the large amount of rice-beer which must be offered to the god and then drunk by the assembled worshippers (Risley, i. 58).

The tutelary deity of the village, spoken of by Lieutenant Shaw under the name of Dwāra Gosain [god of the doorway], is now called Bāra-Dwārī, because he is supposed to live in a temple with twelve doors. The whole village worship him in the month of Māgh (Jan.-Feb.). Colonel Dalton suggests that this god may perhaps be the same as the Oraon Dārī. Kul Gosain, "the Ceres of the mountaineers," and Autga, the god of hunting, appear not to be known at the present day. Gumo Gosain, or the god of the pillar, is represented in every household by the wooden post (*gumo*) which supports the main rafters of the roof. On this the blood of a slain goat is sprinkled to propitiate the spirits of ancestors. The fact that this god is common to the Mālēs and Māl Pahārīās, and is worshipped by both in the same way, seems to tell strongly in favour of the common origin of the two tribes. As in Lieutenant Shaw's time Chāmāda Gosain still ranks high among the tribe, and demands offerings on a larger scale than any other god' (Risley, ii. 58).

At the present day the priests of the tribe are said to be the *demānos*, who were originally diviners; but it is declared that generally the *demāno* does not officiate as priest, but merely directs the village headman, head of the household, or other influential person chosen for the occasion (*ib.*).

The religion of the Māl Pahārīās is of much the same type. Their chief god is the sun, who is addressed as Gosāin, 'Lord,' and to whom an offering of rice is presented and then given to a goat, which is decapitated by a blow from behind. The meat is cooked, and served up at a feast, of which the neighbours partake. The head alone, which is regarded as sacred food (*prasād*), is carefully reserved for the members of the family. Next in honour to the sun are Dharti Mātā, Mother Earth; her servant or, as some say, her sister, Garāmī; and Singhbāhini, 'she who rides on a tiger,' who rules tigers, snakes, scorpions, and all manner of noisome beasts. The tribe also performs the *karama* rite, dancing round the sacred tree (see MAJHWAR). Chordānī, 'the thief demon,' is a malevolent spirit, who must be propitiated by sacrifice and the offering of the firstfruits of the crop, which, as usual, are under tabu (J. G. Frazer, *GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 48 ff.). To Mahādānā eggs are the appropriate offering. Gūmo Gosāin, the house pillar, represents the *lares* of the household, and every village has its own tutelary deity, which lives in a *sāl* tree (*Shorea robusta*). This is periodically daubed with red lead, and may on no account be cut down.

LITERATURE.—T. Shaw, 'On the Inhabitants of the Hills near Rājāmahāl,' in *Asiatic Researches*, iv. [London, 1798] 31 ff.; H. H. Risley, *Tribes and Castes of Bengal*, Calcutta, 1891, ii.

45 ff., 51 ff., 66 ff.; E. T. Dalton, *Descriptive Ethnology of Bengal*, do. 1872, pp. 138 ff., 203 ff.; a popular account of the Pahārīās, mainly based on the above authorities, will be found in F. B. Bradley-Birt, *The Story of an Indian Upland*, London, 1905, pp. 7 ff., 287 ff. W. CROOKE.

MALABAR JEWS.—See JEWS IN COCHIN (MALABAR).

MALAY ARCHIPELAGO.—The religious beliefs and customs of the natives of the numerous isles of the Malay Archipelago, all of them belonging to the great Malayo-Polynesian family,¹ were certainly in the main identical, but, owing to historical facts and foreign influences, by far the greater part of the population have forsaken their ancestral creed. The native population, with insignificant exceptions, of Java and Sumatra, except most Battak, profess Muhammadanism, as do the Macassars, Buginese, Mandarese, Bimanese, and some other tribes of the West and North coast of Celebes, and of Borneo; the small islands of Ternate and Tidore are also peopled by Muhammadans. The Balinese in Bali and Lombok are Saivites, with a sprinkling of Buddhists, whereas the Sassaks of Lombok are followers of Islām. Christianity is the prevailing religion in Amboina, the Minahassa, the Sangih, and Talaut Islands, and has an increasing number of adherents among the Battak, Torajas, Sawunese, and Rottinese; Roman Catholic natives are chiefly found in the Eastern part of Flores. Some small communities of converts to Christianity are also found in Java.

1. Animism.—The religion of the pagan tribes of the Archipelago is what is generally denoted as animism. In speaking of the beliefs prevailing in the Malay Peninsula Skeat rightly says:

'The root-idea seems to be an all-pervading Animism, involving a certain common vital principle (*śūnangāt*) in Man and Nature, which, for want of a more suitable word, has been here called the Soul. The application of this general theory of the universe to the requirements of the individual man constitutes the Magic Art, which, as conceived by the Malays, may be said to consist of the methods by which this Soul, whether in gods, men, animals, vegetables, minerals, or what not, may be influenced, captured, subdued, or in some way made subject to the will of the magician.'²

All this applies to the pagan Indonesians, and, in many respects, also to the natives who have adopted another religion and, in their own opinion, are sincerely attached to it.

Sumangāt, with dialectic variations, is the general word with the Malays also in Indonesia for 'soul,' 'vital force,' penetrating the whole body, but distinct from the latter, so that it can leave the body temporarily, e.g., in dreams, and finally at death. The Macassars and Buginese use the same word, *sumanga*, *sumangē* with the same meaning. The Battak use the term *tēndi*, *tondi* for exactly the same idea; and the Dayaks have *hambaruan*, *amirue*, *amiroi*, *blua*, and other dialectic variations of the same word. With the Torajas in Central Celebes the usual term is *tanoana*, properly 'homunculus'; another expression is *wayo*, or *limbayo*, i.e. 'shadow' (Jav. *wayang*, Mal. *bayang*). When the soul temporarily leaves the body, it assumes the form of a homunculus or an animal. A man whose soul thus goes forth in order to feed upon the souls of others appears in the shape of a deer, pig, crocodile, monkey, buffalo, or cat. Like many other Indonesians, the Torajas believe that there are witches who can separate their head and entrails from their body in order to suck the blood of sleeping persons. Such beings may be compared with the Mal. *penanggalans*, 'vampires.'

¹ With the doubtful exception of the people of Ternate Tidore, Halmahera (Gilolo)

² *Malay Magic*, London, 1900, p. 579 f.

The word for 'soul' in Nias is *noso*, which, like Skr. *prāṇa* and Gr. *πνεῦμα*, is properly the 'breath of life,' and then 'life,' 'vitality.' The same may be said of *hawa* (Jav., Mal. etc.). There are several other Indonesian words for 'soul'—e.g., Tontembuan *imukur*, *nimukur*, Sangir *himukudé*, Bentenan *himukur*, Ponosakan *dimukur*.

The common belief is that not only men, but also animals, vegetables, and minerals have a soul. The Ngaju Dayaks make a distinction between *hamburuan* and *gana*, the former belonging to men, animals, rice, and money, the latter to slaves, some trees, and things. The *gana*, like the *hamburuan*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to its origin, the creator, or passes, directly or indirectly, into another human body, an animal, or a plant. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called *liau* among the Ngaju Dayaks, and *diau*, *andiau*, among the Olo Dusun. It is commonly believed that the *liau* goes forthwith to Lewu lian, the spirit land, which it often leaves to roam in the woods or haunt its burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The common word for 'spirit' in Battak is *begu*, Nias *beghu*, which not only denotes the spirit of the departed, in which case we may translate it by 'ghost,' 'spectre,' but is applied also to superhuman beings, demons, and gods. The Torajas use the term *anga* for the spirit of the dead, and, in particular, *anitu* for the spirits of chieftains and heroes. This word *anitu*, or *nitu*, so wide-spread throughout the whole area of the Malayo-Polynesians, in Formosa, the Philippines, and the isles of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Rotti. The Rottinese use it also for demons, whereas the Hill Torajas apply it to their gods, who, in fact, are deified ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of higher beings or gods, but among some Torajas, who use the term *lamoas*, we find that a distinction is made between higher and lower *lamoas*.

According to E. H. Codrington (*The Melanesians*, Oxford, 1891, p. 124 f.), 'it must not be supposed that every ghost becomes an object of worship. A man in danger may call upon his father, his grandfather, or his uncle; his nearness of kin is sufficient ground for it. The ghost who is to be worshipped is the spirit of a man who in his lifetime had *mana* in him.'

The same may be said with reference to the people in the Malay Archipelago, and not the heathen exclusively. The ghosts of different kinds are not equal in power. The Karo Battak hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Sermata Isles believe that the ghosts of those who have died a violent death are most powerful and zealous to help their kinsfolk. In Halmahera the ghosts of persons killed in war or by accident are called *dilike* in Galelinese, *dilikini* in Tobelorese. They are more powerful than other ghosts, protecting the living, especially in battle,¹ and are worshipped in the village temple. The Torajas also honour the ghosts of those who have fallen in battle.

To another category of ghosts belongs the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *tjaka* *desa*, with

¹ For further particulars see M. J. van Baarda, *Woordenlijst van het Galelaseesch-hollandsch*, p. 98; A. Huebner, *Tobeloreesch-hollandsch Woordenboek*, The Hague, 1908, p. 61.

frequent offerings. The tutelary deity of a place is called *danghyang*, i.e. 'the god'; as the name implies, he is not a ghost, but a supernatural being. The worship of the reputed founder of a settlement is very common in the Moluccas. The Galelinese call the genius of a village and the forefather of its people *wongé*.

The Indonesians in general live in constant dread of innumerable ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *pontianak*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *pontianak* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird,² but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for other means see Kruijt, *Het Animisme*, pp. 245-251).

All sorts of diseases are ascribed to the baleful influence both of ghosts and of other spirits. Especially in Nias we find several names of *beghus* who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening attacks. In apprehension of the danger which may accrue from the dead, the Malays take care that the dead body is so treated that the ghost may not return. With many tribes one of the symbolical means of doing this is to scatter ashes, as if to blind the ghost.³ The relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain restrictions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiation.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former dwelling, whence the custom of erecting a hut in which to place the necessary offerings. With some Indonesians it is usual to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Amboina and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *tiwah*⁴ of the Ngaju Dayaks and the *tengke* and the *mompemate* of the Western Bare'e Torajas.⁴ For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, *The Natives of Sarawak*, i. 203-210.

In the primitive belief of the less civilized Indonesians there is a bond of connexion between a dead man and his body, chiefly his bones. It is usually the skull that is used as a medium for

¹ But cf. Skeat, p. 325 f.

communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miracle-working relics. Another medium of communication is found in idols representing the deified ancestors; these are held to be inspired after due initiation. Such images are very numerous in Nias, where they are called *adu*, and occur also in Ceram and in some parts of Borneo. The Battak have no idols of particular ancestors, but keep two puppets in their houses, one male, the other female, called Silaon ('the primeval ones'), or Debata idup ('deities of life'). They seem to represent the primordial couple from whom mankind is sprung. Among the Ngaju Dayaks puppets called *hampatong* represent the ghost (*gana*) of the slaves of the deceased at the *tuah*, but the term has also the more general meaning of 'puppet.' The Toraja tribes, on the other hand, except the To Lage and To Onda'e, have no images, but wooden masks (*pemia*). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired.

2. Shamanism.—The belief that persons, during madness, epilepsy, and sometimes abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal conditions in order to get into contact with spirits to learn from them what medicines to apply or how to act in matters of importance. The medium through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality by artificial means, the rites employed for this purpose being multifarious among the peoples of Indonesia, but, in general, similar to what we find elsewhere—*e.g.*, among the Buriats (*g.v.*).

The Battak distinguish the shaman (*sibaso*) from the priest (*datu*). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decision, based upon his knowledge of the books of his craft, in full consciousness. With the Dayak tribes it is a priest or priestess who acts as medium. The *dayong* of the Kayans is a priestess who sends her own soul to bring back the soul (*blua*) of a sick person, or to conjure up the ghost of the dead. The *manang*, a word properly meaning 'one who exercises power,' is with the Sea Dayaks the man who is able to meet and converse with spirits. The same character belongs to the *walian*, *belian*, *basir*, or *dayang* of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally show signs of ecstasy caused by their being inspired. A peculiar kind of shamanism, which, however, is of foreign origin, is found in Halmahera.¹

3. Fetishism.—Various substances are supposed to conceal a powerful soul within themselves. They are therefore held sacred and worshipped in one way or another in the hope that by their power some desired object may be attained. All over the archipelago we find the use of so-called thunder-stones, chiefly as a means of gaining invulnerability in battle or as a preservative against lightning. Not less common is the belief in the wonderful effects attending the possession of the bezoar.² A high sacredness is attached to stones of a certain uncommon shape, especially in the eastern isles of the archipelago. In Timor the finder of such a stone, considered to be the abode of a spirit, puts it on a sacred place (*voho*) and

brings sacrifices to it. It looks as if such a sacred stone is a rude form of idol, for idols also are inhabited by the deity. Various other fetishes are used as amulets, and a prophylactic fetish called *matakau* is in common use. It consists of a collection of leaves and sticks, which are hung in fruit trees to repel thieves. With the Torajas and Dayaks the suspended materials are mostly of a sympathetic character.

4. Mythology.—In general it may be said that the pagan Indonesians recognize the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishes the transgressors of his laws. In the Moluccas and the South-Eastern Isles the supreme deity is generally known under the name of Upu Lero (with dialectic variations). The word means 'Lord Sun'—a sufficient proof of his origin. Upu Lero may be identified with Upu Langi, *i.e.* 'Lord Heaven.' The earth is a female deity, and represents the female principle, who, in the West monsoon, is impregnated and fructified by the male principle, Lord Sun-Heaven. Similarly, the Torajas recognize two supreme powers: Ilai, 'the Man,' and Indara, 'the Maiden'; these formed men, but not animals or plants. In the Minahassa Muntumuntu is the sun and lawgiver. In the confused mythological lore of Nias we find Lowa Langi represented as the creator of men, though he himself is not primordial, but came forth from the bud of a tree. His counterpart is Lature, the chief of the evil spirits, who, curiously enough, is said to have his seat in the sun; he is the master of all that is perishable. The highest god of the Toba Battak is Ompu mula jadi na bolan, 'the Great Lord Origin of the Creation'; and his subordinates are the three gods Debata na tolu: Batara guru, Soripada, and Mangala bulan. The use of the somewhat corrupt Sanskrit words is sufficient proof of foreign influence, but the name of the highest god is original. Bhatara Guru is a title of Siva among the Śaivites in ancient Java. Among the Karo Battak he is the highest god; and likewise among the Macassars and Buginese in former times. The Sanskrit word *bhātāra*, in some more or less changed form, is found in many Indonesian languages in the sense of 'god' or 'divine being.' So the Ngaju Dayaks call the creator Mahatara, but also Hatalla or Mahatalla, borrowed from Arabic *Allāh ta'ālā*; and the same name is used by the Manyan Dayaks. With the Sea Dayaks *pētara* or *bētara* is a name for higher beings. Thoroughly original is the word for the supreme being in Halmahera, *viz.* Galelारे *Giki-moi*, Tobelorese *Gikiri-moi*, the 'First Being.' The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Rarawolai, the war-god, has his seat in the moon, with nine female ministers.

The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The *sangiangs* of the Ngaju Dayaks are benevolent demi-gods related to men. The most powerful of them is Tempon telon; his principal function is to conduct the ghosts to the land of spirits. The *djatas* (from Skr. *devatā*) are water-gods, whose ministers are the crocodiles. The water-spirits are called *taghazangarafa* in Nias. The *hantus* and *hantuens* of the Ngaju Dayaks are malignant spirits, or demons, whereas the *antu* is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons make their appearance in the shape of snakes, dogs, pigs, crocodiles, tortoises, and men is very general. The Kayans have a great number of gods—*e.g.*, a god of war, three gods of life, a god of storms and thunder, of fire,

¹ See van Baarda, *s.v.* 'Djini.'

² For the ideas of the Malays in the Peninsula see Skeat, pp. 195-197, 275; see also following article.

of harvest, of the waters, and of insanity, and the gods who conduct ghosts to the subterranean world. Above all these gods or demons stands Laki Tenangan, whose wife is Doh Tenangan, the patroness of women. Laki Tenangan is identical with Pa Silong of the Klemantans, and Bali Ponylong of the Kenyahs.

5. Nature-worship. — Nature-worship in its widest sense finds its expression in the sacred character of mountains, volcanoes, seas, and rivers, all of them being inhabited and ruled by super-human powers.

H. KERN.

MALAY PENINSULA. — 1. Geography. — The Malay Peninsula, a long scimitar-shaped piece of land, stretches from Burma and Siam to Singapore. Its length from the northernmost extremity to the southern confines of Johor, immediately to the north of the island of Singapore, is rather under 1000 miles; its breadth varies from 35 miles to less than 200 miles at the broadest part. The result is that the peninsula, though distinctly a part of the mainland, is insular in

character rather than continental. At a comparatively late geological period its southern half was indeed actually insular, being at this time joined to the island of Sumatra, and entirely separated from the northern portion. The line of division ran, somewhat roughly, from Singora on the one side to Perlis on the other, and it may be observed that at the very point where this line traverses the peninsula a marked change in the flora and distinct ethnographical differences occur. The lower and more properly Malayan portion of the peninsula is separated from that to the north by a low divide. The backbone of the peninsula is formed by ranges, mainly of granite formation, the source of numerous rivers and streams which drain the country. The ranges are steep and precipitous, rising to 7000 or 8000 ft. and containing stanniferous and sporadic auriferous deposits. The wild aborigines make their homes chiefly on the foot-hills, but they are also found on the main mountain complex to a height of upwards of 3000 feet. The upland valleys are narrow and covered with dense jungle. They offer little attraction to any but the scattered aboriginal population who still find shelter in their fastnesses and, in some districts, to the Chinese miners. Further towards the coast the valleys become larger and more fertile, and their loamy soils have long been cultivated by the Malays, and in recent years by numerous European planters. As the rivers reach the sea on either side, the soil tends to become more and more a clayey or sandy alluvium. Often the rivers are tidal for a great many miles inland. On the east coast, for some four months of every year, the steady beat of the China monsoon seals all the river-mouths with a sandy bar, and during the height of this monsoon all trade is effectually prevented. On the west coast the land is sheltered, as if by a colossal breakwater, by the neighbouring island of Sumatra. Here muddy mangrove flats are found, but with magnificent expanses of sandy beach at intervals. The light breezes that prevail have led to the evolution of quite different types of boats and canoes from those on the China Sea. The peninsula is rich in tin ore. It produces an amount estimated, roughly, at three-quarters of the entire world's supply. The revenue derived from this industry has been ably applied by the governments of the native States to their development. Out of this income a railway has been built from Penang to Singapore, another is under construction round the main mountain mass on the east coast, and will be continued to meet the Siamese railways from Bangkok, while the railway from Penang is also to be extended to meet the same railway system. Together with a most excellent road system, second to none in the East, these modern means of transport have changed entirely the old conditions of life, and have brought this part of British Malaya, in one generation, into vital contact with our own economic world. Besides the mining industry there are now large agricultural industries dealing with rubber and coco-nuts. In the main these industries are worked by a non-indigenous population from China and the south of India, for whose sustenance large supplies of rice are imported annually. The British possessions consist of the islands of Penang and Singapore, and of three small strips of land: Province Wellesley opposite Penang, and the Dindings and Malacca between Penang and Singapore. The Federated Malay States of Perak, Selangor, and Nègri Sembilan on the Straits of Malacca, and Pahang, on the China Sea, form a compact core dominating the centre of this part of the peninsula. To the north of the Federated Malay States are the States of Perlis and Kedah on the west coast, and of Kelantan and

Trengganu on the east coast, all of which have recently been taken under British protection, and also the State of Patani, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection. It is common to speak of the units of the British sphere as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populous island of Java. Occasionally the term is more accurately extended to include the island of Labuan, British N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. *Ethnological affinities and history.*—The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out conclusions deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have served as a causeway for migrations from the Asiatic continent, while the protected character of the waterway on the west side, and the richness of this part of the peninsula in minerals and other products, have favoured its economic development, and made it not only attractive to higher civilizations, as the study of its entire history shows, but also a rendezvous of merchants and workers from many far-separated countries. At the present day not the least important element in the population consists of a congeries of alien races, Chinese from the southern provinces of China, Canton, Fu-kien, and the island of Hainan, Tamils from S. India and Ceylon, and, in a lesser degree, Sikhs, Panjabis, and Pathans from N. India, and Javanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Kraw Divide, overstepping the ancient ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the Perak valley, the defences of which were strengthened with a hedge of thorny bamboo, which is not indigenous in this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in comparatively recent times.

(a) *Malays.*—The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal of at least two different types, and Malayan) Indian and Islāmic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a great extent, if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongoloid group of peoples found in Formosa, Sumatra, Java, and throughout a great part of the Malay Archipelago. When the Palēmbang emigrants first began to arrive from Sumatra, about 900 to 1000 years ago, introducing a Hinduized civilization into the peninsula, it is probable that they found some Indo-Chinese race of superior culture already in possession. This is suggested by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some cen-

turies, the earlier Palēmbang colonists, are still in the matriarchal stage as distinct from other Sumatran settlers, by whom customs of a patriarchal type are followed. In the Malayan phrase, the people of the Nēgri Sembilan 'follow the *adat pērpateh*,' which may be described as '*Pērpateh* custom,' whereas the other Malays of the peninsula 'follow the *adat Tēmenggong*' ('custom of the *Tēmenggong*'), these two contrasted bodies of custom being based on mother-right and father-right respectively.

These Sumatran settlers, who were agriculturists, amalgamated with the aborigines, at any rate in some districts—e.g., in the State called Nēgri Sembilan—but the conversion of the Malays from tolerant Hinduism to Muhammadanism from the late 14th to the 16th cent. began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Sunnī Muhammadanism of the Shāfi'ite school has remained (as in Java) the official religion of the peninsula, although among the less educated of the Malays it is the merest veneer covering a vast body of practices and beliefs which can be traced either to the influences of Hinduism or to primitive shamanistic beliefs, such as are still held by the aborigines. Malay Islāmism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs, geographically and ethnographically, to Indo-China, a name which well expresses the fact that, with hardly any exception, the congeries of races inhabiting the peninsula from time immemorial represent strata of races belonging to one or other of the two chief families of nations in various parts of Asia, viz. a Mongoloid and a non-Mongoloid, both terms being used broadly. Belonging to the latter family we have (1) Indonesians (defined by A. H. Keane¹ as the pre-Malay 'Caucasic' element, of which the Veddas and Korumbas, and one at least of the Australian aboriginal races, are typical), often called 'Dravidian' (though, like 'Malayo-Polynesian,' this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same great family, (2) a more highly developed or specialized type, possibly the tall brown-skinned Polynesian. These two main Indonesian types are said to be represented in the peninsula, the pre-Malay 'Caucasic' element of the Korumba-Vedda type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language),² while to the pre-Malay Oceanic 'Caucasians' (of the Polynesian or Maori type) belong the taller east coast 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat fleshy, large-limbed men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongolian family of nations is represented both by the Siamese (or Thai) in the northern portion of the peninsula and by the Malays themselves in the southern part, the Malays proper being perhaps best regarded as a highly specialized offshoot of the southern or 'Oceanic' Mongoloid race, immediately immigrant from central and southern Sumatra. They have long, lank, bluish-black, straight hair, of circular section, and are almost beardless, with skin of a dark yellow-brown or olive hue (or the 'colour of newly-fallen leaves'); they are round-headed (brachycephalic), and often have more or less wide

¹ *Man Past and Present*, Cambridge, 1899, p. 231.

² R. O. Winstedt, *Malay Grammar*, Oxford, 1918, p. 12. 'This connexion was first definitely asserted by Prof. Schmidt of Modling, Austria, and is now generally accepted; it establishes an ultimate prehistoric relationship between Malay and the languages of the aborigines in the Peninsula' (ib.).

and flattened noses, and somewhat thick ears, and on the average are about 1.61 m. in height. The women are usually much shorter than the men. Both sexes have rather short, often almost stumpy, feet, with toes that are to some extent prehensile; they will walk up a thin sloping pole leading to a raised platform or house-floor by gripping it with the hands and at the same time holding it between the great toe and remaining toes of each foot. Their joints are remarkably fine and small; the dagger-ring of a well-developed old-style rebel chief, which was worn on his forefinger, was too small for an average-sized little finger of a European. A jungle Malay can commonly perform certain feats with his limbs that are impossible to a European unless he has been specially trained as an acrobat.

In Sumatra the race was moulded by Indian influences into a comparatively civilized condition before they crossed to the peninsula. When they arrived, they found the country occupied by the three pagan races (see below, (b)), whom they drove before them into the fastnesses of the mountainous and jungle-clad interior. It is thought that they also found some branch of the Môn-Khmer or Môn¹ races holding the coast-line and other points of vantage, and thus occupying almost the same relation towards the aboriginal races as the Malays do at the present day, and that they then partly absorbed the Môn, by thinning them of their women, and partly drove them into the jungle. This episode is, however, a lost chapter in the history of the peninsula, although some such theory seems evidently necessary in order to account for all the actually extant conditions.

The Malays proper are but partially civilized, a graft upon a savage stock, allied not only to the Central and Southern Sumatrans and Indonesians, but also perhaps ultimately to the Chams of Champa.² See CAMBODIA, CHAMS.

The hereditary savagery of the Malay nature, for many years after the introduction of the British Residential system (introduced to curb the turbulent Malay Rajas, who were fostering piracy), continually broke out, the commonest form in which it showed itself being perhaps the *amok*, the national Malay method of committing suicide, until the gradual strengthening of the right arm of British law made it too risky to indulge in, when by degrees it became unfashionable. Other striking evidence of the high-strung excitability of the Malay temperament is still to be seen in the form of the mysterious disease called *latah* (corresponding to what has been called 'arctic hysteria'), which also has not yet been thoroughly investigated.

(b) *Aborigines*.—Various theories have been put forward as to the ethnological character of the several wild races which form the substratum of the population. It was held by the older ethnologists that they belonged to a homogeneous group—a Negrito race modified by admixture with the Malay population. This is what has been termed the 'Pan-Negrito' theory of A. de Quatrefages, N. von Miklucho-Maclay, and others. This hypothesis, however, has proved untenable, and the result of later researches has established the

fact that at least three¹ types are to be found among these primitive tribes. Of these tribes two, at least (the Semang and Sakai), can be found in a relatively pure state, though only in very limited areas, and the third (the Jakun) is probably nowhere really pure. Admixture between the three has taken place in varying degrees throughout the peninsula, and the only satisfactory procedure anthropologically is to compare each tribe with the pure, unmixed standard or standards to which it is most closely related. By no other method can any really useful conclusions be reached, or, indeed, the drawing of the most fallacious inferences avoided.

(1) *Semang*.—The Semang are a nomad Negrito race—comparable with the Negrito (Pygmy) peoples of Central Africa, and probably most closely connected with the Andamanese, whose group of islands lies off the Burmese coast at its southward end—belonging to a primitive group of peoples found to a greater or less extent as a relic of the aboriginal population as far as New Guinea and the Philippines, although it is remarkable that no traces of any such race have yet been quite proved in Borneo midway between these two Negrito centres. The physical characters of these people are short stature (1.491 mm. male, 1.408 female), brachycephaly, skin varying from dark copper or chocolate to shiny black, hair woolly, nose broad, lips everted, beard scanty. They extend from Patani to Kedah, and from Kedah to Mid-Perak and N. Pahang.

In view of the fact that the Semang (or, as they are called on the east coast of the peninsula, Pagan) are so frequently described as being of Negro character—'like African negroes seen through the reverse end of a field-glass'²—it cannot be too strongly stated that this is a mistake. At the utmost, it may be conjectured, with W. H. Flower, that they represent, with the true Pygmies, an original undeveloped stock from which the Papuans, like the Negroes, may have branched off. But even for this theory there are many difficulties, and it cannot be said to have been in any way established. Hence the Negrito and the Negro must be regarded as totally different races—the former having short or round heads and the latter being long-headed.

(2) *Sakai*.—The Sakai were at one time regarded as Semang admixed with Malay, but are now clearly differentiated as a separate and independent type³ most nearly akin to the Dravidian group of peoples. They are taller than the Semang (average height 1.504 mm. male, 1.437 female), dolichocephalic, skin very variable, light to dark brown, hair wavy, nose fine and small, cheek-bones broad, mouth small, lower lip full and projecting, beard as a rule non-existent. The habitat of the purest Sakai is S.E. Perak and N.W. Pahang.

(3) *Jakun*.—The Jakun are a mixed group inhabiting especially the south of the peninsula, probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more remarkable since a relatively important element running throughout all the aboriginal dialects in

¹ Wilkinson has recently suggested that five aboriginal race types should be recognized. When, therefore, the new elements, such as would be required in order to form the two proposed new types, have been differentiated, and these elements are all shown not to be referable to either one or the other of the three types already identified, the problem will have reached a further stage of development. Certainly, as there are still some unexplained points, it is probable that some further racial element may eventually be isolated (see *F.M.S. Govt. Papers on Malay Subjects: Aboriginal Tribes*, 1910).

² Hugh Clifford, *In Court and Kampong*, London, 1897, p. 172. But this is a microscopic slip for an author who has done as much as any other ten men to familiarize the English public with the peoples of Malaya.

³ This all-important differentiation was first clearly established by R. Martin; see his *magnum opus*, *Inlandstanne der malayischen Halbinsel*, Leipzig, 1905.

¹ Pronounced 'Mown.' The Môn, or Talaing, are remnants of an old pre-Malay ('Caucasic') race which once covered the whole of lower Burma. The Talaing language is the oldest literary vernacular of Indo-China, and is fast dying out, though it is the original tongue upon which the Burmese alphabet and religion were modelled, and in which were composed the Môn inscriptions, which go back to about the 11th cent. of our era.

² The Cham dialect has in recent years been shown to contain Malay elements (E. Aymonier and A. Cabaton, *Dictionnaire cam-français*, Paris, 1906). One of the most peculiar customs (though in this case non-Malay) attributed to the Chams is that the women ask the men in marriage.

varying degrees consists of some Malayo-Polynesian tongue, the vocabulary of which shows affinities with the Malayan languages of the Far Eastern Archipelago, unlike modern (peninsular) or standard Malay. The reason for this is not apparent, unless we may conjecture that at some remote period a race whose national speech was of this Malayo-Polynesian type prevailed in the peninsula. The Jakun may be classified as consisting of at least three related groups, blended as above. In so far as they are of Malayan type, they should be to that extent regarded as aboriginal Malays. In physical character they are a little taller than the Sakai, the head is brachycephalic, the skin dark coppery, hair long, straight, and smooth, nose thick, flat, and short; the eyes show little tendency to obliquity, and the mouth is large and broad, with well-foamed lips. The Jakun proper are divided by the Malays into Hill Tribes (Orang or Jakun Bukit) and Sea Jakun (Orang Laut).

The surest test in regard to these tribes is the hair-character; hence we may distinguish the three main racial groups as *ulotrichi* ('woolly-haired'), *cymotrichi* ('wavy-haired'), and *lisotrichi* ('smooth-haired').

There has undoubtedly been a considerable admixture between all the wild tribes, but, owing in particular to their being still pagans, it is improbable that they have been materially affected by intermingling with the Malays, since nothing could be rarer than that a Malay woman should demean herself by marrying a heathen husband. The case is rather the other way about, since a Malay marrying a woman of the wild tribes would see that his children were brought up as Muhammadans, while in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Semang element has caused them to be reckoned as part of the recognized Malay population.

3. Culture.—(a) *Malays*.—Apart from such tendencies as have already been mentioned, the Malay character may be regarded as a softened and more civilized form of the Mongol, since under ordinary circumstances he may be relied upon to show himself a peaceable, quiet, civil, and loyal subject, though he still retains much of his old proud sensitiveness, and in inland districts he is still reserved in his ways of life, and to some extent suspicious of strangers. In countries where he is less trammelled by civilization, the Malay is frequently of a bold and even savage character and makes an excellent soldier; there should, therefore, be no doubt that with training he would soon develop first-rate soldierly qualities. His alleged laziness is due in part to his natural reserve, which allows more pushing races to outstrip him, and in part to the simplicity of his life, and to the absence of any spur to industry in a land where the climate supplies out of its own superabundance the greater part of his few simple wants—a land which to him is a veritable 'island of fruits,' of 'bowery hollows crowned with summer sea.' It must be remembered, too, that before the advent of the British the employment by his rulers of the *krah* or *corvée* system, as well as the wide prevalence of debt-slavery, made it difficult for the average Malay to reap the reward of his labour.

Among the institutions of the Malay race which it shares more or less with other races in the same region are the use of sea-canoes (*prahu*,¹ once associated with piracy), the building of houses on piles (inland as well as on the border of tidal

rivers), the use of the blowpipe with poison-tipped darts (now practically confined to the aborigines), and the *kris*, the *sarong* (the national Malay plaid skirt-like garment, closely corresponding to the kilt of our own Highlanders, though worn somewhat longer on the western seaboard of the peninsula), the filing, gold-plating, and blackening of the teeth (now all but completely obsolete customs), the use of the *baler*, or council-hall (now confined to Rajas), and a strong belief in animism. In spite of being animists at heart, however, the Malays are not infrequently more or less bigoted Muhammadans, being in this respect at the very antipodes to the Battak of Sumatra, who have a literature of their own, and who are still to some extent inclined to be cannibals.

The Malay traditions and romances contain distinct references to human sacrifices, which would appear to have lasted until the advent of the British. The men show mechanical skill of a high order, and would probably respond readily to a more advanced training especially in engineering. Many are still adept in manual arts, notably in those belonging to the jungle and the sea.

The material culture of the Malay is of the insular Malayan (chiefly Sumatran) character. It has never been influenced by Hinduism to such an extent as, for instance, the culture of Java (as exemplified in the architecture of Borobudur and other famous temples of ancient date in that island). The Malays are skilled and artistic craftsmen in certain arts, though in others they are somewhat conspicuously backward. Their textile work reaches a high standard, and they display considerable ingenuity in their weaving processes and in combining their dyed threads to produce elaborate and often intricate patterns, among which a variety of check patterns predominate. In metal-work, especially in the working of silver, their taste is, under favourable circumstances, less florid than the Indian and less coarse than the Chinese. In ornamenting metal and damascening, in inlaying, and especially in niello-work, their work, both in design and in technique, is excellent of its kind. Distinction in such branches of metallurgy as the manufacture of blades for their krissees, and other weapons, is rare, though not non-existent; a high degree of skill in the adornment of the hilts of weapons and the sheaths in which they are kept is appreciably common. They pay special attention to the manufacture of waved kris-blades, and their damascene-work is a technical process of considerable elaboration, the more so because the proportions and even, in some cases, the ornamentation of the blade are determined by an elaborate set of rules governing the dimensions and intended properties of the various portions. These rules are not entirely technical, though compliance with them requires some degree of technical skill, but are in part magical, and designed to secure excellence in the blade and success in its employment. Similar rules are sometimes applied in a lesser degree to the *parang* (woodman's knife). Metal casting by the *cire perdue* process is known and employed not only for copper but also for white metal or *tutenague* (sometimes popularly called 'tooth and egg' metal). Coins (round cash) were formerly cast on the east coast in the form of 'cash-trees,' from which the cash were snipped off, and before the British entered the country the superfluous tin was run into ingots shaped like elephants, crocodiles, cocks, etc., which were used as currency.¹ Time was reckoned by water-clock (as in India and Ceylon and also, it may be mentioned, in ancient Britain). Thus for the mains at cock-fights in Kedah it was kept by means of a

¹ These *prahu*, being roomy boats paddled by large numbers of men, and of extremely shallow draught, could habitually elude pursuit by men-of-war's boats by slipping over the innumerable river-bars of the peninsula, and escaping into the network of salt-water creeks. It was not till the second half of the 19th cent. that the *prahu* was vanquished by the paddle-wheel.

¹ R. O. Temple, *The Obsolete Tin Currency and Money of the Federated Malay States*, Malacca, 1914 (reprinted from *IA*).

perforated half coco-nut shell set afloat in a water-bucket, and timed to sink in a definite period. Pottery is made both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases, Indian influence is traceable, the types being both graceful and artistic. In some cases hæmatite, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm-spathe bucket as a receptacle is, no doubt, responsible for the lack of a more extended development of fictile ware, in spite of the great abundance of clays suitable for porcelain. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malays, as shown in the ornamentation of household utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heart-breaking effect of the superficial Muhammadan veneer which has been imposed on the Malays from without. The further from such influences, the commoner such ornament becomes, and the better its quality. The Malays are especially ingenious in adapting means to ends and in conforming to the conditions of their surroundings; their houses are well adapted to the conditions of life of a jungle-dwelling race, whilst the seaworthy qualities of the Malay *prahu*, or sailing-boat, bear witness to the reputation of the Malay as a sailor.¹

(b) *Aborigines*.—The culture of the wild tribes presents generally many features of similarity. The inland tribes are still nomads to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them practise a primitive agriculture, sowing in a rude way small patches of rice or millet; their method of cultivating their half-wild orchard-trees, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sea Jakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in slaying and snaring their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their typical clothing consists of a girdle of leaves or barkcloth, or, on festal occasions, a belt of shining black strings, made of the rhizomorph of a toadstool. Their typical habitations are of a primitive character, consisting of mere lairs, or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. They do not circumcise or (as a rule) chew betel, nor do they tatu or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in fact, among the pagan tribes, the bow is, in the present writer's opinion, good *prima facie* evidence of Semang admixture; the northern Sakai, who also possess it, have most likely borrowed it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakai, the idea

of which has been copied, in all probability, from their Sakai neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages were settled by meetings of these chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishable generally by fines.

The Sakai, a mountain race, are still largely nomadic. Their habitations consist of tree huts and temporary shelters; their clothing is a loin-cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They tatu the face and practise scarification and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their distinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their implements, more especially the blowpipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type; the only functionary is the *pēnghulu* (Mal. 'head-man'),¹ who has every right over his tribe. Except when enforcing his position, however, he is only the equal of his fellow tribesmen. The office is hereditary, but, failing a direct heir, the *pēnghulu* may appoint his successor during his lifetime. In their laws the penalty of death is reserved for murder, the relatives of the victim being the executioners. Cases of this kind are rare. For theft, also rare, the punishment is exclusion from the tribe. For other crimes the delinquent makes compensation, or pays a fine. Individual property does not exist, its place being taken by family property. The family as a unit cultivates the land, and the produce is shared between the members. The limits of the family property are designated by the *pēnghulu*, and abandoned land may not be taken up without his consent.

A more highly developed social order exists among the Jakun, or aboriginal Malaysians, as represented, e.g., by the Southern Sakai, who show strong Malayan influences.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing resembles that of the Malays, but is scantier. They sometimes file their teeth to a point. Their typical weapon is a blowpipe of bamboo, or, as in Kuantan, uniquely made of two half cylinders of wood fitted together for the purpose—corresponding exactly to a form of blowpipe used in Peru. They have no bows. They use spears and cutlasses; in some cases they also carry sword and kris like the Malays. They live in huts built on piles and use 'dug-out' boats of hollowed tree-trunks, but on the river only, not on the sea. They still use face- and body-paint, but do not tatu or scarify the face. Their marriage customs include, like those of the Malays, 'bride-purchase,' the ceremony of eating together, and, in addition, the bride-chase, which takes place round a large bell-shaped mound, constructed for the occasion, or an ant-hill or tree, if the tribe is a land one, or in a dug-out canoe—the form which it took among the sea-gypsies (Orang Laut). Their social organization is of a distinctly higher type than that of either Semang or Sakai. The chief of their tribe, the *batin*, is the head of a group of villages, and has certain subordinate officers

¹ See H. Warington Smyth, 'Boats and Boat-building in the Malay Peninsula,' in *Journal of the Soc. of Arts*, 1902 (reprinted in *JA* xxxv. [1906] 97 ff.).

¹ *Pēnghulu*=Mal. 'head-man' (from obs. Mal. *hulu* or *ulu*, 'head'). On the other hand, *pelima* or *pēnglima*=Mal. 'hand-man' (from obs. Mal. *lima*, 'hand'), i.e. executive officer.

who represent or act for him upon occasion. Thus, among the Besisi of Langat, the *batin* is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in cases of illness or disaster, and the judge whose duty it is to punish wrong-doing. His substitute is the *jinang*. Their subordinate, known as the *penghulu balai*, has charge of the tribal feasts and councils, whilst the *jukrah* (probably=Mal. *jurukrah*, or 'corvée officer') is the summoner of the tribe; the *penglima* is the *batin's* executive officer. Among the Benua each *batin* has authority within his own jurisdiction, but difficult or unusual cases are referred to a council composed of all the *batins*. In this division of the Jakun, as indeed among all, crime against personal property is rare, and is expiated by payment of fines in the form of coarse Chinese plates or saucers. One half of the fine goes to the *batin* and one half to the injured person. The office of *batin* descends, as a rule, from father to son, except among the Johor Jakun, where the eldest son has to be accepted by the tribe, and, if his brothers as well as himself are rejected, a stranger to the family is elected. If suitable, the sons of minor officials would be appointed by the *batin* to succeed their father. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons and daughters or to wife and other relatives. Property held by a man before marriage among the Mantra was assigned on his death to his parents, brothers, and sisters.

4. Languages.—(a) *Malay*.—The Malay language belongs to the Malayo-Polynesian family, related forms of which occur sporadically over an amazingly vast insular area, extending from Formosa in the North to New Zealand in the South, and from Madagascar in the West to Easter Island in the Eastern Pacific.¹ Malay itself has, moreover, very considerable importance as a *lingua franca* over a great part of the same region. In recent years a connexion has been sought between the Malayo-Polynesian family of languages and a family of 'Austro-Asiatic' languages, including S.E. Asia, Munda (Central India), Khāsi (Assam), Mōn, or Talaing, and Khmer, or Cambodian (Indo-China), Nicobarese, and the aboriginal dialects of the Malay Peninsula; 'this connexion is now generally accepted.'² This fact would actually link up the Malayan language in prehistoric times with the corresponding element in the Sakai and Semang dialects of the peninsula. This theory is entirely the work of Schmidt; but C. O. Blagden's work³ in tabulating the various elements in these aboriginal dialects first made this identification possible.

The Malay tongue, by which the standard speech of the peninsula and E.C. Sumatra is meant, is of an agglutinative character, the roots being, as a rule, unchanged, and new words being formed by means of affixes, infixes, and reduplication. The roots are mostly dissyllabic, and the derived words frequently very numerous, while any harsh juxtaposition of consonants is avoided, by means of either assimilation or dissimilation, following certain recognized euphonic rules.

From a phonetic point of view, Malay shows a remarkably small, almost a minute, number of changes during the last four centuries. At an earlier period it had, however, become morphologically simplified, analysis showing the development of the modern affix system out of an earlier and more restricted substratum of similar particles common to Malay itself and to the islands of the archipelago.⁴

The oldest foreign loan-words in Malay are Sanskrit, and include words for religious, moral, and intellectual ideas, with some astronomical, mathematical, and botanical terms, a court vocabulary, and a large number of everyday words.⁵

The plural is theoretically formed by reduplication, though, as a rule, in the vernacular speech no difference is made between plural and singular. Reduplication is, however, also employed to express a metaphorical meaning. Thus we have *orang*, 'person' or 'man' (whence *orang-orang*, 'man of the woods' or 'wild man'), but *orang-orang*, 'pupil of the eye' (corresponding to what are called, in Elizabethan literature, 'children,' or 'babes of the eye'), *kuaching*, 'cat,' but *kuaching-kuaching*, 'biceps muscle' (from the play of the muscle; the Romans, by a curious antithetical metaphor, compared it to a little mouse—*musculus*). Similar metaphorical reduplications give us *kuda*, 'horse,' but *kuda-kuda*, 'wooden horse' or support (as in our own towel-horse); and *tupai*, 'squirrel,'

but *tupai-tupai*, 'belaying pin' (on a mast, which is compared to a squirrel running up a tree).

With regard to the difficult question of the penultimate accent, Winstedt¹ (with H. van der Wall and Gerth van Wijk) has recently (1913) come to the conclusion that the stress falls, even in standard Malay, upon the penultimate syllable, both in the case of simple words and in words that are mere derivatives. In this he is probably correct, although it is far from being in accordance with the usually received opinion.

The Malay parts of speech frequently fail to coincide with our own: a root-word or radical, *e.g.*, may often be used either as a substantive or as an adjective, with complete indifference, and the same remark holds true of substantive and verb. Words which logically would have priority take precedence of those which should not do so. Thus the actual subject or thing talked about, having prior importance logically, precedes any word which is merely qualificatory; also the normal sentence-order is subject, verb, object. There is no inflexion for gender, number, or case, and the syntax is as simple as that of 'pidgin English.' Thus it has been accurately remarked that the lines,

'Little boy, box of paints,
Licked his toy, joined the Saints,'

would be verbose to a Malay, who would express it as follows:

'Little boy, box paint[s],
Lick[ed] toy, join[ed] Saint[s].'²

Similarly an up-country European traveller who happened to inquire whether there would be time for him to reach a neighbouring village before nightfall might be puzzled to receive by way of reply the mysterious monosyllabic 'Can' or 'Dark' (as the case might be), the meaning in the first case being that he could safely reckon on doing so, and in the second that night would fall before he reached his destination.

Malay may, therefore, be thought of—as if such an expression may be allowed—as a kind of 'shorthand speech'—a fact which is the more remarkable because in the written literary language it often reaches the opposite extreme of exuberant verbosity.

The dialects of Malay are many and varied, but the three that are of most importance to the present subject are: (a) the dialect of Kelantan and Patani, (b) the dialect spoken in Nēgri Sembilan (i.e. especially in Nanning and Rembau), and (c) the Riau-Johor dialect (spoken in Selangor, Perak, Pahang, etc.). Of these the first is that which especially shows survivals from the Malayo-Polynesian tongue, to which reference was made above. This correspondence, moreover, is fairly close, as can be seen from the Maori *rua*=Malay *dua* ('two'); Maori *ika*=Malay *ikan* ('fish'); cf. even the Easter Island *māte*=Malay *mata* ('dead'); Malagasy *vulana*=Malay *bulan* ('moon'); Formosan *pyilan*=Malay *perak* ('silver').³ Even New Guinea dialects (usually supposed to be free from Malay) contain some words of evident Malay origin. In view of other evidence, it seems permissible to believe that this particular Malay dialect of the east coast of the peninsula forms a much-needed link between standard Malay and the nearest Malayo-Polynesian languages, and, further, that it was from this precise district on the continental seaboard of south-eastern Asia that this Malayan dialect spread throughout the Polynesian islands. The corresponding social links are (a) their very similar kin-systems and (b) the general use of tabu.

(b) *Aboriginal dialects*.—The languages of the wild tribes are split up into a number of dialects, each confined to a relatively small area. They are rapidly disappearing, especially in the southern districts of the peninsula, their place being taken by Malay as the wild tribes become more nearly assimilated with Malays in status and culture under modern conditions. Setting aside purely local and unimportant differences, the linguistic material, scanty as it is in most cases, has been classified into three main groups, which may be referred to three principal types or standards: (i.) typical Semang dialects, best represented by the speech of the aborigines in central Kedah and the adjoining State of Raman; (ii.) typical Sakai dialects, the best specimens coming from south-eastern Perak and the adjoining district of Pahang; and (iii.) in the southern part of the peninsula, the Jakun dialects, which may be classed together as Jakun or Malayan in spite of the fact that they contain a large number of Sakai words, because the great bulk of their words are Malayan and not Sakai, although they do not afford material so favourable for clear type-differentiation as is found among the Sakai and Semang. Both in phonology and in vocabulary the Sakai and Semang show considerable divergence, but between the strongly contrasted type-dialects are intermediate variations, the linguistic evidence thus supporting the ethnological data in pointing to contact and admixture.

Roughly speaking, the dialects fall into groups which correspond, though not accurately, with the anthropological varieties of the aboriginal races, at least in the case of Sakai and Semang.

Of the affinities of the aboriginal languages and the elements which have entered into their composition something has already been said. It is clear that all the dialects as now spoken contain a considerable number of purely Malay words, more or less modified in pronunciation by the borrowers. In addition to these loan-words, however, which are easily identifiable, there is a considerable element remaining which is not traceable to standard Malay. The latter element, of which we have already spoken, was not developed within the peninsula, and this and the Malayo-Polynesian factor in the aboriginal dialects which is akin to the insular Malay spoken in the Malay Archipelago together make up what is perhaps the largest component in the languages of the aborigines. A third and still

¹ For illustration of this astonishingly wide range see below, p. 353b.

² See above, p. 349, n. 2.

⁴ Winstedt, p. 12.

⁵ W. Maxwell, *Malay Grammar*, London, 1888, Intro.

more interesting element has been proved to show a very close affinity with the Môn-Khmer or Môn dialects of western Indo-China. The identifications, though certain and numerous and even striking, are rather disappointing, if considered as a vocabulary percentage. Sidney Ray himself once remarked to the present writer: 'What is the use of our assuming [as certain scholars had done] that the Sakai dialects are identifiable with Môn, when all that has been identified is about 20 per cent of the entire vocabulary? The question is, what is the remaining 80 per cent?'

To reply, we must study attentively both the Semang and Sakai syntax structure and a considerable percentage of the vocabulary, and especially, as regards Sakai, the phonology; the modern Jakun dialects are of no less importance. In each group there remains an unidentified element. Semang embodies a number of words which are confined to the Negritos and which are completely *sui generis*. It is clear that the Semang dialects did not originally belong to the Môn-Annam group. These words relate to matters of everyday life, and presumably they represent the old original dialects of the Negritos. Relationship with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Semang is recognizable in the Andaman dialects, and this fact is one of the many and great puzzles of the Semang problem. For the unidentified element in Sakai no suggestion as to origin has been made, though it is possible that many of the uncertain words may yet be traced not to a Malayan but to a Môn-Annam origin. In the case of the Jakun it is pointed out that some of the words of unknown origin occur in Semang, but not in Sakai, but they are hardly of sufficient number to support the view that Jakun dialects were originally allied to Semang; on the contrary, a large number of Jakun words are certainly allied to Sakai, and Wilkinson, treating as Jakun certain southern Sakai dialects, seeks to eliminate Blagden's linguistic Jakun, but leaves unexplained both Kēnāboi and the common element in which Mantri, Beduanda, and Jakun differ from every other known language.

5. Religion: greater gods.—(a) *Malay*.—The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and ritual afford abundant proof, which is supported by the historical evidence, that this religion has been superimposed upon some form of Hinduism, which itself, when introduced into the country, superseded an earlier and more primitive type of belief, of shamanistic character. Folklore, charm-books, and romances go to show that the greater gods of the Malay pantheon—so far as their names go—are borrowed Hindu divinities, while the lesser gods and spirits are native to the Malay religious system, incorporated in and modified by the higher religions, but not entirely forgotten.

Taking first the Hindu divinities, we find Viṣṇu, the preserver, Brahmā, the creator, Batāra Guru¹ (Śiva), Kala,² and Seri³ simultaneously invoked by the magician. Of the greater divinities Batāra Guru is, in the minds of the Malays, unquestionably the most important; in other words, the Malays were of the Śaivite sect of Brāhmanism. In the *Hikayat Sang Samba*, the Malay version of the *Bhāgavata*, Batāra Guru appears as the supreme god Śiva, with Brahmā and Viṣṇu as subordinate deities. He alone has the Water of Life which resuscitates slaughtered heroes. The Malay magician will, on occasion, boldly declare that he was the all-powerful spirit who held the place of Allāh before the advent of Muhammadanism, a spirit so powerful that he 'could restore the dead to life'; and that to him all prayers were addressed at that period. It may be noted that most of the theological terms in use among the Malays are of Sanskrit origin, and that the titles Sang-yang ('the deity') and Batāra are used mostly of the older Hindu divinities. The Malays, however, in adopting the Sanskrit title of Guru, seem to have transferred it to a hunting-god, whom they identify in certain localities with the 'Spectre,' or 'Demon Huntsman,' though pure Hinduism would certainly not have recognized hunting (one of the deadly sins of that religion) as a pursuit fit for one of their deities. Further, the Malays distinguish between a good and a bad side of Batāra Guru's character, which may point back to the combina-

¹ Guru=spiritual guide. Batāra is Skr. *bhātāra*, 'highly honourable'; in Jav. (Manjapahit) and Sej Mal. it='king.'

² Skr. *kāla*, 'black,' an epithet of Śiva.

³ Skr. Śrī, goddess of good fortune and wife of Viṣṇu

tion into one of what were originally two distinct personalities, Batāra Guru and Kala. Thus the Malay Kala holds as his only definite sphere of influence the foreshore, a strip intermediate between the land-sphere of Batāra Guru and the dominion of a third deity called 'Grand-Sire Long-Claws' (Toh Panjang Kuku). This attempt to divide the spheres of land and sea must again be attributed solely to the Malays, as Hindu mythology knows nothing of the sea. It is clear, therefore, that in the greater deities of the Malayan pantheon we may, after all, recognize Malayan deities simply re-named after the gods of the Hindus. The Batāra Guru of the sea is identified by some magicians with Si Raya, and occasionally with the god of mid-currents (Mambang Tali Harus). Sickness is sometimes ascribed to him, but it is not usually so fatal as illness induced by the malice of the Demon Huntsman, and fishermen and seafarers, on the other hand, obtain from him many benefits. The only other deities of importance are the White Divinity, who dwells in the sun, the Black Divinity, who dwells in the moon, and the Yellow Divinity, who dwells in the sunset; the last is considered most dangerous to children, and Malayan parents always endeavour to keep their children within doors at sunset and during the twilight in order to avoid his malignant influence.

(b) *Pagan races*.—In view of the still inadequate evidence of the beliefs of the pagan tribes in relation to a supreme deity, it is necessary to exercise some caution in making any statement as to their ideas upon the subject. On the other hand, it is at least safe to remark that any one who, as the result of mere worrying by questions, commits himself to the statement that any of these pagan races have no such beliefs whatever proves merely that his own methods of investigation are at fault in these matters.

It appears, moreover, clear that the Semang and Jakun, and possibly also the Sakai, are at present in the stage of development, common to most primitive peoples, in which the supreme deity belongs to the realm of mythology rather than of religion proper. Since he stands more or less aloof from the affairs of this world and the next, and possesses no cult, his claims to recognition are set aside in favour of spirits more closely in touch with mundane affairs, whose powers for good and evil are constantly capable of exercise and who at every turn must be propitiated. Among the Semang there is clear evidence for a belief in the existence of such a being, combined with a crude dualism based upon natural phenomena.

According to one account, Tā' Ponn ('Grandfather Ponn') is a powerful but benevolent being described as the maker of the world. He was, in fact, described to the present writer by the Semang of Kedah as being 'like a Malay Raja; there was nobody above him.' He is the moon's husband and lives with Ag-Ag, the crow who is the sun's husband, in the eastern heavens. Tā' Ponn has four children, two male and two female. His mother Yāk is the old Earth-mother, and lives underground in the middle of the earth. He has a great enemy, Kakuh, who lives in the west. He is dangerous and very black. That is why the east is bright and the west dark. The heavens are in three tiers, the highest of which is called Kakuh, and which are defended against unauthorized intrusion by a giant coco-nut monkey, who drives away any one found trying to enter the heavens.

The naturalistic dualism of this account is obvious; from his place of abode, and from his having the moon as his consort, we may perhaps conclude that Tā' Ponn is a spirit of the rising sun. In addition it has been maintained that the Semang recognize two other superior deities, Kari, a thunder-god, the supreme creator, ruler, and judge, and Ple, a related but subordinate divinity, who, under Kari, created earth and man. The evidence, however, is too slender for dogmatic statement, and the point still awaits the collection of further material.

The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any corresponding belief exists among them, as has been maintained, it is overshadowed by the cults of demons, ghosts, and spirits. The Jakun afford more certain evidence of a belief in a supreme deity, although their conceptions at the best are vague and shadowy. The Mantri say that Tuhan Di-Bawah, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Benua believe in one god, Pirman,¹ who dwells above the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johor know and acknowledge a supreme being whom they call by the Malayo-Arabic name of Tuhan Allāh; the grotesquely slight influence, however, that is really exercised by Muhammadanism on the wild races of the Malayan jungles is best evidenced by the statement of those tribes who believe that Muhammad, the prophet of God, is the wife of the supreme deity.

6. Lesser gods, spirits, and ghosts.—(a) *Malay*.—Subordinate to the great gods are lesser gods or spirits whose place in Malay mythology is due to Muhammadan influences; their inferiority may in part be due to the law that the gods of the autochthones are usually considered by an invader more powerful than his own deities. These lesser gods and spirits are the *jin*, or genii. The Malays, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Genii (Sang Gala² Raja) appears to rise on occasion to the level of the great divinities, when he is regarded as a manifestation of Batāra Guru in his destructive aspect as Siva, or Kala, though later he came to be considered a separate personality. This would also explain the difficult problems of how the Black and White Genii come to be regarded as brothers, the latter being identified with Mahārāja Deva, 'great king of the gods.' The genii are also subdivided into good and faithful (*jin islām*) and bad (*jin kāfir*), this nomenclature being obviously a Muslim accretion. In addition to these subdivisions they are also regarded as attached to special objects—e.g., the powerful *jin* of the royal musical instruments. The genii are able to do infinite harm to mortals, and choose as their dwelling-places hollows in the hills, solitary places in the forests, dead epiphytes on trees, etc. They are sometimes said to derive from the dissolution of various parts of the anatomy of the world-snake Sakatamuna, the first great failure at man's creation.

The Malays have also adopted into their popular religion the Muhammadan belief in angels (Azrael, Michael, and Gabriel), prophets (Solomon, David, and Joseph), and chiefs, four in number penned in the four corners of the earth.

Ghosts and spirits are known by the generic name of *hantu*. Of these there are many varieties. *Hantu kubor* are grave-demons who, with the spirits of murdered men, prey upon the living whenever they see an opportunity; *hantu ribut* is the storm-fiend; *hantu ayer* and *hantu laut* are water- and sea-spirits; *hantu rimba*, deep forest demons; *hantu bērok*, the baboon-demon; *hantu bēlian*, the tiger-demon; and *hantu songkei*, the 'loosening' demon, who interferes with rope-snares and traps for wild animals. In addition there are giants and 'tall' demons (*bota*, *gasi-gasi*, and *hantu tinggi*) as well as 'good people' (*bidadari* or *pēri*), who are of foreign origin; echo³ spirits (*orang bunyian*), spirits of whom little is known except that they are good

fairies and very easily cheated; blood-sucking demons of various kinds, mostly birth-spirits (these last being certainly among the ghastliest conceptions of humanity); and others such as the *hantu kopek*, which is the equivalent of our own nightmare.

(b) *Pagan races*.—Except in one or two cases, little has been recorded concerning the beliefs of the pagan tribes relating to the spirits or demons. Those which most afflict the Sakai of Ulu-Bertam are the 'tiger-spirit,' the 'jungle-spirit,' and the 'river- or water-spirit.' Against these charms and simples can prevail. Against the tree-spirit, however, who slays his victims before any one can help, there is no protection. The Sakai of Selangor had a ceremony at which they sat and blew bamboo pipes and sang to the demons.

The spirits in which the Bēsisi believe include the wind-demon (*jin angin*), who lives on a white rock near Tanjong Tuan (Cape Rachado); the demonic legion (*jin sa-ribu*), who dwell in the earth and, when possible, feed upon human beings; and the garrotting demon (*jin sa-rapat*), who lives in the uplands. Certain trees are the embodiment of spirits, notably the gutta, eagle wood, and camphor trees, and this idea is extended to inert objects—e.g., canoes, treasure-jars, and stone implements. Chipping a jar kills its spirit.

The Demon Huntsman (*hantu si buru*) is ten ft. high, and his face is very hairy. From nightfall onwards during the full of the moon he hunts the wild boar and the *sambhar*-deer. Although he is highly dangerous to mankind, many have made friends with him, and, when they have invoked him, he has cured them of their illness. Other spirits are the river-spirit, the demon of fatal birth-sickness, and the tomb-demon, which, in one of its manifestations, plunders graves in the form of wild beasts, such as deer and tigers.

7. The soul.—(a) *Malay*.—In Malay beliefs the *sēmanqat* ('human soul') is a thin, unsubstantial mannikin, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but is supposed to correspond in shape, proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is quasi-human and may possess, independently of its corporeal owner, personal consciousness and volition. It has been alleged that the *sēmanqat* cannot be the 'soul' because it is believed to quit the body and wander about during sleep, and that it must therefore be a spirit of vitality. But this very same reasoning would show that it cannot be a spirit of vitality. What is actually meant here by 'soul,' however, is the native (and our own mediæval) idea of the soul, which is something very different from the soul of our modern idealistic Christianity. The latter might indeed almost be described, in comparison with its mediæval prototype, as a 'super-soul,' and it is only the more primitive idea of the soul in which we are here interested.

In charms it is addressed as having a house, usually, though not necessarily, identified with its embodiment (the body of its owner). As the *sēmanqat* is separable from the body, it follows that, if called in the right way, it may be made to follow—a powerful weapon in the hands of an enemy or lover who possesses the requisite magical powers. When abducted, it may be imprisoned in a lump of earth, a cloth, or a wax mannikin. The lump of earth should have been in contact with the victim's body—e.g., with the sole of the naked foot. An escaping or swooning *sēmanqat* may be recalled to the owner's body; hence the form of certain kinds of medical treatment. In the older charms

¹ But this name (= *Fīrman*, 'Word of God') is clearly borrowed, like Allāh, from Muslim sources.

² Possibly Skr. *śaṅkara*, 'beneficent,' an epithet of Śiva.

³ Or 'hidden.'

the *sēmangat* is distinctly referred to as being sevenfold, and, as a similar multiple division is found elsewhere among savages (*PC*⁴ i. 391f.),¹ this may be taken as original, although seven is a somewhat favourite number in Malay magic.

The belief in the existence of *sēmangats* does not confine them to human beings. Animal, vegetable, and mineral *sēmangats* are clearly recognized. While in the case of animals the *sēmangat* is a counterpart, on a reduced scale, of its embodiment, in the vegetable and mineral kingdoms the tree *sēmangat* or the ore *sēmangat* is usually an animal, whereas the rice *sēmangat* is treated as resembling a human infant. The *sēmangat* of the eaglewood tree, e.g., takes the form of a bird, the tin-ore *sēmangat* that of a buffalo, the gold-ore *sēmangat* that of a deer, and so forth. A box or a treasure-jar may also have a *sēmangat* until chipped or broken, when the *sēmangat* escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the *sēmangat* of a particular kind of boat is called by a special name, *mayor*, as opposed to the usual soul-name, *sēmangat*.² But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This creed is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral kingdoms.

Although Malay animism is consistent and complete in extending the belief in the *sēmangat* to all nature, animate and inanimate, side by side with the purely animistic belief there is abundant evidence of a special Circe-like theory attributing animals, birds, fishes, reptiles, and trees to an (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomorphic ideas is to be found not only in the folklore but in many magical ceremonies and charms of Malaya (on the *sēmangat* see, further, INDONESIANS).

(b) *Pagan races*.—Of the conception of the *sēmangat* held by the pagan tribes very little is known, and, lacking definite statement, their beliefs must be inferred from their methods of burial and treatment of the dead and their views of the life after death.

According to the eastern Semang (Pangan) of Kelantan, each man has a *sēmangat* shaped exactly like himself, but 'red like blood' and 'no bigger than a grain of maize.' It was passed on by the mother to her child. After death the *sēmangats* of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and such of the Semang as are scared by him fall into a vast boiling lake beneath, in which they swim for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutch, and in this contemptuous fashion pulls them out. The old and wise men for this reason were buried in trees, so that they could fly over the demon's head. The western Semang believed that only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea to a land of screw-pines and thatch-palms, wherein was the hole into which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two months of day and one month of night. Among the Sakai it has been

¹ See also W. W. Skeat, *Malay Magic*, London, 1900, pp. 50, 411, etc. It is surprising to find among Malays this sevenfold division of Plato himself.

² N. Annandale, 'The Theory of Souls among the Malays of the Malay Peninsula,' *JRAS*, Straits Branch, v. 3 [1909].

said that *sēmangats* proceed to a Hades (*Nērāka*³) where they are washed clean by one 'Granny Long-Breasts,' and made to walk across a boiling cauldron on the sharp edge of a chopper. Bad *sēmangats* fall in, good ones escape to an Island of Fruit, where they wait until a friend comes to show them the way to the 'Husks of the Clouds.'

The Mantri possess peculiarly positive faith in the continued existence of the *sēmangat* after death. It leaves the body and is carried by Bayang Lasa either to Ngangnari or to Fruit Island (*Pularu Buah*), far away in the region of the setting sun, where all *sēmangats* dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (*Tanah Merah*), a desert place and barren, repairing thence to Fruit Island to get their nourishment. The Benua, on the other hand, believe that after death the *sēmangat* dissolves into nothingness again, having been fashioned from air by Pirman. Notwithstanding this, they hold that the *sēmangats* of medicine-men, while their animate bodies remain behind, are conveyed or carried to heaven in music.

8. Animism.—Although it would in any case be justifiable to regard the attitude of the Malays towards the *kērāmat*, or holy place, as a survival from an earlier stage of religious belief on the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the view that not only Muhammadanism, but also the popular ideas traceable to a modified Hinduism, are superimposed upon a form of religion in which animism was the predominant factor. A belief in spirits pervades the whole of the everyday life of the bulk of the people. The position and importance of the medicine-man or magician (*pawang* and *bomor*), the language of the innumerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—even in some cases the most trivial—would in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by the relations of the Malays with animals, with trees, and with the crops, and especially by their remarkable beliefs with regard to mining.

(a) *Animals*.—To nearly all animals, but especially to the larger, the Malays attribute anthropomorphic traits and, in some cases, superhuman powers. The elephant and tiger, e.g., are believed to possess cities or districts in which they assume human form and live in houses. According to a legend which comes from Labu in Selangor, a man tracked an elephant to her home and married her in human form. She resumed her animal form when, on returning to his country against her express directions, he gave her food which included certain young tree-shoots. The tiger, which is an object of especial fear, is believed to be a demon in the form of a beast; in the legendary 'Tiger Village' the roofs of the houses are thatched with human hair, men's bones are the rafters, and men's skins the hut-walls. The original tiger was a boy found in the forest who changed into a tiger when beaten with many stripes by his schoolmaster. The latter placed a ban upon him to compel him to 'ask for' his prey. The tiger therefore uses divination by leaves (of certain forest trees) to ascertain whether his petition for a victim has been granted. It may be added that he is also believed to doctor his wounds with leaf-poultices. The belief in wer-tigers is one of the most deeply ingrained of Malay superstitions, but the power to become such a being is believed to belong especially

³ Skr. *naraka*, 'hell.'

to one tribe of Sumatrans, the Korinchi Malays, of whom there are a number living in the peninsula. In one case a dead wer-tiger was identified by his possessing a gold tooth derived from his human original (see LYCANTHROPY). Both ghost-elephants and ghost-tigers are strongly believed in. They are distinguished by having one shrunken foot, are harmless, and are the tutelary spirits of certain regions of sacred localities. The most famous ghost-tigers of the peninsula dwell on Mount Ophir (4000 ft.), near Malacca; in Selangor they were the guardians of a shrine on the summit of the Jugra Hill. The latter were formerly reputed to be the pets of the princess of Malacca; thus the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both claws and whiskers of the tiger are greatly valued as charms; the latter are sometimes twisted up with a man's moustache, to strike terror into his enemies, and the former are imitated in the tiger's claw knives worn on their fingers by the men who pretend to be wer-tigers.

Equally significant are the stories and beliefs connected with the mouse-deer or chevrotain. This animal occupies the place of Brer Rabbit in Malay folklore;¹ it figures in numberless proverbial sayings and romances, and is honoured by the title of Mentri Belukar, 'the Vizier of the (secondary) Forest-growth.' In the fire-getting ceremony it is said to ask for fire wherewith to 'sing its mother-in-law's feathers' (a bird).

Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is unlucky to see them in the jungle, unless the person meeting them barks after the manner of a wild dog before they have time to do so. Cats, in addition to possessing supernatural powers (e.g., in the rain-making ceremony), are lucky because they wish for the prosperity of their owners. On the other hand, cat-killers, when in purgatory, will be required to cut and carry coco-nut logs to the number of hairs on the cat's body, wherefore cats are not 'killed,' but only set adrift on rafts to perish of hunger.²

The flesh of swine is now regarded as unclean by the modern (Muhammadan) Malay, but there are indications that this was not always the case; thus a wild pig's paunch is required in a Malay recipe for turning brass into gold; the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The earth itself is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping no skill can avail unless it is itself supported by magic, by special charms supplied by the medicine-man, and by formulæ to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as a protection. Like the Siamese elephant-wizard, the Malay deer-wizard himself must first

enter the toils before a hunt begins, in order to influence the deer magically to enter the deer-snares. If this were omitted, the ropes would fail to hold the deer, nor would the deer enter. The marks on the legs of the *sambhar* deer (*rusa*) are due to ulcers on the legs of its human original.

Fish and other inhabitants of the water, like land animals, are regarded as having human or super-human qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is, according to one account, a boy who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally a cat, another a monkey, another a human being drowned in the river, and so forth. The Norse myth of the rivers sprung from the teats of the cow Auðhumla is recalled by a Perak story of a large specimen of the mudfish called *aruan*. Many magical or semi-magical beliefs cling round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat charms and take precautions to secure capture by symbolic actions such as striking the water with the canoe-paddle in imitation of the crocodile's tail; or, when eating curry, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will take the bait; or (by avoidance) by not taking the bones of curries—meats for fear that the wooden cross-piece buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes notification by three loud cries to the land-spirits that offerings, consisting of rice, betel, parts of a goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial tray, await their acceptance, and the offering of two similar trays, one in shallow water and one, containing the goat's head, at the seaward end of the fishing stakes. Miscellaneous offerings from a basket are scattered while the boat is rowed out to the stakes, and, when they are reached, saffron-coloured and parched rice is scattered on the water, while the 'neutralizing rice-paste' ceremony is performed on the stakes and the boats. A number of tabus, such as seven days' refraining from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boats, or of climbing the fishing-stakes with boots on, are strictly enforced. The use of a tabu language by the fishermen is also *de rigueur*.

Among the wild tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious dead. The elephant, the largest and most important of the animals, is the one into which the *semangats* of Semang chiefs are supposed to migrate. In consequence, it has euphemistic and propitiatory names. The same applies to the tiger. Monkeys, snakes, and birds play an important part in Semang mythology, while among insects the stick-insect is the most important. The list of animals to which the *semangats* of chiefs are supposed by the Bësi to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mantri the tigers are the slaves of the wizard, or *payang*, and are supposed to be immortal, while the Jakun believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that in such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of unnatural history associated with animals is, indeed, quite remarkable for a race whose jungle knowledge is so complete as it is among real up-country Malays. The case of the large caterpillar which is believed to metamorphose into a squirrel is typical.

(b) *Birds*.—Ideas of various kinds, mostly animistic or anthropomorphic in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and hoots, it is said that

¹ W. W. Skeat, *Fables and Folktales from an Eastern Forest*, Cambridge, 1901, introd. p. xiii.
² Clifford, p. 47.

there will soon be a 'tearing of cloth' for a shroud. If the *bāberék*, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant brings out a wooden platter, beats it with a knife, and calls out, 'Great-grandfather, bring us their hearts,' in the hope of deluding the spirits into the belief that he forms one of the train of the Spectre Huntsman (*hantu pēmburu*) which these birds accompany, and must therefore not be attacked by them.

The argus pheasant (*Iuang*) is said in Perak to have been metamorphosed from a woman; the female, moreover, is believed to reproduce its kind by swallowing the male bird alive. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (*rhinoplas*) to have been a man who slew his own mother-in-law. The *toh katampi* (a variety of horned owl) is believed to enter the fowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-bin, ensures a good harvest to its owner; a ground-dove, kept in a house, is a prophylactic against fire. If any one is fortunate enough to secure the nest of a kind of heron, or *ruwak-ruwak*, it confers upon him the power of invisibility. But the list of birds to which it has been recorded that the Malays attach peculiar ideas and significance may be said to be limited only by the varieties indigenous to the peninsula.

In fowling, as in hunting, sympathetic magic plays a prominent part, while every operation has its appropriate charm for repetition. In catching wild pigeons, constant reference is made to their *sēmangats*, and the aid of the *pawang* is required to perform the 'neutralizing rice-paste' ceremony in the space in front of the conical snarer's hut, enclosed for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-tube or pigeon-call. During the operation great care is taken that no part of the snarer's paraphernalia is called by its proper name (which might be understood by the pigeon); everything is called by some euphemism—e.g., 'the Magic Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

(c) *Vegetation*.—The Malayan beliefs in relation to trees and other forms of vegetation follow to a great degree, if not entirely, their concepts in relation to animals. It is not clear that they hold that all trees have a *sēmangat*, but it is certain that some trees, such as the durian, the coco-nut-palm, the trees producing eagle-wood, camphor, and gutta-percha, and others are supposed to possess *sēmangats*. This belief extends even to dead and seasoned wood, as is shown by the invocation addressed to the timbers used in the ceremony of launching a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian groves into bearing by threats addressed to them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said to the coco-nut-palm: 'Thus I bend your neck and roll up your hair; and here is my ivory toddy-knife to help the washing of your face.'¹ The malacca cane is regarded from the same animistic point of view, and it is believed that a cane with a long joint will protect the owner from harm by snakes and animals, as well as bring him good luck in everything. In Selangor the stick-insect is supposed to be the embodiment of the malacca cane-spirit. In felling a *tualang* tree

¹ Skeat, *Malay Magic*, p. 217.

(apparently not a specific tree, but a generic term for all trees containing a bees' nest)—a matter in which great reluctance is shown—it is necessary to obtain the services of a *pawang* to drive away demons by charms and incantations. In the course of the incantation the heads of two white fowls are cut off and the blood is sprinkled upon the tree-trunks. The lime is another tree of which the spirit is the object of a special cult; it is revered and looked upon as their chief patron by the theatrical players of Penang. In searching for the diseased and perfumed wood known as *gharu*, or eagle-wood, the services of a *pawang* are required to burn incense and repeat the appropriate charms. According to one account, the *pawang* uses a shelter near the selected tree (which is indicated by a low whispering or singing in the tree), and then repeats a charm which induces the *gharu*-spirit to appear to him, generally in a dream, and to inform him of the kind of sacrifice required. When the tree has been felled, any one passing between the trunk and the stump will die immediately. The *pawang* uses and carries with him a piece of eagle-wood, the *gharu mērupa* (or shaped eagle-wood), which possesses a natural resemblance to some animal or bird. This is believed to contain the *sēmangat* of the eagle-wood and to assist in the search for that product. Similar beliefs are entertained, and similar ritual is followed, in the collection of camphor and gutta-percha. It is interesting to note that in the collection of camphor a special language must be used, *pantang kapur*, which, so far as known, is Malay in part only. A portion of any food eaten during the search for camphor must be thrown into the jungle for the *bisan*, or camphor-spirit.

Many rules followed in planting the crops are based upon sympathetic magic and animism. In the first place, the propitious season for each operation must be indicated by the *pawang*. Sugar-cane must be planted at noon; this makes it sweeter by drying up the juice and leaving the saccharine matter. Maize should be planted with a full stomach, a thick stick, and thick dibble; this will swell the maize ear. Plantains should be planted after the evening meal, as they fill out better; sweet potatoes, to ensure their having plenty of 'eyes' when they begin to sprout, should be set when the night is starry.

Of all agricultural pursuits, however, the cultivation of rice exhibits most completely the animistic ideas which underlie the relation of the Malays to nature. At every stage of the procedure precautions are taken to ensure the well-being and prosperity of the rice-soul, upon which the success of the cultivation depends.

The time of the sowing is determined by the *pawang*; prayers are read over a portion of the seed at the mosque (replacing an earlier ceremony at the holy place, or *kéramat*); in sowing, the mother-seed is placed in a specially-prepared bed in one corner of the nursery-plot before the rest of the seed is scattered. When the rice is ready, it is transplanted with proper propitiatory ceremonies, and occasionally, say once in three or four years, these were accompanied by a ceremony—a sort of mock combat (*singket*)—to drive off evil spirits. When the rice is ready for reaping, in order to begin the harvest, the reapers must first obtain the *pawang*'s permission. The first operation was to take the *sēmangat* out of all the plots, and before cutting the rice it was usual to sprinkle it with the neutralizing rice-paste. From the spot where the rice is finest and where there are seven joints to the stalk, seven stems are clipped ceremonially to be the *sēmangat* of the rice-crop. Another handful is tied by the *pawang* in the centre with a strip of a special variety of sugar-cane, to be the mother of the rice-crop of the year following. This mother-sheaf should be reaped last, preferably by the wife of the owner. The *sēmangat* was made into the shape of an infant dressed in swaddling clothes, placed in a basket with a Malay umbrella to shade it from the sun, and laid on a new sleeping-mat, with pillows at its head, in the house of the owner. For three days the people in the house must observe certain tabus; e.g., rice, salt, oil, money, etc., must not leave the house, perfect quiet must be observed, hair must not be cut, and so forth. These tabus were practically identical with those imposed in the case of the birth of children. For three days after the taking of the *sēmangat* the

mother-sheaf was treated as a young mother; *i.e.*, young shoots of trees were pounded and scattered over it every evening, and on the evening of the third day coco-nut pulp and goat-flowers mixed with sugar were eaten and a little ejected from the mouth on to the sheaf—an analogue of the salad administered to a mother. A woman, when entering the clearing, must kiss the stalks, saying, 'Come, come, soul of my child, as if embracing one of her own infants. Ultimately the rice obtained from the *semangat* (representing the child) and from the sheaf (representing the mother) are mixed and placed in the receptacle in which rice is stored, together with a wreath of the straw of the first ceremonial pounding of the *padi*, the ears first pounded being those cut immediately after the taking of the *semangat*. Some is mixed with next year's seed, and some is used to make the *tépong tawar*.²

From all that has been said it will be clear that the gist of the Malayan harvest ceremony consists in the attempt to simulate, on behalf of the vegetative rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may stimulate the productive powers of the rice-plant for the following harvest.

(d) *Mining*.—In the western States of the peninsula tin-mining was, and still is, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the opening of a mine are purely Malayan. Formerly a lucrative and highly important post was that of mining wizard; some of these magicians were believed to possess the power of bringing ore to a place where it did not exist, and of turning into grains of sand, or of sterilizing, such ore as existed. The ore itself was regarded as endued not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble a buffalo, and in this shape could travel to and fro underground. The gold-spirit in one case (at Raub in Pahang) was believed to take the form of a golden roe-deer—an idea obviously based on the imaginary shape of some large nugget. Beyond tin, gold, and possibly a little silver and galena, no metals are worked in the peninsula.

The natives, however, have a great reverence for iron. The Lump of Iron in the royal regalia, when placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the newborn child and the rice-soul; betel-nut scissors (also of iron) or a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any chance demons. Bezoar-stones and stone implements alike are said to be endowed with magical properties and powers; a unique east-coast belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being hurled down from the sky in the form of thunderbolts.

The objects of the charms employed by the mining wizards seem to be to clear the jungle of evil spirits, to banish evil spirits from the ground before starting excavations, to propitiate the local spirits and induce the tin-ore to show itself when the tin-bearing stratum is reached, and to persuade the spirits to partake of a banquet spread for them in a receptacle intended to represent a royal hall of audience. The spiritual 'audience chamber' is usually two or three feet square and furnished with offerings similar to those normally placed on the sacrificial tray, with certain articles, such as sugar-cane, plantains, yams, etc., supposed to be specially characteristic of the food eaten by miners. The chief tabu is the killing of any sort of living creature within the mine, except in case of sacrifice, when a white buffalo may be slain upon the brink of the mine, the head being buried

¹ Lit. 'Cluck, cluck,' the call commonly addressed to domestic fowls.

² 'Neutralizing rice-paste' (see above)

and small portions representative of each part being deposited in the 'audience chamber.' Other tabus are the wearing of a sarong, burying the skin of any beast in the mine, wearing shoes, and even carrying an umbrella; the last is particularly offensive to the spirits, since it is the insignia of Malay royalty. A special language has to be used in so far as certain words are concerned. No animal or thing not itself allowed in the mine (such as an elephant, tiger, or cat), nor even lime-fruit, may be mentioned by any but this substituted title. Nor may any one assume the attitude or dress (a black coat) worn by the wizard in building the altar for the preliminary sacrifice, in performing the magical ceremonies, or in uttering the invocations (such as the attitude of standing with both hands on the hips or behind the back), nor may even the wizard himself assume them on any ordinary occasion.

(e) *Water*.—The Malays have been a seafaring race from time immemorial, and the rivers were also of great importance to them before the making of roads. It was by the rivers that they first penetrated the country; the old Malay settlements are all on river-banks, and the streams are still the chief source of supply for irrigating the rice-fields. To both river and sea many superstitions and legends are attached. Their animistic notions include belief in water-spirits, against whom precautions are taken for the protection of their boats. It was formerly the custom to fasten a bunch of sugar-palm twigs to the top of the mast to prevent the water-spirit from settling on the mast-head. The sea-spirits are invoked to point out shoals, etc., and sometimes in rapids or other difficult places offerings are made to the spirits of the rivers. The tidal wave (bore or eagre) on a river was formerly held to be caused by the passing of a fluvial monster, which ascends the river; one of these (on the bore ceasing) was described to the present writer as having been killed by being knocked on the head with a stick. Eredia (A.D. 1613) says that the Malays attribute such bores to souls of the dead who are passing the ocean in *cañilas* from one region to another, *i.e.* from the Golden Chersonese to the river Ganges. Ordinary river-floods (which were distinguished as male and female) were thought to be caused by similar agency.

9. *Cosmology and natural phenomena*.—(a) *Malay*.—In Malay folklore the theory of creation is that light emanating from the supreme being became the ocean, from which ascended foam and vapour. The earth and sea were then formed, each of seven tiers, the earth resting on the surface of the water from east to west, the mountains of the Caucasus being regarded as a chain put round the earth to keep it stable on the face of the waters. Beyond them is spread a vast plain, the sand and earth of which are of gold and musk, the stones rubies and emeralds, the vegetation of odoriferous flowers. Besides the Caucasus, which are known to the Malays as Bukit Kof ('Hills of Kāf'), and are of immense importance in popular lore, there is a great central mountain called Maha Meru, which is sometimes identified by Malays with a hill in Sumatra. Another version of the Creation, in part obviously due to Muslim influence, describes how God, the eldest magician, pre-existing by Himself, created the pillar of the Ka'ba¹ of which the four branches form the four corners of the earth, and the world-snake, Sakatimuna, which was killed by Gabriel and broke asunder, the head and fore part shooting up to heaven, the tail part penetrating downwards beneath the earth. The description of this serpent (whose name suggests an Indian origin)

¹ Lit. 'cube' (the cube-shaped sanctuary of the Black Stone at Mecca). For the Ka'ba see MECCA.

is remarkably anthropomorphic; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolves on its axis four times in the year, and that the sun was a body of fire moving round the earth and producing the alternations of day and night. Some at least imagined the firmament to consist of a perforated stone or rock, the stars being caused by the light which streams through these apertures. Further, the earth is declared to be carried by a colossal buffalo on the tip of its horns—an obvious Malay parallel to the world-elephant in the *Rāmāyana* and the boar-incarnation of Viṣṇu. When one horn gets tired, the buffalo tosses up the earth and catches it on the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the nether ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called Nun (Arab. 'fish'). The universe is girt round by a huge serpent which feeds upon its own tail. Peculiarly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the movements of a colossal crab that twice a day leaves and re-enters its cave at the foot of the world-tree Pauh Janggi (the sea-coco-nut-palm), which grows on a sunken rock or quicksand in the 'Navel' or Central Whirlpool of the Ocean (*pusat tasek*). The sun's name in Malay is Mata-hari, which means 'eye of day,' but on the east coast it is held to be a horse which is conducted in procession through the heavens by angels during the day, and led back again at night-time to the point whence it started.

Eclipses of the sun and moon are considered to be due to the devouring of these bodies by a gigantic dragon (Rāhu), or, according to some, a god. Malays, like the Chinese and other more primitive races, endeavour to save the sun and moon by making a vigorous noise to drive away the destroyer. The spots on the moon represent an inverted banyan tree, under which sits an old hunchback, plaiting strands of tree-bark, or, as some say, spinning cotton. As soon as his task is finished, he will angle for everything on the earth's surface. The line has not yet been completed because a rat gnaws through it despite the vigilance of the old man's cat, which is always watching. It should be added that the Malay phrase, *bulan bunting pēlan-dok* ('the moon is great with the mouse-deer'), is doubtless explainable by the fact that in Sanskrit mythology the spots on the moon are thought to be a hare or antelope, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often used when she is three-quarters full.

Landslips in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Rocks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the end is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as 'no one can ever arrive at the place' where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen drinking (*ular minum*). On the east coast it is sometimes said to be the head and entrails of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula in which a water-jar (*tēmpayan*) had been drained dry by a rainbow.

Sunset is a time of danger, since then all evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (*mambang*

kuning, 'the yellow deity') is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house at sunset, *kunyet tērus*, an evil-smelling root much disliked by evil demons. Pulau Tioman, an island south-east of Pahang, is believed to be actually the body of a dragon, or *nāga*. The Malay who told this to the present writer said that a long while ago an English Government vessel was passing this island, when her crew, catching sight of the then existing three points of the dragon's crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are now said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilt, an earthquake follows, because the island is in reality the monstrous body of an enormous dragon.

(b) *Pagan races*.—The Semang endow both sun and moon with human form, both being female. Like the Japanese, who have been credited by some authors with Malayan affinities, they associate the sun with a crow (Ag-Ag), whom they assert to be the husband of that luminary, whereas the husband of the moon is Tā Ponn (see above, p. 354^b). When the sun sets, it falls into a cavern, which some Semang identify with a species of Hades. Eclipses are caused by a huge dragon, or serpent, which tries to swallow the luminary; in the case of the moon, the Semang assert that the serpent is the moon's mother-in-law, who has assumed this form and is trying to embrace it—an act which is clearly regarded by the Semang with loathing and abhorrence. The rainbow is a huge python, or serpent, and the spots where it touches the earth are feverish and bad to live near. During a storm of thunder and lightning the Semang draw a few drops of blood in a bamboo internode and throw it skywards. As the ghosts of wicked tribesmen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part groundwards (Pangan).

Thunderbolts are supposed to be hurled as the result of undue familiarity towards a mother-in-law. An unusual explanation of thunder and lightning from Kedah is that the latter phenomenon is the flashing of the top-cords of dead medicine-men. The thunder is the hum of the tops themselves when revolving.

The Kedah Semang hold that heaven consists of three tiers or layers: the highest is filled with fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pillagers by a gigantic baboon who pelts any such would-be assailants with 'false durian-fruit' (the produce of a wild fruit-tree);¹ the third has nothing but the low brooding clouds which bring sickness to humanity.

Of Sakai beliefs little that is typical has been recorded, such information as is available witnessing to a close resemblance to Semang beliefs. Rā-hū' (obviously the Indo-Malay Rāhu), a being resembling a dragon, tries to swallow the sun and moon, but is driven away by the beating of drums and bamboo clappers. Kélang Bēlok, a world-eagle, at one time destroyed all human beings except a boy and a girl. With a magic knife the boy slew the

¹ This fruit is sometimes called by Malays the 'Ha-ha' fruit, from the belief that demons, on flying up to inspect it, see that it is not the real durian-fruit, and indulge in loud peals of sardonic laughter.

eagle, and from this pair all mankind are descended. The Sakai are said to indulge in ceremonial exorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, which cause them to harm people, though the forces themselves are not demons. The earth is a thin crust resting on the nether ocean, and the heavens possess several layers, or tiers; the inhabitants of the uppermost are said to include a female deity who has to wash the sin-blackened souls in hot water.

The Blandas of Selangor say that the earth was originally the shape of a flat long betel-box (*sōdok-sōdok*), the nether ocean had the form of a globular tobacco-box (*lōpak-lōpak*), and the heavens were round and over-arching like an umbrella. The Blandas' account of paradise resembles that of the Bésisi. The latter hold that the souls of the good (or wise) pass away to the Island of Fruit-Trees, which they identify apparently with the moon, an eclipse being the work of a spirit that wishes to annihilate their spirit ancestors, the moon's inhabitants. This Island of Fruit-Trees is reached by crossing a fallen tree-trunk which serves as a bridge, and from which the wicked fall into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a big dog which sits at the parting of the ways by which the souls must go. The magicians of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gaffer Engkoh dwells in the moon, which he reached by a ladder now broken, and protects from wild animals dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and motion of the sun, moon, stars, etc. The dark spots in the moon they believe, however, to be a tree beneath which sits the moon-man Moyang Bertang, an enemy of mankind, who is constantly making nooses with which to catch them—a task which he is prevented from accomplishing by mice, who continually gnaw through the strings. Eclipses are not attributed to a snake or a dragon, but to a devouring evil spirit. The sky is a great [? inverted] copper pot, suspended over the earth by a string, and around its edge the earth is constantly sending up sprouts which would join the stars if an old man did not cut and eat them. In addition the Mantri have a version of the sun-rope belief, viz. an idea that the sun is a woman tied by a string which her lord is always pulling, while the stars are the moon's children. The sun once had as many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Benua Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beam, the north being twenty days' journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

10. *Origin of man.*—(a) *Malay.*—What is now the most usual account of the creation of man, from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Muhammadan story. Adam was formed from the heart of the earth by the angel Azrael, not without strenuous opposition and protests from the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, and is probably to be attributed to an Indian origin, describes the supernatural origin of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which con-

tinually sent forth fresh shoots as it was cut down, and in which King Daśaratha, according to the story in *Sri Rama* (the Malay version of the *Rāmāyana*), found the princess, or, again, in the tradition of the discovery of Teh Purba in the river-foam.

(b) *Pagan races.*—The Semang story of the origin of the human race is that the first woman, seeing that all other animals had children, was desirous of having offspring of her own, but did not know how to obtain them. She and her husband took to carrying a brace of fire-logs under their arm-pits by way of make-believe. But one day the coco-nut monkey (B'ro), on noticing what they were doing, gave them advice, as a result of which they had four children, two boys and two girls. These married and had children of their own, but the ring-dove (*tēlukor*) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and 'marry other people,' in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin forms an incident in a group of myths connected with Měrtang, the first medicine-man, and his younger brother, Blō, who came from a place called 'Rising Land' (Tanah Bangun) in the sky and returned there after a sojourn on earth. They were the children of two people called 'Drop of Water' (Ayer Sā-Titik) and 'Handful of Earth' (Tanah Sā-Képal), the latter being their mother. Měrtang took his youngest sister to wife, and from them the Mantri are descended. Blō married the other sister, but had no offspring. When men increased in numbers to an alarming extent, To' Entah (or 'Lord-knows-who'), the first *batin*, a son of Měrtang, drew his father's attention to the circumstance. Měrtang wished things to remain as they were, but Blō suggested that 'men ought rather to die, after the fashion of the banana, which itself expires, although its young scions survive.' Thus it was decided, and so the old now die, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (*ungka putih*) who sent their young ones down into the plains, whereupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth. The story of the princess found in the bamboo also occurs among the Mantri. She married the son of the first Raja, and she and her husband both live invisible to this very day.

Benua tradition says that a man and woman were created by Pirman when he formed the world. When the Lulumut mountains, the oldest land, rose out of the water, a ship of *pulai* wood, completely enclosed, in which the man and woman were contained, was left floating on the surface of the water. After the ship ceased to move, they nibbled their way out, and from this pair men are descended. As the male child was born from the right leg and the female from the left, children of the same womb cannot marry. The Jakun say that God created a man and woman in heaven who came down to earth in the State of Johor.

11. *Personality; the body and personal possessions.*—Malays, in common with all peoples of a primitive civilization, have implicit faith in the magical possibilities of personality and of intimate personal possessions. This is very clearly shown in the beliefs relating to the spiritual or magical powers of the Rajas, the theory of the king as the divine man being strongly held and consistently adhered to. It is alleged that the Malay king originally had the right to slay any one at pleasure,

¹ *Alstonia scholaris*, which furnishes the Malay substitute for cork.

without being guilty of a crime and without any inconvenient questions being asked him. Not only is his body sacred, but that sanctity extends to the royal regalia, which no one may touch, or even make models of, without incurring the risk of a grave illness, possibly even death itself. Any one who infringes the royal tabus, offends the royal person, or wrongfully makes use of the royal insignia or privileges will be struck down by the divine (quasi-electric) discharge of the royal sanctity (*daulat*). In the Malay romances the kings are credited with all the attributes of inferior gods; they are usually invulnerable and gifted with miraculous powers, such as that of transforming themselves, returning to life, and resuscitating the lives of others. As a divine man the Malay king possesses a number of prerogatives which enter into almost every act of life and effectually set him apart from ordinary men. One of these is the sole use of white for the royal umbrella, and the use of yellow cloth (the white umbrella, once the royal emblem throughout Indo-China, has now been abandoned for yellow). Linguistic tabus are also employed with reference to the king, such words as *santap*, 'to eat,' *beradu*, 'to sleep,' *gering*, 'to be sick,' being substituted for the usual Malay words when reference is made to the royal person. At the Malay king's death his name is dropped and he is called *Marhum*,¹ the deceased, with the addition of a phrase descriptive of some prominent, and often uncomplimentary or grotesque, event of his lifetime. One of the most important and significant beliefs connected with the king is that which attributes to him a personal influence over the works of nature, such as the growth of the crops and the bearing of fruit-trees. This also, in a minor measure, applies to his delegates, and in modern times has even been extended to European officials employed in the government of the country.

In a lesser degree the magical property upon which the regal sanctity is based is a quality of the ordinary individual, though usually inversely in the sense that it is susceptible to evil influence, or, in the case of parts of the body, capable of conveying evil to the owner. The head is still, to some extent, regarded as sacrosanct. In cases of assault greater penalty is exacted for an injury to the head than for that to any other part of the person. Great circumspection is employed in cutting the hair; sometimes it is never shorn; more often it is not cut during a special period—e.g., after the birth of a child. Often a boy's head is shaved after birth with the exception of one lock in the centre of the head, which is allowed to grow until he begins to grow up, or even, in consequence of some parental vow, until he attains the period of puberty or marriage. These customs may be due to the sanctity of the head, or possibly to the idea that magic may be brought to bear upon the former owner of the hair by means of that which has been cut off. For this reason both hair-clippings and nail-parings are carefully disposed of, while they are invariably mentioned as part of the ingredients of the well-known wax *mannikin* still believed to be most effective in bringing about the illness or death of an enemy. To the same category belongs the practice of kneading up with the substance of a *mannikin* the eyebrows or saliva of the intended victim, or soil taken from his footprint.

12. Holy places.—Notwithstanding the existence of the mosque as the centre of religious life, there is in every small district a sacred place, or 'high place' (*kérāmat*),² at which vows are paid on special occasions. Such spots are invested with a high degree of sanctity. In theory they are the burial-places of holy men, the early apostles of the

Muhammadan faith, or the first founders of the village, and persons of local celebrity; but, as a matter of fact, in many if not in most cases, they belong to an earlier state of belief than such an origin would imply. Many of these *kérāmat* are not graves at all, but fall into the category of those holy places which the Malays themselves, when asked to interpret them, explain as being 'spirit places' (*kérāmat jin*). For instance, the *kérāmat* of Nakhoda ('shipmaster') Husain on Bukit Nyalas, near the Johol frontier, consists of a group of rocks exhibiting no sign of any kind of burial. This (orthodox) *jin* presides over rain and streams and all kinds of water. Incense is burnt here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the *kérāmat* is a tree with a protuberance on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Batu Tre, to which the Mantri have resorted from time immemorial. A similar rock is situated on the top of Gunung Berembun ('Berembun Crag'), while other mountain summits also have similar wishing-places, each possessing its good spirit. The suppliant who visits these places carries with him a couple of white fowls and samples of various articles of food in a tray, which is suspended from a tree or placed on the highest peak of the summit. After his wishes have been silently addressed to the spirit of the mountain, the petitioner sets a meal prepared on the spot for the purpose.

It may be noted, however, that such sacred places were not recognized by the Semang, possibly owing to their nomadic habits. The Sakai and Jakun appear to have set apart certain sites for the purpose of burning incense and registering vows, and they had, in addition to these shrines, medicine-huts, either solitary cells in the depths of the forest, in which the medicine-man kept a selection of his charms and spells, or diminutive shelters which screened him and his patients during the ceremony of exorcism.

13. Rites: prayer and sacrifice.—In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage; its efficacy is increased by repetition. Sacrifice, as is shown by the language of the charm, is, or was originally, regarded as a simple gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, 'if the deity demands a human sacrifice, a cock may be substituted'¹—a statement which points, moreover, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a buffalo a goat, for a goat a cock, for a cock an egg—a statement which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malays appears to be confined to votal ceremonies or vows in which the votary's offering is not regulated by custom, but there is often a tacit understanding that he will sacrifice something of value to himself.

The chief rites performed on various occasions, to which reference is made below in connexion with special beliefs, are: (a) rites performed at

¹ Arab. *marhūm*, 'one who has found [divine] mercy.'

² From Arab. *karāmah*, 'respect,' 'veneration,' 'miracle.'

¹ Skeat, *Malay Magic*, p. 211; cf. p. 144, note.

shrines; (b) the rite of burning the incense; (c) the scattering of the sacrificial rice; and (d) the application of the neutralizing rice-paste.

(a) The principal elements of the rites performed at shrines are the burning of incense, the offering of *nasi kunyit* (yellow-stained rice), and the killing of he-goats. The worshippers partake of the flesh of the goats and, in some cases at least, of the yellow rice, while the white ('soul') cloth, five cubits in length, which is laid on the shrine now becomes the property of the mosque attendant (*bilal*), though formerly it doubtless went to the *pawang*.

(b) The burning of incense is the commonest form of burnt sacrifice. An invocation is sometimes addressed to the spirit of the incense, urging it 'to pervade the seven tiers of the earth and the seven tiers of heaven respectively,'¹ so as to ensure that the offering reaches the nostrils of the gods. Omens are drawn from the way in which the smoke rises.

(c) The scattering of the sacrificial rice is performed with four varieties of rice-grain (parched, washed, saffron-stained, and a special kind called 'glutinous rice,' or *pulut*). The parched rice is generally used for scattering on the sacrificial tray after banana-leaves have been spread over it. The saffron-stained and the washed rice are sprinkled on the persons to be benefited, or upon the ground or house-floor, while the glutinous rice is generally used for feasts at high places.

(d) Lustration is accomplished by fire or water. Of the former the best examples are the fumigation of infants and the roasting of the mother after child-birth. One form of lustration by water is an integral portion of a large class of ceremonies, such as those relating to building, fishing, agriculture, marriage, etc. It is called *tépong tawar*, or the 'neutralizing rice-paste' (really rice-flour water). It consists in the application, by dabbing, painting, or sprinkling, of a thin paste (made by mixing the rice-flour with water, taken up in a leaf-brush or sprinkler) on the objects which it is intended to protect or neutralize. The brush is made of bunches of five, seven, or nine leaves of certain plants bound with fibrous strings of shredded tree-bark or creeper. The materials and combinations vary, of course, with the object and occasion of the ceremony (whether, e.g., for a marriage, for blessing the fishing-stakes, or for taking the rice-soul). Short rhythmic charms were often used to accompany the rites, but were not repeated audibly.

Developments of the idea of lustration by water are to be found in the bathing of the mother and child after birth and the washing of the floor on similar occasions, the ablution of the sick, of the bride and bridegroom, and of corpses, and the annual bathing expeditions which purify the bathers and protect them from evil. Fasting in the form of religious penance is now seldom practised, but used in former days to be undertaken to secure a state of exaltation, to induce visions, or to acquire supernatural powers. The fast always took place in a solitary place, usually on the summit of a lofty hill or mountain. Such fasts did not imply complete abstinence; a small modicum of rice was allowed daily, with the result that they might be prolonged almost indefinitely.

14. Magic and the medicine-man.—(a) *Malay*.—Although the office of the medicine-man, or magician (*pawang*), is falling into abeyance in towns, it was at one time of great importance; and this is still the case to a large extent in country places. The *pawang* is the accredited intermediary between men and spirits, and, although he has no connexion with the Muhammadan religion, without him no village community would be complete. The office is often hereditary, or at least confined to the members of one family. Certain properties, such as a peculiar kind of head-dress, are, as it were, the regalia or official insignia, and are handed down from one generation to another. The functions of the medicine-man are many and diverse. Few of the operations of life can be undertaken without his intervention. In fishing, trapping, and hunting, in the gathering of jungle produce, in agricultural matters, such as sowing, reaping, irrigation, and clearing the jungle, in prospecting for minerals of all kinds, in every crisis of life—birth, adolescence, and marriage—of sickness, death, and burial, his aid is invoked to decide the propitious moment for action, to prescribe the ritual, and to carry out the rites. Not the least important of his powers in former days was that of controlling the weather—traces of which are still preserved in Malay weather charms. For his services in these matters he receives a small payment.

For the most part the *pawang's* instructions consist of prohibitions, or *pantang*; e.g., it is *pantang* in some places to work in the rice-fields on

the fourteenth and fifteenth days of the lunar months; certain instruments are proscribed: in the interior a reaping-hook may not be used for cutting the *padj*, or at least the *tuai* (a small instrument consisting of a crescent-shaped blade, set transversely in a slip of bamboo, which will cut only one or two heads of rice at a time) must be used to begin the reaping. By these prohibitions, it may be concluded, the *pawang* preserves the traditional method of an older régime—e.g., in enforcing an adherence to the custom of the fixed maximum prices for the sale of rice and other articles within the village, infraction of which entails a bad harvest.

The *pawang* is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal summarily with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. Such punishment is usually inflicted by a 'sending,' or 'pointing,' one form of which consisted in pointing a kris in the direction of the intended victim, the point of the dagger beginning to drip blood as soon as the charm began to work. Another form consists in burning the point of the cordiform top of a newly opened bunch of bananas growing on the tree; this causes excruciating agony; then the *pawang* cuts off the top and the victim dies vomiting blood, his heart having fallen out of its proper position. The Malay witch also commonly keeps a familiar, which may have as its embodiment a night-owl, a badger, etc.

In certain respects, it is important to note, the magician stands on the same footing as the divine man or king; e.g., he possesses a regalia which is called by the same name (*kabēsāran*) as the insignia of royalty, he may (at least in some cases) use the royal colour, and he may, like the king himself, enforce the ceremonial use and disuse of certain words and phrases. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man which may be mentioned are his ability to act as a spirit-medium and to give oracles in trances, and his practice of austerities and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.¹

Although the office of magician is hereditary, the power may be acquired by certain recognized methods. One of these is to raise and meet face to face the ghost of a recently murdered man or of an infant, by means of incantations and fumigations performed at the grave-side.

The Malays themselves make some distinctions between the *pawang* and the *bomor*, the latter being the medicine-man who is concerned especially with the curing of diseases. The two terms are, however, sometimes used as if they were interchangeable. The basic principles of the medical man's art are identical with those of the *pawang*; they depend upon a belief in spirits, and the aim of his treatment is either to propitiate or to overcome their influence.

The *bomor's* procedure in dealing with disease falls under two clearly distinguished headings. First comes the ceremonial inspection or diagnosis, when the character of the therapeutic treatment is determined by divination, by means of omens from the smoke of burning incense, by the position of coins thrown into a water-jar, or by the aspect of parched rice floating on the water's surface.

The therapeutic rites are various in character:

(1) *Propitiatory ceremonies*, the most popular of which is the use of the sacrificial tray called *anchak*, a small frame of bamboo or wood decorated with a fringe of plaited coco-nut-leaves, on which offerings of food are laid for the spirits to eat when it has been hung in a suitable spot outside the house.

¹ Skeat, *Malay Magic*, p. 75.

¹ Skeat, *Malay Magic*, pp. 466-468.

As an alternative method models of certain objects are placed upon the tray, the evil spirits are invited to enter them, and the tray is then got rid of by being hung up in the jungle or set adrift on the sea or nearest river.

(2) *Neutralizing ceremonies*—the use of counter-charms to neutralize the active principle of poisons, extended by the medicine-men to cure all cases where any evil principle (even a familiar spirit) is believed to have entered a sick person's body. The ceremony of applying such charms usually consists in mixing powder from a grated bezoar-stone or celt with water and drinking it after reciting the incantation.

(3) *Expulsory ceremonies*—rites intended to expel from the patient's body all kinds of evil influences or principles, such as may have entered him on his touching a dead animal or bird, or from meeting the 'Wild Huntsman.' The evil principle known as *badu* attaches to everything that has life, including inert objects such as trees, and even stones and minerals, which, in the Malay view, are animate. Of these evil principles or 'mischiefs' there are one hundred and ninety, or, according to some, one hundred and ninety-three. To 'cast out the mischief,' the patient is stroked down with a brush (made of certain prescribed leaves and plant-sprays) which has been dipped in water in which woods have been grated or pieces of scrap-iron allowed to soak, or else he is rubbed with limes, appropriate charms being recited in either case. In another form of the ceremony the 'mischief' is driven from the body along a red thread, which the patient holds in his hand, until it reaches certain dough images of birds, beasts, and fishes, placed upon the *anchak*. A 'disease-boat,' sometimes a mere raft, is also used as a vehicle for the spirits and set afloat on sea or river. The evil may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger- or elephant-spirit, may be summoned. In such cases the spirit, seizing upon the medicine-man, who, while in a state of possession, simulates the movements of the animal-spirit summoned, expels the evil by its superior spiritual powers.

(4) *Revivificatory ceremonies*—ceremonies to recall the sick person's *sémangat*. In one such rite dough is rolled into a human figure, which is laid upon five cubits of white cloth. Rice is scattered, incense burned, and a charm recited to induce the *sémangat* to enter the dough image and be transferred thence to the soul-cloth, and thence to the patient. Similar ceremonies are used to prevent the *sémangat* of a swooning person from escaping.

(b) *Pagan races*.—The *bélian* (shaman, or medicine-man) is the most important member of the tribe among the Semang. In normal circumstances the chiefs or head-men are always *bélians* of more or less reputation. They obey certain prohibitions which do not affect ordinary members of the tribe: they may not eat the flesh of domestic animals, like the goat or buffalo, and that of domestic fowls but rarely. They receive a special form of burial, traditionally regarded as specially honourable, consisting of a rude shelter built in a tree, in which are placed a modicum of food and water, a jungle-knife, etc. It is believed that they are able to proceed to paradise in trances and to drive out devils. They alone know the love-charms that never fail, and can slay men by 'sendings' at a distance of several days' journey. They alone have the power to change themselves into wer-tigers, and at their death their *sémangat* passes into the body of an elephant, tiger, or rhinoceros. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are demons, and have to be exorcized as such. They are abstracted sympathetically from the body by pulling up sapling stumps at or near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the hole in which the root grew; chewed betel is ejected on the body (in imitation of the Malay medicine-man), and the hurling of dead saplings into the wood, so that the evil spirits may be cast out likewise, ends the ceremony.

'Sendings' or 'pointings' are achieved by a minute dart or splinter of bamboo about two inches long, which is laid on the right palm and is ordered to go forth and slay the victim. This dart or sliver flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees' comb is burned at the same time. Such 'sendings' were said by the Semang to be effective at 'a distance of probably two days' journey.'

The Mantri believe that all diseases are caused either by the spells of bad men or by spirits.

Among the latter are the smallpox demon, which the Mantri avoid even mentioning by name; the dropsical demon (*hantu kembang*), which haunts the abodes of men and afflicts them with pains in the stomach and head; the Demon Huntsman (the *hantu si buru* of Malayan origin), who dwells in lakes or pools, is black, and has three dogs which he will cause to chase a man in the forest; if they catch him, they will drink his blood. In every stream, in the ground, in trees, and in caves and crevices of rocks dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and thus causing their death. When a person is wounded, the *hantu pari* fastens on the lesion and causes the blood to flow by sucking. The Berembun tribes believe that diseases are inflicted by the spirits of the rivers (*hantu sungai*), which are evil and feed on the human *sémangat*.

The Mantri magician's most noted form of 'sending' is the *tiju*, or pointing ceremony, which is achieved by the use of wax from an abandoned bees' nest.

When a wind blows in the direction of the victim, the magician takes a vessel of water and a lighted candle or two, and mutters an incantation while 'gazing' into the water. When he discerns the image of his intended victim in the water, he throws the wax into the air, and the wind instantaneously carries it to his victim. The latter feels as if struck by some unseen assailant, and is immediately seized by sickness, which may result in death, should the strength of the spell be great enough.

This attack may be averted if the victim has surrounded himself by counter-spells or charms of a prophylactic character. These may not only ward off the blow, but may even prevent the magician from seeing the image of the victim in the water. Amulets are much used as prophylactics against those diseases which are most frequently attributed to 'sendings,' but which may also be due to unsatisfied cravings (*sakit pūnan*).

Among the Benua Jakun the magicians are an order combining the offices of priest, physician, and sorcerer. They and the Bésisi medicine-men are much dreaded by the Malays, who believe them (as autochthones) to be more powerful than their own magicians, especially, *e.g.*, in matters in which the performance of the Bésisi *bérsauwai* ceremony is likely to be effective. Not only can the medicine-men cure, but they can inflict disease and death-sickness. This is usually effected by the 'pointing,' or *tiju*, ceremony. Even tigers are subject to these medicine-men, and every magician of repute is believed to have one in constant attendance. In curing disease, incantations are accompanied by the music of the *gélondang*, a long bamboo struck by sticks, which are always made of wood of the *mérawan* tree. Conjurations are addressed to *Jiwa-jiwa* (=Mal.-Skr. *deva-deva*), who resides in heaven and alone can approach Pirman. The incantations last all night for one, two, three, or four nights, until the medicine-man announces that he has received the medicine or that the deity is inexorable. The Berembun tribes, like the Malays, attribute the magician's powers to his command over spirits. Every shaman has disciples, who accompany him when he visits the sick. These pupils alone enter the small hut of leaves erected near the house in which the medicine-man performs his incantations, these being continued until the wizard is possessed by the spirit. The latter then answers the medicine-man's questions respecting the mode of treating the diseased person. The Jakun of Madak (Johor) believed that the great magicians (*pyang besar*) of the tribe could reach heaven itself, and that they could disappear without dying, or else, on sickening for death, by arranging to have incense burned over them for two days after their apparent decease, they could return to life again.

A ceremony of exorcism known as *sēoi*, or, more commonly, as *sawai*, is employed by the Bēsi in case of illness or when an answer is required to a question concerning the welfare of an individual.

The ceremony takes place in a hut in complete darkness. After incantations accompanied by the rhythmic drumming of bamboo 'stampers' on the central beam of the floor, the spirit descends upon one member of the company, who answers any questions put to him while he is in a state of trance or possession. In the case of illness the magician erects a small leaf-chamber or cell (*balai bumbun*) near the walls of the hut, in which he conceals himself while the ceremony progresses.

The Blandas employ spells and exorcisms to cast out disease and evil spirits. Spirits of tigers, elephants, and monkeys are summoned to enter the magician's body, and the sick man is then brushed with leaves seven times downwards from head to foot while a charm is repeated. In the blood-throwing charm water is used, and a charm against the Wild Huntsman is also recited.

15. Birth ceremonies and beliefs.—(a) *Malay*.—There are four spirits, or, rather, demons, which are especially feared by the Malays in relation to child-birth. The *bayang*, a demon which appears in the form of a civet-cat, is evoked by incantation over the grave of a still-born child. It may, however, be inherited, and its possessor can send illness, usually in the form of convulsions or delirium, to an enemy. It is especially inimical to children, who are sometimes made to wear a black silk string armlet as a protection against its attacks. The *lansuir*, a woman who has died in child-birth, becomes a flying demon, or banshee, who, through a hole in the back of her neck, sucks the blood of children. It is believed that these demons have on occasion become wives and mothers, but, when allowed to dance at village merrymakings, they will assume their original form and fly off again into the forest. The *pontianak* is the still-born daughter of a *lansuir*. As a precaution intended to prevent the dead mother or still-born child from originating these mischiefs, the *lansuir* and *pontianak* are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles in the palm of each hand (to prevent them from opening and shutting their hands in flying). The *pontianak* appears under the form of a species of night-owl. The *pēnanggalan*, a colossal flying head with hair matted by clots of blood, a species of monstrous vampire or banshee that sucks the blood of children, sits on the roof-tree, or endeavours to force its way through the floor, whenever a child is born, to attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called *polong* and *pēlēsit*, which also give rise to anxiety at this time, though they do not confine their activities to new-born children. The *polong* originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually preceded by the *pēlēsit*, its pet or favourite, which, in the form of a cricket, searches for a victim and enters his body, when found, tail foremost. The *pēlēsit* is obtained by exhuming the body of a first-born child, a first-born mother's offspring, which has been dead for less than forty days, and burying the child's tongue, with incantations, in a spot where three cross-roads meet. It has been noticed that these demons belong to the category of familiar spirits who are sent to attack their victims by an owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the Bomor.

In regard to the observances at and after child-birth, it is usual to engage the midwife (*bidan*) in the seventh month by sending her a copper vessel containing four or five areca-nuts, three or four packets of betel-leaf, tobacco, and so forth, all of which the *bidan* charms and then empties upon the floor for the purpose of taking the omens. She then chews some of the betel-leaf and ascertains the child's horoscope. At the appointed time she chooses the luckiest place in the house for the child to be born, by dropping an adze-blade, point downwards, first in one place and then in another, until it sticks upright in the ground (under the usual Malay pile-dwelling). Beneath this spot, under the raised floor of the house, are fastened a bunch of prickly screw-pine leaves, the 'acid' egg-plant, or *brinjaul*, and a *lêkar jantan* (rattan stand for a cooking-pot) as a snare for and protection against any evil spirit (who will, it is believed, prick himself with the former and catch his head in the latter as in a noose). Demons so caught have been pecked to death by the fowls. A tray covered with husked uncooked rice and two mats with several thicknesses of sarong between are prepared for the child's reception. As soon as the new-born infant is laid upon this, it is formally adopted by the father, who (nowadays) breathes into its ear a Muhammadan formula. Mother and child are purified by bathing in warm water containing various kinds of leaves, with areca palm-blossoms. The child is then swaddled. Mother and child are next marked, especially the latter, as a precaution against convulsions and straining, and also, in the case of both, by way of protection against evil spirits. For this ceremony chips of wood from the thin end of the threshold, from the house-ladder, or from the house furniture, in combination with a coat of garlic, a coat of an onion, assafetida, a rattan pot-stand, and fibre taken from the monkey-face of an unfertile coco-nut, are collected and burned, and the ashes are mixed with a little betel-water. The proper charm is repeated, and, the forefinger having been dipped in the mixture, the centre of the child's forehead is marked—if a boy, with an arrow-shaped mark; if a girl, with a cross, and also with daubs on nose, cheeks, chin, and shoulders. The mother is marked with a line from breast to breast and on the end of the nose also. The evil one will then, it is thought, take woman and child to be his own (who are supposed to be similarly marked) and refrain from harming them. In addition, if the child is a girl, the eyebrows are shaved, and a curve is drawn in their place, extending from the root of the nose to the ear. If the head is considered to be 'too long' (the Malays being on the whole a round-headed race), a yam-leaf cap is made to compress it.

Other ceremonies affecting the child are the administering of the 'mouth-opener,' the rite of giving the first drink from half a green coco-nut, followed by the laying of a gold and a silver and an amalgam ring on its lips, and by fumigating it before it is laid for the first time in the swing-cot, which takes the place of the Malayan cradle. The cot is protected by a funnel-shaped bunch of leaves of the *brinjaul* and other materials, including the casing of the charred torch used at the severing of the umbilical cord, a spice-block, and a trap against blood-sucking demons, made of a *parang*-blade, a coco-nut scraper, and a rattan pot-stand. This trap hangs under the bunch of leaves. The spice-block is explained as being a substitute for the child itself; it is laid in the cot during the first part of the fumigation ceremony, and for the first seven days, whenever the child is taken from the cot, the block must replace it. The naming ceremony takes place usually within the first week, and the first head-shaving and nail-cutting a few days later. Of the naming ceremonies the most characteristic is represented by the east-coast practice of writing seven different names on as many separate banana-fruits, and then allowing the infant to choose between them.

The most characteristically Malayan custom connected with child-birth is that which requires the mother to 'ascend the roasting-place' (*naiik salean*) daily. A rough couch is prepared for her on a small platform, beneath which a large fire is lighted, and upon this bed she has to recline two or three times a day, and that, moreover, for an hour or two together. Sometimes heated hearth-stones wrapped in rags are applied to her stomach. This is said to continue for the whole period of the forty-four days of convalescence. In some cases the 'roasting' was carried out with such rigour as to cause aberration of mind or even the death of the unfortunate patient. At the end of the forty-fourth day a purificatory ceremony takes place, wherein the floor is smeared with rice cosmetic

and scratched over by the claws of a fowl held tightly in the grasp of the cleanser. At about the same period, of the fortieth day, the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been deposited in the water). A boy then, if the infant is a boy, is sent up-stream to catch a fish with a casting-net; if a girl, a girl acts as the fisher. In Upper Perak the baby himself, with a number of other young children, is caught in the net; he will then never want for fish to feed on.¹

During the forty-four days' period there are many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause faintness, sugar (except coco-nut sugar), coco-nuts themselves, and chillies are prohibited.

Both before and after child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or cut his hair until after the child's birth; he may not sit in or obstruct the doorway. Any untoward act may cause deformity: a child was born with only a thumb, forefinger, and little finger on the left hand owing to the father having, just previously to the child's birth, killed a crab with a cutlass. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any life whatever. In Perak any log marked by, or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and endanger the life of both mother and infant.

(b) *Pagan races*.—Superstitions and practices connected with birth, so far as known among the pagan tribes, or, rather, among those pagan tribes for whom Malayan origin and affinities are here claimed, strongly confirm the view that the popular beliefs of the more highly civilized natives of the peninsula are essentially primitive in character. The practice of roasting the mother, e.g., of course on a quite minor scale, is found among the Jakun, Bësi, and Mantri, while among the Blandas the charms used at birth are directed against the demons, the *langhwi* (Malay *langsuir*), *polong*, and *pontianak*—identical, at least in name, with those of the Malays. Another incantation is repeated at the moment of removing the caul as a charm against the caul-demon, which licks up the blood of the sufferer. The Sakai bury the umbilicus and placenta under human habitations so that the rain may not beat upon them and turn them into birth-demons.

It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-soul which was carried by the expectant mother in a bamboo receptacle; but, although the conception of the *sémangat* as a bird is certainly familiar to the Malays, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a *sage-femme*, who, among the former, has a special hut used by the women of the tribe for purposes of confinement.

The Bësi decorate the mother's mosquito-curtains with the leaf-hangings used on all important ceremonial occasions, while among the Mantri a cup of water is charmed during labour and administered to the mother. The sap of certain leaves is given to the child, and a charm is repeated. A name, which is retained until marriage, is given to the child at the moment

when the umbilical cord is severed. The Benua Jakun fastened round the neck of the child at birth a string to which pieces of turmeric, and so forth, were attached. The Jakun also observed a number of food prohibitions: while the children were unable to walk, the parents abstained from certain fish and animal foods, the latter including fowls and eggs, deer of all kinds, tortoises, and lizards.

16. *Adolescence and maturity customs*.—(a) *Malay*.—Of the purely Malay ceremonies at adolescence the most important are the filing of the teeth and the cutting of the first locks of hair—the latter, of course, only when, owing to some vow of the parents, the 'first head-shaving' operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-wizard (*parwang gigi*). Neutralizing (ince-paste, charms, and the scattering of the several kinds of sacrificial rice and rings of precious metal are employed by the *parwang* in order to avert the 'mischievous' (*badé*) from his instrument, as well as from the teeth of the patient. The medicine-man's eyes are considered to be especially endangered by the *badé* emanating from the teeth, while an unskilled performer may cause much pain to the patient if he does not know thoroughly how to 'neutralize' the evil.

The rings of precious metal which are pressed against the patient's teeth as part of the rite of extracting the *badé* are also used in the hair-cutting ceremony. The bride's hair is arranged in seven long tresses hanging down her back below the veil which, on this occasion, shrouds her head; to each of these is attached a ring of precious metal, and then each tress of hair, on being cut, is allowed to fall with the attached ring into a coco-nut vessel (ornamented for the purpose with a chevron edge) which is half full of fresh coco-nut milk. For this ceremony also the proceedings are opened by the aspersion of the bride with the neutralizing rice-water, some of it being also sprinkled on the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large, round, ornamental ear-ring, or ear-stud, is still the mark of virginity. Significantly, the ear-studs of a virgin bride are tied on to the ear-lobes of a widow who remarries, the latter being regarded, so to speak, as a sort of 'merry widow,' and being, in fact, actually called jeeringly 'the widow adorned' (*janda dër-hayas*). Ear-boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the mere accessories of the practice it seems to be entirely a non-Muhammadan rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant detail as to suggest that it has been grafted upon an ancient festival (probably the tonsure ceremony) belonging to an older faith than that of Islām.¹

It is accompanied by the usual purificatory rites, and the ceremony is made the occasion for a banquet, at which the boy is dressed like a pilgrim and stained with henna like a bridegroom, after which the customary gifts are offered. In Perak he is then taken aside and robed in rich raiment, his mouth filled with the sacrificial saffron-stained rice, and his body sprinkled with the purifying rice-dust. After this, two coco-nuts and two small packets of rice are slowly rolled over him from head to foot. A hen is then placed 'on his chest to pick up grains of the yellow rice from his mouth. This is done to drive away ill-luck.'² The boy's teeth are next tapped with a stone by the operator, and, after feasting, a procession to the river follows, the object of which is to propitiate the water-spirit. The boy then has his top-knot shorn off and returns to the house for the actual circumcision, during which he takes his seat either on a sack of rice or on the stem of a banana. In the procession the youths are sometimes carried on men's shoulders, sometimes (east coast) in a litter shaped like some strange bird or mythical animal.

The girls' ceremony is much simpler, much more private; it was formerly accompanied by ear-boring and tooth-filing, and by staining the teeth 'black as a borer-bee's wing.' Large round ear-studs were also formerly assumed by girls at this period, as emblems of maidenhood; but, though these are still sometimes worn on the east coast, they are now assumed, on the west coast, only at the wedding ceremony in preparation for the rite of discarding them a few days later.³

In the same part of the peninsula (east coast) the ceremony is not called, as on the west coast, 'entering into Islām,' but, most significantly, *masok jawi*,

¹ R. J. Wilkinson, in *Papers on Malay Subjects* [printed for the F.M.S. Government], 1908, 'Life and Customs,' pt. 1. p. 5.

² Cf. Wilkinson, p. 68.

³ *Ib.* p. 171.

³ *Ib.* p. 19.

which means literally 'admission into the body of the Malay people'—the most usual meaning of *jawi* being the vernacular, or 'Malay,' language. Yet another term for the ceremony in these parts was 'purification' (*chuchi tuboh*, literally 'cleansing of the person')—a phrase which is also applied in the same parts of the country to marriage.

(b) *Pagan races*.—Of the various operations with which it is usual among primitive peoples to mark the attainment of maturity, neither incision nor circumcision is practised by the wild tribes except, in the case of the former, among the Sembrong and Jakun of the Batu Pahat in Johor, and the Benua, and, in the case of the latter, as elsewhere, only where Muhammadan influence has penetrated. It may, in fact, be said that the rite is virtually synonymous with conversion to Islām, and that it may be taken as the broad dividing-line between Muhammadanism and mere paganism. Nor, with the exception of a single record from the Perak Sakai, is there any tatuing in the strict sense of the expression. Scarification, however, is found among both Semang and Sakai, but not among the Jakun, and, judging both from distribution and from frequency, there is good reason to believe that the custom originated among the Sakai, and was introduced, though only to a limited degree, among the Semang. The scarification consists of divergent lines on the cheek from the nose towards the ear, produced by the scratches of a thorn or edge of a sugar-cane leaf, charcoal being rubbed into these scratches by way of pigment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakun, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. The designs are decorative and magical rather than tribal. Perforation of the nasal septum with the wearing of a nose-bar or porcupine's quill also appears to be more especially a Sakai practice. Boring the ears, however, is, as a ceremony, practically universal, whilst the ceremonial filing and blackening of the teeth may belong rather to the Malayan order of ideas. It occurs among the Semang of Kedah and Kelantan, but is there undoubtedly borrowed from the Malays of the neighbouring country.

The shaving of the head, with the exception of a top-knot, which is temporarily removed at puberty, is found among the Semang, but, though also found with differences among the Malays, is most likely a native custom of the wild Negritos, as it is also found among their Andamanese kindred.

17. *Betrothal and marriage*.—(a) *Malay*.—Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representatives of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle,' at which the offer used originally to be made, and the reply given, in rhyming stanzas. The term of the engagement is then settled. The amount of the marriage settlement is fixed by custom at two *bharas* of dollars (\$22, about £2, 6s.) in Selangor, or \$31.25 (about £3, 5s.) in Perak, etc. The sum is not usually mentioned unless a modification of this arrangement is to be made. A breach on the part of the bride's parents involves forfeiture of double the marriage portion. The affianced pair avoid one another, but there is a regular system of exchange of presents, those given by the girl being deposited in exquisitely woven baskets made in the shape of birds or fishes. It should be added that the Malay name of the ceremony in the peninsula, *béripinang*, is an interesting parallel to the splitting of the betel-nut (*pinang*), which is the

symbolical act of betrothal to this day among the Dayaks of Borneo.

The actual marriage ceremonies cover a period of four days, beginning with the work of decorating both houses, which includes the erection of a dais, with two standard candlesticks, often 6 ft. high, before the door of the bride's chamber. The arrangement of the dais (*pélammun*) is of extreme importance, since the number of big white (or in case of a Raja, yellow) pillows used indicates, according to a rigid code of etiquette, the rank of the contracting parties. The whole of the dais is covered with a mosquito-curtain, and the walls of the chamber are adorned with striped or 'rainbow' hangings (*kain pélangi*), while the ceiling is decked with an awning or 'heaven' (*langit-langit*).

The basic forms of the rite, which were those of a royal wedding, include the so-called 'bride-price,' the food-sharing ceremony, and the approximation of the dress of the bride (who on this occasion wears trousers) to that of her husband (who wears a skirt). It is this fact that, as A. E. Crawley¹ has explained, helps to account for the apparent resemblance to royal ceremonies that may be noticed in so many Malay customs. The idea seems partly to disguise the subjects of the ceremony in order to avert the possible danger attaching to what is certainly regarded as a critical occasion, and partly to promote a more perfect union between the pair by means of (1) a pledge passing between them (*i.e.* the 'bride-price') as well as by (2) the sharing of a meal together, and (3) the obliteration (so far as may be practicable) of the distinctions of sex. The pretence of kingship by which the bridegroom is made to wear the bracelets, chain, neck-ornament (and, if we may go by the analogy of Malay funeral custom, even the kris) is simply, therefore, an attempt to secure a really effective disguise for the party in danger. The shaving of the bride's forehead may be similarly explained, since the bridegroom is also shaved. Although these are all likewise usages of royalty, it is wrong to regard them merely as a species of social self-advertisement; they are really the paraphernalia worn by all persons of the Malayan race on certain critical occasions,² in order to banish the spirits of evil and thus to avert mischief and danger. Till recent years the ceremonies over the greater part of the peninsula were almost entirely non-Muhammadan, and often took place in country districts without the intervention of any mosque official whatever. Lustrations followed, and on the east coast processions in monstrous or bird-shaped litters.

In certain details the wedding ceremonial has now become Muhammadanized in character; among these is to be included, most probably, the staining of the fingers of the bride and bridegroom with henna. The henna-staining at first is done in seclusion ('by stealth'), the initial public appearance of the married couple at their respective dwellings occurring on the second night, when ceremonial rice-water is sprinkled, offerings of rice made to each of the parties, and the 'henna dance' (*tari hini*) performed; on the fourth day the procession of the bridegroom to the house of the bride's parents takes place. Here, on his arrival, his progress was in former days occasionally opposed by a mimic conflict (*mélawa*), which terminated only on his payment of a small fine or ransom to these (for the nonce) self-constituted 'authorities.' This part of the ceremony, which used to be explained as an example of the so-called 'marriage by capture,' is now taken to be merely an expression of the antagonism between the sexes. In some cases a rope or piece of red cloth barred the way, and a stout resistance was offered until the bridegroom had paid the fine demanded. Even then admission to the house had to be made against the resistance of women of the bride's party. The simple marriage service—a mere bald statement of the fact and of its acceptance by the groom—is now performed by the *imām* (Muhammadan priest) in the presence of the bridegroom only. It is said that, according to the old custom, the ceremony took place on the day before the procession. The groom

¹ *The Mystic Rose*, London, 1902, p. 386, quoting the Malay ceremony.

² Not specially in connexion with kingship.

is then taken to the bride, and both are seated ceremonially side by side (*bərsanding*)¹ on the dais and partake of rice, each feeding the other from a specially-prepared receptacle (*nasi sėlakōna*=Skr. *aṣṭakōṇa*, 'octangle')—an octagonal erection of three tiers which holds the 'rice of the presence' (*nasi adap-adap*), coloured eggs (*tēlor joran*), etc., and stands before the *pelāmman*. The eggs, which have coloured streamers, and represent a fruit, with flower and leaf, are given to the guests as wedding favours. On the third day of the lustrations which follow the marriage the ceremony of bathing for good fortune takes place in the evening. Later, at night, a bonfire was formerly lit outside the house and the groom 'stolen,' i.e. carried off to his parents. He was escorted back to his house next day, and a water-fight with syringes (called 'water-bows') took place (sometimes in a specially-erected pavilion) between the friends of the two parties. After this the bride and bridegroom each pulled one of the ends of a slip-knot made of a young coconut frond, and the bridegroom broke through threads wound seven times round himself and the bride; in some cases (Patani) the threads were severed by burning. Seven days after the concluding feast-day the rite of the 'discarding of the ear-rings'—the emblems of the bride's maidenhood—takes place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the 'bridal rice' (*nasi bər-astākōna*), in the 'bridal thread' (*bēnang pancharōna*), and in the 'bathing pavilion' (*balai pancha-pērsāda*) we have not only Indian customs, but Indian names.²

In addition to this regular form of marriage with the consent of the girls' parents, the Malays recognized another form of marriage when the parents were notoriously unwilling, the essential feature being that the would-be bridegroom, fully armed, must force his way to the women's apartment and secure the person of his bride, or prevent her from escaping. If the parents should then give their consent, the customary payments were doubled. This procedure was known as the *panjat anghlara*.

In a second and more peaceful form, the *panjat adat* (once frequently employed by Malayan Rajas), the groom did not break into the house himself, but sent his kris, accompanied by a message that he was ready with the dower, doubled in accordance with custom. If the kris was returned (e.g., on an unfavourable answer), the parents must send back with it a double dower.

W. E. Maxwell gave both these forms of marriage as being recognized by Malay custom.³ Wilkinson, however, assenting to the second, regards the first as a mere *crime passionnel*.⁴

The marriage ceremony is called in most parts of the peninsula by terms which are obviously of Arabic or Persian origin; on the east coast, however, where Muslim influence is less strong, it is often termed, significantly, by a Malay word denoting 'purification.' Like their Polynesian linguists, certain Malays (e.g., Nēgri Sembilan) forbid the marriage of two brothers' (or sisters') son and daughter, but not that of a brother's son and a sister's daughter.

(b) *Pagan races*.—Among the pagan tribes the essential feature in the marriage ceremony is a ritual purchase and a repast shared between bride and bridegroom. Among the Semang the price consisted of the blade of a chopper (*parang*), presented by the bridegroom to the bride's parents, and a coiled girdle of great length, said to be manufactured from the rootlets of the sugar-palm, given to the bride. This act of purchase, so long as it was performed before witnesses, was in itself binding. The Semang, as a rule, were monogamists, and conjugal infidelity was strongly discountenanced, the immemorial penalty being leath, which would now be commuted for a heavy fine. Among the Perak Sakai the nuptial present was, as among the Semang, a knife or yam-tubers.

According to one account, the bride and bridegroom attended

at the house of the chief, who, after an inquiry as to their prospects, declared the man and wife united. Another account states that the relatives of both parties assembled at the bride's house, and that the two betrothed persons ate rice out of the same dish together. The little finger of the man's right hand was joined to the little finger of the left hand of the woman, and they were pronounced husband and wife by the elders of the settlement.

The Sakai occasionally, but rarely, took more than one wife. Death or a fine was the penalty for infidelity.

The Jakun ceremony embodied several features of peculiar interest and importance.

In addition to the nuptial presents for the bride and her parents—beads, white cloth, etc.—the husband was expected to provide a hut, cooking-pots and pans, and other household requirements. Either party or both were questioned as to their ability to carry out the duties of their future state, the requirements in the case of the man being proficiency in the use of the blowpipe, ability to fell trees or to climb after fruit in the jungle, and even ability to smoke a native cigarette. The *batan* (head-man of the tribe), as a rule, was present and pronounced the parties husband and wife at the end of the ceremonies. Among the Bēsi of Selangor the head-man then gave the bride and bridegroom a new name. According to one account, among the Selangor Sakai, the smoking of a native cigarette was substituted for the common meal. The Mantri bride and bridegroom presented a love-token of betel-leaf to one another before the feast, at which they ate together from the same plate. The most distinctive feature, however, in the Jakun marriage was the use made of a conical or, rather, bell-shaped mound of earth (sometimes an actual ant-heap) decorated with natural and artificial 'flowers,' the latter being representations of the solar disk with rays, etc., and other ornaments; around this mound the bride was pursued by the bridegroom, in some cases three, in others seven, times; if he succeeded in catching her, they were declared to be married. Among the Bēsi of Kuala Langat (Selangor) the bridegroom was conducted before the present writer seven times round this mound at a walking pace, and the bride once, before they partook of a common repast, consisting of a dish of rice and drink from a bowl of water which had both been placed on top of the mound (*bāsut*). This was, of course, a survival of the mound-race ceremony. In one form of this rite among the Mantri there was no mound, but the pursuit took place round a circle of varying size; in the case of the Benua of Pahang, a fire was substituted. In the case of some Jakun tribes of Johor, in the middle of a dance the bride ran into the forest, and was followed by the bridegroom. The counterpart of this ceremony among the Land-Tribes (Orang Darat) was, it is important to note, among the Sea-Tribes (Orang Laut) of Johor a ceremony in which the bride had to be pursued by the bridegroom for a given distance on the river, in canoes.

Monogamy was generally, though not invariably, the rule. Although marriage was recognized as strictly binding by the Bēsi and other Jakun, yet at their drinking carnival (*main jo'oh*), which took place at the end of the rice-harvest, they were allowed to exchange their wives promiscuously.

18. *Burial customs and mourning*.—(a) *Malay*.—The Malays are not among those races who fear, but rather among those who pay respect to, the ghost of the departed.

After death the body is shrouded in sarongs and laid on the back, with hands crossed on the breast, on a mattress which, in turn, rests on a new mat of pandanus. A pair of scissors used in the preparation of betel-leaf is placed on the chest, the explanation being that, should a cat by any accident come in contact with, or brush against, the body, the touch of iron will prevent the corpse from returning to life, as once happened. Cats are always expelled from the house while it contains a dead body, and the corpse is watched day and night in case evil should come near it. The preparation of the body for the grave includes ceremonial washings, which should be performed while it rests on the outstretched legs of four people (members of the family) sitting on the floor. Failing volunteers for this office, banana-stems are used as rollers. A final washing of 'nine waters' is performed by the *widm* (if accessible), 'three scoops' of water being scattered to the right, three to the left, and three over the body from head to foot. The orifices, including the ears, eyes, and nose, are plugged with cotton, and the corpse is wrapped in a white cotton shroud, the selvedge of which is torn off and used to bind up the body at the breast, hips, knees, head, and feet, the shroud having been fastened with the 'five knots.' The corpse is then placed on the mattress in the position which it is to occupy in the grave, lying, that is, on the right side with the head to the north, and face looking towards Mecca (westward). When the relatives give the last kiss before the shroud is fastened, they must be careful that no tears fall on the face, as these might disturb the deceased's spirit. The position of the body in the grave depends upon the kind of coffin used. If it is a single-plank bier (*papan sa'kepīng*), the body is placed in a recess at the left side of the grave, and the plank is fixed in a sloping position with pickets closing the aperture, so that the plank itself may neither touch the body nor allow the earth to fall upon it. Another kind of receptacle

¹ 'Wherever the old Palembang (Sumatra) tradition exists—in Pahang, Johor, Riau, Malacca, Selangor, and Perak—the enthronement or *bərsanding* varies very little. But if we leave the Palembang area and cross into Patani, the ceremony is different, the regalia are different. We see before us the ghost of the ancient Northern Courts and of the old and high civilizations that have been crushed out of existence by the Siamese' (Wilkinson, p. 70).

⁴ P. 28.

Curetes, of Acarnania.¹ As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.² Even the Telchines, a synonym of spitefulness in the folklore of Greece, were in their time founders of cults (Diod. Sic. v. 55; cf. Paus. ix. xix. 5). But they all belong to the old order, they are all heterodox, they are all classed as γοήτεις (Nonn. xiv. 36 f.; Strabo, p. 601).³ Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nonnus, *Dionys.* xiv. 36); they are malignant sorcerers, who wither the plants, ruin the crops, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the servants of Hephaestus, so these semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape⁴ to the *Kobolde* of Germanic mythology. These clans of demoniac master magicians know all the secrets of nature. The Dactyli were masters of music and of the healing art. They taught Orpheus (Diod. Sic. v. 64) and, long afterwards, Pythagoras. Paionius, Iasius, Alkesidas, the three great physicians of the epic, are all Dactyli. Later, they were regarded as inventors of the famous *Ephesia Grammatia* (Clem. Alex. *Strom.* i. 15 [PG viii. 781]). The Centaurs Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curetes. Among all nations the most notable symptom of the power to prophesy is an ecstatic state of mind. The assumed origin and pattern of the Corybantic worship, the best known and most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dance of the Curetes around the baby Zeus—really a primitive spell, an ἀποτροπαῖον, to keep the child from harm (see KOURETES AND KORYBANTES).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 845; Val. Flac. vii. 356), Agamedes,⁵ Melampus (Apollod. ii. ii. 2), Cēnone (ib. iii. xii. 6), Pasiphae (ib. iii. xv. 1), Agamede or Perimede (Roscher, s.v.; Theocrit. ii. 16 and schol.), Circe (Roscher, ii. 1193), and Medea (ib. s.v.). The special, though not the exclusive, interest of all is φάρμακα. Prometheus, the wise and kindly Titan, belongs to the old régime. Melampus comes from Thessaly, the distant land of magicians. All the rest (except Cēnone, and even she is a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamede is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Colchis, the distant land where the sun-god himself rises at dawn from the ocean stream.

Circe.—In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far away in the mystic and trackless seas. Cruel, but no more consciously cruel than the child who separates some luckless fly from its wings, this φάρμακῆς, whose special power is metamorphosis, amuses herself with enticing such wandering mariners as come within her reach to drink magic potions which straight-

way turn them into swine. Like any other queen of the mermaids, Circe is unmoral rather than immoral. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Medea.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. *Theog.* 956 ff.; Alcman, cited by Athenag. *Legat. pro Christ.* 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrob. i. xii.; Serv. on *En.* vii. 750). Of all mythical magicians she is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,¹ she is evidently the most highly developed personality in a group of homonyms. It was therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in the long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful and awful Colchian, as awful as her mistress the goddess of the crossways, Medea πᾶμφάρμακος, daughter of Æetes and granddaughter of the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a φάρμακῆς. It is therefore particularly, though not exclusively, from her knowledge of φάρμακα that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 802, iv. 25), and in art she is often represented as holding it in her hand. Her charms are innumerable.² She can restore youth, bestow invulnerability, lull the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause in their courses, call down the moon from heaven, etc. Indeed, Apollonius's description (iv. 1665–72) of her procedure when, from the deck of the Argo, she cast the evil eye on the giant Talus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Seeliger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the Argonauts, cures Heracles of his madness, frees the Corinthians from a famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. On the contrary, the popular tradition of her continued to grow in its own way (Tib. i. ii. 51, note, ed. K. F. Smith, New York, 1913). Special feats of magic were supposed to have been her invention (e.g., Paus. ii. xii. 1), and, as the line just cited from Tibullus suggests, we may be sure that the *libri*

‘carminum valentium
Refixa coelo devocare sidera’

of Canidia to which Horace refers (*Epod.* xvii. 4) contained more than one charm claimed to be Medea's own. So, too, the magic plants and simples for which Thessaly was so famous were supposed to have sprung up in the first place from the box of charms lost by Medea as she was passing over that land with her winged dragons (schol. Aristoph. *Nubes*, 749; Aristides, i. p. 76 [Dindorf]). Her fame in the written word is unique. We are obliged to agree that she never lived among men; she was merely a child of popular fancy and the foster-child of a long line of literary artists few of whom were men of transcendent genius; and yet she emerges as perhaps the most wonderful woman in all classical antiquity. Poets, historians, orators, philosophers, even unimpressible grammarians

and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last feeble echoes of rhetoric, and again in the renaissance of the modern world, hers is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown old or lost its interest and charm.

As we might guess, Medea is the typical Græco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her *φάρμακα*, and the large preponderance of *φάρμακela* itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. Their methods.—*Φάρμακα* are either to be swallowed or to be applied outwardly as salves or plasters. The distinction is medical, but it is also Homeric, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (*Od.* x. 391 f.); Medea uses another to render Jason invulnerable (*Apoll. Rhod.* iii. 1041 ff.), and still another—in the form of an aspersion—to put the dragon to sleep (*ib.* iv. 156); in the old Lesbian folk-tale Aphrodite gave Phaon a box of salve which, when applied as directed, gave him youth and surpassing beauty (*Ælian, Var. Hist.* xii. 18; *Serv.* on *Æn.* iii. 279; *Palæphat.* 49; *Lucian, Dial. Mort.* ix. 2; *Roscher, s.v. 'Phaon'*). The shirt of Nessus and the robe of Creusa belong to the same type. Pamphila (*Apul. Met.* iii. 21) went so far as to have a box filled with little caskets, each containing a special salve for a given metamorphosis.

Quite as ancient and characteristic is the *φάρμακον* taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (*Od.* iv. 220-232); so Circe effected all her transformations (*ib.* x. 237); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of *φάρμακα* or *pocula amatoria*, i.e. drinks to inspire love—is perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here that in Circe's case the process is not completed until she touches the victim with her *πάσδος*, or magic wand. In art Medea is frequently represented with a wand; with a wand Æthene makes Odysseus look young again (*Od.* xvi. 172); so Hermes overpowers our senses (*Il.* xxiv. 343; *Od.* v. 47); and, as every one knows, to this day no magician's outfit, even if he is nothing more than an ordinary sleight-of-hand performer, is complete without this ancient and dramatic accessory. The use of the wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Except, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the *φάρμακον*, and, as we have seen, the Græco-Roman theory of magic presupposes that Circe had already prepared her *φάρμακα* to the accompaniment of the proper charm, and that Helen's nepenthe had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for *φάρμακela* in the art of healing. The sons of Autolyceus bind up the wound of Odysseus, and stop the flow of blood with an *ερασιδή* (*Od.* xix. 457); the divine physician, Asclepius, follows the same methods (*Pind. Pyth.* iii. 52; cf. iv. 217; *schol. Isthm.* vi. 53; cf. *Soph. Ed. Col.* 1194 [Jebb]), and at all times the use of incantation with a remedy was so characteristic that one of our richest sources for the study of *φάρμακela* as magic is the works of the physicians

from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicine; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is going to succeed. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of pre-Periclean times is typical. The case of Iphiclus (*Apollod.* i. ix. 12; *Roscher*, ii. 306) is an excellent example.

For ten years Iphiclus could have no children. At last he consulted Melampus the seer. Melampus, whose specialty, like that of Mopsus the Argonaut (*Apoll. Rhod.* iii. 916 ff.), was the language of birds, consulted the vulture. The vulture said that ten years before, while castrating rams, Iphiclus had threatened his father Phylacus with the knife. It was then discovered that the knife had at that time, and presumably by Phylacus himself, been struck into the tree with which the life and well-being of Iphiclus were bound up,¹ and that it had stuck there ever since. The knife was removed, the rust scraped off and prepared as a *φάρμακον*, and, when Iphiclus had taken it as prescribed, he immediately recovered his powers. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Græco-Roman magic, and still survives in our own homely saying that 'the hair of the dog cures his bite.'

Other branches of magic referred to in this period are equally typical. According to Homer (*Od.* x. 516 ff.), Odysseus learned from Circe how to call up the dead, and the ceremonial of *nekymantia*, as the poet pictures it, always remained practically the same. Indeed the antics of Empedocles, as described by Diog. Laert. (viii. 59, 62 ff.), show clearly that the type of the *γοήτης* became finally fixed at a very early period. Again, the bag of winds given by Æolus to Odysseus (*Od.* x. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries.² The same is true of the primitive rustic magic attributed to the Telchines. Finally, the love-charm known as 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to Suidas, was a contemporary of Xerxes. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (*Nubes*, 749) and was never afterwards forgotten.

III. FOREIGN INFLUENCES.—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Telchines, Dactyli, and Curetes—apparently, too, the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be such distant countries as Colchis, Egypt, Thessaly, and even the Islands. As time went on and the horizon of the known world became correspondingly wider, such local centres became *pari passu* more and more distant, and the strange tribes of the African deserts, the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the primacy always remained with Thessaly. In the time of Aristophanes as in the time of Apuleius, Thessaly was *par excellence* the realm of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflexion of average opinion in the world at large. Numberless passages might be cited to show that in the Athens of Pericles, as long afterwards in the Rome of Augustus, the average professional enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though Pliny (*HN* xxx.

¹ W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1877, p. 30 ff.

² *GB*, pt. 1., *The Magic Art*, London, 1911, I. 319 ff.

1 f.) denies it, was another famous locality for magic. But Thracian magic, as Hubert warns us,¹ was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, it was not only a religious movement but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world (see ORPHISM). But it was heterodox and, therefore, 'magic.' This seems to be the first great and definite example within historical times of the impingement of a strange religion on Greek orthodoxy. Aristophanes and his fellow poets make all manner of fun of the Orphics, and such a passage as Euripides, *Cyclops*, 639 ff. (cf. Plato, *Rep.* 364 E), shows that Orpheus, like Musaeus, had already become an inventor of magic, a sort of protomagician and doctor.² Finally, Orpheus the magician, as he appeared to the popular mind of the 5th cent. B.C., became a character of great importance in the mystic magic of later days,³ the rites of the Orphics were associated with those of the Chaldaei, the Ophitæ claimed Orpheus as their founder, and he was even made one of the founders of astrology and alchemy. Indeed, as Hubert says,⁴ it is often difficult to distinguish between Orphic texts and magic texts. Further confusion was caused by the lustral ceremonies peculiar to Orphism, and to the association of Orpheus with the cult of Selene and Hecate. So far as the average man was concerned, the distinction between the *ἀγύραι* and the *μύστραι* and the unattached priests of Orphism (Plato, *Rep.* 364 B; Theophr. *Char.* xxx. [xvi.])⁵ was practically negligible. The standing charge against them was their emphasis on *mysteria*. But Orphism itself suffered from the fact that, being a strange religion, it was at once classed as mere magic. As such, it had no standing and inevitably began to deteriorate. It justified more and more its new name of ordinary magic, and its adherents assumed more and more the habits and point of view of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, as usual, by contact with new principles and methods of procedure. Here, of course, we have one important reason for the incomparable wealth and variety of Græco-Roman magic.

The Magi.—But of all these foreign influences on native magic the religion of the Persians, i.e. of the Magi, was perhaps the most important. At any rate, in the ordinary opinion of later times it was the type of all such influence in general. An almost immediate result, e.g., of absorption by its native rival was the designation of the new combination as *magela*. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroaster upon magic is characteristically reflected in the later history of the subject. Thus, as it was popularly believed in the ancient world that great scholars and sages—especially if, like Pythagoras, Epimenides, Democritus, and even Plato, they had also travelled in foreign parts and had been vouchsafed the ineffable mysteries of the Oriental religions—were thereby mighty magicians, if not actually the first to reveal their wondrous art to the world at large (Val. Max. viii. vii. 7, ext. 2; Solinus, 3; *HN* xxx. 3 f., xxiv. 156 ff., xxv. 13 ff.;

Plut. *Sympos.* viii. 8; Anl. Gell. x. 12; Apul. *de Mag.* 27, 31; Diog. Laert. ix. 7; Lucian, *Necymantia*, 6; Apoll. Tyan. *Ep.* xvi), we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told still later that he was also a pupil of Zaratas the Chaldean (Lobeck, *Aglaophamus*, p. 471). Democritus broke into the tomb of Dardanus in order to secure the wondrous MSS buried with the defunct; and others say that, after being initiated by the Persian Osthanes, he became one of the fountain-heads of the tradition of alchemy.

Of these Persian sages associated with the tradition of Græco-Roman magic the most famous was Osthanes (*HN* xxx. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unutterably precious but, until his time, entirely oral tradition of ancient magic (*ib.*). The first book on medical magic was attributed to him (*ib.* xxviii. 6), and also certain apocryphal books on alchemy.¹ Of all the authors on magic he is the most frequently referred to, and his name may be found cited as an important authority in 'dream-books' still for sale.

As we shall see, all this foreign influence on magic was much discussed by the philosophers (Diog. Laert. *proem.* 1). One of the most notable contributions must have been the so-called *Μαγικός*, usually attributed to Aristotle (*Frag. Aristot.*, ed. Rose, frag. 32 ff.). Suidas (s.v. 'Antisthenes') does well to doubt Aristotelian authorship, for the symptomatically childish statements referred to it are eminently uncharacteristic of that residuary legatee of Hellenic thought, the hard-headed and highly intellectual Stagyrte.

IV. ITALIC MAGIC.—The traditional history of Italic magic is not so well attested, but the assumption that, generally speaking, it was quite the same as that of Greece is fully supported by such testimony as survives. The first Roman reference to magic is the law of the Twelve Tables ('*QUI FRUGES EXCANTASSIT. . . NEVE ALIENAM SEGETEM PELLEGERIS*')² which forbids the transference—by magic—of the crops growing in other people's fields to your own. This primitive and universal explanation of the reason why the wheat ears in your neighbour's field are full of grain and yours are not never died out among the Romans. It is illustrated by Pliny's typical anecdote of one Furius Chresimus (*HN* xviii. 41), and as late as the 6th cent. A.D. we are told by Agobardus of Lyons, *de Grandine et Tonitruis*, 2 (*PL* civ. 148), that in his time the belief was current that the witches had formed a sort of trust and were transporting all the crops in air-ships to a land with the significant name of 'Magonia.'

A certain amount of magic of this primitive type is preserved by the Elder Cato (*de Agr.* 70 f., 73, 96, 102, 127, 156–160) and Varro (*de Re Rust.* i. ii. 27) and is more or less discernible in later authors (e.g., *HN* xi. 5, xxviii. 4; Sen. *Quest. Nat.* iv. 7; Serv. on *Ecl.* viii. 99; Aug. *de Civ. Dei.* viii. 10; Pallad. i. 35). It will be observed that the only difference here between magic and religion is that religion is officially sanctioned, while magic is not. The effect of the law of the Twelve Tables is simply to establish this distinction from the legal point of view.

Divination, as usual, occupies a more or less indefinite position between religion and magic. Hence *nekyomantia* was practised to a certain extent by private individuals, and Cicero's accusation of Vatinius (*in Vatini.* vi. 14) is not so extraordinary as it sounds.

⁴ *Op. cit.* p. 1499.

⁵ Lobeck, p. 625.

The usual term for a magician is *maleficus*, but the word does not occur in the law until Diocletian.¹ *Veneficium* is the generic name for any magic ceremony, whether legal or illegal, and *veneficus* or *venefica* as the epithet of a magician is used in the same way. The *magus* in Cicero's time was still more or less associated with his Persian origin, but with the first year of Tiberius² he comes under the ban of the law, and after Trajan's time the word was applied to any one who practised illegal magic (*Cod. Theodos.* ix. 16. 4; *Cod. Justin.* ix. 13. 7). *Saga*, 'wise woman,' is probably one of the oldest words for a 'witch' in the language, and the fact that it also means a 'bawd' is a sufficient indication of the *saga's* social position as well as of her specific functions as a magician. She is one of the standard characters of the Roman elegy. *Striges* (*strigae*, Petron. 63; Ital. *streghe*), lit. 'screech owls,' was a name for witches which records the popular Roman explanation of vampires.

As the Greeks looked upon Thessaly, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etrurians knew how to call up the dead, bring on rain, and discover hidden springs (Wissowa, in Pauly-Wissowa, s.v. 'Aquilæ'). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Pæligni were particularly famous for certain magic powers (*Verg. Æn.* vii. 758; *Hor. Epod.* v. 76, xvii. 29, 60, *Sat.* i. ix. 29 f.; *HN* xxi. 78; Ovid, *Fasti*, vi. 141 f.). The Romans saved the Etruscan *haruspicina* at an early date by naturalizing it. Cato (*de Agr.* v. 4) classes it with the rituals of the *augures*, *harioli*, and *Chaldaei* as a matter which any solid farmer would do well to avoid; but, although he himself was doubtless unaware of it, his own charm for a sprained hip has a suspiciously foreign sound. Even then Roman magic had been exposed for some time to the influx of foreign religions which set in soon after the Second Punic War; the overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principal Roman source for the details of magic practice is the poets—and the poets confine themselves for the most part to the Greek tradition. The result is that after Cato's time we are dealing not so much with Greek magic or Roman magic as with the magic of the Græco-Roman Empire.

Before referring to the ancient literature connected with this subject—originally enormous and still formidable—it should be observed that no small amount of magic of a certain type had already passed into the category of what Hubert aptly calls 'magic éternelle,'³ i.e. magic too old to have a definite origin, and so common that the fact that it was ever magic at all has long since been forgotten—in short, magic that has been secularized and is reckoned merely so much scientific knowledge already acquired. This explains why Pliny, a hard-headed Roman who had no use whatever for what he would define as magic, is for us a principal source for those magic formulæ and incantations which long usage had made a part of medicine and the various sciences with which he deals. And to a greater or less extent similar material may be found in any other ancient authority who deals with the same matters. One of the most important themes of Græco-Roman science was the tradition of the given subject. Perhaps this explains the curious fact that in the course of time the very word *φυσικός* itself acquired the secondary meaning of 'magic.'

For these as well as for other reasons already given, few sources are so valuable to the student of Græco-Roman magic as the ancient treatises concerned with medicine, especially if, like Pliny, the author is an inveterate collector of useful information, or if, like the *de Medicamentis* of Marcellus, the book is intended for home use. One of the most notable and characteristic develop-

ments of antiquity, especially during and after the Alexandrian age, was the extent to which every conceivable subject of a scientific or quasi-scientific nature was treated as literature, particularly as a theme for verse. In such cases whatever magic there was in the subject was rarely forgotten. Valuable sources for the magic of medicine, therefore, are the *Theriaca* and *Alexipharmaca* of Nicander (even more famous were the lost poems on the same subject by Æmilios Macer) and the long passage on snakes in Lucan, ix. 607-937, which doubtless owed much to Macer. Particularly valuable, too, are those writers who deal with some homelier branch of medicine, such as the art of the veterinary—like Palladius and the authors of *Hippiatrica* and the *Mulomedicina*. Especially notable among physicians are Ætios of Amida, Theophranes Nonnus, and Alexander of Tralles, but, above all, Cyranides and Dioscorides. Scribonius Largus and Serenus Sammonicus also might be considered. In short, any ancient doctor, however wise or learned, is likely to contribute something to medical magic.

The writers on agriculture and kindred themes (e.g., Cato, Varro, Columella, the author of the *Geoponica*, Gargilius Martialis), the writers on botany, beginning with Theophrastus (*Historia Plantarum*), the naturalists, and the writers of *φυσικά*, like Neptunius, are valuable. The same is true of antiquarians like Gellius and Macrobius, of the *Paradoxographi*, of the *Agrimensores*, and of the *Parœmiographi*. In short, omitting for the present that large and important class of writers who deal with the subject merely as a literary asset, any ancient author, no matter what his theme may be, is likely to contribute something to our knowledge of contemporary magic.

It is the philosophers, however, especially the philosophers of a certain type, who are most intimately associated with the most remarkable phase in the history of our subject. We have already seen at how early a date the spiritual life of antiquity began to feel the impact of foreign ideas and systems. The Orphics, the Magi, the worship of Mithra, the Assyrians, the Babylonians, the Phœnicians, the Egyptians, the Hebrews—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory. Laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless. The classical world was a babel of creeds, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly *saga* to the impressive *Chaldaei*. As yet the average man of birth and education was not, as one might say, dangerously affected by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great tide of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was world-wide. Men needed new wine, and the old bottles could not contain it. The craving which for generations had been more or less vague grew in volume and intensity, and finally reached its acme not far from the beginning of the 2nd cent. of our era. There were creeds then—like those of Isis and Mithra—that would seem to have just missed becoming great religions of the future. There were men, too, in that period—e.g., Apollonius of Tyana and the Peregrinus of Lucian—who were philosophers of the contemporary type,

¹ Mommsen, *Strafrecht*, p. 640, n. 3.

² *Ib.* p. 640, n. 7.

³ *Op. cit.* p. 1501.

and posed as the more or less inspired founders of creeds—all charlatans, of course, but not entirely so; and it is not altogether inconceivable that the names of some of these men might have gone ringing through the ages instead of being merely an object of occasional scholastic contemplation.

Mysticism.—The unusual prominence of magic in this period is symptomatic and due to a number of causes. There was, of course, the ignorant lower class, who always believe in magic. But there was also a higher class, fairly well educated—heavily recruited in a period like this—who had lost their faith in orthodoxy, but who lacked the character to seek the truth elsewhere and the continuity of purpose to attain it. They preferred to give themselves up to whatever promised the incredible—in a way sufficiently dramatic and interesting to gratify the taste for novelty. Under such circumstances there is always another class ready to cater to this form of intellectual and spiritual dissipation. Both these classes—the willing deceivers and the willingly deceived—are pictured to the life in Lucian's admirable skit, the *Philopseudes*, i.e. 'Liars for the love of it.' A few, of course, ridiculed the whole matter; the most notable example is Lucian himself, who has been well named 'the Voltaire of antiquity.' Others undertook to demolish magic by argument; chief among these were the Sceptics, the Cynics, and the Epicureans, i.e. those who did not believe in orthodoxy, and therefore, by our familiar criterion, were not logically driven to accept the reality of heterodoxy. Finally, however, there were also others—especially the Gnostics and the Alexandrian school of philosophy—who, after honest and conscientious investigation, became responsible for the most remarkable development of magic in Græco-Roman times. This is the magic of mysticism in its various forms. Among the most important authorities for this aspect of the Alexandrian school are Porphyrius (*de Abstinencia* and *de Mysteriorum*) and Proclus (*de Sacrificio et Magia*). The theory, as Hubert observes,¹ is one in which the philosophical and the religious elements are still imperfectly differentiated. It is a synthesis of all the known methods of acting on the powers of the supernatural world. It is halfway between religion and ordinary magic, and capable of moving in either direction. The philosophers, of course, emphasized the religious character of the combination, but, as Augustine (*loc. cit.*) saw, and as Porphyrius himself acknowledged (quoted by Eus. *Præp. Evang.* v. 10), they could make no satisfactory distinction between *goetia*, *magia*, and *theurgia*. Their principal criterion was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their *theurgia* became dissociated from religion; its position in society, like that of the *theurgia* of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of magic. The attack on Apuleius was supported more by the various initiations of which he was so proud and the sanctity of the traditions which he invoked than by any specific acts of magic with which he was charged. *Theurgia* did afterwards enter religion, but it entered by the Gnostics, not by the philosophers—and this only in so far as the Gnostics who transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithra gave a religious character to theories and ceremonies that in Pliny's time (*HN* xxx. 17 f.) were described as magic. On the other hand, it was always difficult to distinguish between the Ophite and the regular associations of magicians.²

¹ *Op. cit.* p. 1601.

² Dieterich, p. 149.

Theurgical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philostr. *Apoll. Tyan.* vii. 39). Among the most important works were the *Karà Máγαν* of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his *Pseudomantis*), and the *Πόττων Φαρά* of the Cynic Enomaus. The *Πρὸς Μαθηματικούς* of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (e.g., in his *Alexander seu Pseudomantis*, *Demonax*, *Philopseudes*, etc.), they attacked not only magic, but everything marvellous in either religion or mythology. Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians. All magic is a mere pretence, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (*de Civ. Dei*, xxi. 6); and, indeed, the Church Fathers in general are far from denying the existence and power of magic (Epiph. *Hær.* xxxiv. 1; Tert. *Apol.* 35, *de Anima*, 57; Eus. *Præp. Evang.* v. 14), especially in those early days when it seemed necessary to make the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians and their faith was magic (Iren. *Hær.* i. 13 ff.; Justin Martyr, *Apol.* i. 26). Paganism in any form was magic. For the Alexandrian *theurgi* the difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, *per se*. And the same old distinction carried with it the same old assumption that the one was just as real as the other. The Christians never seem to have realized any more than did their pagan forefathers that the difference between their gods and other people's gods might conceivably be the difference between gods who are and gods who never were. The only way to deal with the pagan gods was to classify them as evil demons (Tatian, *Orat.* viii.). They were just as real as ever; the marvels and prodigies attributed to them were just as real and just as readily believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still nodded and gave signs from time to time, just as they had always done; but that was a *magica operatio* wrought by the demons of the old religion (Iren. *Hær.* v. 28. 2; Eus. *HE* ix. 3). The persistence of this old prodigy of nodding, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous mediæval story of the 'Ring of Venus.'

Of particular interest to the student of magic of this strange period are such surviving treatises as the *Poimandres* of Hermes Trismegistus, *Asclepius sive Dialogus Hermetis Trismegisti*, the *Hieroglyphica* of Horapollon, and the astrological works

of Nechepso and Petosiris.¹ The literature of the magic oracles belongs to astrology as well as to magic. Another important source is the *Tabellae Devotionis*, so many of which have come to light in recent years.²

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert³ gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (*op. cit.*), L. Mitteis and U. Wilcken, *Papyruskunde* (Leipzig, 1912), the *Archiv für Papyrusforschung*, and the occasional reports in Bursian's *Jahresbericht des klassischen Altertums*.

The magic papyri belong for the most part to the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain habitual formulæ are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (*HN* xxx. 1 ff.) of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Osthane. Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phoenician. (2) The second is the Jewish school, descended from Moses, Iamnes, and Iotapes (*Pap. Mag.* p. 755; *Apul. de Mag.* 9; *Ex* 7¹⁰⁻¹²), and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephotes to Psammetichus, a charm of Solomon, or a letter of Pitys, the Thessalian, to Osthane. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brāhmanical elements in this strange compound. Assyro-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence,

and they doubtless encouraged the impression that they were the only depositories of the genuine tradition of real magic. But, as Hubert remarks,¹ they brought no organized system to bear upon the Græco-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, which was presented in Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their god, as we should expect, is frequently mentioned in incantations, especially the different forms of his name (Aoth, Abaoth, Arbathiao, Abriao, Adonai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon² has explained 'Abraxas' as a corruption of the Hebrew benediction *hab-bērākāh dābherāh*, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequent in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so utterly strange, and an alphabet which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of any country as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the *Book of the Dead*,³ a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Græco-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Hebrew archangels. It is equally surprising to see Sabaoth approached with Greek rites. Often special efficacy is gained by issuing a sort of general call to all the pantheon or—which, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturally turns to the foreign religions. It also believes that the plural is more redoubtable than the singular. Hence the more or less chaotic pantheon of magic, especially in its more advanced stages, the symptomatic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. THEORY OF MAGIC.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. But the main ideas, the essential principles from which they all derive and upon which they

¹ *Op. cit.* p. 1513.

² *Greek Papyri in the Brit. Museum*, London, 1898 ff., i. 63.

³ *ed.* E. A. W. Budge, London, 1898, p. cli

² See esp. W. S. Fox, 'The Johns Hopkins *Tabellae Defixionis*,' *AJPh*, Suppl. to vol. xxxiii. [1912] and references.

³ *Op. cit.* p. 1503 ff.

are all founded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (*καρσος*) is a constraint, any form of metamorphosis (such, *e.g.*, as lycanthropy) is a constraint, *fascinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, nailing down, and their opposites. A magic act is a *κατάδεσμος*, a *κατάδεσις*, a *defixio*, a *devinctio*; the removal of its effect is an *ἀνάλυσις*, a *solutio*, and the corresponding verbs are, *e.g.*, *καταδέω*, *defigo*, *λύω*, *solvo*. The language of charms and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

'The object of every magic act is to put beings or things into or take them out of a state in which certain movements, certain changes, certain phenomena must infallibly ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.'¹

1. The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy explains much, it should not be forced to explain all. This would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two different ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not apply it too rigidly. There are cases in which the characteristic features of both methods are more or less traceable. We must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form among the Greeks and Romans is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and *φάρμακα* of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the Greeks and Romans were concerned, the supernatural power had already intervened in the preparation of the given article; and the magician's characteristic method of pluralizing for power is naively illustrated by the rule that in preparing a *φάρμακον* one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, *i.e.* *φαρμακεία*, helps to explain the magician's particular interest in the properties of plants and simples. For a similar reason the alchemist is particularly interested in the properties of stones and gems; some of them are sovereign for certain diseases, if ground up and taken inwardly with the appropriate ceremonial. Primitive medicine is a fearsome adventure for the patient. In rare cases the *mana* inheres in the object as such, but this is generally a secondary conclusion. As a rule, the *mana* is acquired, or merely accidental. Some objects are only conductors of *mana*—which explains why they can be

used for apparently contradictory purposes. Other staple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are selected according to the usual rules—some real or fancied resemblance, especially the association with some god, etc. A certain thing, *e.g.*, is yellow, therefore it is good for jaundice. Such odd names for plants as 'Jove's Beard' or 'Venus' Ears' record associations with gods, and were doubtless originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets.² Sometimes the decision is made from etymology, true or false; the *reseda* owes its power to its name only (*HN* xxvii. 131). The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism.³ As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert³ defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in prefiguring the desired action and result (Tib. i. vi. 53 f.; Soph. *Asas*, 1175)—

e.g., apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (*HN* xxi. 149; Marcellus, xxvii. 128).

The same idea of contact and sympathy creates the familiar rule of magic homœopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *exuviae* of Æneas had a special function and a special significance in the pretended *solutio amoris* of the unhappy Dido (*Æn.* iv. 494 ff.). Without assuming the active co-operation of this principle, we cannot appreciate the true inwardness of the most striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (Tib. i. ii. 46)—which is one important reason why witches were so often accused of haunting the graveyards (Hor. *Sat.* i. 8; Lucan, vi. 530), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (Petron. 63; Apul. *Met.* ii. 21). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (Tib. i. ii. 57 f., with the present writer's note; Macrobius, iii. ix. 2; *HN* xxviii. 18, iii. 65; Plut. *Quæst. Rom.* 61 [p. 279 A]; Serv. on *Æn.* i. 277; Solinus, i; Lydus, *de Mens.* iv. 73), is only the *alias* of the great city with world dominion. The true name, *i.e.* the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been

¹ Dieterich, p. 171 ff.

³ *Op. cit.* p. 1507.

¹ Hubert, *op. cit.* p. 1506.

ceremonially named with the true name of the person whom it is meant to represent.¹

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (*Hippol.* 478 f.),

εἰσὶν δ' ἐμφθαί καὶ λόγοι θελκτήριοι,
φανήσεται τι τῆσδε φάρμακον νόσου,

echoed by Horace (*Epist.* I. i. 34 f.) in

'Sunt verba et voces quibus hunc lenire dolorem
Possis et magnam morbi deponere partem.'

are true not only of magic theory in general, but of the Græco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (*e.g.*, *HN* xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

'Salvum sit quod tango!' ejaculates Trimalchio mously (Petron. 63), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired result must ensue. But which words? Ancient formulæ connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Ephesia Grammata* attributed to the Dactyli.²

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Mere music, *e.g.*, as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Väinämöinen, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stridor* and *stridere*. The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek *γογγρελα*. The *γογγρελα* were specifically necromancers and, as we saw above (p. 271^b), they were supposed to have received their name from the most notable

peculiarity of their magic, viz. 'from their wailing and crying among the tombs.' So, long afterwards, in Græco-Roman times the charms described by *stridor* and *stridere* are very characteristic of *nekyomantia*. If so, and we can hardly doubt it, the inarticulate magic charms connoted by these two words should be just those described as 'wailing and crying among the tombs,' and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stridor* and *stridere* outside the sphere of magic itself are illuminating. (1) One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

'Ecce inter tumulos atque ossa carentia bustis Umbrarum facies diro stridore minantur' (Petron. cxxii. 137); 'aunbus incertum feralis strideat umbra' (Lucan, vi. 628; cf. Stat. *Theb.* vii. 770; Sil. Ital. xii. 600; Claudian, in *Ruf.* i. 126; Ovid, *Fasti*, v. 458; Verg. *Æn.* vi. 492 f.; Hom. *Od.* xxiv. 6; and Hor. *Sat.* i. viii. 40 f.).

By the doctrine, therefore, of sympathy the *stridores* of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) *Stridor* is regularly used to describe the hoot of the *strix*, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the *βιαοθάνατοι*, questing ghosts of those who died before their time (see *HECATE'S SUPPERS*). No wonder the *strix* is the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The *strix* is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on Tib. I. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Protesilaus is a case in point (Roscher, s.v.), also the story of the Lamia (Philostr. *Apoll. Tyann.* iv. 25) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (*Mirab.* 1) which is the prototype of Schiller's 'Braut von Korinth' and Gautier's 'Morte Amoureuse.'

But witches can turn owls whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor.* i. viii. 13-18, speaking of Dipsas, the redoubtable saga with eyes of different colours ('*pupula duplex*'),³ says:

'Hanc ego nocturnas versam volitare per umbras
Suspicio et pluma corpus anile tegi,
Suspicio, et famast; oculis quoque pupula duplex
Fulminat et gemino lumen ab orbe micat;
Evocat antiquis proavos atavosque sepulcris
Et solidam longo carmine findit humum.'

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pamphila in Apuleius (*Met.* iii. 21). She assumes the form of a *strix* to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *succuba*, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very marrow in his bones. Hence it is that the Græco-Roman screech-owl, who, even at her best, as Pliny substantially says (*HN* x. 34), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as

³ See K. F. Smith, in *Studies in Honor of B. L. Gildersleeve*, Baltimore, 1902, p. 287.

¹ E. Rohde, *Psyche*, Tübingen, 1907, p. 61; often in the papyri.

² See E. Kuhnert, in Pauly-Wissowa, v. 2771-2773, and references.

much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the *strix* is a real *strix* or a witch in the form of one (Ovid, *Fasti*, vi. 141)? Indeed, as early as Plautus (*Pseud.* 820; cf. Propert. iv. v. 17) *striges* already meant 'witches' as well as 'screech-owls,' and this designation of what is evidently the Roman parallel of the old Greek *γχοφρεῖς* records a popular belief which showed no tendency to diminish in later days.

2. Sources of magic power. — Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert¹ remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing,² and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian *theurgai*. Here, of course, the characteristic Græco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The *theurgai* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religious-philosophical system permeated with the ideas and ceremonials characteristic of mysticism. Asceticism was recommended, but, above all, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. *de Idol.* 9 f., *Apol.* 35). Indeed, Maria the Jewess was instructed by God Himself.³ Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses'⁴ gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the *Κοσμογονία* (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, i.e. the universal powers. The magician, especially the magician-chemist, derives his power from the acquaintance with the forces of nature. He has established *rapprochement* with the universe; and, as there is also *rapprochement* between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.⁵

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of serious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the con-

struction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown or easily lost. Children, e.g., merely as such, sometimes possess it.¹ Virginity has always been considered an important condition of the power to prophesy (*Geopon.* xi. ii. 4; Plut. *de Defectu Orac.* 46).² The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Demosth. c. *Aristog.* i. 17; Aristoph. *Nubes*, 749; Lucian, *Dial. Deor.* xx. 10, *Dial. Meretric.* i. 2, iv. 4, *Eus Accus.* 21). We have already seen how important they are in the mythology of Greek magic, and this is true of all magic. They are less prominent in the magic of the mystics and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, immemorial magic of everyday life in Greece and Rome they never lost their importance. As a *φάρμακός*, Medea was typical of her sex. The knowledge and practice of *φάρμακela* as a branch of magic were always more or less confined to women.

The distant, the foreign, the strange, the unusual, even the horrible, are all important factors. 'Magic' is a primitive name for anything abnormal. Those who come from distant countries, especially if, like the Brāhmins (Philostr. *Apol.* *Tyan.* iii.), they are also the priests of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magnifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift. Any person with the evil eye is a magician; so, too, the ventriloquist (schol. Aristoph. *Vesp.* 1014; Plato, *Soph.* 252 C; Plut. *de Defectu Orac.* 9). Anything abnormal about one's birth or pedigree is likely to give one magic powers. Persons born with a caul have the gift of prophecy. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catullus, xc.; Xanthus, frag. 28 [*FGH* i. 43]; Sotion, *ap. Diog. Laert. procem.* 7; Strabo, p. 735). Sometimes whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105);³ some—e.g., the Thibii (*HN* vii. 17)—owe it to the possession of the evil eye; others have some particular specialty.

The Ophiogenes, the Psylli, the Marsi, etc. (*ib.* xxviii. 80, vii. 18-16), can kill snakes simply by breathing on them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Corinth could calm tempests (Hesych. and Suidas, s.v. *ἀνεμοκοίται*), and so on. Many similar statements made by Alexandrian authors and others now lost are preserved by Pliny (*HN*, esp. bks. vii. and xxviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked. — But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as characteristic of the world at large as it was of Plato and his

followers (Plut. *de Defectu Orac.* 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Poena, Empusa, the *Μοῖραι*, *Ἀνάγκαι*, and *Βασκούσαι* are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely *ἀνθρώποι*, or emanations. The efficacy, e.g., of the *τυγξ* demands, as Hubert observes,¹ the creation of a demon or of a special god²—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremonial is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he can command. He calls on some appropriate god, e.g., to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite itself is due; hence the theory of the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to act upon and use the supernatural powers either as energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons. Plato himself (Suidas, s.v. *μαγεία*), as well as the average man, attributed to them the success of any magic rite.³ The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of inferiority to the great gods. In fact, as time goes on, the realm of the supernatural assumes more and more the aspect of an Oriental despotism with a thoroughly organized bureaucratic government, all in the hands of demons. There are secretaries and under-secretaries, guards, doorkeepers, messengers—a regular hierarchy of demoniac officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and the occasional person with 'influence,' i.e. the magician; and it is curious to see how soon and easily the latter assumes the methods and attitude of the influential citizen who lives under a similar government in this world. If he wishes to reach the ear of the all-highest at the other end of the line, he addresses the demon of lowest rank, the message is transmitted through the appropriate channels, and in time he gets his answer. Indeed, as in all such governments, the first demoniac underling may be so nearly human and, therefore, so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyrius (*de Mysteriis Aegypt.*), and, in fact, the prominence of it is particularly characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of *γογγύελα* to the latter. The demons were identified with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to

the rank of demons, became messengers of the universal deity (Aug. *de Civ. Dei*, ix. 19), while the archangels, Michael, Gabriel, etc., take rank with the *archontes* of the Gnostics as tutelary gods of the planets (W. Anz, *TU* xv. [Leipzig, 1897] *passim*). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatives, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the *νεκρδαίμονες*, especially those who, like the *βαιοθάνατοι*, died violent deaths or otherwise before their time, or never received proper burial, and therefore cannot rest in their graves.⁴ The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.⁵

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves practised magic (Apollod. i. ii. 1, iii. vi. 8); indeed, Pindar says (*Pyth.* iv. 213 ff.) that it was Aphrodite herself who taught Jason how to 'draw down the moon'; and so the magician would naturally turn to them (Apul. *de Mag.* 31). The preference is, of course, for the *di inferi*—Hades, Demeter, Persephone, Baubo, the Praxidikai, the Erinyes, Gaia, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddess *par excellence* of magic and magicians throughout antiquity, is Hecate-Selene,⁶ the Dea Triformis of the cross-ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and *φάρμακα*. The most famous and dramatic incantations of antiquity are associated with her. The *lunula*, the *tyγξ*, the *selenitis*, the redoubtable *spuma lunaris*, and the *rhombus* are only a few magic objects and properties directly associated with her. The schol. on Apoll. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Musæus was called her son, etc. Next to her, perhaps, especially in the magic papyri, comes Hermes Chthonius, often confused with Hermes Trismegistus (Diog. Laert. *proem.* 7; Porphy. *de Abst.* ii. 16).⁴

But the *Κόσμοι Θεοί*, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the babel of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who are supposed to be identical with him, or of using *Ἰάω* as the name of the god of gods, or *Ἰάω*, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaphroditic form for the same purpose—all these are so many illustrations of the magician's inveterate habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.'⁵ Nothing was left but the name, and even

this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompanying ceremonials had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of pluralizing for power, of summoning from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The *Διαβολή πρὸς Σελήνην* preserved in the *Papyrus Paris*, line 3622 ff., is an interesting example of what was considered efficacious against the wrath and vengeance of *Πόρνια Σελήνα*, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.¹ He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are *ἀγνεία*, 'purity,' ablutions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity² (cf. Tib. II. i. 11 f.; the regular *secubitus* so often referred to by the elegiac poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.³ The costume must be flowing, i.e. without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to).⁴ Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This

is vital. In most cases there are gestures which cannot be omitted.¹ Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Gargilius Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with Selene-Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.²

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard *nekyomantia*. Both are favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.³ It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connexions; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's *mana*. The divining rod,⁴ though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s.v. 'Aquillex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of *dactylomantia* (Amm. Marc. XXIX. i. 29 ff.), the lamps in *lychnomantia*, the basins of water in *lecanomantia*, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the *τύγξ* (Pind. *Pyth.* iv. 213, and often), the famous *rhombus*, *turbo*, or *vertigo*, i.e. the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

¹ Deubner, p. 36, for examples.

² Abt, *op. cit.* p. 292 ff.

³ *Op. cit.* p. 151 ff.

⁴ The examples of its use in classical literature are collected by E. Norden, *Jahrb. für Phil.*, Suppl. Bd. xviii. [1894] 317 ff., 319 n.

⁵ See Abt, *op. cit.* p. 148, n. 3, for literature on this point.

All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of *incubatio*.¹ The purpose of *incubatio* is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner's famous dissertation afterwards incorporated and extended in W. H. Roscher's *Ephialtes: eine pathologisch-mythologische Abhandlung über die Alpträume und Alp-dämonen des klassischen Altertums*, Leipzig, 1901.² Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one's head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the *incubus*, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the *incubus* itself is to a surprising extent determined by the sleeper's surroundings, especially by the material and texture of his coverings. Such being the case, though L. Laistner³ goes too far in his theory that the *Uralptraum*, the primeval nightmare, is the father of all mythology, we may at least suspect with Roscher that Pan's legs were the inevitable result of the style of bed-quilts used by his primeval worshippers (cf. Latinus's method of securing an interview with Faunus in Verg. *Æn.* vii. 81 ff.), and, for that matter, that the *incubi*, *succubæ*, *striges*, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But of all magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. *Ecl.* viii. 74 f.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, e.g., wasting away to death with no apparent cause (Ovid, *Amor.* iii. vii. 29 f., *Heroid.* vi. 21, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Callisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Eus. *Præp. Evang.* v. 12 ff.).

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. *Sat.* i. viii. 25 f.).¹ Occasionally even three figures appear to have been used (schol. Bern. on Verg. *Ecl.* viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (*loc. cit.*) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient.² The value and philosophy of *evuvæ* have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc.³ Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet⁴ (Apul. *Met.* i. 10, *de. Mag.* 53).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator's instructions to the intervening demon in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a *devotio*, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.⁵

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.⁶

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic *rapport*, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development. From being a means to an end they became magic *per se*. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures.⁷ Examples still surviving are 'abracadabra,' and 'sator arepo tenet opera rotas' (see *Thesaurus Ling. Lat.*, s.v. 'Arepo'). The *Ephesia Grammata* belong to the same type (Porphyry, *de Myster.* vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power *per se*—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony,

gesture, or word (*Eus. Præp. Evang.* v. 14). Odd numbers have always been significant (*Verg. Æcl.* vii. 75, and often), three and multiples of three are sacred to Hecate, and certain special numbers like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the operator in acquiring the desired power (*Theocr.* ii. 3, 10, 159). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, the usage of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naïve analogy set forth, for instance, in the old hexameter quoted by Eusebius (*Præp. Evang.* iv. 9)—

Φαῖδρά μὲν οὐρανίοις, χθονίοις δ' ἐναλίγκια χοροῖ,
'dark victims to the powers of darkness, light to the powers of light—

the gods to whom magic habitually addresses itself are the gods of the under world. So wine,¹ honey, milk, perfumes, meal (*Theocr.* ii. 13, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (*Lucan.* vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (*Hor. Epod.* v.; *Philostr. Apoll. Tyan.* viii. 5),² and, for that matter, against any heretical sect with secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with wearisome regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath.' In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it *in toto*. We can hardly expect such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic *per se*.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is,

therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the conditions of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a *devotio*), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The καθάρματα, for instance, the ceremonial remains of the sacrifice to Hecate (see *HECATE'S SUPPERS*), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (*Verg. Æcl.* viii. 102, with the notes of Conington and Forbiger). The *Mavrela Kρονική* (*Par. Paris.* 3095) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

Ἀπέλθε, δέσποτα, κόσμον προπατήρ, καὶ χάρησον εἰς τοὺς ἰδίους τόπους, ἵνα συντηρήῃ τὸ πᾶν. Ἄλως ἡμῖν, κύριε.

It will be seen, therefore, as Hubert observes,¹ that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for these elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the infernal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christian magicians (*Iren. Hær.* i. xiii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Græco-Roman paganism there seems to have been no such parodying of religious rites—above all, no such deliberate and malignant desecration of things considered divine as that of which we hear so much in mediæval magic and which appeared again in the modern cult of Satanism (*q.v.*), as described some years since by Jules Bois² and as utilized for purposes of fiction by J. K. Huysmans.³

Summary.—In so far as there was any real and essential difference between magic and religion in Græco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize those primitive doctrines—notably the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to re-arrange, re-interpret, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Græco-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured means for securing it. When it rose in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been carefully educated and refined, it was still haunted by the old ideas, and generally ended by infecting with them its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but, among other things, they show that, under the circumstances, the old rule of official recognition was eminently wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whether it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sins. If it had clung to the native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent. the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the æsthetic sense, it steadily degenerated into utter absurdity as pretentious and complicated as it was dreary and commonplace.

But, fortunately for us, Græco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and, as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival

of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib. i. v. 41; Propert. iv. vii. 72). Nor was the charge by any means always unfounded. *Pocula amatoria* were a regular specialty of the *lena*, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jerome, *Chron. Euseb.*, 1924; Sueton. *Calig.* 50).

VI. *MAGIC IN LITERATURE*.—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, sciences, and professions, in law, religion, and philosophical discussion, in history, anecdote, and any other record of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Græco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Romantic historians of the Alexandrian age, the Paradoxographers, the writers of *novelle* and tales of marvel, even the practice debates of the rhetorical schools, and, in later times, the throng of professional declaimers for whom those schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and department. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to its æsthetic possibilities than was Homer himself, and he created a tradition of its literary use which not even the semi-Oriental and unutterably dreary fooleries of the papyri were able entirely to destroy.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is *nekyomantia*, calling up the dead to ask them questions. *Nekyomantia* is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. i. ii. 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though by no means necessary, preparation for *nekyomantia*. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is

merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. *Edyp.* 571; Lucan, vi. 728). As we have seen, the literary use of *nekyomantia* begins with the famous passage of the *Odyssey* (xi. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Erichtho's special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. *Nekyomantia* had a long and brilliant tradition in the drama. Examples still surviving are Aeschylus, *Persæ* (the ghost of Darius), and Seneca, *Edipus*, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. *Κλύακες Χαρωνίδαι*, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the world below. *Nekyomantia* was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled *Nekyomantia*, and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, *Sat.* i. viii., and Lucian's *Nekyomantia*.

If we choose to emphasize the literary influence as such of the Homeric *Nekyia*, we can say that it is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the *Aeneid* and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the *Frogs* of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the *Καρδίααις εις Αΐδου*, which practically became conventionalized as a *mise-en-scène* for the presentation of doctrines and opinions. Allied to it are such examples as Horace, *Sat.* ii. v., Seneca, *Apocolocyntosis*, such works of Lucian as the *Dialogues of the Dead*, and Claudian's attacks on Eutropius. The *Epicharmus* of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Sotades used it to a notable extent.

But, while *nekyomantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.'¹ It is first mentioned in surviving literature by Aristophanes, *Nubes*, 750, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mime of Sophron in the time of Xerxes, the lost *Thettale* of Menander (*HN* xxx. 7), the second *Idyl* of Theocritus (founded on Sophron), and the eighth *Eclogue* of Vergil (founded on Theocritus). Certainly, too, Lucian, *Philopseudes*, 14 ff., is a

masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *milieu* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's' story of how his disciple, Glaucias, was saved by the great 'Hyperborean' magician. It seems that Glaucias, a rich young orphan whose father had been dead about a year, fell fairly ill with love for the disdainful Chrysis—a genuine prototype of Jemmy Grove and cruel Barbara Allen. His condition became so serious that the 'Professor,' as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minae had to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of *nekyomantia*, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Hecate came up, how the ghosts flocked around, how, at the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chrysis.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaucias's door, in rushes Chrysis, throws her arms around him, *ὡς ἂν ἐμμανέστερα ἐπύρα* ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon to heaven, down sank Hecate to Hades, and all the ghosts disappeared.

But the 'Professor's' listener is not duly impressed. Besides, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborean magician, one goddess, and one clay ambassador to unite in overcoming the disdain of a girl who, as every one knows, is ready to follow a man to the North Pole and beyond for twenty drachmas.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Nights*. Transformation was Circe's specialty, and the Homeric account of her methods (*Od.* x. 212 ff.) has always remained the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those in which Apuleius (*Met.* iii. 21 ff.) and Lucian (*Asinus* [the common source of both was the lost romance of Lucius of Patras]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fotis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where the transformation is confessedly due to magic. Vergil's sorceress, e.g., says that she has seen the werewolf transformation with her own eyes and that it was done by magic:

'Has herbas atque hæc Ponto mihi lecta venena
Ipse dedit Moeris (nascuntur plurima Ponto);
His ego sæpe lupum fieri et se condere silvis
Moerim' (*Ecl.* viii. 95 ff.).

But in all the famous werewolf stories of antiquity,¹ as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which Æolus gives the bag of winds to Odysseus (*Od.* x. 19 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apoll. Rhod. iv. 1652 ff.). Ovid (*Met.* vii. 160 ff.) gives a full and dramatic description of her charm for renewing the youth of Jason's father, Æson. More famous was her pretence of doing the same favour for the aged Pelias at the instance of his daughters (Apollod. i. ix. 27; Hygin. *Fab.* 24; Macrob. v. xix. 9 f.). This was the theme of the lost *Περφόρμω*

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.¹

Creusa's robe was a famous theme. Euripides (*Medea*, 1156 ff.) merely described the awful effect of it upon the wearer; Seneca (*Medea*, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of *nekyomantia*. As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, *Met.* ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, *Epod.* v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (Hor. *Odes*, iv. i. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a savage wants snake-poison for his arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged agonizingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a *φάρμακον* secured in a special way for a special purpose.

The gathering of herbs is another preliminary of *pharmakela*, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with *Medea* (Apoll. Rhod. iii. 843 ff.; Valer. Flaccus, vii. 323 ff.; Ovid, *Met.* vii. 224 ff.; special emphasis was probably laid on this by Sophocles in his *Ῥιτορῆς*). She went out at night and by the light of the full moon cut her plants with a brazen sickle² held in her left hand and behind her back, i.e. ἀμεινόμενῃ (see *HECATE'S SUPPERS*).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty v. Magic in the court of Love.³ Its first appearance is in the scene between Hermione and Andromache (Eur. *Androm.* 205 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frag. 646 K.; Afran. 378 R.; Lucet. iv. 1278 ff.; Tib. i. v. 43, viii. 23; Ovid, *Med. Fac.* 35 ff., *Ars Amandi*, i. 299 ff.). At some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

ately magnanimous mother of a great conqueror—any great conqueror will do—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, *Conj. præc.* 23, the position is held by the mother of Alexander; the sands of Egypt have lately disclosed the fact that in Satyrus, *loc. cit.*, it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the *Metamorphoses* of Apuleius is a veritable treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given by way of illustration.

The first (*Met.* i. 11 ff.) is told by Aristomenes, and might be called 'The Witches' Revenge.' While travelling about Thes-saly a short time previously, Aristomenes ran across one Socrates, an old friend whom he had not seen for several years. The man was a monument of rags, squalor, and wretchedness; he was also in a constant state of abject terror. He had drifted into a *haison* with a famous but elderly witch named Meroe, and, in fact, had been living with her, more or less perforce, for a number of years. Now he was trying to run away. Aristomenes decided to help his friend to flee the country. He took a room at the inn, made him presentable with a bath and some clothes, the two ate a heavy dinner, accompanied by too much wine, and retired early so as to be off betimes in the morning. Aristomenes barred the doors, and for greater safety pushed up his trundle-bed against them. Socrates fell asleep at once and snored loudly, but Aristomenes lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrible noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomenes still in it was turned upside down. Then in walked Meroe and her sister, Panthia, the one carrying a leathern bottle, the other a sponge and a naked sword, and gathered about Socrates, who was still plunged in his magic slumber. Aristomenes could see all this from beneath his trundle-bed and hoped he had escaped observation, but in vain. Meroe was anxious to kill him at once with the sword, but Panthia thought it better to tear him limb from limb. 'No,' said Meroe, changing her mind, 'let him live, so that, when the time comes, he may cover his friend with a little earth.' With that Socrates' head was drawn to one side, and Meroe drove the sword into his neck just behind the left collar-bone. Then she plunged her arm into the gaping wound, and plucked his heart out. Meanwhile she caught all the blood in her bottle so skilfully that not one betraying drop escaped. When this was done, Panthia pushed her sponge into the wound, with the words:

'Sponge, sponge, born o' the main,
Haste ye, haste ye back again!
When you reach the river-side,
In the water slip and slide;
Water, water, flowing fast,
Bears you onward home at last.'

Then, after heaping nameless insults on Aristomenes, the two women left the room, the doors flew back in place, the bolts shot to (a regular occurrence in witchcraft; cf. Apoll. Rhod. iv. 41 ff.), and all was as before—all but the murdered friend. How was Aristomenes to explain that in the morning? He tried to escape, but the porter was obdurate and even suspicious. Then he went back in despair and attempted to hang himself from the window-frame. But the rope broke, and, what made it more horrible, he fell on the corpse—whereat the corpse leaped up in high dudgeon at being so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and, when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Socrates was as pale as wax, but he ate heartily, and then, at the suggestion of Aristomenes, knelt down on the bank of the stream to drink. As he leaned over, his neck gaped open, and a sponge, followed by a few drops of blood, dropped out, fell into the water, and was swept away. In a moment he was dead. So then and there Aristomenes dug a shallow grave and 'covered his friend with a little earth.'

The second story (*Met.* ii. 32 ff.) is unique as a satirically exaggerated illustration of what can be accomplished by the doctrine of sympathy when it is really given a fair chance. During his stay at Hypata young Lucius, the protagonist of the book, was entertained by his father's old friend, Milo. The rest of the family consisted of Milo's wife, Pamphila, who was a redoubtable sorceress, and Fotis, a beautiful slave-girl, with whom Lucius immediately fell in love. One night he went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, the dim shapes of two great burly figures jostled up against him on either side. Thinking they were thieves, he leaped back, whipped out his sword, and ran them both through. He was barely awake the next morning, with a vague but awful memory of what had happened, when all the magistrates appeared, full of fear and office, and arrested him for murder.

The trial scene, which begins at once, is a masterpiece. It

that Rūhā is Venus, and that Adōnai, the god of the Jews, is Šāmes, the sun (on the Mandæan names of the planets cf. *MS*, p. 45). The observance of Sunday was not as yet a Mandæan practice, though it later became obligatory (R 56. 12; cf. *MR*, p. 90, and below, § 32).

An account of the baptism of Jesus in the Jordan is given in the *Sidrā d'Yahyā*, which, however, narrates the incident in the following way: the Baptist is at first unwilling to perform the ceremony, and does so only after he has received from heaven (Abatūr) the written mandate, 'Yahyā, baptize the liar in the Jordan.'

17. The relation of the Mandæan religion to Judaism.—Besides the OT characters already mentioned, several others are named in certain sections of the *Genzā*, but are of no importance in Mandæan theology. Virtually all of them are enumerated below.

It is curious to note that in one passage (L 18 f.) the promise is made to Adam that, 'on the great Day of Resurrection' he and all his race will rise again and be transported to his own land, while in the same tractate, immediately before, the soul of Adam is said, quite in keeping with the Mandæan view, to have ascended to the 'house of the Life.' The idea of a resurrection from the dead is altogether foreign to Mandæan theology, so that the passage about the promise must have been carelessly transferred from a Jewish or Christian-Gnostic work. The Jewish materials in the *Genzā* were drawn, not directly from the OT, but from Aramaic sources, including some of a Gnostic character. The ark of Noah (Nā) ran ashore—as the Targums also tell—on the mountains of Qardū (Gordyāa, i.e. Kurdistan); Abraham and Moses were prophets of Rūhā; King Solomon, like King Jamšid in Iranian legend, held the demons in subjection until he ceased to give thanks to his Lord, and let himself be adored; the world-conflagration which had once annihilated the human race before the Deluge was kindled by 'the angel Daniel, to whom was given power over fire,' at the order of 'Ēl-rabbā and Rūhā (*MR*, pp. 129 f., 123).¹

The assumption that the Mandæans were originally a Jewish or Judæo-Christian sect (Hilgenfeld, Wellhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Judaism was not obtained from oral tradition; on the contrary, they found the names in written documents—found them, moreover, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Mēšā, Miriam as Miryai, Abraham as Abraham, Israel as Usriēl, Jacob as Yaqif; Sabbath appears as *Saftā*, *malākhē*, 'angels,' as *malikē*, 'kings,' and Benjamin actually as *bnē 'Amin*, 'the sons of Amin.' The inevitable inference is that the Mandæans had been throughout complete strangers to the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandæan literature there is no evidence to show that the Mandæans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in their prayers. Like the Essenes (*g.v.*), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life characteristic of the Essenes, while their views regarding the planets are quite inconsistent with such a practice as that of according

¹ The *Genzā* refers also to the Iron Mountain (L 17. 5: *ṭarā d'parēlā*), which, though not noticed in the OT, is mentioned in the Targum of Jonathan in connexion with the fixing of the eastern frontiers of Palestine in Nu 34⁸⁻¹¹ (also in Josephus, *BJ* iv. viii. 2 [§ 454, ed. Niese]).

an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandæans turned towards the north, where the exalted king of light sits upon the throne, while the common Jewish view (held also by Elkesai) is that the evil spirits and their chief Sammāel (from *smāl*, 'the left,' i.e. the northern one) have their abode in that very region of the heavens.

18. Conjectures regarding the origin of the Mandæan religion.—The relation between the Mandæan teachings and Manichæism (*g.v.*) cannot be fully discussed here. The parallels have been collected by the present writer in *MS*, pp. 223-228 (cf. *Elchasai*, p. 142 f.), and to that list should be added the correspondence between a passage in the Manichæan narrative regarding the awaking of the first man to life (as quoted by Pognon, *Inscr. mand.*, p. 130 f., from Theodore bar-Khōnī's *Book of Scholia*), and one in L 46 f. In the verifiable parallels the Mandæan versions seem to be secondary, and we must infer that both sides are indebted to the same group of sources. A large proportion of the material common to both is explained by the mass of Parsi ideas in the Judæo-Christian groundwork of the doctrine of the king of light on the one hand, and in the theology of Mānī on the other. Doubtless, too, the Mandæan redactors introduced into their tractates a number of fragments from Manichæan documents unknown to us (cf. *MR*, p. 198 f.). The religious teachings of the two faiths, however, were essentially distinct in character; the fundamental dualism of the Manichæan system—a doctrine that finds a soteriological design even in the creation of the world, and involves an ascetic mode of life—is far removed from the Mandæan view. It may also be noted that, according to a passage in the *Kitāb al-Fihrist* (ed. G. Flügel, Leipzig, 1871-72, p. 328, line 5), the father of Mānī, shortly before the latter's birth, joined the Mughtasila, a sect akin to the Mandæans; this point, however, need not be further discussed here (for fuller details cf. Brandt, *Elchasai*, p. 137).

On the other hand, we cannot place the slightest reliance upon bar-Khōnī's statement (in Pognon, pp. 154 f., 224-227) that the sect of the Mandæans was founded in the land of Maisān by a beggar named Ado, of Adiabene: 'Companions came to him, and there they played on cymbals, as beggars are accustomed to do.' Some of the names of Ado's relatives, as given in the context, are also borne by well-known figures in the Mandæan religion, while most of the others would at least be quite suitable for such. Nöldeke is doubtless right in his conjecture that Ado is simply a corruption of Adam—*oḏ*] from *soḏ*]. Here, in fact, we recognize a blunder on the part of the heresiologist, due to his habit of regarding alien religions as sects, and tracing each to a distinct founder.¹

The religious teaching of the Mandæans must, however, in the opinion of the present writer, be explained in other ways than those suggested by the theories discussed, and the view to which our critical examination of the *Genzā* leads us will be found to do justice to all the data, and has at the same time the merit of simplicity; moreover, it derives some degree of support from what can be ascertained regarding the age of the Mandæan script.

19. Age of the Mandæan script.—Comparing the Mandæan written characters with the various alphabets collected by Julius Euting in his *Tabula scripturæ aramaicæ* (Strassburg, 1890; the work contains also the Pahlavi script), we find that, while they are somewhat like the characters employed in the Nabataean inscriptions of Sinai, dating from the 2nd-5th centuries A.D., they

¹ On bar-Khōnī's designation of the Mandæans as Dostæans see especially *PRE³* xii. 157, 159 f.

approximate more closely to those found in the inscriptions of El-Hajr, written in the 1st cent. A.D. (in these comparisons we must, of course, disregard the hair-strokes due to the cursive mode of writing). In particular, the circle by which the Mandæans represent *N* is closely matched by the corresponding characters in col. 53 of Euting's *Tabula*, and the *N* of an inscription at Basra, dated 17 B.C., is similar in form to the Greek minuscule *σ*.¹ Thus, as the Mandæan written character dates from about the beginning of the Christian era, and as there is no ground for supposing that the Mandæans had previously used a different alphabet, the rise of the Mandæan literature cannot well be dated earlier than the 1st cent. A.D.

20. The baptistic nature-religion.—The idea that the rivers descended from the celestial world by way of the mountains in the distant north and that their waters impart fresh energies to the pious who bathe in them—a naturistic element of belief retained by the Mandæans amid all the thoughts and fantasies subsequently acquired—was probably inherited from their ancestors. In explanation of that belief we would advance the conjecture that this Semitic people had not always lived among the lower courses of the rivers, but at an earlier period had dwelt in a locality much further north, and nearer the sources—in a district from which they could see, upon their northern horizon, huge mountains towering to the sky (cf. *MR*, pp. 69-72; *MS*, pp. 213-217). We scarcely need to explain how these facts would provide a basis for the belief in question, and we can easily understand, too, how a people, if driven from their native region and compelled to endure a miserable existence in their new abode, should seek, in conformity with the practice of their ancestors, i.e. by means of immersions, constantly repeated, to absorb the virtues which the river brought from the higher world to the low-lying plains. We do not claim, of course, that this is more than a surmise, yet we would draw attention to the fact that there are linguistic phenomena which might be adduced in its support. Thus the Syriac idiom used in Kurdistan and on Lake Urmia is found to agree with the Mandæan dialect in the formation of the infinitive and in not a few features of the pronoun—a fact which Noldeke (p. xxvii) recognizes as 'of great importance.' If, however, we set the theory aside as over-hazardous, we must be content to suppose either that the very simple religious ceremony of ablation had prevailed from primitive times among the country people of Lower Babylonia or that by some means or another it had spread to that district from Syria (cf. Brandt, *Elchasai*, pp. 151, 154).

21. The adoption of Gnostic tractates.—The Mandæans, then—though not yet bearing that name—practising their religious ablutions, and sharing the general Semitic belief in demons, were living in Southern Babylonia at a time when the intermingling of religions had proceeded so far in the districts in which the Aramaic and Persian languages were spoken that it had at length evolved those creations of theological fantasy commonly called Gnostic, with which, however, we must here combine the Manichæan teachings and, in great part, the substance of the Pahlavi books (*Bundahishn*, etc.). The priests of this baptistic tribe were not, intellectually, sufficiently advanced to share in the reflective activity which strives to interpret the objects of faith and the influences of religion as cosmic entities and occurrences; nor

¹ Noldeke (*Mand. Gram.*, p. xxxv) notes that the Mandæan script bears a fairly close relation to the earliest form of Pahlavi, especially the so-called Chaldaeo-Pahlavi, but its conformity with the Nabataean inscriptions mentioned above seems to the present writer much more striking.

had they much appreciation for explanations of the world-process by pre-suppositions which purported to guarantee future salvation to all who acted in accordance with them, although this salvation itself and its mythological elements, the ideas of the gods and all their imaginative embroidery, were quite of a kind to make a powerful impression upon them. In reality it was into the hands of a class whose learning was confined to a little reading and writing that 'Gnostic' tractates fell, and these texts, written in a foreign language, and, therefore, to be read only with difficulty—documents coming from afar, dealing with things of a remote past, and unveiling the world of the gods—wrought upon them with the force of oracles, revelations from above, records of a superhuman wisdom. Accordingly, the priests adopted the tractates as their own, translating them, of course—at first orally, no doubt—into their own dialect. Conceivably, indeed, it was the desire of having these precious revelations in their own language that prompted them to draw up an alphabet of their own; and it is also possible that it was the translators themselves, and not their descendants in a later generation, who came to believe that the documents were from the first meant for them and their people, that the contents had been revealed to their forefathers, and that the 'Mandâ'yê' addressed therein were none other than these ancestors and themselves.

22. The rise of Mandæan theology.—It seems beyond question that the earlier generations of Mandæans who had a knowledge of writing (covering, we should estimate, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comported in some measure with their own religious sentiment—as records of revealed wisdom; in their backward intellectual condition, moreover, they could not fail to be impressed with matter so unfamiliar. In the work of translation, however, as well as later in transcribing and renewing dilapidated texts, they themselves learned the art of literary composition. Thus, if they found that these strange documents made no mention of, e.g., 'the Jordan,' the bath of immersion, or anything else that they could have wished to discover in them, they added what was required, while fragments of defective MSS they either inserted into others or put into such order as they could devise. From translation they advanced to redaction, and from redaction to independent composition. Such, then, was the genesis of the Mandæan literature; it consists essentially of borrowed matter. The circumstance that very diverse cycles of conception had a place in this material stimulated the Mandæan scholars to attempt the task of combining one with another, and of mediating between the different views. This, again, explains the development of the Mandæan theology, and it also accounts for the confusion that prevails in it.

The Mandæans never had an orthodox system of theology. Their authors busied themselves with the motley materials that had accumulated in their minds only with a view to reproducing the narrative of the creation of the world and of the human race in a fresh and improved form; and the one central thought that guides all their efforts is the necessity of explaining the harsh lot of the devout Mandæan in his earthly circumstances, and of giving him the strongest possible assurance that his soul will return again to the bright and joyful realm which is its true home.

23. The religious beliefs of the Mandæan writers.—Amid all the conceptions and the varied views with which the Mandæan writers became familiar, and notwithstanding all the reverent interest with which they received the new materials, they never

surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion underwent a process of refinement in conformity with the development of their theology.

From the heterogeneous Gnostic trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandæan religious belief, which can be traced without difficulty in most sections of the *Genzā* writings. The main features of that belief are as follows. Far above, beyond the heaven of the planets, there is a world full of light and splendour, where dwell the Life (as the supreme deity) and other divine beings, or where, according to another phase of doctrine, the 'exalted king of light,' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandæan community. Far beneath, again, is the world of darkness with its black waters. Part of it has been 'thickened,' brought into a solid state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains; and thus the Mandæans, by bathing in the 'living' water of the rivers, maintain their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land. Here, meanwhile, evil spirits reign, akin to the powers of darkness now immured—the deities of other peoples and other creeds—and it is they and their creatures or servants who make life a torment for the Mandæans. Hence the believer waits with earnest longing for his salvation, i.e. his deliverance from this earthly existence.¹ At the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards through the celestial spheres to the world of light and of the Great Life.

24. The Mandæan typology.—The soul of the Mandæan, until the hour of its deliverance, is sustained by the symbolism of the ritual elaborated by the priests. Confessors of the true faith are plants of the world of light or of Mandā d'hayyē (R 89 f., 220, 15 f., etc.), and they are summoned to their most important religious duty in the words *Pārtān yardnā* (R 17, 20), 'Make the river sprout' or 'blossom' (*MR*, p. 99 f.; *MS*, p. 163, note). What is implied here is that the water streams from the world of eternal life and infuses life into those who bathe in it, so that they may be said to spring from the river like plants. They were also required, however, to mark their brow with the living water, and likewise drink of it (the draught is called 'gushing'), partake of a loaf (the loaf is termed *pehtā*, 'opening,' 'unlocking'), etc.; and those who take part in these ceremonies have a share in the benign fountains of the better world—in the great baptism in the heavenly Jordan, in the gushing of radiance, in that treasure of the Light which is to be opened. The liturgical recitations (*drāšē*) were meant to represent the beams (*drāšē*) of splendour which would flow from the house of the Life to meet the soul as it sped upwards from the earth (*MS*, p. 49), etc. The ultimate ground of trust, however, was always the ceremony of immersion; thus in R 18, 13 we read:

'Your token is the token of the living water, by which you ascend to the place of the Light.'

At the ceremony of immersion—originally this itself was the sign—it was the practice, as early as the period of the *Genzā*, to utter names, viz. those of the Great First Life (R 196, 8; or of the

¹ The Christian belief in a redemption from spiritual evil, from the dominion of Satan and the power of sin, is quite foreign to Mandæan thought.

king of light, R 17 f.) and Mandā d'hayyē (*MR*, p. 104 f.).

To their own rite of immersion, whether performed, as was usually the case, by the individual himself, or, as on feast-days, with the co-operation of a priest, or administered to children, the Mandæans applied the term *mašbutā* (מַשְׁבּוּתָא, presumably for מַשְׁבּוּתָא; the odd pronunciation given by Siouffi, *masouatta* [French], could be approximately correct only for the plural form of the noun), a word which certainly comes from the Sem. verb שָׁבַט (the sound of *y* is lost in Mand.), which the Mandæans use exclusively in connexion with the religious practice in question (cf. § 38). For Christian baptism, on the other hand, the writers of the *Genzā* persistently employ the term used in the Syrian Church, *ma'mōdūtā* (מַמְדוּתָא = מַדְּבִיחַ) and the Afel forms of מִדְּבִיחַ. They condemn and vilify the Christian ceremony because it is performed not in 'living,' but in (or with) 'cut-off' water.

25. Kuštā.—In the ethical and religious sections of the Mandæan literature much is said about *kuštā*, 'straightness,' 'rectitude,' 'veracity.' In the ritual the ceremony of immersion included a gesture called 'putting forth *kuštā*,' this being identical with what is described in several texts as a stretching out of the hand 'from the bath of immersion,' or (after the performance of some other religious duty) 'before Mandā d'hayyē.' The gesture was made with the right hand, and it corresponds to the clasp of hands with which the soul would be welcomed by the Life and other great celestial beings when it reached the world of light. It was an outward manifestation of the upright mind and of loyal devotion. Further particulars regarding the religious ceremonies, which were constantly being increased and rendered more complex by the priests, will be found in § 33 below, and more fully in *MR*, pp. 96–120, 221–226.

26. Ceremonial purity.—In this period the idea of purity was recognized in the sense of a relation to the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it ('Hibil zīwā, pure Mānā'; L 116, 17, 'the Jordan of the Life, from which I have taken purity'). The laws already mentioned regarding food came to the Mandæans through the medium of the ethical code in the doctrine of the king of light, as did also the injunction that husbands and wives should 'wash themselves with water' after cohabitation, and women after menstruation. It was only later that the commandment of ablution was extended to many other occasions of life (Siouffi, cited in *MR*, p. 95 f.).

27. Prayers.—Among the Mandæans prayer was known as 'compassion,' or 'petition and praise.' According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judæo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (R 300) prayer in the night-time is actually forbidden. We read also of a 'man' who (like the archangel Michael among the Jews) receives the prayers, and stores or preserves them in the treasure-house of the Life (R 221 f., 300). In the later redaction of a regulation in the ethical code the believer is commanded to ask a blessing upon flesh-food before eating (R 68; cf. *MR*, p. 94). The priests drew up short forms of prayer for these ordinances; but for protection against distress and danger they regarded prayer in the proper sense as less effective than a long series of recitations from the ancient books.

28. The masseqtā.—The ceremony termed *mas-*

segtā, 'mounting up,' 'ascent,' consists exclusively of such recitations, and is designed to help the souls of the departed if in their journey or flight to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandæans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured as a place where the adherents of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being *matrā*, or *matartā*, i.e. 'ward,' 'place of custody,' 'prison.' Some of the descriptions contain features taken from Parsi-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as Mithraic in Origen, c. *Cels.* vi. 22; cf. *MS*, p. xii), or the guardian spirits who come to meet the soul, and—in the latest *Genzā* texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (*MR*, p. 195 f.; so, in the Vatican *Divān*, beasts of prey lie in wait for the soul). The souls of the devout pass all the wards without molestation, because, according to the tractates of the *Genzā* which describe the ascension (x. R and iv. L), they give the 'name and sign' that they have 'taken from the waves of the water,' i.e. because they profess the Mandæan faith and thus show that they belong to the world of light. In place of this name and sign, however, the hymns of the *Genzā* (about 120 pieces), all of which find their themes in the destiny of the soul, its imprisonment in the body, its release, and its journey home to the world of light, insist rather upon the necessity of good works; with these was probably associated a devout spirit (cf., e.g., L 101. 3: 'I loved the Life, and Mandā d'hayyē dwelt in my heart'). It is but seldom, however, that we find in these hymns even a few words referring to the religious practice of the Mandæans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The *massegtā* for the dead is in reality a Mandæan imitation of a corresponding ceremony in the Parsi religion. According to Parsi doctrine, the soul, after leaving the body, is received by its own good thoughts, words, and works—which assume the form of a beautiful maiden—and by them is led across the narrow Chinvat bridge, or guarded against other objects of fear. Now the hymns in the *Genzā* are simply *massegtā* hymns, i.e., they were composed for use in the Mandæan ceremony. They are the work of Mandæan writers, as cannot be doubted in view of the matter incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Parsi ceremony and the Parsi texts.

29. *Mandæan poetry*.—Although the majority of the Mandæan hymns can lay little claim to real poetic merit, they show at least that the Mandæans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them seems to be one of sincere and genuine emotion. As a specimen of the *massegtā* hymns we give here one of the most pleasing (L 89 f.); it should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in the body and in its earthly conditions generally—an entanglement that is dissolved at death.

1. 'How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

I fly and I go. At the ward of Šameš ['the sun'] I arrived.

I utter a call: "Who taketh me past the ward of Šameš?"

"Thy merit and thy works and thine alms and thy well-doing take thee past the ward of Šameš."

Strophes 2, 3, 4, and 5 are all mere repetitions of the first, except that for Šameš they substitute respectively the moon, fire, the seven, and Rūhā. The hymn then proceeds:

8. 'How I rejoice! How my heart doth rejoice! How I

rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

I fly and I go. I arrived at the water-brooks. As I arrived at the water-brooks, the radiant beam (שֶׁמֶשׁ וְיָרֵךְ) came forth to meet me. He took me by my right hand and led me through the water-brooks. They [the celestial beings appointed for the purpose] brought splendour and clothed me with it; they brought their light and wrapped me round with it. Life reclined upon life, and found its own life; its own life it found.'

Here follow a few sentences composed of ancient formulae; their construction and, in part, their sense are difficult to make out.

30. *The Mandæans under Sasanian rule*.—The Mandæans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandæan hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half-century of our era, when a number of rapacious Jewish satraps, as related by Josephus (*Ant.* xviii. ix. 1 ff. [§ 310 ff., ed. Niese]), provoked the whole population to an outbreak against themselves and their compatriots.

The Sasanians persecuted the Manichæans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandæans. The latter, however, were sometimes ill-treated by Christian monks who went to them as missionaries. In the *Genzā* (xvi. R) we find an account of the Roman Catholic clergy and worship, and (i. and ii. R) we are told that the attempts to convert the Mandæans were not always carried out 'with sweetness'—with discourses and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 28. 16):

'When He [the 'Saviour Jesus'] compels you, say, "We are thine"; but in your hearts acknowledge Him not, and deny not the word of your lord, the exalted king of light; for hidden things are not manifest to the lying Messiah.'

31. *In the period of the Arabian invasion; migration*.—Then (c. A.D. 650) came the incursion of the Muslim Arabs, and the collapse of the Sasanian empire. Certain late portions of the *Genzā* make reference to the gate and the demons of the planet Mars, 'Nirig [Nergal] who is called the Arab 'Abdalā.

'The whole earth is made subject to his throne'; to his followers all things fall a prey; 'day after day they make war and shed blood, and are ever an oppression to the tribe of the souls, and to the great family of the Life'; 'and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life. . . . In their distress the devout Mandæans comforted themselves with the thought that the wicked 'Abdalā had fallen into one of the infernal prisons, where his followers take him to task, asking why they now suffer torments in the realm of darkness while 'the servants of the alien [i.e. Mandā d'hayyē], against whom we drew the sword, mount up to the world of light' (*MR*, p. 162 f.).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandæans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on the Euphrates and the Tigris, had for a time ostensibly adopted Islām, or that they concealed themselves among the adjoining marshes.

32. *Restoration of the cultus*.—Tractate xxvii. R may be interpreted as a summons to a meeting of the Mandæan communities either on the banks of the rivers of Khūzistān or (after peace had been restored) in their old home; it is a manifesto in which 'we, the Tarmīdās,' turn with prayer and

adjuration to the Mandæans of both sexes to urge them to fulfil their religious duties. The people are to come on Sundays to the temple (lit. 'dwelling'; down to modern times it was nothing more than a small house with gabled roof), where, in becoming order, they are to stand praying behind the Tarmidās, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the *Genzā*, and is a documentary witness to the rise of an ecclesiastical organization among the Mandæans. In earlier texts the term *tarmidē* (for תרמיד), like the corresponding word *μαθηταί* in the NT, means simply 'believers'; but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as *habsabbā* (ܠܚܒܫܒܒܐ; cf. Peshitta of Mt 28¹), was adopted by the Mandæans from Syro-Christian usage, though, of course, through the medium of documents of whose origin they were ignorant. The manifesto urges the due observance of the day (*MR*, pp. 88, 90). The religious ceremonies enjoined are those of old: immersion, performed by the individual himself or applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the *tarmidē*, 'priests,' are still hardly distinguishable from the *malʿānē*, 'teachers,' reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonial with rites requiring the co-operation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conjoined them with the simple ceremonies of earlier times. Even towards the close of the period of the *Genzā* as attested in the latest sections of that work (cf. *MR*, p. 104), we find, besides the rite of marking the forehead with water from the river, a sign made with oil; a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of 'living' water was duplicated, being taken once from the individual's own hand and once from the priest's bowl (*qanṭā*). The priesthood ventured even to institute, in addition to the ordinary communion-bread, a host of higher order, the 'superior *pehṭā*,' which was reserved for themselves and the *Salmanās* (see below). They also instituted a sacrament for the dying (cf. *MR*, p. 82), and, in addition to the *masseṭā* of the dead, one for the living. The latter was an eight days' ceremony, and conferred upon the person concerned the title of *salmanā ṭabbā*, 'blessed perfect one,' as well as priestly rank; he was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandæan as time and opportunity permitted—every day, morning and evening (Le-Gouz, *Voyage et observations*, p. 301), or only on Sundays and feast days, and the days preceding them (Siouffi, *La Religion des Soubbas*, p. 83)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerged the layman three times; thrice, too, he made the sign upon the recipient's forehead, and thrice, with his own hand, gave him water to drink (*Qolastā*, fol. 9. 32 ff.). Further, the first immersion of children now assumed the form of a

baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. *MR*, pp. 221–224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandæans worship the cross rests upon references in the *Narratio* of Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground close together and cross-wise, and that he renders homage to this symbol. The structure is termed 'beams of splendour,' and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Mandæans in Bagra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed 'la sacrifice de la poule' on the 2nd of November 1665. Since, however, the Mandæan religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Siouffi, the 'superior *pehṭā*' was made but once a year, and was in the form of baked wheaten cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in the temple, presumably with a view to ratifying its slaughter as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Mandæan cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also to a pupil) was *sgandā* or *skandā* (cf. *MS*, p. 169), and to a priest, *tarmidā*, while a high priest bore the Persian title of *ganziḇrā*, 'treasurer.' Each priest had his own dishes and table, and partook of food and drink apart from the others; but his wife, by a special consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Mandæan cult was carried furthest in the Persian settlement. Besides the title of the high priest, the names of several articles of priestly attire (*rustā*) are Persian words—*tāgā*, *kanzālā*, *pandāmā*. The priest's seal-ring (Siouffi, 'le chaumiavar') bears the device, 'Name of Yāwar ziwā'; had the inscription originated in Babylonia, it would have been 'Name of Mandā d'hayyē.' Again, while the *Narratio* of Ignatius (p. 23) shows distinctly that the Mandæans of Bagra knew nothing of the practice of confessing to a priest, Siouffi's informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is assured of the remission of future penalty; but after the third time further transgression can be expiated only by certain good works. The passage of the *Genzā* to which appeal is made in support of this ordinance simply enjoins that the devout shall thrice 're-erect' apostates or transgressors before casting them out of the community.

36. Final redaction of the *Genzā* writings.—Persian loan-words are found even in the oldest Mandæan texts, but names like Yāwar ('friend,' 'helper'), Sām, and Bahrām (Verethraghna) could

hardly have come into vogue among the Mandæans except on Persian soil. When, accordingly, in many tractates we find these names taking the place of the undoubtedly more ancient Mandā d'hayyā, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called Sām, Yāwar, etc., it seems highly probable that most of the tractates in the *Genzā* underwent their final redaction, i.e. attained their present form, in the Persian province.

37. Religious decadence; obsolescence of the language.—By the time when the 'Abbāsid kalifs had established peace and order throughout their domains, the Mandæan religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place—as in the writers of the *Drāsē d'malkē* and the *Sidrā d'Yahyā*—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and would again behold its primal abode was no longer a well-spring of sacred lyric; the Mandæan had, in fact, become familiarized with his faith, and was now anxious simply to bring his store of ancient hymns into order, to keep it intact, and to use it properly. It was in this period that the Mandæans gathered their writings into collections, and composed the liturgical directions or regulations comprised in the *Qolastā*, the *Marriage Formulary*, and the *Paris Dīwān*. Moreover, living, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their ancestral dialect, and Arabic, which had made its way into these districts, became their vernacular, though Mandæan still maintained its place in religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the *massegtā*, indeed, the recitations constituted the main element, and, according to Siouffi, this ceremonial, designed to succour the departed, lasted for seven days. Since, however, the teachings of the *Genzā* required all believers to engage in such recitations, the priests endeavoured, by instructing the young, to confer upon the laity the ability to read and, as far as possible, to understand the texts, although their own learning was doubtless almost wholly confined to a knowledge of the liturgy and a traditional understanding of their own language.

38. The Šābians of the Qur'ān; Mughtasila and Mandæans.—In the Qur'ān we find three passages (ii. 59, v. 73; cf. xxii. 17) in which the Jews, the Naṣaræans (Christians), and the Šābians are assured of religious toleration. The famous Muslim scholar al-Mas'ūdī, writing in the 10th cent., speaks of Chaldean or Babylonian Šābians 'whose remnants live to-day in villages among the swamps between Wāsiṭ and Baṣra,' states that in their prayers they turn to the pole-star and Capricorn, and describes them as 'those who wear girdles' (S. de Sacy, *Notices et extraits*, VIII. i. [1810] 132 ff.). The Mandæans turned towards the north, and wore the girdle. Moreover, the *Kitāb al-Fihrist* (p. 340, l. 26) states that the Šābians of the marshes are the Mughtasila, a word meaning 'those who wash themselves,' and it also declares that they wash all their food—a practice which, so far at least as flesh-food is concerned, is also enjoined in the *Genzā*. To these Mughtasila, however, the same writer ascribes a doctrine of dualism—a thing quite unknown in the Mandæan documents; and he also states that many of them still worship the stars, while, on the other hand, the guarantee of toleration in the Qur'ān assumes that

the Šābians believe in One God (and in the Last Judgment). To account for these references to the Mughtasila there seem to be two alternative hypotheses at our disposal: we may suppose either that the Šābians of the marshes were descendants of that group of originally heathen baptists of Babylonia which did not share the religious development of the Mandæans, or that some of the Mandæans had taken refuge from the Arabs in the swamps (§ 31), and there, while adhering to their custom of bathing and washing, had adopted new and alien doctrines. For further particulars regarding the Mughtasila cf. art. ELKESAITES, vol. v. p. 268.

The passages in the Qur'ān and the name 'Šābians' would apply most approximately to the Mandæans. The Mandæans, in speaking of their practice of immersion, always employ forms of the verbal root *ṣabā*, as, e.g., in R 286. l. בִּנְיָאִין וְנִנְיָאִין, 'who immerse their sons and their daughters'; by their Arab neighbours they were termed Ṣubba down even to recent times, and in European accounts dating from the 17th cent. they were called 'Sabbī,' 'Sabbēi,' 'Sabi,' 'Sabæi'—the termination being that of the Ital. or Lat. plural. The name may formerly have covered the Mughtasila as well, and the latter possibly also came under the references of the Qur'ān. As regards the Mandæans, we have already seen that, as an outcome of the doctrine of the king of light, they had become monotheists, and that they believed in a future retribution.

39. Ostensible Christianity of the Mandæans.—The toleration extended to the Šābians by no means secured for the Mandæans a condition of life satisfactory in every respect. In course of time—perhaps more than once—circumstances arose in which they thought it better to be regarded as Christians. As, however, besides the name of 'Mandāyā,' they had also adopted that by which the Christians were known, viz. 'Nāsōrāyē'—in the *Genzā* the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Šābians dwelling in the marshes, or if they hoped to evade a tax imposed specifically on the Šābians, they would probably assume the Christian name without misgiving. According to Ignatius a Jesu (*Narratio*, i., a chapter written by himself), the Mandæans of Baṣra believed that Muhammad had granted them a document guaranteeing their safety, but that his successors had not respected it. Ignatius also states that the Mandæans were formerly united with the Chaldean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandæan communities had at one time joined hands with the Church—though only for a while—it will be quite correct.

The Arabian writer, Ḥamza Isfahānī (belonging, like the two Arabian writers already cited, to the 10th cent.), affirms that the true Šābians, i.e. those whom the Qur'ān has in view, were heretical Christians, 'living between the desert and the swamps.' This opinion may have arisen from a fusion of vague reports about the Mandæans and the Mughtasila, and it might possibly be taken as indirect evidence that as early as the 10th cent. the Mandæans desired to be regarded as Christians. On the other hand, a Muslim might quite well think of all the Šābians, by reason of their baptistic practices, as belonging to the Christian body.

40. The Mandæans as 'Christians of St. John.'—The Portuguese monks through whose reports the existence of the Mandæans was first made known in Europe asserted that they were descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1622), and

from that time, in treatises and text-books of Church History, they have been referred to and regarded (on the ground of Ac 18³⁵ 19^{1a}) as Christiani S. Ioannis, 'Christians of St. John.' It was not without some support from their own side that this designation gained currency. A number of Mandæans who had transferred their allegiance to the Roman Catholic Church visited Rome in the period between 1652 and 1660, and Abraham Echellensis, who cultivated a most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves 'Nasāræans of Yahyâ'—though in Arabic only, the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as *krisṭiānê* (R 55. 14, 282. 12).

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandæans, but at length, when the final additions and a number of titles to the writings of the *Genzâ* came to be formulated (R 57. 23, 188. 26, 213. 10, 218. 23), a period opened in which the Mandæans turned to the figure of the Baptist with intense interest, and it is worthy of note that his old name Yôhannâ (which they pronounce Yûhânâ) was now expanded to Yahyâ-Yôhannâ, or was sometimes simply superseded by Yahyâ. Yahyâ is the Arabic form of the name—the form by which the Baptist is mentioned and highly extolled in the Qur'ân (iii. 34, vi. 85, xix. 13-15). May we not, therefore, venture to suppose that the reason why the writers of this period bring John into such prominence and make him a hero of their people was that they had already begun to refer to him, in the presence of the Muslim authorities, as the prophet of their religion? Henceforth they could claim, whenever and wherever they thought fit, to rank as 'Nasôrâyê d'Yahyâ'—a name which, to all except themselves, could mean nothing else than 'Christians of John.'

Finally, they are said actually to have introduced the name of Yahyâ-Yûhânâ into their baptismal formula, and to have done so, in fact, by speaking of the rite itself as having been instituted by God, by Mandâ d'hayyê, and by John (cf. *MR*, p. 225, on Sionfi's authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandæans by Roman Catholic missionaries during the 17th cent., viz. that their baptism was only the baptism of John mentioned in Ac 18²⁸ 19², and as a counter-stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendancy in the Persian Gulf.—In the 16th cent. the Portuguese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Basra they reached an agreement by which, in return for annual gifts, he permitted them to have a trading-station in Basra, and promised to protect it. The Portuguese soldiers and traders were everywhere followed by the Jesuits, who founded missions, and secured the government of such settlements as 'Christian territories' according to the regulations of the Inquisition. Thus Portuguese monks came to Basra, where they obtained a house and made one of its rooms into a church, their hope being to win

for the Roman faith more particularly the schismatic (Nestorian and Armenian) Christians living in the district. Their attention, however, would soon be attracted by the Mandæans, for the number of the latter in Basra and its neighbourhood in the 17th cent. was still estimated at 14,000-15,000, while in the city itself they are said to have formed the majority of the population (Le-Gouz). Decades may have elapsed, however, before the monks learned that the 'Sabbi' held John the Baptist in honour and baptized their children, and so came to believe that this baptistic people were already semi-Christians, and needed only a little instruction in order to become good Catholics. The *Discursus* which Ignatius issued as a supplement to the *Narratio* provides the arguments to be employed in persuading the Mandæan priests; but the latter were not to be won over by such simple means. Thereupon the missionaries, bent upon gaining their end, induced the pasha to order the Sabbi, under threat of fines or bodily penalties, to attend the Roman Catholic place of worship and observe Sunday according to the Christian practice of resting from servile work on that day. In this way the work of conversion was set on foot, supported, however, by doles of food and clothing to the children of the poorer Mandæans.

About this time the Mandæan communities suffered a considerable loss from another cause. In the early years of the 17th cent. the Portuguese found that their commercial monopoly on the Persian coast was challenged, and by way of strengthening their powers of defence they resorted to the employment of mercenaries. To the Portuguese cantonments the Mandæans are said to have flocked in vast numbers from Basra, and, no doubt, from Persia also—people who, of course, had there barely managed to live. In their new capacity they were instructed in the Christian faith and received Christian baptism (Le-Gouz, della Valle).

The fortified inshore island of Hormuz, which commanded the entrance to the Persian Gulf, was invested by British merchantmen and the military forces of the 'Duke' of Shiraz in 1622, and surrendered on the 1st of May of that year. The prestige of the Portuguese was at an end; their missionaries withdrew from Basra, and the Mandæans once more enjoyed freedom in their religious services. Of the Christian converts some embraced Islam, while the rest reverted to their ancestral faith—'et ne s'en conserva pas quatre Chrétiens' (Le-Gouz).

42. In Basra in the time of Ignatius a Jesu.—The place of the Portuguese Jesuits was taken by an Italian mission of Discalced Carmelites under the leadership of Ignatius a Jesu. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mandæans while they lived in Persia, and he devised the plan of persuading them to emigrate to Christian territories. From the Portuguese viceroy in the Indian Ocean he obtained a guarantee that Mandæans who so desired would receive grants of land in the colonies under the viceregal authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by many who were eventually rejected because they insisted upon being allowed to take their priests with them and to remain loyal to their faith; but, notwithstanding this, a number of Mandæans were sent forth, such migrations having taken place, as has been ascertained by Assemani from documents of the *Congregatio de propaganda fide*, in the years 1629, 1633, 1646, and 1650. The whole affair, however, came to very little, and all that Ignatius himself says of it is that he had once sent to the

viceroy of Goa a number of men who were to act as the spokesmen of their people, and also to look for suitable residences in Ceylon, and that at length other fifty Mandæans, some of them with their wives and children, had set out for Muscat. It may be remarked that between 1638 and 1658 the Portuguese were gradually expelled from Ceylon by the Dutch.

43. Numerical strength of the Mandæan communities in the 17th century.—Information regarding the numerical strength of the Mandæans and their diffusion in the contiguous provinces of Turkey and Persia—as found, probably, in the first half of the 17th cent.—is provided by a map published in Paris by Melchisedech Thévenot in 1663. This map, which, unfortunately, bears no date, embraces the area throughout which the Mandæan communities were scattered, and gives on its lower margin a list of the townships in which they were located and the number of families in each community. We find an aggregate of 3279 families living in 31 settlements. By far the largest figure, exactly 2000, is conjoined with Huwaiza, in Persia; next comes Tina with 500 families and Baṣra with 400, then one place with 50, two with 30, and others with numbers ranging from 2 to 20, while to four place-names a dotted line is attached, and to several others only a stroke. We shall thus hardly err in assuming a total of some 3400 families.

44. Reports of European travellers since 1650.—Ignatius a Jesu left Baṣra in 1650 or 1651, and the Christians no longer endeavoured to win the Mandæans for the Church. It is true that the mission-house was not abandoned, and that the banner of the Cross continued to wave from its roof, while the pasha still received his annual gift; but, when Jean Thévenot lodged there in 1665, he found that it was tenanted only by a single Italian monk, and that the church stood open for prayer not only to Europeans, but to Nestorian and Armenian Christians. Shortly afterwards, when the station had once more been brought into working order, its director, the Carmelite Archangelus a S. Theresia, was obliged to expend a considerable sum of money to procure Mandæan MSS for Robert Huntington, who lived in Aleppo from 1671 to 1681. The vendors were a couple of Mandæans, one of whom had to be assured upon oath that his co-religionists should never hear of the transaction, while the other had become a convert to Islām.

A long period then elapsed during which little or no information regarding the Mandæans reached Europe. Paragraphs devoted to them (and often referred to in encyclopædias) in J. Chardin, *Voyages*, etc. (Paris, 1686 ff.), and E. Kaempfer, *Amœnitatum*, etc., fasc. v. (Lemgow, 1712), simply repeat accounts previously published. In 1765 Carsten Niebuhr visited Baṣra and found that only a few 'Sabians' lived there; he had their alphabet transcribed for him by a smith. Naval Lieutenant Ormsby, the friend of J. R. Wellsted, stayed at Hit for five days in 1833, and ascertained that the Mandæans had a community with a priest in that city, though neither there nor elsewhere could he learn anything about them but the most meagre details.

The first European to gain really fresh information regarding the Mandæans was the German Orientalist H. Petermann, who, in the spring of 1854, spent three months in Sūq eš-Siyūkh on the Euphrates, learned the Mandæan language from the local high priest Yahyā (-Būlad), and in the latter's company was permitted to be present at a

number of ceremonies, including the five days' baptismal festival. At length, however, a much greater addition to our knowledge was contributed by the information with which a grandson of this Yahyā gratified the curiosity of N. Siouffi, French vice-consul at Baghdād, in 1875. The fullness and accuracy of the communications are explained by the fact that the informant, before embracing Christianity when about twenty-five, had received an education qualifying him to become a Mandæan priest, but it is necessary to state that his account of the Mandæan doctrines and legends was wholly dependent upon a late version, from which every difficulty had been expunged (cf. *MR*, pp. 17-19), and that he could describe the methods and customs of his people only in their most recent phases of development.

45. The Mandæans in the 19th century.—The books of Petermann and Siouffi contain observations from which we may learn how the Mandæans had fared in the long interval from the 17th cent., and it would seem that in this period, too, the vicissitudes of their ordinary life were due to suffering and want. About the year 1800 30 families in Shushter alone are said to have seceded to Islām, and 'many Mandæans' are reported to have done so about 1825. The great pestilence which ravaged Persia and Mesopotamia in 1831 carried off the entire priesthood with the exception of two *šgandās*, and at some unspecified date the Mandæans forsook Baṣra owing to its deadly climate. In the vicinity of Huwaiza only 25 families remained, all the rest having removed because the river (Kercha) had almost completely dried up. Sūq eš-Siyūkh (which does not appear in the list subjoined to Thévenot's map), or rather the village of Šubbaye on the other side of the river, had become one of the main domiciles of the Mandæans (the 'Šubba'), and was named after them. The district, however, was ruled by a Bedawin *šaiḫ*, who so afflicted the village with chicanery and extortion that about 200 of the 260 families composing the local Mandæan community abandoned it in 1853 and removed to Ammāra on the Tigris, where the second largest community (about 100 families) had enjoyed a more favourable lot under Turkish rule. Petermann also mentions Qurna, at the confluence of the Euphrates and the Tigris, with 40 families, and Muḥammara, on the Shaṭṭ al-'Arab below Baṣra, with 4, as well as the Persian towns of Dizful with 80, and Shushter with 34. He makes an aggregate of about 560 families, with 10 priests. Siouffi mentions other 11 settlements, 6 in Turkish and 5 in Persian territory, and his estimate of the total number of Mandæans is 4000, of whom 1500 were males. These two enumerations bring us to the years 1854 and 1875 respectively. Whether any Mandæan communities still exist the present writer is not in a position to say.

MANETHO.—This historian of Egypt was born at Sebennytus, the *Theb-Neteret* of the hieroglyphic inscriptions, and lived during the reigns of Ptolemy Lagi and Ptolemy Philadelphus. His name is probably the Gr. form of *Mā-en-Tehuti*, 'Gift of Thōth'—equivalent to the Gr. Ἐπιδόωτος. The following works have been attributed to him, some of them on doubtful authority: (1) *Ἀλγυπτιακά*, (2) *Βίβλος Σώθεος*, (3) *Ἱερὰ Βίβλος*, (4) *Φυσικὴν ἐπιτομήν*, (5) *Περὶ ἑορτῶν*, (6) *Περὶ ἀρχαιοσύμῃ καὶ εὐσεβείας*, (7) *Περὶ κατασκευῆς κυρίων*. His reputation rests upon the *Ἀλγυπτιακά*, a history of Egypt which he compiled at the request of Ptolemy Philadelphus. The first part of his work dealt with the mythological era in the history of Egypt, and the first eleven of the thirty historical dynasties; the second began with the XIIth dynasty, and ended with the XIXth; the third comprised dynasties XX.-XXX. The work was written in Greek, and has, unfortunately, perished, with the exception of the list of kings, which has been preserved in corrupt and incomplete forms by Julius Africanus, Eusebius, and George the Syncellus.

An examination of these king lists shows that in many particulars Julius Africanus and Eusebius do not agree in their rendering—i.e. in arrangement of the dynasties, in the lengths of the reigns, and in the total number of kings assigned to the various dynasties. According to Africanus, 561 kings reigned in about 5524 years, while, according to Eusebius, only about 361 kings reigned in 4480 or 4780 years. The version of Africanus is clearly the more accurate of the two, agreeing best with the monuments. It seems fairly certain that Africanus had access to the actual work of Manetho. The version of Eusebius was based on that of Africanus, and shows carelessness in the copying of both names and figures. It will thus be seen that the work of Manetho must be received with some caution, for his king lists have become very corrupt; and it is probable that the Christian writers who transmitted his system, being anxious to reconcile it with the accepted Biblical chronology, have curtailed his lists to some extent. Nevertheless Manetho's work remains the standard authority on Egyptian chronology, and upon it all attempts to restore that chronology must be based.

The chief original authorities with which his work may be compared are: (1) the Turin Royal Papyrus—lamentably mutilated, and badly restored; (2) the Tablet of Abydos, containing a list of 75 kings, dynasties I.-XIX.; (3) the Tablet of Saqqārah—47 royal names in practically the same order as (2); and (4) the Tablet of Karnak, containing a list of 61 kings—the cartouches are not

arranged chronologically. The lists of Manetho are much more complete than any of these, and it is to him that we owe the accepted distribution into dynasties.

Opinions differ widely as to the value of his historical work. A period in which he was regarded as a mere fabricator was succeeded by one in which his authority was considered practically unimpeachable. Thus Lenormant says:

'He is now the first of all authorities for the reconstruction of the ancient history of Egypt' (*Anc. Hist. of the East*, i. 201).

More modern authorities are sharply divided. Adverse opinion may be represented by Breasted's sweeping dictum:

'A late, careless and uncritical compilation, which can be proven wrong from the contemporary monuments in the vast majority of cases where such monuments have survived. Its dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars' (*Hist. of Egypt*, p. 23).

This is so sweeping as to suggest bias at once; and, when it is remembered that an exactly opposite judgment is pronounced by authorities of such standing as Maspero and Flinders Petrie, its oracular tone becomes merely ridiculous. Maspero's verdict is as follows:

'The system of Manetho, in the state in which it has been handed down to us by epitomizers, has rendered, and continues to render, service to science; if it is not the actual history of Egypt, it is a sufficiently faithful substitute to warrant our not neglecting it when we wish to understand and reconstruct the sequence of events. His dynasties furnish the necessary framework for most of the events and revolutions, of which the monuments have preserved us a record' (*Dawn of Civilization*, p. 228).

Still more emphatically favourable is Petrie's judgment:

'An authority of the highest order. . . The internal evidence is also strong for the care given to his work and its precision. . . Manetho has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. Every instance in which this has been supposed has broken down when examined in detail. Not a single case of overlapping periods can be proved against him. On the contrary, there are two excellent proofs of his care to avoid such errors' (*Researches in Sinai*, p. 171).

Possibly the truth may lie somewhere between the two extreme opinions, and Manetho may be neither so careless as Breasted alleges nor so immaculate as Petrie affirms. In any case, even his detractors cannot afford to do without him; for every reconstruction of the history of Egypt is based, and will continue to be based, on the dynastic framework which he has provided.

What system of dating we are to derive from his dynastic scheme and other sources is another question. Here also there is fundamental disagreement. As far back as 1580 B.C. there is practically no difference between the various schemes of dating, and Egyptian chronology may be looked upon as settled with only a few years' margin of error up to that point. Beyond that lies chaos. The Berlin school, represented by Meyer and Breasted, dates the beginning of the 1st dyn. at 3400 B.C., and that of the XIIth, fixed by astronomical data, at 2000 B.C. Wallis Budge, still clinging to Brugsch's system, gives 4400 B.C. for the 1st dyn. and 2400 B.C. for the XIIth. Petrie gives 5510 B.C. for the 1st dyn., and, using the same astronomical data as the Berlin school, 3459 B.C. for the XIIth. Here it is most unlikely that the truth lies between the two extremes, and Brugsch's *via media* seems to lead nowhere. The gigantic gap between Petrie's dates and those of Berlin is due to the fact that Petrie holds that the advocates of the shorter system have dropped a whole Sothic period of 1460 years out of their reckoning. If the astronomical foundation be sound, the truth must lie either with the shortest or with the longest system, and only further

research can clear up the problem. Meanwhile the tendency has been somewhat in the direction of the Beilin system, which, according to Petrie, 'defies all the history and the collateral facts which support it' (*Ancient Egypt*, London, 1915, pt. i. p. 37); and Manetho's credit remains in suspense.

In addition to his service to chronology, Manetho has contributed, though only at second-hand, two interesting traditions of Egyptian history. These are preserved by Josephus (*c. Apion.* i. 26 f.), and give a somewhat nebulous account of the Hyksos invasion, and the narrative of the expulsion of a race of lepers and unclean persons, which may conceivably represent the Egyptian tradition of the Hebrew Exodus.

Manetho's chronological scheme is too long to be given in detail, but will be found, in part or in whole, in most of the Egyptian Histories—e.g., completely in Budge, *Hist. of Egypt*, i. 130-140.

JAMES BAIKIE.

MANICHÆISM.—I. Sources.—Manichæism, the religion of Māni or Manes, is one of those systems which are usually classed together under the name of Gnosticism. The Manichæan religion arose in Babylonia about the middle of the 3rd cent. A.D., and during many generations exercised great influence both in the East and in the West. Of the literature of the Manichæans very little has survived. The fragments of Manichæan MSS which have lately been discovered in Central Asia present great difficulties of interpretation, so that, while they confirm much that was previously known, they do not enable us to form a connected idea of the subject.¹ The attempts which have been made in modern times to prove that some well-known books, in particular certain of the Apocryphal Gospels and Acts, are of Manichæan origin must be pronounced wholly unsuccessful. Hence our information respecting this religion is derived almost entirely from non-Manichæan authors, most of whom wrote with an avowedly hostile purpose. As our conclusions must depend largely on the relative importance which we attach to the various sources, it is necessary first to give some account of them. They fall into four main groups: (1) Oriental Christian sources, (2) Zoroastrian sources, (3) Western sources, (4) Muhammadan sources.

(1) *Oriental Christian.*—These have, in some respects, the greatest claim to consideration. The Aramaic-speaking Christians of Syria and Mesopotamia were in race, in language, and in general

¹ These fragments are written in various languages (Persian, Turkish, and Chinese). They have been published by F. W. K. Müller, 'Handschriften-Feste in Estrangelo-Schrift aus Turfan,' in *SBZ* 1904, p. 348 ff., and in *ABA* W, 1904, 'Ein Doppelblatt aus einem manichäischen Hymnenbuch,' in *ABA* W, 1912 (republished separately, Berlin, 1913), A. von Le Coq, 'Ein manichäisch-urigurisches Fragment aus Idikut-Schahn,' in *SBZ* W, 1908, p. 398 ff., 'Ein christliches und ein manichäisches Manuskript-Fragment in türkischer Sprache aus Turfan,' *ib.*, 1909, p. 1208 ff., 'Dr. Stein's Turkish Khuan-tuanit from Tun-Huang, being a Confession-prayer of the Manichæan Auditors,' in *JAS*, 1911, p. 277 ff.; C. Salemann, 'Ein Bruchstück manichäischen Schrifttums im asiatischen Museum, Petrograd, 1904' (= *Mémoires de l'Académie Impériale des Sciences*, viii. vi. 6), *Manichäische Studien*, i., do. 1908 (= *Mémoires*, viii. viii. 10), *Manichäische Studien*, i., do. 1907-12 (= *Bulletin de l'Académie Impériale des Sciences*); E. Chavannes and P. Pelliot, 'Un traité manichéen retrouvé en Chine,' in *Jd*, 1911 (republished, Paris, 1912).

culture nearly akin to the primitive Manichæans, and had every opportunity of becoming well acquainted with the new religion. Unfortunately very little of their testimony has come down to us. Aphraates, in the first half of the 4th cent., the earliest Syriac author whose works have been preserved in any considerable quantity,¹ briefly alludes to Manichæism as a dangerous heresy:

'The children of darkness, the doctrine of the wicked Māni, who dwell in darkness like serpents, and practise Chaldeism [i.e. astrology], the doctrine of Babel.'² More information may be gathered from the works of a younger contemporary of Aphraates, the well-known Ephraim of Nisibis, commonly called Ephraim Syrus. References to Manichæism are found in several of his writings, especially in a series of five discourses, entitled *Letters to Hypatios*.³ The treatise against Manichæism composed by Gabriel, bishop of Hormizdshēr, in the 6th cent., seems now to be lost.⁴ Later Syriac writers, such as Theodore bar-Khōnī⁵ and Barhebræus,⁶ do not supply much that is of importance.

Among Oriental Christian authorities we must also reckon the Armenian writer Eznik of Kolb, who lived in the 5th cent.,⁷ and Sa'id ibn al-Bitriq, generally called Eutychius, who was Patriarch of Alexandria from A.D. 933 to 939.⁸

(2) *Zoroastrian.*—The evidence contained in Zoroastrian literature is, if anything, scantier than that which may be collected from the works of Oriental Christians; moreover, it is much more difficult to interpret, owing partly to the unsatisfactory condition of the text and partly to our imperfect acquaintance with the language. But the vehement condemnations of Manichæism which are found in Zoroastrian books bear witness at least to the dread with which the Persian priesthood regarded the rival faith.⁹

(3) *Western.*—Accounts by Greek and Latin authors exist in far greater quantity, but they are, from the nature of the case, much less trustworthy. Manichæism was so essentially Oriental (i.e. non-Hellenic) in its character that the Christians of the West would probably have had considerable difficulty in understanding it, even if they had been wholly impartial. That this was out of the question hardly needs to be stated. The strangeness of the system was doubtless an attraction to some minds, but those who are attracted by mere novelty are usually uncritical, while the attitude of uncon-

¹ On Aphraates see W. Wright, *Short History of Syriac Literature*, London, 1894, p. 32. The *Homilies* of Aphraates have been re-edited, with a Lat. tr., by I. Parisot (Paris, 1894).

² *Hom.* iii. Why the Manichæans were accused of astrology will appear later on.

³ The first of these discourses and part of the second were published by J. J. Overbeck in his *Sancti Ephraemi Syri aliorumque opera selecta*, Oxford 1865, p. 21 ff. This portion of the second discourse was reprinted by K. Kessler (*Mani*, p. 268 ff.), with a very inaccurate Germ. tr. The remainder of the work, with the exception of some passages which are effaced in the MS, was first made known by C. W. Mitchell (*S. Ephraim's Prose Refutations*, i., London, 1912). In Ephraim's *Carmina Nisibena* (ed. G. Bickel, Leipzig, 1886), no. xlv., there is an interesting passage which doubtless refers to the Manichæans, though they are not expressly named. 'Fools in their perversity have forged a tale, how that the Darkness ventured to disturb the Light,' etc.

⁴ See Wright, *op. cit.* p. 120.

⁵ Theodore's account of Māni has been published and translated by H. Pognon in his *Inscriptions mandaites des coupes de Khoubair*, Paris, 1897-99. It is borrowed in part from Ephraim, and therefore cannot be regarded as purely Oriental. Cf. also F. Cumont, *La Cosmogonie manichéenne, d'après Theodore bar Khōnī* (= *Recherches sur le Manichéisme*, i.), Brussels, 1908.

⁶ The testimony of Barhebræus is to be gathered partly from his *Syr. Ecclesiastical History*, partly from his *Arab. Compendium of the Dynasties*.

⁷ See V. Langlois, *Collection des historiens anciens et modernes de l'Arménie*, Paris, 1867-69, ii. 375 ff., and the tr. by J. M. Schmid, Vienna, 1900, p. 94 ff.

⁸ *Eutychii Annales*, ed. E. Pococke, Oxford, 1658-59, which contains the original Arab. text with a Lat. tr.

⁹ Perhaps the most important passage on this subject is that which E. W. West has translated in his *Pahlavi Texts*, ii. 243 ff. (*SBZ* xxvi. [1885]). A Germ. tr. is given by Salemann, *Ein Bruchstück manichäischen Schrifttums im asiat. Museum*.

promising hostility, which was adopted by the great majority of Christian theologians, naturally proved even less favourable to accurate comprehension.

The foreign origin of Manichæism is duly emphasized by Eusebius in the brief notice which he devotes to this 'insane heresy'.¹ Alexander of Lycopolis, the author of a short tract against Manichæism,² was probably a contemporary of Eusebius. He deserves notice as being the only Western writer who treats the subject from a purely philosophical point of view; though he speaks of Christianity with a certain respect, it is doubtful whether he ever became a Christian. Of more importance is the testimony of a somewhat later controversialist, Titus, bishop of Bostra in Syria, who died about A.D. 370. In a geographical sense, Titus must be reckoned among Oriental Christians, but his *Treatise against the Manichæans*³ proves him to have been thoroughly Western in his education and habits of thought, deeply imbued with Greek philosophy, in particular with Stoicism, and full of contempt for 'barbarians.' He distinctly states that he derived his information from a Manichæan book,⁴ but he tells us nothing definite as to its authorship. His words, however, seem to imply that the book was not composed by the founder of Manichæism himself, for in quoting it he says, 'as is stated by the author who wrote down the doctrines of that maniac';⁵ and, again, 'these are the very words used by him or else by one of his followers.'⁶ He afterwards mentions a Manichæan work entitled *The Treasure*,⁷ but whether this is identical with the book cited previously cannot be determined. In any case it is interesting to observe that, according to Titus, the Manichæans made every effort to conceal from outsiders the writings of their founder, apparently in obedience to his express orders.⁸ Another fact, no less significant, is that Titus professes to have softened down the expressions which he found in his source: 'these are not the words used by him, but this is what he meant to say, translated into more decent language.'⁹ In estimating the evidence supplied by Titus this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the *Acta Archelai*, a work which professes to record a disputation between Manes and Archelaus, bishop of Carchar¹⁰ in Mesopotamia.

¹ HE vii. 81.

² ed. A. Brinkmann, Leipzig, 1896.

³ Of the four books into which this work is divided only the first two and the beginning of the third have been preserved in the original Gr.; but all four are extant in a Syr. tr., which must have been made very early, as it is contained in a Brit. Mus. MS written in A.D. 412. The Gr. text was first published by J. Basnage in 1726; the best edition is that of P. A. de Lagarde (Berlin, 1869), who also edited the Syr. version. It is to be noted that the Gr. text has a long insertion (printed as an Appendix by Lagarde, pp. 69-108) which is absent in the Syriac. In *SBA W*, 1894, p. 479 ff., August Brinkmann has endeavoured to prove that this piece is a fragment of a book against the Manichæans by Serapion of Thmuis, a friend of Athanasius.

⁴ αὐτῇ λέγει φησὶν ἡ παρ' αὐτοῦ βιβλος (bk. i. § 21); φησὶ γὰρ αὐτὸ τὸ γράμμα ἀφ' οὗ τὰ παρὰ τοῦ μανέντος παρεθήκαμεν (bk. i. § 22). The punning use of *μανεῖς*, *μανία*, etc., in allusion to the name Manes, is extremely common.

⁵ ὡς γὰρ ὁ τὰ τοῦ μανέντος συγγραφεὺς φησὶν (bk. i. § 21).

⁶ φησὶ δὲ πρὸς λέξιν αὐτὴν ἐκείνος ἢ ἑτέρος τις τῶν ἀπ' ἐκείνου (bk. iii. § 4). Photius states that the source used by Titus was the work of a certain Addas: εἶδοι μὲν κατὰ Μανιχαίων γράφειν, ἔγραψε δὲ μᾶλλον κατὰ τῶν Ἀδδου συγγραμμάτων (*PG* ciii. 238).

⁷ Syr. *šimēthā* (bk. iii. § 9). This is probably the work called *θησαυρὸς* by Epiphanius, and *θησαυρὸς ζωῆς* in the Greek *Formula of Abjuration*. Both al-Ya'qūbī and al-Bīrūnī ascribe to Māni a book known as *Kanz al-Iḥyā*, 'Treasure of Life-giving,' but it is to be noted that the list of Māni's writings in the *Fikhrīst* (p. 336, line 8 ff.) does not include this title, although it mentions a *Sifr al-Iḥyā*, 'Book of Life-giving.'

⁸ Bk. iii. § 9.

⁹ εἰ γὰρ καὶ μὴ τοῦτοις γε τοῖς ῥήμασιν, ἀλλὰ γε ταῦτα βούλεται λέγειν, ἀπὲρ εὐσχημονέστερον πάνν γε πρὸς ἡμῶν εἰρηται (bk. i. § 17).

¹⁰ The name is doubtful. Possibly the author, or a later scribe, may have confused the two places Karkhā and Kashkar; the latter form agrees with that given by Epiphanius in his version of the story.

Here for the first time we meet with the remarkable theory that Manichæism originated, not with its reputed founder, but with a certain Scythianus, from whom the system was passed on to Manes. These *Acts* are extant in a Latin translation, made from a Greek text of which we possess some long fragments.¹ According to Jerome,² the book was originally composed by Archelaus himself in Syriac ('Syro sermone') and afterwards translated into Greek. But it has been clearly proved that Archelaus is not the author, and that the narrative is to a large extent, if not entirely, fictitious. Nevertheless, some modern writers have endeavoured to show that, though Jerome was mistaken in ascribing the *Acts* to Archelaus, he was right at least in believing them to have been composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Nöldeke to be worthless.³ The author of the *Acts*, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Strangas as the Western boundary of the Persian Empire—a notion which is derived from the Greek *Romance of Alexander the Great* (pseudo-Callisthenes), as Nöldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge as to the early history of Manichæism. Nevertheless, it is not surprising that his statements were readily believed by Western Christians. With some variations, the story contained in the *Acta Archelai* reappears in Epiphanius,⁴ Socrates, Theodoret, and several later writers.

By far the most celebrated of the Western authorities on Manichæism is Augustine. At first sight it might seem that his testimony ought to outweigh all others that have been mentioned, for during nine years (from A.D. 373 to 382) he was a professed Manichæan. Among the works that he composed on the subject, after his conversion to Catholic Christianity, are the following: *Contra Epistolam Manichæi quam vocant Fundamenti*, *Contra Faustum*, *Contra Fortunatum*, *Contra Adimantum*, *Contra Secundinum*, *De Actis cum Felice Manichæo*, *De Genesi contra Manichæos*, *De Natura Boni*, *De Duobus Animabus*, *De Utilitate Credendi*, *De Moribus Ecclesiæ Catholicæ et de Moribus Manichæorum*. Many passages relating to Manichæism are to be found in his other writings, particularly in the *Confessions*. But, on the whole, the amount of positive knowledge which can be gathered from Augustine is much less than might have been expected. In the great majority of cases he confines himself to vague generalities, and, when he descends to particulars, his statements seem mostly to rest on hearsay. It may be doubted whether even his Manichæan informants were at all accurately acquainted with the history and writings of their founder. Faustus, whom Augustine represents as one of the ablest and most influential among the Manichæans, was a native of N. Africa, and it is therefore unlikely that he could read the sacred books of his religion in the original Aramaic. Nor have we any reason to believe that the other Manichæans with whom Augustine came in contact were better instructed.

One of the latest, but not the least important, of the Western sources is the Greek *Formula of Abjuration*,⁵ which repentant heretics were required to pronounce before being admitted into the com-

munion of the Byzantine Church. In its present shape this document cannot be older than the 9th century. It consists of a series of anathemas, directed partly against doctrines and partly against persons, put together without any definite plan. Some of the doctrines are undoubtedly Manichæan, but some emanate from other sects, and some appear to be gross misrepresentations. Yet, in spite of the uncritical manner in which it is compiled, the *Formula of Abjuration* contains a certain number of interesting facts.

(4) *Muhammadian*.—Evidence from Muhammadan literature does not begin before the 9th cent. of our era. Nevertheless, the Muhammadan accounts are, on the whole, the most instructive of all, much fuller than those by Oriental Christians and less misleading than those by Western writers. For this several causes may be assigned. In the first place, the Muhammadan scholars to whom we owe these descriptions wrote from a historical, rather than from a controversial, point of view. Moreover, some of them at least had access to very ancient and trustworthy sources of information; for Babylonia, the political centre of the Muhammadan Empire, was also the ecclesiastical centre of the Manichæan community, and, accordingly, in that country the text and the traditional interpretation of the Manichæan Scriptures were most likely to survive. It is true that after the Muhammadan conquest the Aramaic language gradually ceased to be spoken, but the knowledge of it never wholly died out, as we see in the case of the Christians and the Mandæans, who have retained their sacred books, in their respective Aramaic dialects, down to the present day.

Almost all Muhammadan historians who treat of pre-Muhammadan or early Muhammadan times take some notice of Manichæism, but the authors from whom we learn most on this subject are the following: (a) Ibn Wādih, also called al-Ya'qūbī, who in A.D. 891 composed a *History of the World*;¹ (b) Muhammad ibn Ishāq, who probably lived about the end of the 10th cent. of our era, and is known as the author of the *Fihrist*, i.e. 'Catalogue,' a great storehouse of information respecting literary works of various kinds;² (c) al-Bīrūnī, who died A.D. 1048, one of the most learned men that the East ever produced, the author of a book on *Chronology*³ and other important treatises; (d) al-Shahrastānī, who died A.D. 1153, the author of a work on religious and philosophical sects.⁴ All these authors wrote in Arabic, although the last two were of Persian nationality.

The story of Māni in the *Shāh-nāmāh* of Firdausī, the well-known Persian epic poet, is almost entirely legendary, and the same may be said of nearly all the popular Muhammadan accounts, whether written in Persian or in Arabic.

2. The founder of Manichæism.—With regard to the history of the founder we are mainly dependent on Muhammadan writers, for the Western authorities either tell us nothing definite or else repeat, more or less faithfully, the legend contained in the *Acta Archelai*. The story there related is briefly as follows:

In the time of the Apostles there lived a man named Scythianus, who is described as coming 'from Scythia,' and also as being 'a Saracen by race' ('ex genere Saracenorum').

He settled in Egypt, where he became acquainted with 'the wisdom of the Egyptians,' and invented the religious system which was afterwards known as Manichæism. Finally he emigrated to Palestine, and, when he died, his writings passed into the hands of his sole disciple, a certain Terebinthus.¹ The latter betook himself to Babylonia, assumed the name of Budda, and endeavoured to propagate his master's teaching. But he, like Scythianus, gained only one disciple, who was an old woman. After a while he died, in consequence of a fall from the roof of a house, and the books which he had inherited from Scythianus became the property of the old woman, who, on her death, bequeathed them to a young man named Corbicius,² who had been her slave. Corbicius thereupon changed his name to Manes, studied the writings of Scythianus, and began to teach the doctrines which they contained, with many additions of his own. He gained three disciples, named Thomas, Addas, and Hermas. About this time the son of the Persian king fell ill, and Manes undertook to cure him; the prince, however, died, whereupon Manes was thrown into prison. He succeeded in escaping, but eventually fell into the hands of the king, by whose order he was flayed, and his corpse was hung up at the city gate.

It is needless to say that this narrative, as it stands, has no claim to be considered historical. Some details, in particular the account of the execution of Manes, are confirmed by more trustworthy authorities, but as to the main point—the existence of Scythianus and Terebinthus—no such confirmation is forthcoming. The assertion that Terebinthus took the name of Budda seems to be a confused reminiscence of the fact that Māni represented the Indian Buddha as one of a series of prophets who had preceded him. But this, so far from tending to support the story as a whole, is rather an argument against it.

The accounts of the principal Muhammadan authorities may be briefly summarized thus:

Māni,³ the son of F-t-q,⁴ was born in Babylonia⁵ about A.D. 216.⁶ His father was originally a heathen, and frequented an 'idol-temple' at or near Ctesiphon, the Persian capital, 'as other people were wont to do.' But shortly before the birth of Māni he abandoned his former religion, and joined⁷ the sect of the Mughtasila, i.e. 'those who practise ablutions.'⁸ Māni at an early age became convinced that he had received divine revelations, and that he was chosen to preach a new faith.⁹

¹ As to this name the authorities vary.

² This name also is uncertain.

³ So the name is written in Arab., and the adj. derived from it is usually *mānavī* (formed according to the ordinary rule in Arab.), but sometimes *manavī*, *manānī*, or *mānī*. In Syr. the name Māni seems to have been pronounced as in Arab., although the Syr. spelling does not enable us to decide positively whether the first vowel was long or short. In the case of rare proper names the vowel-points added by later Syrian scribes have, of course, no authority. In Zoroastrian writings the name appears with a final aspirate, *Mānīh* (adj. *mānīhīk*), and this aspirate accounts for the form *Manxānos*, *Manichæus*, which Gr. and Lat. writers often use, not only as an adj., but also as the equivalent of *Mānys*, *Manes*. The origin and meaning of the name Māni are unknown. But this very fact tends to show that it is a real name, not an honorific title like Christ or Buddha.

⁴ This is the form given in the *Fihrist*. The vowels are uncertain, but the consonants agree with those of Πατάριος, who is expressly mentioned as the father of Manes in the Gr. *Formula of Abjuration*. It is well known that the Arabs have no sign for P, and use F or B instead. According to the *Fihrist*, F-t-q also bore the name of Bābak (=Pers. Pāpak), while al-Ya'qūbī calls him Hammād. The last name, which is purely Arabic, must be due to some mistake.

⁵ According to al-Bīrūnī, the birth-place of Māni was a village called Mardīnū, on the upper part of the Kūthā canal, i.e. a little to the south of Baghdād.

⁶ The statement of al-Bīrūnī that Māni was born in the year 527 of the era of Alexander (i.e. the Seleucid era) agrees very nearly with what we are told in the *Fihrist* as to the age of Māni when he came forward as a public teacher.

⁷ G. T. Stokes, in *DCB*, s.v. 'Manes,' states that Māni's father 'founded' this sect—an assertion for which there is no authority.

⁸ These details are given in the *Fihrist*, evidently from a Manichæan source. What was the precise form of heathenism which Māni's father originally professed is not clear. The terms used in the *Fihrist* point to some local cult rather than to Zoroastrianism. The religion of the Mughtasila seems to have been a kind of Judaic Christianity mingled with heathen elements. It was not identical with that of the Mandæans in later times, though the two sects had much in common.

⁹ The narrative in the *Fihrist* clearly implies that Māni did not derive his system from any human teacher. On the other hand, al-Bīrūnī describes Māni as a 'disciple of Pādārūn,' and a similar statement appears in the well-known historical work of al-Mas'ūdī, who lived about a century before al-Bīrūnī, except that the name is there written somewhat differently (see Mas'ūdī, *Les Prairies d'or*, ed. C. Barbier de Meynard and Pavet

¹ ed. M. T. Houtama, Leyden, 1893.

² ed. G. Flügel, and published after his death by J. Rodiger and A. Müller, Leipzig, 1871-72. The section relating to Manichæism was published separately by Flügel, with a Germ. tr. and copious notes, under the title *Māni, seine Lehre und seine Schriften*, Leipzig, 1892. The author of the *Fihrist* is sometimes called al-Nadīm, but it is doubtful whether this name, or rather nickname, belonged to him or to one of his ancestors.

³ ed. E. Sachau, Leipzig, 1878, and tr. by him into Eng., *The Chronology of Ancient Nations*, London, 1879. Al-Bīrūnī is the Arab. form of the Pers. Bīrūnī.

⁴ ed. W. Oureton, London, 1846, and tr. into Germ. by T. Haarbrucker, Halle, 1850-51.

Before he was twenty-five years old he had privately gained a few disciples, but he began his public propaganda on the day when Šāpūr (=Sapor I.), the son of Ardashir, was crowned king, i.e. March 20, A.D. 242.¹ He succeeded in securing the patronage of the king's brother Pērōz, and through him obtained access to the king himself.² In the course of his journeys he is said to have visited Central Asia, India, and China, but it does not appear that he ever penetrated into the Roman Empire. He composed numerous books and epistles in Aramaic, and at least one book in Persian, probably the work known as the *Šāpūragān*, which, according to al-Birūnī, was written for king Šāpūr.³ We learn from Ephraim Syrus that Mānī illustrated his writings with coloured pictures;⁴ his fame as a painter survived for many centuries in the East. He is also said to have invented the peculiar alphabet which the Manichæans afterwards employed; it was a modification of the Syriac *Estrangēlō* character, as the recently discovered fragments prove. Mānī was put to death by king Bahrām (or, according to the older pronunciation, Warahrān) I., who reigned from about A.D. 274 to 277.⁵ Whether he was flayed alive, as al-Ya'qūbī and some other authorities state, is doubtful. His corpse, or, according to others, his skin stuffed with straw, was hung up, by order of the king, at the gate of Gundē-Šāpūr, an important city which lay a little to the east of the ancient Susa. In after times that gate was always known as 'the Māni-gate.' The execution of Mānī was evidently due not so much to the personal caprice of the king as to the enmity of the Zoroastrian priesthood. At the same time the Persian government made a strenuous, but wholly fruitless, attempt to exterminate the adherents of the new religion.

3. The Manichæan system.—Manichæism, like other forms of Gnosticism, professes to be at the same time a religion and a philosophy, inasmuch as it not only sets up an ideal of holiness, but also undertakes to explain the constitution of the world. It is not, however, to be regarded as a philosophy in the ordinary European sense of the word. It attempts to arrive at philosophical truth by means of a method which, to us, appears wholly unphilosophical. Though the Manichæans confidently appealed to human reason and were always ready to defend their conclusions by argument, they did not pretend that those conclusions had been reached by abstract logic or by any kind of scientific induction; on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mānī himself says, in a passage which al-Birūnī quotes from the *Šāpūragān* (see above):

'Wisdom and deeds⁶ have always from time to time been brought to mankind by the messengers of God. So in one age they have been brought by the messenger called Buddha to India, in another by Zarādusht [Zoroaster] to Persia, in another by Jesus to the West. Thereupon this revelation has come down, this prophecy in this last age, through me, Mānī, the messenger of the God of truth to Babylonia.'

Such was the claim put forward by Mānī. We have now to consider the substance of his teaching.

The Manichæan system is based upon the idea of the essential and eternal contrast between good and evil, between light and darkness. But it is not correct to say, as Western writers have fre-

quently done, that Mānī identified good with spirit, and evil with matter (ἄλγ). Whether he ever attained to the conception of matter may be doubted;⁷ at all events, it is clear that he represented evil, or darkness, as something capable of thought and volition;⁸ in other words, his dualism was of the imaginative, or poetical, not of the philosophical kind. The following is an abstract of the account given in the *Fihrist*.

Originally the light and the darkness bordered on one another, but were unmingled, the light being limitless above and the darkness limitless below. The light is identical with God, who is called 'the King of the Paradises of Light,' but the realm of light includes also an atmosphere and an earth which are co-eternal with the Godhead. Moreover, there are various other beings called gods,⁹ who are subordinate to the King of the Paradises of Light. Out of the darkness arose Satan, the Primal Devil, who 'did not exist from all eternity, although the elements of which he is composed are eternal.' At first he wrought havoc in his own domain, and then invaded the kingdom of light.⁴ 'When he saw the flashes of light, he conceived a hatred for them, shuddered, and rejoined his native elements.' He made a second attack, and the King of the Paradises of Light, in order to repel him, produced a being called the Primal Man, who went forth armed with a fivefold panoply—the breeze, the wind, the light, the water, and the fire. Satan, on the other hand, arrayed himself in the smoke, the consuming flame, the darkness, the scorching blast, and the cloud. After a long struggle Satan prevailed over the Primal Man. The heavenly powers then intervened and rescued the Primal Man, but the elements which formed his panoply became mingled with the elements of darkness. Out of this confused mass the heavenly powers fashioned the actual world which we inhabit. Not only all animal and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain portions of divine light. Hence the distinction which we are accustomed to make between natural and spiritual phenomena does not exist in Manichæism, since it represents all the processes of nature as part of a spiritual contest.⁵ The visible universe is, in fact, a vast and complicated machine devised by God for the purpose of enabling the elements of light to effect their escape. When the light contained in the earth separates itself from the darkness, it ascends in the form of a pillar, called 'the pillar of glory,' first to the moon,⁶ thence to the sun, and thence to the higher regions. This process continues until at length the final separation is brought about by a conflagration, which will last 1458 years. Thereafter the light will be secured for ever against the assaults of the darkness.

The most singular part of the Manichæan system is that which relates to the origin and history of mankind. Unfortunately, the statements of the *Fihrist* on this subject are fragmentary and full of obscurities, which the other sources do not enable us to explain in an altogether satisfactory manner. But it is clear at least that the first human beings, whom Mānī called Adam and Eve,⁷ were represented as the offspring of devils, the object of the devils in producing them being to imprison, and so to keep in their own possession, a portion of the elements of light. The heavenly powers, in order to frustrate the purpose of the devils, sent Jesus (who is here regarded as a celestial being) to instruct Adam on the subject of 'the Paradises and the gods, Hell and the devils, the earth and the heaven, the sun and the moon,' and in particular to warn him against sensuality. As to the history of Adam and Eve many details are given, some of which have been borrowed from the OT, some perhaps from sources unknown to us, while some appear to be wholly fantastic.

¹ Alexander of Lycopolis (ed. Brinkmann, p. 5) observes that in the Manichæan system the term ἄλγ is not used in the Platonic or the Aristotelian sense; accordingly Alexander defines the Manichæan ἄλγ as 'motion without order' (ἡ ἀτάκτος κίνησις).

² According to al-Shahrastānī, some Manichæans held that the mingling of the darkness with the light had taken place 'blindly and by accident,' not as a result of volition. But this is obviously a later philosophical speculation.

³ The nature of these gods is not clearly defined; they are regarded as the offspring of the Supreme God.

⁴ It is instructive to compare this narrative with the parallel passage in Titus of Bostra, bk. I. § 17. For 'the Primal Devil' Titus substitutes ἡ ἄλγ.

⁵ Thus, for instance, the rain is explained as due to the perspiration of devils (Titus of Bostra, bk. I. § 17).

⁶ The moon, as it waxes and wanes, is compared to a bucket which alternately fills and empties itself (ib.).

⁷ It is to be observed that Adam, 'the first man' (in Arabic *al-insān al-awwal*), is wholly distinct from 'the Primal Man' (*al-insān al-qadīm*).

de Courteille, Paris, 1861-77, II. 167; also Flügel, *Mani*, p. 141). Who Fādarūn was we are not told; it is therefore vain to inquire whether he really existed, and, if so, whether Mānī had any connexion with him. The assertion of Barhebræus that Mānī was at one time a Christian, and even 'a presbyter,' rests upon no evidence whatever.

¹ See T. Noldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 412.

² That king Šāpūr was ever converted to Manichæism, as al-Ya'qūbī states, is very improbable.

³ The fullest list of Mānī's writings is to be found in the *Fihrist* (p. 336 ff.). Unfortunately many of the titles are doubtful, and even those which are certain seldom give us any clue as to the nature of the contents.

⁴ See C. W. Mitchell, op. cit. I. 126 ff. of the Syr. text.

⁵ That Mānī was executed under Bahrām I. seems tolerably certain, though one historian (Theodore bar-Khōnī) places the event in the reign of Šāpūr, another (al-Dinawari) in the reign of Hurmuz (i.e. Hormizd I., about A.D. 278), and a third (Eutychius) in the reign of Bahrām II., the son and successor of Bahrām I. For the sake of readers unacquainted with Arab. it may be worth while to point out that in Sachau's tr. of al-Birūnī's *Chronology*, p. 191, line 17, the word 'Hurmuz' is a slip of the pen; the Arab. text says merely 'and he killed,' referring to Bahrām. By a curious coincidence there is an exactly similar mistake in H. Zotenberg's tr. of the corresponding passage in the history of al-Tha'alibī (Paris, 1900), p. 503: 'Sābūr fit aussi mettre à mort. . . Cette action gagna à Sābūr. . .'. Here again Bahrām is meant.

⁶ i.e. the theory and the practice of religion.

As we learn from the passage of the *Shāpūraqān* quoted above, Mānī held that a series of divine revelations had been promulgated in the world by Buddha, Zoroaster, Jesus, and finally Mānī himself.¹ Al-Bīrūnī adds that Mānī, in another of his books, claimed to be 'the Paraclete (*al-Fārāqlūt*) announced by Christ,' and this we learn from other sources also, both Christian² and Muhammadan. As the Muhammadan authorities use the Greek word, it may be assumed that it was used by the Manichæans themselves, but we are not to conclude that Mānī knew Greek, still less that he had read the NT in the original. The term Paraclete was in common use among Aramaic-speaking Christians, from whom Mānī doubtless borrowed it. Precisely what meaning he attached to it is a question not easy to answer. From the statements in the *Fihrist* as to his parentage and birth we may infer with certainty that, though he laid claim to a divine commission, he did not profess to be more than a human being in the ordinary acceptation of the term.³ And it is to be observed that in the *Shāpūraqān* the earlier prophets, including Jesus, are placed on a level with Mānī. This would seem to imply that they also were regarded as mere men. It is, therefore, not a little surprising to find that Christian authors, such as Titus of Bostra⁴ and Augustine, frequently represent Mānī as holding a Docetic theory with regard to Jesus, namely, that He was not born of a woman and that His body was a phantom.⁵ And the difficulty of ascertaining what was really the Manichæan doctrine on this point is still further increased by the statement in the *Fihrist* that Mānī pronounced Jesus to be a devil (*shayṭān*).⁶ The *Fihrist* informs us also (p. 336, line 10 ff.) that one of Mānī's works, *The Book of Secrets*, contained a chapter on 'the son of the widow, that is to say, according to Mānī, the crucified Messiah, whom the Jews crucified.' How the strange phrase 'the son of the widow' is to be explained, and how this passage is to be reconciled with that in which Jesus is said to have been called a devil, we have no means of determining. But, whatever the Manichæans may have believed as to the origin of the historical Jesus, the nature of His body, etc., it would

¹ The list of prophets given by al-Shahrastānī (l. 192) is longer, viz Adam, Seth, Noah, Abraham, Buddha, Zoroaster, Christ, Paul—then shall come the seal (i.e. the last) of the prophets to the land of the Arabs. Whether this sentence is simply a Muhammadan interpolation, or a distorted form of some passage referring to Mānī, is uncertain.

² Christian writers, from Eusebius onwards, sometimes wrongly interpret this to mean that Mānī identified himself with the Holy Ghost. It is scarcely necessary to recall the fact that even in the NT the term *παράκλητος* is applied not only to the Holy Ghost but also to Christ (1 Jn 21). The statement of Titus of Bostra (bk. ii. § 1), Augustine, and other Christian writers, that Mānī called himself an 'Apostle of Jesus,' has been confirmed by one of the recently discovered fragments (F. W. K. Müller, M. 17). This title does not necessarily imply more than that Mānī believed his own teaching to be substantially identical with that of Jesus.

³ The fact that in one of the fragments published by F. W. K. Müller (M. 811) Mānī is addressed as 'Mānī, son of the gods' (*Mānī yazdān frazēnd*), does not prove anything to the contrary, since the phrase may be understood in a purely spiritual sense.

⁴ Bk. iv. § 38 ff., p. 145 of the Syr. text.

⁵ As Baur remarks (*Das manich. Religionssystem*, p. 285), the Christian Fathers tell us at great length what Mānī denied with respect to the person of Christ, but they say scarcely anything about his positive teaching on the subject.

⁶ *Fihrist*, p. 335, line 3; see Flügel, *Mānī*, note 284. A more explicit statement is to be found in the treatise *De Fide contra Manichæos*, ascribed to Eudodius, a friend of Augustine: 'Sic enim in Epistola Fundamenti dicit: Inimicus quippe qui eundem Salvatorem iustorum patrem crucifixisse se speravit ipse est crucifixus, quo tempore aliud actum est, atque aliud ostensum. Princeps itaque tenebrarum affixus est cruci, idemque spineam coronam portavit cum suis sociis, et vestem coccineam habuit, acetum etiam et fel bibit, quod quidam Dominum potasse arbitrati sunt, atque omnia quæ hic sustinere visus est, tenebrarum ducibus irrogata sunt, qui clavus etiam et lancea vulnerati sunt' (ch. 28 [PL xli. 1147]). The fragment on the Crucifixion published by F. W. K. Müller (M. 18) unfortunately leaves the question open.

certainly appear that they denied the fact of His crucifixion. Hence, according to Augustine,¹ they were in the habit of contrasting the unreal sufferings of Christ with the real sufferings of Mānī, which they solemnly commemorated by an annual ceremony known as the *Bḡna*. That the Muhammadan writers say very little on this Christological question may be due to the fact that here their own views happened to resemble those of the Manichæans.²

The teaching of Mānī as to the duties and ultimate destiny of individuals was in accordance with his theory of the universe as a whole. Since the visible world has as its aim the separation of the light from the darkness, practical religion must consist mainly in the furthering of this process. The divine element in man must be freed from its fetters in order that it may return to its heavenly source. With regard to this part of the Manichæan system much misconception has prevailed in the West, from the time of Augustine to the present day. The divine element in man is not to be identified absolutely with the soul, though the Manichæans sometimes used language which admitted of such an interpretation. Yet, if we examine the evidence carefully, it becomes clear that, when they spoke of the soul as divine, they meant only that it contained something divine; and even this was not asserted with respect to the soul of every individual.³ Another misapprehension, due chiefly to Augustine's treatise *De Duabus Animabus*, is that man was represented as having two souls, one good and the other evil.⁴ In reality the passages which are cited as proofs of this theory affirm only the existence of two opposite tendencies in man. And, just as the soul is not wholly good, so the body is not wholly evil; for, according to the *Fihrist* (p. 335, line 16 ff.), the Manichæans held that after the death of the righteous man the 'powers' contained in his body, namely, the water, the fire, and the breeze, have to be extracted by 'the sun, the moon, and the shining gods,' and then 'the rest of his body which is altogether darkness is cast into hell.'

But, although it was the duty of all Manichæans to take part in the liberation of the light from the darkness, their share in the great work naturally varied according to their several capacities. First of all, a broad distinction was made between the ordinary Manichæans, who were known as 'the Hearers' or 'the Combatants,' and the inner circle of teachers or ascetics, whom Western writers call 'the Elect' (cf. *Ἐκλεκτοί*, *Electi*) and Muhammadans *al-Ṣiddiqūn*.⁵ The Elect again were subdivided

¹ 'Cum sæpe a vobis quærerem illo tempore, quo vos audiebam, quæ causa esset, quod Pascha Domini plerumque nulla interdum a paucis tepidissima celebritate frequentaretur, nullis vigiliis, nullo prolixiore ieiunio indicto auditoribus, nullo denique festivo apparatu; cum vestrum Bema, id est, diem quo Manichæus occisus est, quinque gradibus instructo tribunali et pretiosis linteis adornato ac in promptu posito et obiecto adorantibus, magnis honoribus prosequamini; hoc ergo cum quærerem, respondebatur eius diem passionis celebrandum esse, qui vere passus esset; Christum autem, qui natus non esset, neque veram sed simulatam carnem humanis oculis ostendisset, non pertulisse, sed fluxisse passionem' (Augustine, c. *Epistolam Fundamenti*, viii.).

² It is well known that, according to the Qur'ān (iv. 156), Christ was never crucified; but, when His enemies sought to slay Him, He was removed from the earth and 'a likeness was made to appear to them.' This theory, it will be observed, does not imply any denial of the reality of Christ's body. That Muhammad borrowed the conception from the Manichæans is very improbable, but at all events there is a striking analogy.

³ The souls of those who are finally lost seem to have been regarded as wholly evil. Thus we read in the *Fihrist* (p. 331, line 16 ff.) that Eve had two daughters, one of whom possessed an abundant measure of divine light and wisdom, whereas the other possessed none at all.

⁴ See the very instructive discussion by Baur, p. 162 ff.

⁵ This expression means in Arab. 'the veracious,' but, as Kessler has pointed out (*Mānī*, p. 818, note 4), it is here to be understood in the sense of its etymological equivalent in Syr.,

into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Mānī himself. But the position of the Elect differed essentially from that of the Christian clergy, inasmuch as the Elect exercised no sacerdotal functions properly so called. Whether Mānī instituted anything of the nature of a sacrament is doubtful; in any case, if there were Manichæan sacraments, they cannot have occupied an important place in the system, since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting.¹ Hence the main characteristic of the Elect was not that they had the exclusive right, or power, to perform certain acts, but rather that they possessed a fuller knowledge of religion and abstained from certain things which were lawful to the rest of the community. This duty of abstinence was called by the Manichæans 'the three seals,'² which Augustine more definitely characterizes as *signaculum oris*, *signaculum manuum*, and *signaculum sinus*.³ The first 'seal' imposed restrictions with respect to food and speech, the second with respect to outward acts, the third with respect to thoughts and desires. Thus the Manichæan asceticism implied no thought of expiation; the idea that self-inflicted suffering atones for sin—an idea which has exercised so disastrous an influence in some sections of the Christian Church—was quite foreign to the religion of Mānī. The prohibitions which he issued are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are essentially Satanic, and therefore retard the liberation of the light. In matters of detail the Manichæan code naturally appears arbitrary to us; it is evident that in drawing the line between what is 'Satanic' and what is not Mānī was guided much more by his fancy and by various casual associations than by any abstract logical principle. Thus, for instance, all Manichæans were forbidden to kill animals, but it would seem that the Hearers were permitted to eat flesh. The Elect abstained from both flesh and wine; they were also forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry and to engage in worldly avocations, whereas the Elect might neither marry nor acquire property, 'except food for one day and clothing for one year.'⁴ It is remarkable that among the things most strictly prohibited were idolatry and magic.⁵ As in nearly all Oriental religions, fasting played an important part. Sunday was observed as a fast-day by ordinary Manichæans, Monday by the Elect; viz. *Zaddiqā*, 'the righteous,' which we may assume to have been the form employed by the Manichæans themselves (see C. W. Mitchell, *op. cit.* i. 30: 'A Manichæan who is called a *Zaddiqā*, p. 127 ff.: 'Those idle women of the party of Mānī, those whom they call *Zaddiqāhā*'). Neither Kessler nor any previous writer seems to have noticed that from the same Syr. word is derived *zandīq*, or *zindīq*, 'heretic,' a term which was applied especially to the disciples of Mānī by the Persians of the Sasanian period, and afterwards by Muhammadans. Various other interpretations of this word have been proposed, but none that is at all plausible. The substitution of *nā* for *dā* is a phonetic change for which there are many analogies. That a term which was originally used as a title of honour should afterwards have acquired an opprobrious sense is likewise quite natural; cf. the Germ. *Ketzer*, from *kaþasþs*. The Persian terms for the 'Hearers' and the 'Elect' respectively are *Niyōshāgān* and *Vīzīdāgān*.

¹ According to Augustine (*c. Fortunatum*, i.), the Elect were supposed to celebrate a kind of Eucharist in their secret meetings. But, as Augustine himself admits that he knew nothing definite on the subject, we cannot attach much importance to his testimony.

² *Fihrist*, p. 333, line 5; Flügel, *Mānī*, note 217.

³ *De Moribus Manichæorum*, ii. 10.

⁴ Al-Bīrūnī, *Chronology*, p. 208.

⁵ The prohibition of idolatry is the first of the ten commandments which, according to the *Fihrist* (p. 333, line 10 ff.), all Manichæans were required to observe.

there were also monthly and annual fasts. Of the prayers, which were recited several times in the day, the following specimens are given by the author of the *Fihrist* (p. 333, line 15 ff.):

(1) Blessed is our Guide, the Paraclete, the Ambassador of Light, blessed are his guardian angels and adored are his shining hosts.

(2) Adored art thou, O shining one, Mānī our Guide, source of brightness, branch of life, thou great tree which art wholly medicine.

(3) I prostrate myself and adore, with a pure heart and a truth-speaking tongue, the great God, the Father of Lights, the Essence of Lights, adored and blessed art Thou, all Thy majesty and Thy blessed worlds which Thou hast called;² he adoreth Thee who adoreth Thy hosts, Thy holy ones, Thy word, Thy majesty, and that which seemeth good to Thee, because Thou art the God who is all truth, life, and holiness.

(4) I adore and prostrate myself before all the gods, all the shining angels, all the lights, and all the hosts, who proceed from the great God.

(5) I prostrate myself and adore the great hosts and the shining gods who by their wisdom have pierced, expelled, and overcome the darkness.

(6) I prostrate myself and adore the Father of majesty, the Great, the Luminous. . . .³

It will be noticed that these utterances contain not a single petition, no confession of sin, and no reference to the need of pardon. But we should not be justified in arguing that such conceptions were alien to the Manichæan system, for great stress seems to have been laid on repentance and the forgiveness of sin.⁴ Since, however, the Manichæans did not admit the idea of a propitiatory sacrifice, their theory as to the forgiveness of sin necessarily differed from that which was accepted by the great majority of Christians. Precisely what Mānī himself taught on this subject we cannot hope to determine; but the view which appears to have been current among the Manichæans, at least as early as the 4th cent., was that repentance naturally leads to forgiveness, 'since man is not punished for sinning, but for failing to grieve over sin.'⁵

With respect to Mānī's doctrine of the future life we have somewhat fuller information. The division of mankind into three classes, the Elect, the Hearers, and the Wicked, is here specially emphasized. The Elect, immediately after death, ascend by means of 'the pillar of glory' to the moon, and thence are conveyed to paradise; the Hearers must pass through a long process of purification and of wandering to and fro, before they join the Elect; while the souls of the wicked roam about the world, in a condition of hopeless misery, until the final conflagration, and are then consigned for ever to the realm of darkness.⁶

4. The relation of Manichæism to other religions.—When we consider the complex nature of Mānī's teaching, it will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manichæism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manichæism naturally gave rise to the theory that Manichæism is a combination of Christian with Zoroastrian or

¹ For *ḥayā*, 'bashfulness,' we should no doubt read *ḥayāt*, 'life,' as Noldeke has suggested.

² That is, apparently, 'called into existence'—the Arab. verb *dā'a* seems here to be a rendering of the Aram. *gēdā*, on the use of which see H. Pognon, *Inscriptions mandaiques*, p. 185, note 1.

³ Here follows a short clause which is unintelligible.

⁴ See Baur, p. 262, and the *Khuashnāfi*, ed. A. von Le Coq (*JRAS*, 1911).

⁵ 'Non enim puniatur quia peccavit sed quia de peccato non doluit' are the words of the Manichæan Secundinus, cited by Augustine (*c. Secundinum*).

⁶ *Fihrist*, p. 335. In this passage we find nothing which distinctly confirms the statement of Augustine that the souls of the Hearers and of the Wicked were believed to pass into plants and animals (*c. Fortunatum*, bk. v. 10, *de Her.* xli.). At the same time the idea of metempsychosis is not definitely excluded.

Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency to explain everything in the ancient world as due to Babylonian influence has led to the belief that Manichæism and all other forms of Gnosticism are simply modifications of the old Babylonian religion.

But to those who impartially examine the sources none of these hypotheses will appear satisfactory. Whatever elements Māni may have borrowed from older Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manichæism stood to Christianity was undoubtedly closer, but to call Manichæism a Christian heresy would be misleading. The characteristics which Manichæism and other Gnostic systems share with primitive Christianity are not necessarily derived from any Christian source; they are, for the most part, products of a general movement which, as mankind outgrew the older religions, spread over the civilized world and assumed various forms, according to the special circumstances of each case. The general movement in question has been well described by H. Oldenberg as a shifting of the centre of gravity, in religious matters, from without to within.

'The antique conception of religion, as a sort of offensive and defensive alliance between man and God, a mutual agreement whereby the worshipper secured for himself prosperity, success, and victory over his enemies, gradually faded away, or sometimes was violently shattered, and in its place there arose a new kind of belief, which held out the hope, not of earthly enjoyment, triumph, and dominion, but rather of rest, peace, and redemption' (*Buddha*¹, Berlin, 1897, p. 3).

In the time of Māni the old heathenism was by no means extinct in Babylonia, though Zoroastrianism had become the religion of the State.¹ Moreover, large Jewish colonies had long been established in the country. Of the early history of the Christian Church in those regions next to nothing is known, but there can be no doubt that before the beginning of the 3rd cent. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians of Babylonia were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type.² In particular the sect founded by the Syrian Christian Bar-daišān (Bardesanes), who died in A.D. 222, seems to have had great influence. Ephraim Syrus goes so far as to call Bar-daišān 'the teacher of Māni';³ this is not meant to imply that Māni was ever a Bardesanist, but merely that he adopted certain Bardesanist doctrines. In any case it is essential to realize that Manichæism arose in a country where several religions were competing with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Mughtasila, the community to which Māni's father attached himself.

The hostility of Māni to popular paganism is sufficiently shown by his strict prohibition of idolatry. That he clearly distinguished between ordinary paganism and Zoroastrianism appears from his inclusion of Zoroaster among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than as radically false; but how much he actually

borrowed from it is a very difficult question. To suppose that Māni's dualism was due mainly to Zoroastrian influence would be an unwarranted assumption; for, though both systems are rightly described as dualistic, they nevertheless differ profoundly. The aim of the Zoroastrian is to banish evil from the world; the aim of the Manichæan is to extract from the world that which is good. In this respect Manichæism has more in common with Buddhism than with Zoroastrianism; but from the fact that Māni represented Buddha as the communicator of a divine revelation we must infer that Māni's acquaintance with Buddhism was of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can attach no great importance to his adoption of certain ancient Babylonian myths—e.g., such as relate to the nature and movements of the heavenly bodies.¹ In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude towards Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved;² hence in Christian writings directed against Manichæism the defence of the OT generally occupies a prominent place. It is probable that Māni's aversion to Judaism was largely due to his horror of a practice which Judaism notoriously has in common with popular paganism, namely, the sacrificing of animals.³

Towards Christianity he was much more favourably disposed. Whence he derived his information on the subject is indeed uncertain, for, though it seems probable that the greater part of the NT had been translated into Syriac some time before Māni was born, we cannot safely assume that he had access to it. Hence his peculiar teaching as to the person and history of Christ, to which allusion has been made above, may be due in some measure not to perversion of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the most essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Māni. But he had one great advantage over the Christians, namely, that he provided a much more secure dogmatic basis for asceticism than any previous teacher. The Christian ascetics, in condemning natural feelings and appetites, were constantly hampered by their theory of God as the Creator of the universe in general and of man in particular; the distinction which they were obliged to make between human nature as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichæan dogma that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Māni displayed a boldness and originality of conception which entitle him to be regarded as a genius of the first order. To represent his system as a mere patchwork of older beliefs is therefore a total perversion of the facts.

5. History of the Manichæan community.—At the time of their founder's death the Manichæans were already a numerous and highly organized

¹ Astrological myths and speculations played a considerable part in some other Gnostic systems, notably in that of Bar-daišān.

² See, for instance, the beginning of the account of Manichæism in al-Shahrastāni (i. 188). The statement in the *Evangelium* (p. 385, line 5 ff.), that Māni rejected the prophets generally, is an exaggeration based mainly on his treatment of Moses.

³ In this respect, of course, Māni did not differ from some of the early Christians. Thus the *Epistle to Diognetus*, which is usually regarded as a product of orthodox Christianity, speaks of animal sacrifices in terms of unqualified condemnation, and even in Rabbinical literature a tendency to disparage sacrifice occasionally shows itself.

¹ The theory that Zoroastrianism did not become the State religion till after the overthrow of the Parthian dynasty (about A.D. 224) rests on no trustworthy evidence.

² F. C. Burkitt's *Early Eastern Christianity* (London, 1904) relates chiefly to the Christianity of Edessa and its immediate neighbourhood; but much of what he says probably applies also to Babylonia.

³ O. W. Mitchell, *op. cit.* p. 8.

sect, scattered over a great part of the Persian Empire and drawn from the ranks of various older religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrian priesthood opposed the new faith. Mānī's immediate successor, as head of the community, was a certain Sīs (Gr. Σίσυμβιος). For many centuries Babylonia continued to be the headquarters of the Manichæan organization, in spite of repeated persecutions on the part of the Persian government. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manichæans were treated even worse than the Christians.¹ For this no political pretext could be alleged, since the Manichæans were politically inoffensive, whereas the Christians not infrequently brought persecution upon themselves by an ostentatious display of their philo-Byzantine sentiments. The principal result of these attempts to suppress Manichæism in Babylonia and Persia was that large numbers of Manichæans took refuge in Central Asia, where they carried on a successful propaganda among the Turkish tribes.

The precise date at which Manichæism began to spread in the Roman Empire is not certain, but it was undoubtedly well known there early in the 4th century. With respect to its prevalence in N. Africa, two or three generations later, Augustine furnishes ample evidence. The Christian emperors, as we might have expected, showed themselves no less intolerant towards Manichæism than the kings of Persia. In the persecution of the Manichæans Pope Leo I. played a specially prominent part. As to the later history of the Manichæans in Europe very little can be discovered with certainty, on account of the vagueness with which the term 'Manichæan' is used by Catholic writers. Thus the charge of Manichæism was brought against the Bogomils in the Byzantine Empire and the Albigenses (*q.v.*) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokanye has been described as a modified form of Manichæism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mānī in the East enjoyed a period of comparative repose. Strictly speaking, they had no legal claim to toleration, for the Qur'ān, which expressly recognizes Jews, Christians, and Sabians² as capable of deserving the favour of God (ii. 59, v. 73), does not mention Manichæism. Nevertheless, it would appear that in the early days of the Muhammadan Empire no penalties were inflicted upon the Manichæans. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may for a while have served to protect them from molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manichæism. In many cases these reports were certainly false; thus, for instance, the Khalifa al-Walid II. (A.D. 743-744), whom Muhammadan historians depict as a monster of impiety, is accused of having said that Mānī was the only prophet whom God ever

sent into the world.³ If al-Walid really uttered these words, they would prove not that he was a Manichæan, but that he knew next to nothing of Manichæism. It is, however, impossible to deny that secret conversions to Manichæism actually took place among the literary classes. Apostasy from Islām is notoriously a capital offence according to Muhammadan law (see art. APOSTASY [Muhammadan]). Hence we cannot wonder that in the latter half of the 8th cent., when under the 'Abbāsid dynasty the spirit of religious intolerance became dominant in the Muhammadan world, a systematic attempt should have been made to extirpate Manichæism.⁴ The organizer of this persecution was the Khalifa al-Mahdī (A.D. 775-785), who instituted for the purpose a State Inquisitor, with the title of 'Inspector of the Zanādiqa.' The term *zanādiqa* (plural of *zindiq*)⁵ was used primarily to denote the Manichæans, though Muhammadan writers often employ it vaguely in the sense of 'heretics' or 'atheists.'⁶ That al-Mahdī did not make a very clear distinction between Manichæism and some other heresies may be inferred from a passage in which he is represented as elaborately justifying his policy of persecution;⁷ the accusations here brought against the Manichæans include, *e.g.*, the practice of marriage with near relatives (*nikāḥ al-akḥawāt wa-l-banāt*), which was characteristic of the Zoroastrians (see art. MARRIAGE [Iranian]), but seems to have been altogether foreign to Manichæism.

The religious policy of al-Mahdī was generally followed by his successors. The number of persons put to death on the charge of Manichæism certainly amounted to many thousands, while Christians and Jews, though subject to various disabilities, were usually tolerated. But, in spite of all, the religion of Mānī long survived even in the heart of the Muhammadan Empire. Some two centuries after al-Mahdī, the author of the *Fihrist* tells us (p. 337, line 26 ff.) that he had been acquainted with about 300 Manichæans in Baghdad alone. But the region in which they were most numerous was Central Asia. In the territory of the Turkish tribe Taghazghaz the majority of the population professed Manichæism; a Muhammadan traveller who visited that country describes it as flourishing and civilized.⁸ When, in the reign of the Khalifa al-Muqtadir (A.D. 908-932), the Muhammadan governor of Samarkand condemned to death a large number of Manichæans, they were saved, it is said, by the intervention of their co-religionist, the prince of the Taghazghaz.⁹ This is the only known case in which Manichæism became the religion of a political community. We do not know how long this state of things continued, or when Manichæism finally died out; but we may conjecture that it was swept away, like many other beliefs and institutions, by the great Mongol invasion of the 13th century.

That the Manichæan community in the course

¹ *Kitāb al-Aghāni*, vi. 135, last line.

² See the very interesting paper by I. Goldziher, 'Sālih ibn 'Abd-al-Kuddūs und das Zindikthum während der Regierung des Chalifen al-Mahdī,' in *Trans. of the Ninth Intern. Congress of Orientalists*, London, 1893, ii. 104 ff. Goldziher is of opinion that the Manichæan propaganda under the early 'Abbāsids was somehow connected with the anti-Arabian movement of the Persian nationalists (the so-called *Shu'ūbiyya*). Whether there is any truth in this view may be doubted, for Manichæism had nothing to do with nationality. At the same time it is not surprising that Muhammadans should often have confounded these wholly distinct tendencies.

³ See p. 398^b, note 5.

⁴ Thus from the statement in Ibn Qutaiba, *Kitāb al-Ma'arif* (ed. F. Wustenfeld, Göttingen, 1850, p. 299), it is very unsafe to conclude, with G. Jacob (*Allaharabisches Bedeutenleben* 2, Berlin, 1897, p. 107), that there were Manichæans at Mecca in the time of Muhammad.

⁵ Al-Tabarī, iii. 688.

⁶ See Yāqūt's *Geographical Dictionary*, ed. Wustenfeld, Leipzig, 1866-73, i. 840.

⁷ *Fihrist*, p. 337; Flügel, *Mani*, p. 106.

¹ The Persian officials, in dealing with persons suspected of Manichæism, sometimes adopted the curious method of requiring the accused to 'kill ants,' just as Christians, in the Roman Empire, were required to throw incense upon a heathen altar (see E. Rodiger, *Chrestomathia Syriaca* 2, Halle, 1868, p. 94).

² The Sabians (a name which, of course, has no connexion with that of the ancient Sabæans) seem to have been a sect, or possibly a group of sects, who existed in Arabia at the time of Muhammad. The disciples of Muhammad were at first called Sabians by the heathen Arabs, and in later ages the title of Sabians was falsely assumed by several religious communities, as a means of protection—*e.g.*, by the pagans of Harrān, in Mesopotamia, and by the Manichæans of Samarkand, as we learn from al-Birūnī.

of its long history was not altogether free from internal dissensions might have been safely assumed. But the positive information which we possess on this subject is very scanty. We learn from the *Führer* (p. 334, line 4ff.) that at a date which is not specified, but in any case some time before the end of the 7th cent., a party among the Manichæans severed their connexion with the central authority established in Babylonia and set up an independent organization; whether this schism was due to dogmatic differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th cent., when a branch-sect was formed and became known as the Miqlāsiya, after the name of their leader Miqlās. The majority of the Manichæans, who remained faithful to the head of the community, a certain Mihr, were thenceforth called the Mihrīya. The points in dispute between these parties seem to have been matters of discipline rather than of religious belief.

LITERATURE.—In modern times, the first serious attempt to investigate the subject was made by the French Protestant theologian I. de Beausobre in his colossal work, *Histoire critique de Manichéisme et du manichéisme*, Amsterdam, 1734-1739; in dealing with the sources he shows considerable acumen, but his book is ill-arranged and contains many irrelevant digressions. An admirable summary and examination of the evidence, so far as it was then available, will be found in the treatise of F. C. Baur, *Das manichäische Religions-system nach den Quellen neu untersucht, und entwickelt*, Tübingen, 1831. Perhaps the best general account is F. Spiegel, *Iranische Alterthumskunde*, Leipzig, 1871-78, ii. 195-232. The works of K. Kessler—*Mani, Forschungen über die manichäische Religion*, i., Berlin, 1889, art. 'Mani, Manichaer,' in *PRE²* and *PRE³*—supply much valuable information, but they should be used with extreme caution; the author's speculations are often fantastic and his linguistic knowledge is very superficial. A. Harnack, art. 'Manichæism,' in *EBR⁹* (revised by F. C. Conybeare in *EBR¹¹*), is largely based upon Kessler. The same may be said of the work of E. Rochat, *Essai sur Mani et sa doctrine*, Geneva, 1897. Very important contributions to the study of the subject are contained in a series of monographs by F. Cumont and A. Kugener, entitled *Recherches sur le Manichéisme*, Brussels, 1908-1912.

A. A. BEVAN.

MANIPURIS.—Officially the Manipuris are Vaiṣṇavite Hindus. They cremate the dead, they receive the *mantra* from a recognized Hindu *guru* in many but not in all cases, they recognize Hindu festivals (but observe them a day late), they revere the cow, they are scrupulous in the matter of food, but, on the other hand, they do not practise child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brāhman, and none of the ordinary definitions of caste applies to their social order. Knowledge of the Vaiṣṇavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1705), is of social and political value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonies of everyday life. It is, so far as externals are concerned, the religion of the Meitheis. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Rāja or ryot, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religious development in India to study at close quarters the process by which in Hinduism animism is tempered by metaphysics, and magic transformed by philosophy.

The historical records of Manipur, *Ningthawrol*, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meitheis and the Lois. The Meitheis consist of seven clans, each divided into

numerous families, the principal clan being that known as the Ningthauja, or Royal, clan. The name Meithei now borne by all the clans is thought to have been the name of the Ningthauja clan before its hegemony was completely established. The Lois, or the conquered people, are not admitted into the Meithei confederacy, but are of similar stock to the Meitheis, and the Meitheis worship the gods of these Loi villages as much as the Lois themselves. The Meithei confederacy is an endogamous group in theory, although in practice the issue of mixed marriages is admitted. The principal order of divine beings is the *ūmang lai*. There were originally, as recent research has shown, nine *ūmang lai*, or forest gods, with whom were associated seven *lairemas*, or goddesses. There are now 364 such deities. The gods married with mortals, and their issue were promoted to divine rank. The deities have different names in different places, and there are cases where Rājas have been deified after death. The creator deity is identified both with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are members of a special group, whose function is to guard certain areas and who are therefore known either as *maikeingākpa*, watchers over or guardians of direction, or *lamlai*, gods of definite areas. Here there is obviously a combination of ideas dating back to the time when definite areas were occupied by local groups each possessing a group deity. Then among the *ūmang lai* is the rain-god, and last is the god of the household (Sena-mehi), who is occasionally said to be the son of one of the seven goddesses. The function of the *maikeingākpa* deities was to keep sickness from entering the State. Each family has a special deity, male or female, who is obviously in origin a deified ancestor, but the worship of some at least of these group deities is not now confined to members of the group. The seven goddesses bear titles describing their functions. From each of them is sprung one of the clans composing the Meithei confederacy. The earth, water, grass, rice, iron, fish, gold and silver, salt, cotton, fire, and the winds are sprung from these goddesses, either directly or from their daughters. Each of these deities has a *laiphām*, or god's place, specially sacred to him or her. Some reside on hill-tops, but for the convenience of their worshippers have abodes in more accessible spots. Such *laiphām* abound, notably on the ridges and passes, and are marked by heaps of stones and leaves. In the sacred groves near the villages of their special worshippers are houses for the deities, and these groves are sanctuaries for bird and beast. The gods play the national game of polo, and a stick and ball are kept for their use. In some cases they are represented by images or material objects. They also reside in the chief official of the group, village, or family which forms their special clientele. The principal ceremony in the worship of the *ūmang lai* is called the *laiharaoba*, literally 'pleasing the god.' In every case the god has to be enticed from running water. The ceremony rouses him from a state of quiescence into activity, as is shown by his entering into some selected worshipper. The god benefits directly by the rite, which gives him strength so that he becomes thereby more potent to aid his worshippers. The process of enticing the deity varies somewhat according to the deity, and is accompanied by numerous subsidiary rites, mainly in order to avert all evil influence. Special precautions have to be taken—e.g., clean fire must be manufactured by means of a bamboo and a cane in cross friction. Dancing is a necessary accompaniment of the rite, which often includes the use of foul abuse—a feature which gives the god great

pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus indicating that the purpose of the rite is to restore the solidarity of social life and to produce in the worshippers a sense of religious exaltation. The social divisions, resting on age and other lines of social cleavage, function separately on these interesting occasions. The offerings are in some cases such as render the active participation of professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a *Loi*, a member, i.e., of the non-Hindu section of the community, for the Hindu believer for and by whom and on whose behalf the rite is performed. The Hindu may save his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the *Pir Alis* of Bengal, who fell from orthodoxy by mischance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was undoubtedly practised, probably at no very distant date.

The priests of the ancient order are designated *maibas* and *marbis*, and are recruited by the admission of those who become possessed by the deity at one of the high religious festivals. Inasmuch as sickness and disease are attributed to spiritual beings, the *maiba* is also the doctor of the community, but here there are specialists, and the practical knowledge of the *maibas* is far from despicable. The wide-spread belief in possession as a token and source of abnormal power and religious authority is beyond a doubt at the root of much that is important in Hindu doctrine. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like *bhakat*s and *jogis*, are regarded as *jivanmuktas* (q.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the regularity, adequacy, and seasonability of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of the *chāhitāba*, the person who gives his name to the year. Various means of divination are employed for the purpose of securing for this office a person who shall bring the good luck that is dependent on his personality.

Beliefs in evil spirits, who accompany animals and fish, and are ever hurtful to mankind, in beautiful sirens who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree-spirits to cure as to cause sickness, and in the maleficent activity of the ghosts of those who die by violence or of women who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

LITERATURE.—W. McCulloch, 'Account of the Valley of Manipore,' *Selections from the Records of the Government of India* (Foreign Department), xxviii., Calcutta, 1859; T. C. Hodson, *The Meithei*, London, 1908; J. Shakespear, 'The Religion of Manipur,' in *FL* xxiv. [1913] 409 ff.

T. C. HODSON.

MANITU.—*Manitu*, a word originally applied by the Eastern Algonquians to a spirit, is properly *anit*, 'spirit,' with the sign *m*, meaning any spirit or genius in the shamanistic devil-cult of the Indians, and also any *genius loci* without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great

Spirit became current among the Indians, and this was expressed by the word *lit* or *keht* prefixed to *anit*; thus *Keht-anit*, or *Kitanit* (*Kittanit*), to which was again added the syllable *wit*, meaning a mode of existence; hence *Kittanitowit*, 'the existence (known as) the Great Anito,' the paraphrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is abundantly manifested by the absence in any American language of a word capable of expressing the idea of God, the words used in John Eliot's Bible (Cambridge, Mass., 1663) and employed by the Penobscot Indians, *Kiehtan* and *Keitanitom*, being merely variants of this artificial compound. As such the conception was introduced in opposition to a spirit variously called *Hobbomoco*, the Evil Spirit, or *Malsum*, 'the Wolf.' Another form of the latter appears to have been evolved in antithesis to a contracted form of *Keitanitom*, namely, *Tan'tum*, as opposed to *Squantum*, the Devil ('angry god'). *Manitu* is, then, a general word for any sort of a *dæmonium*, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the fusion (really confusion) as the embodiment of one unitary conception. The Indians believed that a spirit might be a good or good-natured power, and that he might be an inimical power, and they also believed that a certain ancestral spirit had always been favourably disposed towards his children, but it was far from the thought of the Algonquians that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found, they reflect the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, that they might be under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as in any case Great Spirits. They believed rather that the 'medicine-man' could control all spirits. Similarly, when the 'epic' of Kulóskap describes this god of the Passamaquoddies as the son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of goodness opposed to a sort of Ahri-man, it must be remembered that the Passamaquoddies have long been under higher religious guidance than that of their medicine-men. Even the 'vague faith in a Supreme Spirit' ascribed to them is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that revere him as leader and helper. In general it may be said that worship is not paid to any evil spirit as such, but also that worship is not paid to any good spirit as such.

The *manitu* is often confused with the *wakan* of western tribes. But the latter is often less a spirit than a power, like the *mana* (q.v.) of the Polynesians, which lies inherent in certain objects as well as in certain men. Its possession gives power, not, to the Indian's thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two conceptions lies that of the ordinary *oke*, which at bottom is one with *wakan*, but is conceived as sometimes a spirit and sometimes a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them con

notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag, which is not really a medicine-bag at all, but a collection of objects of fetishistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is a mysterious force which may inhere in matter or may make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, productive earth, and animals all have it, though some in larger amount than others. Finally, men have it in certain cases. But there is no sharp distinction between this power and that found in spirits proper, where it becomes individualized. It is this very power that is the 'medicine' of the conjurer and nature-subduing priest. Whether it be called *manitu*, *oke* (*oki*), *wakan*, or even *ku* (in Maya form), it is always the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. *Manitu* is generally personal, *wakan* is generally impersonal, but the alternate use of either is not unusual. *Wakan* has been defined by Brinton (*Myths of the New World*, p. 45) as 'supernatural in its etymological sense,' in that it means in the forms current among the Iroquois and Dakotas, namely, *oke* and *wakan* respectively, something 'above,' and Brinton interprets this as *super* in the sense of supernatural. But it is more probable that the word means *super* in the sense of superior. These Iroquois and Dakota forms are etymologically allied, and a possible connexion with Sioux *oghee* may be admitted; but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned *ku* of the Mayas. The 'Quaker' of the Powhatans is another form of the same word, the quaker gods being, however, not the higher but the lesser spirits. This word, like Tan'tum and Squantum above, is an adaptation from approximately corresponding Indian sounds (Quaker is *qui-oki*, 'small spirits') and contains the *oki* of the Iroquois and Algonquins, but it is not probable that it is one with the southern *huaca*, *ku*, etc. The Algonquin *oki* means a spirit of any sort—e.g., the spirit of a body of water, or the spirit of winter—and expresses also the idea of a distinctly demoniac power ruling the winds, but not in a devilish manner; for, especially among the Hurons, the *oki* gives good fortune and regulates the winds for the benefit of the good Indian. It also implies a ghost, and in this respect differs from the conception of *anit* (*manitu*), though in other respects it is difficult to perceive any distinction between the *anit* (*manitu*) and the *oki*; perhaps, as appears from the geographical distribution of the two words, the *anit* was confined to the East, while the *oki* penetrated from the West to the Eastern tribes.

The *manitu* of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being a supreme spirit. Like many of the Indian spirits, he was a very superior animal, Michabo meaning 'great hare' (originally *manibozho*). This *manitu* was revered from the Northern line of the States to Virginia and from the East as far West as the Mississippi. He was represented as the originator of all the system of conjuring and exorcizing which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he in turn tricked and deceived; he was for the most part a humorous buffoon, whose exploits amused the Indians, as those of Brer Rabbit amuse the Negroes. On the other hand, he is referred to as 'the hare that made the moon,' and he is even said to have created

the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, and, when autumn comes, to smoke his last pipe before turning in to sleep through the winter. It is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, sends (not creates) the sun and moon out of the East, has led to the ingenious conjecture that Michabo has come from a confusion of *wabos*, 'hare,' with *wabi*, 'light' (Brinton, *Myths of the New World*, p. 165). There is the greatest confusion in the form of the name now known as Michabo, which appears as Missibizi and Messou as well as Nanibozho and Manibozho, apparently because the name was sometimes rendered *michi* ('great') and sometimes *manitu* ('spirit'), with *wabos*, 'hare.' That is, Michabo was thought of as the 'spirit-hare' or as the 'great hare,' and this 'hare,' according to Brinton, is a later Indian mistake for 'light.' Although the words are alike, and *wabi* means 'white' (*wapa* means the eastern light), yet nothing is more apt to lead one astray than reliance upon such etymological chances. We are, then, far from agreeing with Brinton when he says that 'beyond a doubt this is the compound in the names Michabo and Manibozho which therefore means the Great Light, the Spirit of Light, the Dawn' (*ib.* p. 166). Much as Brinton has done for American studies, he wrote under the dawn-myth influence of his day and probably laid more stress upon etymology than upon ethnology. The truth is that the 'great hare' is the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demoniac animal of kindly disposition and endowed with a great magician's knowledge and cunning, which, however, could not keep him out of ludicrous difficulties. He was not a god, still less a god of goodness, but, as has been said of similar Indian spirits, a spirit of good-nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the year 1616, Michabo and the four winds were the only gods that the Algonquins had at that time. Further, it must be remembered that Michabo is sometimes portrayed (as among the New Jersey Indians) as a devil, while at others he is represented as the 'ancestor'—a term which has often led to the false conclusion that believers in an ancestor-spirit must necessarily believe in a creator-god. Other tribes also have ancestral or at least specially revered animals, such as the bear, deer, and wolf of the Mohigans. None of the Western or Southern American Indians had the conception of a Creator-God, but many of them derived their stock from certain animals. To this class of animal-gods Michabo, the greatest *manitu* of the East, appears to belong. The history of the brothers is told in various forms in various tribes, and has been interpreted as additional evidence that, when there is a good and a bad brother, we have a fundamental dualism, which, however, is unsubstantiated by any close analysis even of the tales as handed down. In the Iroquois version there are two brothers, the Beautiful Spirit and the Ugly Spirit or Good Mind and Bad Mind, as interpreted by the missionaries. But these are in reality the two brothers, 'White' and 'Dark,' Ioskeha and Tawiskara, who contend with one another till White Spirit conquers and rules from the East. Both are grandchildren of the moon, but Ioskeha becomes 'father of mankind'—an expression which means that he is the ancestor of

the Iroquois. He destroyed the frog, which had made earth a desert by swallowing all the water, and he learned the wisdom of the tortoise which supports the world, namely, how to make fire. Ioskeha gave this knowledge to man. Yet here the brother is not represented as an animal; it is a simple conflict of white and dark, or light and darkness, a culture-myth which the Algonquins kept in animal-form, while the Iroquois preserved or invented it without basing the myth upon anything save the natural antithesis of light and darkness (cf. art. DUALISM [American]). It is this myth that caused the belief in American Indian dualism to receive wide acceptance, as it was thus originally interpreted by Brébeuf in 1626.

As the word *manitu* has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forms of spirit-power more or less unknown to the Algonquins. Thus it has come to denote the personal guardian-spirit of certain Western tribes which has occasionally arisen out of the personal guardian of an individual. The mythical ancestor of a village at a certain period in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal, which then becomes his totem. This is adopted by his clan; and, when the clan becomes part of a larger tribal organization, it still remains as the guardian of the clan, though with a marked tendency to become simply a totem-crest. The tutelary guardian-*manitu* thus becomes a mere symbol. Sometimes such crests become merely the property of certain families. The ancestors who received the totem-*manitu* received with it the powers or privileges still retained by the *protégés* of the spirits, who continue to appear to the young men of the tribe, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the North-West. This is the 'individual totem' acquired by every youth at puberty, which, when the organization of the clan is in a decayed state, is no longer identical with that of the ancestor and is no longer inherited. The youth at this period wanders from his father's lodge and in a secluded spot fasts and cries to the spirits, inviting any one of them to become his spiritual patron (cf. art. COMMUNION WITH DEITY [American]). During this period, when he falls asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mysterious protector during life. He then returns home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery-bag ('medicine-bag'). It is possible that the individual *manitu*, though in some cases a later development than the clan-totem, is in other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-*manitu*. Even among the Eastern Algonquins the acquisition of a special *manitu*-spirit in animal form by the youth who fasts is not unknown.

LITERATURE.—G. Catlin, *The North American Indians*, London, 1842; D. G. Brinton, *Myths of the New World*, New York, 1888, *The American Race*, do. 1891; A. H. Keane, *Man, Past and Present*, Cambridge, 1899; *Relation de la nouvelle France pour l'an 1637* (and subsequent years); H. Webster, *Primitive Secret Societies*, New York, 1908. The earliest source of information is contained in the *Relations* of the early missionaries. Brinton and Webster (*op. cit.*) give full bibliographies. The *Annual Reports* of the Bureau of American Ethnology should be consulted for modern conditions.

E. WASHBURN HOPKINS.

MAÑJUŚRĪ.—Like the majority of Buddhist 'gods,' Mañjuśrī is represented under various aspects: (1) in the Great Vehicle, or Mahāyāna (*g.v.*), properly so called, he is a *bodhisattva*, an entirely Buddhist personage in definition if not in

origin (his origin is obscure; cf. *AVALOKITEŚVARA*); (2) in the 'Tāntric Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Mañjuśrī becomes one of the names, and often the principal 'exponent,' of the Supreme Being; (3) the cult of Mañjuśrī, originating in India, took a peculiar development in China: it probably spread from China into Nepāl, where Mañjuśrī is the mythical giver of civilization.

1. As *bodhisattva*.—The most ancient of his numerous names is perhaps Mañjughosa, 'pleasant voice.' His usual epithet is *kumāra*, or *kumārabhūta*, 'young man,' 'royal prince';¹ this title, whatever its origin, means technically a *bodhisattva* at the stage when, having received consecration (*abhiseka*) as a prince, he is associated with the power of a Buddha and becomes his right arm (see *BODHISATTVA*, vol. ii. p. 748*). He is named in the first rank of *bodhisattvas*, before Avalokiteśvara, at the beginning of the *Lotus of the True Law* (translated into Chinese A.D. 147–186), where he is represented (ch. xi.) as a great converter. The 'scholastic' *sūtras* and devotional works give him as a type of *bodhisattva*, relate his vow, attribute to him moral counsel for the conduct of true believers of the Great Vehicle, and celebrate his power.² Legend associates him with the revelation of the books of the *Prajñāpāramitā*.³ Revealer of the *Prajñā*, god of the Word, he is the patron of the Great Vehicle, of the 'second dispensation,' and becomes the god of wisdom, a personage of high importance. According to Fa-Hien (see J. Legge, *Fa-Hien, A Record of Buddhistic Kingdoms*, Oxford, 1886, p. 46), the followers of the Mahāyāna worshipped the *Prajñā*, Mañjuśrī, and Avalokiteśvara. We have many images of Mañjuśrī; the most ancient, with two arms, are those which make his characteristic mark the *Prajñā* carried upon a lotus.

2. As Tāntric god.—It is in the Tāntric section of the Tibetan scriptures (*Rgyud*, *Kanjur* as well as *Tanjur*) that Mañjuśrī takes an extraordinary development.⁴ Half a dozen *Tantras* (*Kanjur*) bear his name; among them is 'The List of the true Names of Mañjuśrī Jñāna-sattva.'⁵ The last term, 'Essence-of-knowledge (?),'⁶ is opposed to the name *bodhi-sattva*, and is more dignified. We find it again in one of the numerous magic rituals devoted

¹ On this expression see H. Kern, in *SBE* xxi. [1884] 4; cf. *Saddharmapuṇḍarīka*, ed. H. Kern and B. Nanjio, Petrograd, 1908 ff., p. 66: 'A certain Buddha will live twelve cosmic ages, not counting the time he is *kumāra*.'

² Various legends are told of his former human lives, but they are not so developed as the legends relating to Maitreya. See (1) E. Chavannes, 'Le Sūtra de la parol occidentale de l'inscription de Kiu-yong Koan,' in *Mélanges Harlez*, Leyden, 1896, p. 75 (this *sūtra* is a *dhāraṇī*, sacred to Varoḥana, 'the Brilliant,' the Buddha to whom Mañjuśrī is sometimes subordinated); (2) the *Mañjuśrīgūṇakṣetravyūha* (translated into Chinese A.D. 800), where Mañjuśrī tells how he took his *bodhi-sattva* vow: 'I do not wish to become a Buddha quickly, because I wish to remain to the last in this world to save its beings'; 'In all my existences I wish to follow the example of Akṣobhya and be a monk' (*Śikṣāsamucchaya*, Petrograd, 1902, p. 13); (3) the *Mañjuśrīvairocana* (translated into Chinese in 813), a book patronized by the Mādhyamikas, giving the story of the conversion of a light woman by Mañjuśrī in the guise of a handsome young man; the only real sin of the *bodhisattva* is the sin of hatred (*Śikṣāsamucchaya*, p. 149). All these works are scholastic, as is the *Bodhipakṣanirdeśa*, an account by Mañjuśrī of the 'wings' (*pakṣa*) of illumination. The devotion to Mañjuśrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*hīra*) are to be noted. Mañjuśrī is one of the saviours and patrons invoked in the 'Stanzas of Good Practices' (*Bhadracharyāgāthā*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śikṣāsamucchaya*, pp. 297, 865; *Bodhicaryāvatāra* [Intro. à la pratique des futurs Bouddhas, Paris, 1907, p. 8 f.]).

³ Tāranātha, *Gesch. des Buddhismus*, tr. A. Schietner, Petrograd, 1869, p. 58.

⁴ See P. Cordier, *Catalogue du fonds tibétain de la Bibliothèque nationale*, iii., Paris, 1810.

⁵ *Nāmasaṃgīti*, ed. J. P. Minayeff, Petrograd, 1887.

⁶ Probably this term has been invented on the model of *bodhisattva* for the purpose of implying something more sublime, and yet more mysterious, than the word *bodhisattva*. This heaping up of terms is characteristic.

by the *Tanjur* to Mañjuśrī: 'spell (*sādhana*) of the Adibuddha, the Essence-of-knowledge Mañjuśrī,'¹ which begins as follows:

'Homage to the Buddha of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.'

*Sādhana*s (spells) are magical operations by means of which the worshipper brings a deity into his presence in order to identify himself with the deity—which is not difficult to accomplish, since every man is essentially nothing but deity, though particularized and stained. These operations include 'diagrams' (*mandalas*), 'geometrical figures formed of squares and circles, more or less ornamented, and inscribed within each other, upon which is ranged an endless succession of deities' represented by magic syllables.² Mañjuśrī often occupies the centre of these *mandalas*.

Tāntic gods have two aspects, a 'right hand' aspect and a 'left hand' (or erotic) aspect. Under the former Mañjuśrī is called 'Lord of speech of the ontological Universe' (Dharmadhātuvāgīśvara); under the latter he is 'Diamond-Love,' 'Thunderbolt-Love' (*Vajrānāga*).³ His right-hand aspect is seen from the following:

'Qu'on s'identifie à Dharmadhātu-Vāgīśvara, qui a le corps tout blanc, quatre faces, huit bras: les cinq Bouddhas [who represent the five kinds of knowledge of which Mañjuśrī is the synthesis] ornent sa couronne de joyaux... les deux mains (originelles) font le geste de l'enseignement; les trois autres de droite tiennent le glaive, la flèche, la hache; les trois autres de gauche, le livre de la Prajñā.'⁴

Here, Foucher goes on to say, the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahmā. Grünwedel remarks that Mañjuśrī and Brahmā share the favours of a common *śakti* (divine energy, feminine aspect, of a god), *Sarasvatī*.⁵

It is noteworthy also that the *Nāmasaṅgīti* (viii. 19) gives Brahmā among the names of Mañjuśrī. As soon as the Buddhas and *bodhisattvas* became 'gods,' they inevitably became gods after Hindu fashion: Avalokita has more likeness to Śiva, and Mañjuśrī to Brahmā. Mañjuśrī always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China.—E. Huber was the first to observe that the canon of one of the Buddhist schools of the Little Vehicle, or Hinayāna (*q.v.*), contained traditions foreign to India—*e.g.*, the legend of a town of Khotan—and he wondered, therefore, whether 'this canon had not been considerably augmented and modified in Turkestan itself.'⁶ It is now certain that 'Serindia,'⁷ and, later, China itself collaborated in the development of Buddhism. The story of Mañjuśrī, who, according to the Chinese pilgrim,⁸ now dwells in China, who is represented in the miniatures of the Nepālese MSS as a god worshipped in China,⁹ and who, according to the Nepālese tradition, came from China to Nepāl, is interesting from this point of view.¹⁰

MĀRA.—It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacerdotal and esoteric; they are the expression of a pantheistic and pessimistic philosophy; but they, nevertheless, appeal to devotion and worship. Brahmā-brahman is the most eminent among them. Kāla, 'Time,' creator and destroyer, Kāma, 'Desire,' a cosmical entity, and many others may be embodied in the figures of the popular pantheon. Our Brāhmanic information on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic sources.

This is the case with Māra, who is not unknown in the Atharvaveda, that aristocratic compendium of demonology; he is an important figure in Buddhism, and the Upaniṣads show the elaboration of the ideas which constitute his frame in Buddhism.

The Atharvaveda joins together Yama, the old Āryan king of the dead, Mrtyu, Death, Agha Māra, the evil slayer or hateful murderer, Nirrtha, the destroyer, and Śarva, the prototype of Śiva (vi. xciii. 1). Elsewhere (xi. viii. 19) it mentions the 'dainties called Misfortune, or Ill, or Evil' (*pāpmāno nāma devatāḥ*), and has deprecatory invocations (vi. xxvi. 1-2, cxiii. 2, xvii. i. 29) to Misfortune (*pāpman*). Māra, or Mrtyu, is Death personified, the god who kills, and he has already acquired his Buddhist qualification *pāpman*, 'the evil one' (Pāli, *pāpiman*). With this dark figure may be identified Yama or Śarva, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the thinkers of the age of the Brāhmanas and of the Upaniṣads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subsolar universe: whoever obtains a passage beyond the sun reaches the realm of immortality. For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the *Kāthaka Upaniṣad* is of importance for the history of Death: a young Brāhman descends to Hades, and, unmoved by all promises of transient pleasures, wrings from Yama, the god of death, the secret of that which lies beyond death and the means of liberation from death, this only means being the knowledge of Brahman which confers immortality. H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the *summum bonum*; but, whereas Yama is benevolent and himself reveals the liberating truth to Nachiketas with only the habitual jealous reluctance of a god, Māra is the evil one, the tempter.¹

In the Buddhist scriptures all these premisses are fully developed. Māra actually assumes the rôle of the sovereign of the world, both of men and of gods; god of death, he is also the god of the living, who are only the food of death; he is the god of re-birth. Māra is Kāma, 'Desire,' since desire is the *raison d'être* of birth and death; and, because

¹ Oldenberg, *Buddha*, tr. Hoey, p. 54.

Buddha is the deliverer from death and birth, Māra is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciples.

The dogmatic position of Māra is clear in all our texts: Māra embodies desire, the universal fetterer, the sensual life both here and in the other world.

In scholasticism three Māras—*devaputra māra*, the deity Māra, *maraṇamāra*, Māra as death, and *kleśamāra*, Māra as vices and passions—are distinguished. In ancient times these Māras were confused. Māra is not an allegory in the Pāli stories of temptations; he is a demon; he is spoken of as Namuchi, a Vedic demon killed by Indra.

It follows that mythological features are not wanting, even in the oldest tales of the Pāli canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by Māra's daughters; but these daughters are Desire, Unrest, Pleasure (Tanhā, Arati, and Rati). It has been said that these stories—the intervention of Māra in order to make the future Buddha abandon his austerities (a common topic in the *Mahābhārata*: gods grow jealous of the power acquired by penitents, and dispatch fair damsels to trouble their meditation), or in order to make Buddha reach *nirvāṇa* prematurely—are only poetical descriptions of the *crises de conscience* of Śākyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or 'modernists,' but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death. Mythical and folk-lore accretions, as well as scholastic concoctions, naturally follow from such a belief. Monks and nuns, especially when living in the 'hermitages,' knew that Māra could appear to them under any form, and ensnare them into philosophical discussions.

The Sanskrit sources, late when compared with the Pāli ones, but not insignificant even for the restitution of the passages which they have in common with Pāli, indulge in much more dramatic and would-be poetical descriptions of Māra's attacks upon Śākyamuni. Some episodes are entirely unknown in the *Tiṭṭhaka*, viz. the battle for the *bodhi*-tree, the possession of which, for the compilers of the *Lalitavistara*, seems to be almost identified with the possession of the *bodhi*, the Enlightenment, itself.

It has been pointed out that even in the Pāli canon the Māra-stories show a gradual development, and that the inventions to be found in the more modern biographies of Śākyamuni, the *Lalitavistara* and the *Buddhacharita*, mark a further point in this development. There is truth in this statement—the multiplication of Māra's daughters and their counter-attacks, a large part of the *mise en scène* of the *Lalitavistara*, are not archaic—but the course of the development is not necessarily a chronological one. Less or more mythological versions may be productions of the same age in different circles.

It appears that the Māra folklore has been more luxuriant than can be judged from the Pāli canon. Some bits of popular folklore which have found their way into the authorized literature may be regarded as fragments of a larger cycle. It is only by a mere chance that we know that Māra roams everywhere, 'in the visible shape of murky smokiness,'¹ to catch the souls of the dying.

It is worth while mentioning that Māra, who is often associated with Brahmā ('the world of men and gods with Brahmā and Māra'), has no fixed

abode, no heaven of his own, in the official cosmology of the Sarvāstivādins (see art. COSMOGONY AND COSMOLOGY [Buddhist]).

See art. TEMPTATION (Buddhist) for the comparison between the Buddhist stories of temptation and the Gospels.

LITERATURE.—E. Senart, *Essai sur la légende du Buddha*, Paris, 1882; E. Windisch, *Māra and Buddha*, Leipzig, 1895; H. Oldenberg, *Buddha*, tr. W. Hoey, London, 1882, pp. 54, 84; H. Kern, *Histoire du Bouddhisme dans l'Inde*, Fr. tr., G. Huet, 2 vols., Paris, 1901, I. 52, 78, 180, 219; L. de la Vallée Poussin, *Bouddhisme, Opinions sur l'histoire de la dogmatique*, do. 1909, p. 227; R. C. Childers, *Dict. of the Pāli Language*, London, 1875, s.v. 'Māra.'

Original sources, Vedic, Pāli, and Sanskrit, have been studied by Senart and Windisch.

L. DE LA VALLÉE POUSSIN.

MARCIONISM.—I. The founder.—According to the earliest and most reliable accounts, Marcion was a shipmaster (*nauclerus*, or *ναυκληρ*) of Pontus, and may have been a native of Sinope. The story¹ which makes him the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about his corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of doctrine is based entirely on the Jewish and Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near A.D. 140—'after the death of Hyginus,' according to Hippolytus (see Epiph. *Hær.* xlii.). Whether or not a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (*de Præscr.* 30), he presented the sum of 200,000 sesterces. But before long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that 'the God proclaimed by the law and the prophets was not the father of our Lord Jesus Christ. For the former was known, but the latter unknown; while the one also was righteous, but the other benevolent' (Iren. *Hær.* I. xxvii. 1).

It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the pale. This took place about the year 144, and from that date the Marcionite propaganda must have been active, since Justin Martyr tells us in his *First Apology* (c. 150) that Marcion

'by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than He has done greater works' (xxvi.).

Tertullian, who was writing his *adversus Marcionem* in 207 or 208, places the activity of Marcion in the reign of Antoninus Pius ('sub Pio impius'). Irenæus (*loc. cit.*) says that Cerdo came to Rome in the episcopate of Hyginus (c. 137–141), and that his successor Marcion flourished under Anicetus (154–166). In view of the different statements, we may conclude that Marcion became active as a teacher some years before 150, and that his activity ended before or about the time of the death of Anicetus. For Marcion's own death no date can be definitely assigned.

2. The doctrine.—The teaching of Marcion may be reviewed under five heads: (a) theology proper, or the doctrine of God, (b) Christology, (c) criticism

¹ This account, which was unknown to Tertullian, may be traced through Epiphanius to Hippolytus. The Armenian version is thus given by Zenk (6th cent.): 'This Marcion was a native of Pontus, the son of a bishop. And having corrupted a virgin, he went into exile on account of his father's having expelled him from the Church. And going to Rome at that time to seek absolution (lit. penitence) and not obtaining it, he was irritated against the Faith' (*Against the Sects*, bk. iv.).

and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(a) *Theology*.—In theology Marcion's main assertion was that the just God of the law and of the OT generally was other than and inferior to the God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving-kindness. The idea of a dual godhead seems to have come from the Gnostics through Cerdo, and this fact may be connected with the (otherwise doubtful) statement by Clement of Alexandria (*Strom.* VII. xvii. 107) that Marcion, 'being contemporary with' Basilides and Valentinus, 'compared with them as an elder with younger men.' At all events, Marcion's theology differed from the Gnostic in excluding any doctrine of æons, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures.¹ His teaching was not in any sense pagan. His lost work named the *Antitheses* contained the proofs of his theology, which were attained by placing utterances by and concerning God in the OT side by side with opposed statements by Jesus and Paul about God in the NT.

He further differed from the Gnostics by abstaining from any attempt at a completed speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two *ἀρχαί* were and remained completely separate, in spite of the moral superiority of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number or plurality was inconsistent with the essence of true godhead; and, on the other, the interposition of the good God—'the Stranger'—in a world which had been created by and belonged to another was an obvious stumbling-block.

(b) *Christology*.—The mode of self-revelation employed by the good God was, according to Marcion, that 'in the 15th year of the reign of Tiberius He (i.e. Jesus Christ) came down to the Galilean city of Capernaum'—to which Tertullian adds the explanation, 'of course meaning from the heaven of the Creator, to which He had previously descended from His own' (*adv. Marc.* iv. 7). The relation of Christ to the good God His Father does not seem to have been otherwise defined than by the idea of sonship. Of the human experience and suffering of Christ Marcion took a wholly Docetic view. Rejecting the Gospel accounts of a human birth, he represented the supposed sudden appearance of Christ in the year 29 as an entirely new phenomenon, without any root in the past history either of the people or of the human race. And, while he regarded the life of Christ on earth and His crucifixion as the means of salvation for men, he nevertheless believed that our Lord suffered only in appearance. On the other hand, he did accept the historical facts narrated in those portions of the Third Gospel (see below) which he believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on our Lord's descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to another Messiah who was to appear later as the messenger of the just God of the OT. But his exposition of the work of this Messiah does not

¹ Marcion appears to have held the independent, though passive, existence of *ἰσῆς*, or matter. He certainly did not attribute to it the degree of activity which some of his followers did. In his view the Creator (i.e. the just God or God of the law) was the ruler of the whole material universe.

seem to have proceeded beyond applying to him the language of OT prophecy.

(c) *Criticism and exegesis of the Scriptures*.—In his dealing with the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the theologies of the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or even verse in the Jewish Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical explanation, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel seemed on the whole to suit best the requirements of his theology, he adopted this, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To him Paul was the only true apostle of the Master, and he believed that the Third Gospel—which he did not call Luke's—had been written under Paul's supervision and expressed Paul's view of the life of Christ. The other Evangelists¹ he regarded as handing on a false Judaic tradition which had grown up among the Twelve, and he therefore rejected their works *in toto*. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian's *adv. Marcionem*.

(d) *The application of religion to practical life*.—It is easy to see that, however arbitrary and subjective was Marcion's attitude in relation to the Christian tradition and its literature, his main interest in the matter was not speculative or theoretical, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life allowed. Thus the celibate alone were admitted to baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation through Christ was for the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) *The ritual of worship*.—The aim of Marcion was to found not a school, but a church. Accordingly, in points of ritual he for the most part followed the usage of the orthodox Church, but admitted catechumens to the same privileges in Church worship as baptized persons, and forbade the use of wine in the eucharistic service. Some

¹ There is no definite evidence as to whether Marcion knew the Fourth Gospel.

of the peculiarities of usage in the Eastern branch of the Marcionite church may be gathered from the statements of Eznik (bk. iv.) :

'He allows not one baptism only, but three after (successive) transgressions, and in place of catechumens who have died he urges others to be baptized. And he has the boldness to direct women to administer baptism—which no one from the other sects has taken upon himself to do—but not to administer a second or a third baptism, nor (does he venture) to admit women to be priests,' etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and the constitution of the sect was probably episcopal, though on this point we have not much information.

3. **Later developments.**—Among the followers of Marcion some, like Potitus and Basilicus, followed their master in recognizing two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles—the Good, the Just, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the Creator and the NT God, he seems to have regarded the former as 'an opposing spirit' who owed his existence to the supreme God. The material world, in the view of Apelles as of Marcion, was created by this 'opposing spirit,' and so Apelles also taught an ascetic view of life. On the other hand, he rejected Marcion's Docetism, and held that Christ really felt and suffered in His earthly experience, although He did not possess a truly human nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

The doctrines of Marcion were for a time widely spread both in the West—Rome and Italy—and in the East—Arabia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under Diocletian, the Marcionites seem to have enjoyed a short period of toleration early in the 4th cent., to judge from an inscription of A.D. 318–319 discovered a few miles south of Damascus, which records the existence of a village community of Marcionites. But their worship was soon prohibited by Constantine. In the West they seem early to have succumbed to the more powerful propaganda of Manichæism (*q.v.*), but in the East they may be judged to have exerted a stronger and more enduring influence. We infer from the attention given to them in the controversial works of Ephraim, and from the careful account of their doctrines left us by Eznik, an Armenian writer of the 5th cent., that they counted for much in Eastern Christendom. So late as the 10th cent. they are mentioned in Arabic by the *Fihrist*.

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eznik's Armenian account:

'Marcion wrongly introduces a strange element (lit. strangeness) in opposition to the God of the Law, positing with him also Hyle, by way of essence, and three heavens. In the one (they say) dwells the Stranger, and in the second the God of the Law, and in the third his armies; and in the earth Hyle, and they call her the Power of the Earth.

And he so orders the world and the creatures, as the law says. But he adds that in union with Hyle he made all that he made, and Hyle was as though a woman and a wedded wife. And after making the world, he went up together with his armies into heaven; and Hyle and her sons remained in the earth, and they each held authority—Hyle in the earth, and the God of the Law in heaven.

And the God of the Law, seeing that the world is beautiful, thought to make in it a man. And going down to Hyle in the earth, he said, "Give me of thy clay, and from myself I give spirit, and let us make a man according to our likeness." On Hyle giving him of her earth, he moulded it and breathed into it a spirit, and Adam became a living soul, and therefore was called Adam because he was made from clay. And moulding him and his wife, and putting them in the garden (as the law says), they continued giving him commands, and rejoiced in him as in a common son.

And (he says) the God of the Law, who was lord of the world, seeing that Adam is noble and worthy of ministration, pondered

how he could steal him from Hyle and appropriate him to himself. Taking him aside, he said, "Adam, I am God, and there is no other, and beside me thou shalt have no other god. But if thou takest any other god beside me, know that thou shalt surely die." And when he said this to him and mentioned the name of death, Adam, struck with fear, began by degrees to separate himself from Hyle.

And Hyle, coming to give him commands according to custom, saw that Adam was not obeying her, but was purposely holding aloof and not coming near her. Then Hyle, amazed in her mind, knew that the Lord of Creatures had deceived her. She said, "From the source of the fountain its water is befouled. How is this? Before Adam is increased with offspring, he has stolen him by the name of his godhead from me. Since he hates me, and has not kept with me the covenant, I will make many gods, and will fill with them the whole world, that he may enquire who is God and not find out."

And she made (they say) many idols and named them gods and filled the world with them. And the name of God, that of the Lord of Creatures, was lost among the names of the many gods, and was not found anywhere. And his offspring was led astray by them and was not serving him, for Hyle claimed them all for herself, and did not suffer one of them to serve him. Then (they say) the Lord of Creatures was enraged, because they forsook him and obeyed Hyle; and one after another, who were departing from their bodies, he was casting in anger into Hell. And Adam he cast into Hell because of the tree, and so went on casting all into Hell, up to twenty-nine generations.

And (they say) the good and strange God, who was sitting in the third heaven, seeing that so many peoples perished and were tortured between the two deceivers, the Lord of Creatures and Hyle, was grieved for those fallen into the fire and tortured. He sent his son to go and save them, and to take the likeness of a servant and assume the form of a man among the sons of the God of the Law. "Heal," he said, "their lepers, and raise their dead to life, and open the eyes of their blind, and do among them great cures without price; until the Lord of Creatures see thee, and be jealous, and crucify thee. And then when thou diest, thou shalt go down into Hades, and bring them from thence; for Hades is not wont to admit life within it. And therefore thou goest up on the cross, that thou mayest become like the dead, and Hades may open its mouth to admit thee, and thou mayest enter into the midst of it and empty it."

And when he crucified him (they say), he went down into Hades and emptied it. And taking the souls in the midst of it, he led them into the third heaven to his Father. And the Lord of Creatures, being enraged, in anger tore his garment and the veil of his temple, and darkened his sun and clothed his world in blackness, and sat in grievous mourning.

Then Jesus, going down a second time in the form of his godhead to the Lord of Creatures, was entering into judgment with him about his death. And the Lord of the World, seeing the godhead of Jesus, knew that there is another God besides himself. And Jesus said to him, "I have a suit with thee, and let none be judge between us but thine own law which thou didst write." And when they produced the law, Jesus said to him, "Didst not thou write in thy law that whoso killeth shall die; and whoso sheddeth the blood of a righteous man, they shall shed his blood?" And he said, "I so wrote." And Jesus said to him, "Now give thyself into my hands, that I may kill thee and shed thy blood, as thou didst kill me and shed my blood, for I am indeed juster than thou, and have wrought many benefits in thy creation." And he began to reckon up the benefits which he had wrought in his creation.

And when the Lord of Creatures saw that he had conquered him, and knew not what to say because out of his own law he was condemned, and was finding no answer because he deserved death in return for his death, then falling to prayer he was beseeching him, "Because I have sinned and killed thee in ignorance, because I knew not that thou art a God, but reckoned thee a man, it is given thee as satisfaction for that to carry off where thou wilt all those who shall be willing to believe in thee." Then Jesus leaving him laid hold of Paul and revealed to him the purchase and sent him to preach that "We are bought with a price, and every one who believes in Jesus has been sold by the Just to the Good."

This is the beginning of the heresy of Marcion, besides many other worthless things. And this all do not know, but a few of them. And they hand on the teaching to one another orally. The Stranger (they say) has bought us with a price from the Lord of Creatures; but how or with what the purchase has been made, that not all of them know.'

LITERATURE.—A full list of authorities is supplied by A. Harnack, *Geschichte der altchristlichen Literatur bis Eusebius*, Leipzig, 1893–1904, i. 191–200; and a shorter list by G. Krüger, in *PRE³* xii. 268 f. The main ancient sources are Irenæus, Tertullian (esp. *adv. Marcionem* and *de Prescr. Her.*), Clement of Alexandria, Origen, pseudo-Tertullian (*Carmen adv. Marcionem*), Adamantius, Ephraim, Epiphanius, Theodoret, and Eznik. An exhaustive account of Marcion's dealings with the NT will be found in T. Zahn, *Geschichte des NT Kanons* Erlangen, 1888–92, i. 585–718. N. McLEAN.

MARCUS AURELIUS ANTONINUS.—

1. **Early influences.**—By birth and training, alike on his father's and his mother's side, Marcus, son of Annianus Verus, belonged to the official aristocracy of Rome. From boyhood he was inured to the

round of absorbing and ceremonious etiquettes which, under the régime of Hadrian, made up the official life of the capital. Through his uncle Antoninus, whom Hadrian appointed *Quatuor vir* for the administration of Italy, he was brought from childhood into personal touch with the Emperor himself, and the playful 'Verissimus' accorded to him by Hadrian re-appears even in the formal address of the Christian apologist.

Another influence, which he himself attributes to his mother's fostering care, sank deep into the fibre of his being. In the antique life of Rome, *religio*, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient pieties and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and gilds, of Salian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious complex Marcus was acclimatized from youth. At eight years old he was enrolled among the Salii, the most primitive of all the priestly colleges at Rome, and 'got all the forms and liturgies by heart.'¹ At sixteen, as *Præfectus feriarum Latinarum*, he solemnized the fête upon the Alban Mount; and besides the formal dignities of *Pont. Max.*, *XV vir Sacr. Fac.*, and *VII vir Epub.* he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which besought blessing for him and L. Verus in their conflict with the Marcomanni. At the outset of his great campaigns he purified the people with the solemn ritual of the *Lectisternium*; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of lions into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life.—His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played ball, and eschewed the mischievous excitements of the circus and the amphitheatre; at Lorium he rode, hunted, walked, and shared the glee of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows rare docility of type. Boyish experiments in philosophy ended in complete conversion under the perusal of Aristotle, the influence of Rusticus, and the charm of Epictetus.

His life falls into three sections: A.D. 121–138, boyhood, ending with his adoption in 138; 138–161, apprenticeship to rule, as Cæsar and lieutenant to his adoptive father, Antoninus; 161–180, Imperial rule, shared nominally in 161–169 with L. Verus, and from 177 with his son, Commodus.

Till 167, when the Danubian campaigns begin, the years are filled with unremitting administrative activities. The *Edictum perpetuum* of Salvius Julianus furnished the basis of the Pandects of Justinian; Gaius and Papinian immortalize the era, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the *patria potestas*, the slave-owner, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at Universities; and medical service was organized for communities. Commerce, industries, and communications were liberally fostered by pro-

vision of roads, aqueducts, bridges, and havens, while in special crises, as of earthquake, fire, famine, or inundation, State aid was ungrudgingly extended. The collection and distribution of taxation were vigilantly supervised, and vast extension given to the forms and activities of local and municipal government. Wealth lavished its resources upon the provision of temples, baths, gardens, colonnades, and other embellishments of city life, while among all classes of the community gilds, colleges, and clubs, though kept under strict surveillance, multiplied to an almost incredible extent.

In his *dealings with the Christians*, Marcus followed the practice of his predecessors. First by Nero, then by the Flavian Emperors, especially Domitian, Christianity had been treated as a form of sacrilege (*δοξεία, ἀθέοτης*) and treason, that lay outside the province or protection of law and entailed the penalty of death. Like rebellion or brigandage, it fell under the summary jurisdiction of the Emperor or his representative. Trajan, setting his face against professional or anonymous delation, and Hadrian, going still further in discouragement of malicious information or assault, did much to arrest active persecution; but Christianity continued to be a capital offence, and the forms of the Imperial cult furnished a standing test of complicity or disclaimer. Enforcement of the penalty rested with the Emperor's delegate, and was rarely exercised. But outbursts of personal hostility, of local prejudice, or of racial or religious jealousies might at any moment bring it into play. The progress of Imperial consolidation, and the rapid social developments of Christianity, both tended to enhance the seeming disaffection of Christians to Imperial unity. In Pliny the note of condescension and compassion softens contempt for the perverse superstition, which seemed to invite and almost compel persecution; in Marcus the accent of irritation becomes prominent; to him Christian defiance seemed like the melodramatic pose which induced Proteus Peregrinus, in the story of Lucian, to cast himself on the pyre as the finale of the Olympian festival. On the main merits of the case he shared, no doubt, the judgment of his compeers, the leading Hellenists of the time, and among them his own intimate associates. The persiflage of Lucian and the malignant disdain of Celsus do not stand alone; Fronto still credits the Christians with nameless crimes and immoralities; Ælius Aristides satirizes their mean and mischievous self-seeking; Galen quotes them as the type of impenetrable bigotry. The Emperor's political philosophy led him the same way. The Græco-Roman unity of Empire was the World-Cosmos finding realization in the communities of men; the highest and best hopes of the world were centring in that consummation of the civic bond about the person of the Emperor; and the self-willed isolation of the Christian was essential atheism, in its estrangement from the divine impulse immanent in man.

But, as a statesman, Marcus holds to the prescriptions of Imperial policy. The rescript, cited by Eusebius,¹ is plainly unauthentic, and belongs, if to any period, to that of Antoninus. Melito² himself discredits the persecuting edicts to which he refers, and bears witness to the clemency and philosophy of the Emperor in checking tumultuary acts of violence against the Christians. The decree, or rather rescript, uttered against 'demoralizing superstitions' may have been partly aimed at Christians; but the terms were general, and it was retained upon the statute-book under later Christian Emperors. Possibly under its terms Christians were sent to the mines of Sardinia, but

¹ *Capit.* 4.

¹ *HE* iv. 13.

² In *Eus.* *HE* iv. 23. 5f.

in point of fact the penal provisions—deportation for those of higher rank, and death for humbler offenders—would mitigate, not enhance, the penalty to which all avowed Christians stood liable. In their social organization the Christians remained as free as other sects. In Rome itself Church-membership and jurisdiction, episcopal authority, and literary activity advanced apace. Apologists, such as Justin, Melito, Athenagoras, one after another addressed their pleas to the Emperor in person; Tatian and Hermas retort scorn and invective on their antagonists. Christians served in the Imperial households and, as the story of the Thundering Legion proves, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Rusticus, prefect of the city, on the charge of 'atheism and sacrilege'; each in succession adhered to the Christian confession, and, on refusing to abjure or to offer sacrifice, was ordered to execution. Marcus was at the time resident in Rome, and, no doubt, endorsed the sentence passed by the Stoic prefect, his close friend and ex-preceptor. Still more famous is the persecution recorded in that masterpiece of Christian martyrologies, the letter of the Christians of Lyons and Vienne to the sister churches in Asia and Phrygia.¹ The outbreak, rooted in racial, even more than religious, antipathies, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was restored, and the martyrs, rescued from the fury of the mob, were remanded to prison, their sentence was referred to the Emperor himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote down his reflexion on Christian perversity and bravado.² In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdom was judicially inflicted, though for the most part Christians were screened under the Imperial ægis from outbreaks of popular fanaticism or dislike. Of systematized persecution there was none, and to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus's latter years were clouded with calamities, public and personal. In 166 Italy was desolated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity; then the yet more terrific inroad of barbarians, streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazyges, and other trans-Danubian hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

3. The 'Thoughts.'—From these ordeals the *Thoughts* emerge. They are not the exposition of a system, but a criticism of life; reflexions confided 'To Himself' in the hours of loneliness and interstices of strain; a retrospect and record of experience; a manual of duty and endurance. In them a soul communes with itself, examines motives, probes illusions, corrects or re-affirms conclusions, emits the sigh of weariness or the

ejaculation of disgust, but perpetually renews resolve, unalterably clinging to the noblest hypothesis with which it was familiar. Beginning in almost random reminiscence, composition gave relief from strain, and became a substitute for company, and a pleasure for its own sake; and for Marcus Stoic principles so interpenetrated the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of the Roman Stoicism than the homilies of Seneca or the *Memorabilia* of Epictetus.

(1) *Logic*.—In his theory of knowledge and sensation he adheres closely to the terms of Epictetus. The *φαντασίαι* are in part sense-impressions proper, derived from things, in part impressions of aims, qualities, or attributes, moral or æsthetic, belonging to things, and conveyed to the reason. It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prerogative. In the one passage in which he formally discusses the doctrine of assent (*συγκατάθεσις*, v. 10) he drops the Stoic claim to final certitude—*τὰ πράγματα ἀκατάληπτα*. But there remains a tenacity of moral assurance which suffices for conduct of life. Reason as part of the divine immanence attains a coherence, a consistency, and strength which give the indefeasible assurance of truth.

(2) *Theory of being*.—In Stoic monism matter, form, and force are an inseparable unity. The life-power, self-determined from within, is embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of *τόνος*, that is, of 'tension within the life-producing force,' present in ever-varying grades in all forms of existence, material or spiritual. In the successive grades of inorganic, vegetable, animal, and human life each variation represents a different degree or kind of tension in the informing *πνεῦμα*, or life-power. Cohesion, life, and reason are resultant phases of embodied spirit, varying in the same way as inorganic substances are seen to vary under processes of rarefaction or condensation. 'Εξίς, 'hold,' or 'cohesion,' is the characteristic property of being in its inorganic forms, *φύσις*, 'growth-power,' of vegetable life (vi. 14), *ψυχή* of 'soul' realized in the animal phase (ix. 9, x. 33), while the higher grade of 'reason'—*λόγος*, co-extensive, it will be noted, with the faculty of speech—appears only at the stage attained by man. The higher tension always includes the properties of the lower, so that the higher order shares the attributes of the lower, but with its own *differentia* superadded. Thus man shares with the inferior orders *εξίς*, *φύσις*, and *ψυχή*, but 'reason' is all his own.

Each type finds its guarantee of individuality and perpetuity in the seminal or generative principle, the *σπερματικός λόγος*, which defines and reproduces the type. This survives immutably, until its final re-absorption into the 'seminal principle' of the universe, the primal reservoir of life (iv. 14, 21, vi. 24). That of the universe at large contains and is likewise immanent in the countless individualized *σπερματικοί λόγοι*, which determine, conserve, and reproduce life in all the several orders of being through their 'productive capacities of realization, change, and phenomenal succession' (iv. 14, ix. 1).

(3) *Soul*.—Man, the microcosm, within his individual range, is the counterpart of the macrocosm, in which he dwells, and with which he reciprocates currents of sensation (*αἰσθησις*), impulse (*ὁρμή*), emotion (*πάθη*), and reason (*διάνοια*, *νοῦς*). All these are activities and reactions of the soul, the counterpart and product of that cosmic soul which permeates and moves the universe. Soul is self-moved, within the range of those seminal principles

¹ Eus. *HE* v. 1.

² xi. 8.

from which it originated. As, in the individual, soul actualizes itself in physical energies, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (*ὁρμή*), inclination (*ὀρεξις*), aversion (*ἐκκλισις*), will (*προαίρεσις*), or in intellectual, such as perception (*φαντασίαι*), judgment (*ὑπόληψις, κατάληψις, πρόληψις*), mind (*νοῦς*), or reason (*διάνοια*), so, too, the world-soul operates in energies no less diverse in operation, now as the natural forces that actuate all inorganic or organic life, *e.g.* heat, moisture, breath, contraction, expansion, or the like, now as the moral forces which we know as fate, destiny, necessity, the 'laws' of nature or of God, and now, again, as those purposive or reasoning powers which, as design, providence, Zeus, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test; by it he construes all the accepted formulas of the school, and resolves their ambiguities.

(4) *Cosmic unity*.—Cosmic unity stands at the centre of his thought, the pole to which his moral compass continually turns. In its contemporary phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose vital activities centred in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and welter of atoms, is impatiently dismissed. It would imply permanent confusion, moral and intellectual—a universe as unintelligible as intolerable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, 'one order made of all things, one God through all, one being, one law, one reason common to all things intelligent and live' (vii. 9), as is shown by the ramifying bond of ubiquitous design (*συνάρπεια εὐλόγος*, iv. 45) and that unfailing rapport between the constituent parts (*συνπράττειν τῶν μερῶν*, v. 26, ix. 9) which results from perfect interpenetration (*κρᾶσις δι' ἄλλω*), and makes the whole inseparably one.

Design is everywhere apparent, in small and great—in all the processes of nature, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire 'concatenation of the web.' Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of reason immanent within the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unifying Logos, which the Stoic school derived from Heraclitus, 'the reason and the ordinance of the city and commonwealth most high' (ii. 16), the all-pervading, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or 'the nature of the whole' (vi. 9, x. 6, 7). But the preference is for terms which associate it with those analogies in human consciousness on which the whole conception is based. Marcus speaks not only of the world-mind and thought (*νοῦς, διάνοια*), world-soul and moral sense (*ψυχὴ, ἡγεμο-*

νικόν), but also of world-impulse and world-sensation. The world, as a live whole and being (*ἐν ζῶον*, iv. 40, x. 1), throbs to one master purpose as truly as all the energies of man respond to the direction of the unitary sovereign self.

(5) *Unity of things*.—The unifying power, a common gravitation revealing itself in man as truth, beauty, and love, combines, constrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

'I am the eye with which the Universe
Beholds itself and knows itself divine'

(Shelley, *Hymn of Apollo*, vi. 1 f.).

But the splendid harmony invests common things and processes with an appeal and beauty of their own; they contribute to the advantage of the universe; they are notes, or discords, which swell the great accord. Not only the heavenly bodies in their orbits, sun and stars, rain and air, the living bees and nesting birds, the lustre of the emerald, and the bending of the corn, but even things unprepossessing in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild boar's mouth—appeal to him who is in unison with nature, and touch hidden springs of answering admiration and desire.

'Earth is in love with rain, and holy ether loves—Yea, the world-order is in love with fashioning what is to be. To the world-order I profess Thy love is mine' (x. 21).

(6) *World-soul*.—The unity of the indwelling mind corresponding to personality in the individual man is commensurate with the scale of the universe, beneficent and rational in aim. Degrees of goodness and of value are part of the great scheme, but everywhere 'things lower are for the sake of things higher' (v. 16, 30, vii. 55, xi. 10, 18, etc.), and all is for the best.

(7) *Evil*.—The oneness of the cosmos is utilized to explain the mystery of evil. Seeming evil is good misapprehended or disguised. The course of nature is all good. 'It contains no evil, does no evil, and inflicts no hurt on anything.' Analyze the facts, suppress the hasty, ill-formed inference, and the evil ceases to exist, or changes its complexion (vi. 36, vii. 26). It is the discord that prepares and shapes the harmony; the coarse jest (as Chrysippus said) that gives the comedy its point (vi. 2). 'Nothing is hurtful to the part which helps the whole' (x. 6).

(8) *Providence*.—The mind of the universe is social, 'civic' (*πολιτικός*) in all its aims. Fate, destiny, necessity (*μοῖρα, τὸ πεπωμένον, τὸ ἐμαρμένον, ἀναγκή*), overrule all things for good; man's freedom is accord with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) *The round of being*.—Everywhere there is the recurrent transformation of elements, pursuing their continuous round. Change is nature's joy (ix. 35, iv. 36), the life of individuals, of nations, and of the universe at large. The 'passage up and down' repeats itself in history, upon the small scale and the great; always 'the same dramas, the self-same scenes reproduced; the court of Hadrian, the court of Antoninus, the court of Philip, Alexander, Croesus; the same stock rôles, only with change of actors' (x. 27; cf. vi. 46). This is the depressing side of the Emperor's philosophy, the resignation from which he would not deign to extricate himself by self-deception.

(10) *Man a part of cosmos*.—Man is by nature an inherent part, a living and organic member—*μέλος*, not *μέρος* merely—of the whole. He draws from its organic life as vitally as the branch draws sap from the parent tree. His 'nature' is the nature of the universe; self-realization of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following

of law and reason, by active citizenship in the world-commonwealth.

(11) *Virtue*.—Moral obligation is fulfilment of function, active acknowledgment of reciprocal relation to the whole. And this alone is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' The soul—a particle of Zeus (v. 27), the good genius or the God within (iii. 4, 6, 16), the lord and law-giver (iv. 1, 12), the pilot reason (vii. 64), the fellow-citizen, the priest and minister of God—is the power within which makes for righteousness. The indwelling presence becomes almost that of the Holy Spirit in the Christian believer. Prayer is not merely communion with the inner self, but a true intercourse with God; the self-communications which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) *Littlestness of man*.—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sum, a moment between two infinities. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (ii. 7, iii. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and belated; virtue is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason in fellowship with nature and God. If ever that is forbidden or debarred, then indeed God sounds the signal for retreat. Unmurmuring and undispleased, we quit the rank. The exodus is quick and easy—a 'bare bodkin' is enough. The play is ended (xii. 36); ring the curtain down. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 3)—alternatives which are dispassionately considered—the dissolution of the material elements ends the present resultant; they take their place in other compounds, while the 'seminal principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) *Ethics*.—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, and obligations proper to his own experience. But the Imperial position assumed gives breadth and elevation of view, and the fixed sincerity of the writer atones for lack of form, or method, or variety. The commonplaces or the paradoxes of Stoicism—the inseparateness of virtue, or the indefectibility of the wise—are not discussed at large. The more developed casuistry of later Stoicism, with its scheme of conditional duties (*officia*, or *καθήκοντα*), its recognition of preferential moral choice (in *προηγμένα* and *ἀποπροηγμένα*), its admission of relative moral values (*κατ' ἀξίαν*), its belief in 'proficiency' (*προκοπή*), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phraseology. The philosopher is on the throne, and passion is outlived. Duties of inferiors, sins of the flesh, all vulgar vices of the tyrant or the profligate, even the licence and the luxuries of city life, are not in view. The whole attitude is one of strained, insistent obligation, wrought out in patience inexhaustible; men are the recipients, himself the dispenser, of benefits; in realization of the social tie, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues courage seldom receives mention; truth is not protest or resolve, but that singleness of word and act, that quiet undeviating 'pursuit of the straight course,' which power and place make doubly difficult; justice comes urging, not the rights of the oppressed, but the obligations of the strong; as regards wisdom or self-control, it

may be said that the whole book is an enlargement upon that theme. The moral perturbations which he dreads are those which beset power and place and privilege, such as impatience, discourtesy, distrust, officiousness, or such more delicate delinquencies as self-absorption in the press of current duties, the want of moral nerve or fixity of aim, or the indolence which, rushing to hasty conclusions, admits unwarranted impressions or desires. And beside the solid virtues and charities incumbent on the ruler are set the social graces which adorn the official and the gentleman—consideration, candour, modesty, attentive and intelligent perception, courtesy, tact, address in conversation; and the compass of morality is extended to such refinements as cheerfulness in leadership, belief in friends' affection, wise husbandry and just apportionment of powers, careful selection among competing claims, reserve of opportunities for self-examination and recreation of the inner life. Leisure as well as labour, thought as well as action, deportment as well as motive, are scrupulously moralized.

'Blame none,' 'Do not find fault,' 'To expect no one to do wrong is madness' (xi. 18), are maxims for the ruler rather than prescriptions of the teacher. 'Can the world go on without shameless people? Certainly not. Then do not ask for the impossible' (ix. 42). The supremacy of the *ἡγεμονικόν*—in Marcus the favourite and characteristic term for man's highest governing self—secures to man self-mastery and personal equilibrium in an unstable world; within his own circumference he becomes 'a sphere self-orbed,' proof against all assaults of circumstance, all enticements and deceptions of sense, and all dominion of impulse, appetite, or feeling. To that extent he can identify himself, his will, with the sweep of the great cosmic current, and, at one with nature, reason, God, be wrapped in calm. To such an one all outer things become 'indifferent,' for 'no man can rob us of our will' (xi. 36). Man is a citadel, 'a promontory against which the billows dash continually; but it stands fast, till at its base the boiling breakers are lulled to rest' (iv. 49). This attitude of set endurance gradually moulds his moral as well as his physical lineaments to that resolved serenity which is engraved upon the stones of the Imperial arch, and abstention rather than action, isolation rather than corporate fellowship, becomes the keynote of morality. Towards this the influences all conspired—the austere renunciations of his creed; the mood of sombre, almost wilful, resignation; the solitude and destitution of the close. Before his eyes Latin literature breathed its last. The great equestrian statue, the memorial column, the reliefs of his triumphal arch, the apotheosis of Faustina, are the last triumphs of expiring art. Human fecundity was stricken with a strange paralysis of reproductive power; the very Campagna was changing to a depopulated waste. Religions, politics, literatures, and Rome herself were dying. In unmistakable letters the handwriting was blazed upon the wall, and he himself was *ἐσχατος τοῦ γένους*. With his death decline and fall set in, not on the Danube only, but throughout the whole Empire of the West. His end was like his life, a slow tenacious struggle with the inevitable. No longer able to eat or drink, he lay upon his couch, still exercising the habits of duty and authority; spoke passionately of the vanity of life; and with the words, 'Haec luctuosi belli opera sunt,' turned to his rest.

MARKET.—i. *Definition*.—The term 'market' may be defined as a periodic gathering of persons at an appointed place for the purpose of trading by way of exchange or purchase and sale, subject to the special regulations which law or custom may impose. The term 'fair' is frequently used in conjunction with the term 'market,' and has been defined as 'a greater species of market recurring at more distant intervals.' In either case, the essential element is the same—recurrence, namely, at a fixed time and at a fixed place.¹

Provided that this element is present, any circumstances which bring men together can produce a market or a fair.² The occasion may be a religious festival,³ a popular assembly,⁴ the formation of a camp,⁵ the temporary sojourn of a court at a royal residence,⁶ the stay of a caravan at one of its customary halting-places,⁷ the concourse at a saint's tomb,⁸ the celebration of funeral games at the burial-place of a hero,⁹ or the temporary cessation of hostilities between besieger and besieged.¹⁰

¹⁰ See authorities in P. J. Hamilton-Grierson, *The Silent Trade*, Edinburgh, 1908, p. 69 f. See also § 4 below.

2. *Geographical distribution of the market*.—The institution of the market is not universal; in many parts of the world it is either altogether unknown or known only in its most rudimentary forms.¹ It has been pointed out that certain geographical conditions and certain racial characteristics are more favourable than others to its establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are, in general, of little importance, perhaps because the necessity for an exchange of articles of diet hardly arises among populations whose economic status is the same, and whose daily needs are supplied by the bounty of nature seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into touch—where, e.g., a tribe of fishermen have a tribe of agriculturists for neighbours.²

According to J. G. F. Riedel,³ there are no market-places in Ceram; and, while we hear of the market in Java,⁴ Sumatra,⁵ and Borneo,⁶ we are reminded by a high authority⁷ that, in many of the islands inhabited by Malay peoples, the institution does not exist, or, if it does exist, is to be regarded as imported rather than as indigenous.

In New Guinea, markets are to be found in the German⁸ as well as in the British portion of the island.⁹ W. Ellis¹⁰ supplies an account of those in Madagascar; and we have a few notices of Polynesian and Melanesian markets.¹¹

The market thrives best where, in addition to favourable geographical conditions, the natural bent of the population is towards commercial pursuits, as in the case of the Negro and Bantu races.¹²

In N. America we find only few and scattered indications of the existence of the market;¹³ and to the hunting tribes of S. America it is practically unknown; while among many of the peoples of Central America,¹⁴ and especially in the old

¹ As to native markets in Australia see art. *Gifts* (Primitive and Savage), 6 (2).

¹⁰ *History of Madagascar*, London, 1838, i. 332 ff.

¹¹ We hear of the markets on the river Wairuku in Hawaii (W. Ellis, *Polynesian Researches*², London, 1832-36, iv. 325), at Somu-Somu in the Fiji Group (C. Wilkes, *Narrative of the United States Exploring Expedition during the Years 1838-42*, London and Philadelphia, 1845, ii. 300 f.), in the Bismarck Archipelago (R. Thurnwald, 'Im Bismarckarchipel und auf den Salomoninseln,' *ZE* xlii. [1910] 119; G. Brown, *Melanesians and Polynesians*, London, 1910, p. 297; Hagen, p. 117 f.), and in New Caledonia (J. J. Atkinson, 'The Natives of New Caledonia,' *FL* xiv. [1903] 245; J. Moncelon, 'Réponse alinéa par alinéa pour les Neo-Calédoniens,' *BSAP* iii. ix. [1886] 374).

¹² Lasch, p. 702. The Boloki are a Bantu people, yet they have no markets (J. H. Weeks, *Among Congo Cammbats*, London, 1913, p. 114).

¹³ The principal market resorted to by the tribes on the coast near the Stikine river was held three or four times a year at a village about 60 miles from Lake Dease (G. Simpson, *Narrative of a Journey round the World during the Years 1841 and 1842*, London, 1847, i. 210). Markets are held by the Eskimo of Point Barrow and those of Demarcation Point (J. Simpson, 'Observations on the Western Esquimaux and the Country they inhabit,' in *Further Papers relating to the Arctic Expeditions, presented to both Houses of Parliament, 1855*, London, 1855, p. 936; see N. A. E. Nordenskiöld, *The Voyage of the Vega round Asia and Europe*, tr. A. Leshe, do. 1881, ii. 118 and note). Markets were also held at the Falls of the Columbia (M. Lewis and W. Clarke, *Travels to the Source of the Missouri River . . . in the Years 1804-06*, new ed., London, 1815, i. 427), and at Prairie du Chien (J. Carver, *Travels through the Interior Parts of North America in the Years 1766-68*, London, 1778, p. 99).

¹⁴ Among the Toltecs (F. de A. Ixtihcochtli, *Relaciones históricas*, in A. Aglio, *Antiquities of Mexico*, London, 1830-48, ix. 332) and the Chibchas (J. de Acosta, *Compendio histórico del descubrimiento . . . de la Nueva Granada*, Paris, 1848, p. 207), and in Yucatan (G. F. de Oviedo y Valdés, *Historia general* §

civilizations of Mexico¹ and Peru,² it formed an important element in the national life. In Arabia fairs and markets arose at places whither pilgrims were wont to repair.³ The fairs at Ukāz,⁴ Muzanna, and Dzul Majāz⁵ were visited by the Prophet, and there were great markets at Senaa and Baṣra.⁶ Not infrequently the resting-places of caravans are little markets, where the Bedawi may lay aside his animosities and trade in peace.⁷

So, too, the religious festivals of Harar, Batne, and Mabug were the resort not only of pilgrims but of traders;⁸ and the immense assemblage which gathered twice a year at the sacred tomb at Teuta, a city of the Delta, was devoted to commerce as well as to worship.⁹

The antiquity of the market in China is vouched for by the Book of Rites, which contains elaborate regulations for its conduct.¹⁰ G. M. Curzon¹¹ speaks of the markets as the most picturesque and characteristic of Annamite spectacles; and the great feature of life in the Shan country is the bazaar, which is held on every fifth day in all the chief villages of the States.¹²

The Khāms of Assam hold a market every four days.¹³ Lasch¹⁴ observes of India that, in early times, fairs and markets were to be found at the holy places frequented by pilgrims; and that the Rigveda and the *Laws of Manu* contain references to markets.

We know that markets were held on the boundaries of certain Greek States under the protection of θεοὶ ἀγοραίων,¹⁵ and that an active commerce found its home in the sanctuaries of Olympia and Delphi; and Homer and Herodotus tell us of the market-places of foreign seafarers, and especially of those of Phœnician visitors.¹⁶ In later times the institution of the

Od.* xv. 415 ff.; Herod. i. 1. G. Grote (*A History of Greece*), London, 1872, iii. 294, note) observes that both Velletius Paternulus (i. 8) and Justin (xiii. 5) refer to the Olympian festival as *mercatus*. See also Cic. *Tusc. Quest.* v. 3.

market spread from Massilia, from the north of the Balkan Peninsula, and from the cities on the shores of the Euxine to the countries of the neighbouring barbarians.¹ In Latium the fairs were of great antiquity. In Rome and in Etruria they were associated with religious festivals; and the most important of the Italian fairs was held on the boundary which separated the Etruscan from the Sabine land at Soracte in the grove of Feronia.² In heathen times the religious festivals and popular gatherings of Norway and Sweden³ and, in ancient Germany,⁴ the tribal assemblies seem to have supplied occasions for the holding of markets.

So, too, in the past, the great markets of France, Germany, and England showed their close connexion with the observances of the Church.⁵

3. Origin of the market.—We have seen⁶ that one of the earliest, if not the earliest, of the forms of commerce is that which has been called 'the silent trade.' Those who engage in it are strangers to one another and are consequently enemies. But, so long as it lasts, they observe a truce, which is safeguarded by a supernatural sanction. This sanction derives its force primarily from the sacredness of the relation between the traders, which the trade creates, and—in very many cases—in a degree hardly less considerable, from the sanctity of the place where the trade is carried on. This spot lies often within a border-land—a locality which is very generally regarded by primitive peoples as holy ground—and such a situation is frequently chosen not only because it possesses this characteristic, but because it is easily accessible. Goods set out on the seashore, on a river bank, or at a meeting of ways are likely to catch the eye of the passing trader; and, if he is satisfied with his exchange, he will return, as we are told, again and again, to the known place at the known time. In this strange custom is to be seen, in our opinion at least, the germ of the market.⁷ Richard Lasch, however, in his admirable essay on the 'Primitive Market,'⁸ urges two objections to this view. He contends that, in its beginnings, the market is, to a large extent, a provision market, mainly in the hands of women. He admits that, in certain cases, an exchange of articles of food may be transacted by the methods of the silent trade. A tribe of bushmen, e.g., which has a tribe of agriculturists for neighbours may employ these methods in bartering game for bananas. In such a case the traders are men, not women. But to infer from such evidence that the market is derived directly

Anderson, *The Hæmiskynja, or the Sagas of the Norse Kings, from the Icelandic of Snorre Sturason*, London, 1880, i. 104; J. J. A. Worsaae, *An Account of the Dances and Norwegian in England, Scotland, and Ireland*, do. 1852, pp. 100, 232.

⁴ Schrader, *Reallex.* p. 521. The Roman word *mercatus*, applied in the first instance to the trading of pedlars and hawkers in S. Germany and the Rhineland, was not used to designate the market as a place until the Germans had come to settle in towns. Thereafter, the word was adopted in almost all the Germanic languages as the expression for market (ib. p. 523; see Rathgen, p. 81; S. Rietschel, *Markt und Stadt*, Leipzig, 1897, p. 83 ff.). Rathgen (p. 9) observes that, in Karolingian times, the institution of the market was fully developed.

⁵ See the works of Huvelin, Rathgen, and Rietschel cited above; C. Elton and B. F. C. Costelloe, 'Report on Charters and Records relating to the History of Fairs and Markets in the United Kingdom,' in *First Report of the Royal Commission on Market Rights and Tolls*, London, 1889, i. 5; C. Walford, *Fairs, Past and Present*, do. 1893.

⁷ See Hamilton-Grierson, p. 28 ff., and 'The Boundary Stone and the Market Cross,' *Scottish Historical Review*, xii. [1914] 251. The view indicated above as to the origin of the market is held by H. Schurtz, *Das afrikanische Genue*, Leipzig, 1900, p. 122 ff.; A. Sartorius von Waltershausen, 'Die Entstehung des Tauschhandels in Polynesian,' *Zeitschr. für Social- und Wirtschaftsgeschichte*, iv. [1895] 541; M. Kulischer, 'Der Handel auf den primitiven Kulturstufen,' *Zeitschr. für Völkerpsychologie und Sprachwissenschaft*, x. [1878] 380 ff.; cf. Huvelin, p. 10; O. Schrader, *Linguistisch-historische Forschungen*, pp. 11, 84, *Reallex.*, s.v. 'Handel,' 'Markt.'

⁸ Pp. 625 ff., 700.

from the silent trade seems to Lasch to be wholly unwarranted. His second objection rests on the nature of the goods brought to market, which are, he says, for the most part perishable. They are produced constantly and they are in constant demand. Accordingly, market must follow market at a short interval, the times being fixed to suit the convenience of the traders. But the existence of such arrangements presupposes an exchange of views between those interested; and such an exchange involves a complete breach with the principles of the silent trade. The best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its beginnings. We shall find that it is attended by men only, and that, in some instances, it exhibits features which recall to us those of the silent trade.

S. Passarge,¹ e.g., describes a market on the Benue to which a river tribe resorted for the purpose of exchanging fish and grain for the skins and game brought in by a tribe of bushmen. The former left a man in each canoe to hold it in readiness in case of a quarrel. Only men were present, and each man stood, weapons in hand, in front of his merchandise. On an alarm the bushmen sprang into the jungle, and the river-men took to their canoes. Insults were hurled, and arrows began to fly; and, in the end, after a few men had been killed on either side, each party returned home, satisfied with the day's work. Another example is supplied by Ellis's² account of the fair or market held in the island of Hawaii on the banks of the Wairuku river. The inhabitants of the different divisions³ into which the island was parcelled out, although frequently at enmity, frequented this meeting-place for the purpose of exchanging the specialties of their respective districts. These consisted of mats, native cloth, dried fish, hogs, and tobacco. 'From bank to bank the traders shouted to each other and arranged the preliminaries of their bargains. From thence the articles were taken down to a large square rock which stood in the middle of the stream. Here they were examined by the parties immediately concerned in the presence of the king's collectors, who stood on each side of the rock, and were the general arbiters in the event of any dispute arising. To them also was committed the preservation of good order during the fair; and they, of course, received a suitable remuneration from the different parties.' Again, we are told⁴ that at Somu-Somu, in the Fiji group, 'the market is held on a certain day in the square, where each deposits in a large heap what goods and wares he may have. Any one may then go and select from it what he wishes, and carry it away to his own heap; the other then has the privilege of going to the heap of the former and selecting what he considers to be an equivalent. This is all conducted without noise or confusion. If any disagreement takes place, the chief is there to settle it; but this is said rarely to happen.' It is reported of the Eskimo of Point Barrow that, in their intercourse with those of Demarcation Point, they seem to be very wary, as if they constantly keep in mind that they are the weaker party and in the country of strangers. They describe themselves as taking up a position opposite the place of barter on a small island to which they can retreat on any alarm, and cautiously advance from it making signs of friendship. They say that great distrust was formerly manifested on both sides by the way in which goods were snatched and concealed when a bargain was made; but in later years more women go, and they have dancing and amusements, though they never remain long enough to sleep there.⁵

A very curious instance, in which women were the traders, and in which the method employed recalls that example of the silent trade mentioned by K. and J. Lander,⁶ is recorded by Torquemada⁷ in his account of the Mexican markets. He tells us that the Indian women made exchanges without a word being spoken. One held out the article of which she wished to dispose to another, who herself had something to barter. The latter took what was offered in her hand, and indicated by signs that it was worth very little in comparison with the value of her own article, and that something must be given in addition before she could consent to the exchange. If the addition required was made, the bargain was complete; if not, each retained her own property.

In these instances we have the mutual distrust, and, in some of them, traces of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, even where its business is confined to the exchange

of provisions, entirely in the hands of men. So soon, however, as women can visit it in security, they assume the entire conduct of its traffic in articles of food, and the men attend only as guardians of its peace,¹ or confine themselves to dealing in the objects of their special concern, such as cattle and slaves.²

Two further observations may be made in reference to Lasch's arguments. In the first place, there are many instances in which perishable articles, such as fresh fruit and fresh meat, are exchanged by the methods of the silent trade.³ In the second place, many cases can be cited in which the places where the silent trade is to be found in operation are matters of common knowledge.⁴

4. Situation of the market.—The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.⁵

Thus, a river separated those who resorted to the market on the Wairuku, the articles to be bartered being laid upon a flat rock in mid-stream.⁶ In many instances the market is held within a border-land,⁷ as in the Baluba country,⁸ in Somaliland,⁹ and in British New Guinea.¹⁰ We have already mentioned the border markets of Greece and Rome;¹¹ and we are told that the frontiers of the Roman world formed a vast zone of markets.¹² In Usambara¹³ and in some districts in British New Guinea¹⁴ the markets are held on the borders of different districts; and the Batua markets¹⁵ in the virgin forest and those of Angola¹⁶ are generally equidistant from the nearest villages. Among the Aikikyu the site chosen for the market is an open space where the inhabitants of several districts can conveniently attend,¹⁷ while in the Congo countries the market-places are often situated in an open country.¹⁸ In both cases a hill-top is a favourite situation. Among the Gallas of the Western Abyssinian country markets are usually held on the top of a small hill, near some big farm¹⁹; in the Gazelle Peninsula, on plateaux, about an hour's journey from the coast²⁰; and, among the Lapps, sometimes in open fields, and sometimes on the ice.²¹ On the Lualaba,²² at

Mogelo,¹ at Andshira,² and among the Kabyles³ markets are situated in uninhabited places, while in Benin the two great markets were held in large clearings, with only small villages adjacent.⁴ At Malani, which consists of two villages, the market lies between them,⁵ and a somewhat similar account is given of that at Abu-Gher.⁶ In one of the districts of Bornu the market is generally held at some distance from the town,⁷ and a like practice is frequently to be found elsewhere.⁸ In some countries it is held near a principal town, as in Madagascar,⁹ or in an open space near a village, as in German New Guinea,¹⁰ or outside a town, as among the Western Mandingoes,¹¹ or between the town-wall and a river, as at the chief town of the Wymar country.¹² Markets are not infrequently held on islands. Thus, on the Gwosdew Islands an exchange takes place between natives of N. America and N. Asia;¹³ and a fair, attended by the Chukchis and other nomad tribes, takes place annually on an island on the Anui River.¹⁴ Markets are held on river-banks on the Niger¹⁵ and on the Benue,¹⁶ at points equidistant from the neighbouring villages, as on the Congo,¹⁷ or at cross-roads, as on the Congo¹⁸ and in Dahomey,¹⁹ at spots easy of access by visitors from several districts, as in Somaliland,²⁰ on the seashore, as in New Caledonia²¹ and among the ancient Northmen,²² on the banks of great lakes, such as the Victoria Nyanza,²³ and, as at Guzzula, on a plain between mountains.²⁴

Many of these situations point to a time when the fear of attack was prevalent; and Schurtz²⁵ suggests that the arrangement in the Mahee²⁶ country by which the weekly markets were held outside the walls, so that strangers might not enter the town, while the daily markets attended by the inhabitants were held within it, is a survival of the old state of things.

Where an established order exists, however, the market is generally held within the town.

Thus, at Kocifu and Zaria the market-place is within the walls;²⁷ and at Kanó it is situated on a neck of land stretching

across a marsh, which nearly intersects the city.¹ The markets at Hang-Chau² and in the city of Mexico³ were held in great squares within the town. Timbuctu may be cited as an instance of a town which had its beginnings in a temporary market.⁴ In Java the markets are held under large trees on spots dedicated to the purpose from time immemorial.⁵ In Silandong the market-places are generally at the foot of the hills, and are marked by old fig-trees.⁶ In the Sherbro and its Hinterland the markets are always held under large trees;⁷ and those on the upper Lualaba frequently take place on grassy mounds under the shade of great spreading trees.⁸ In the chief town of Uganda,⁹ at Loango,¹⁰ at Pawee and Seka in the Mahee country,¹¹ among the Kabyles,¹² and in the Mekeo district of British New Guinea¹³ the markets are held under the shelter of large trees; and a somewhat similar account is given of markets on the Congo.¹⁴

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages.¹⁵ This practice prevails throughout western Yün-nan,¹⁶ and is found in Java¹⁷ and Abeokuta,¹⁸ at Igbegbe and Onitscha,¹⁹ at Kong, and at Bobo,²⁰ in the Mekeo district of British New Guinea,²¹ in ancient Mexico,²² and in many other places.²³ At Ikoradu, on the lower Ogun, the market between the townsfolk and the bushfolk takes place every eight days,²⁴ and in the Banyeng country markets are generally held with an eight days' interval.²⁵ In regard to the markets on the caravan routes between Matadi and Leopoldville, a distinction must be kept in view between those held daily by the neighbouring villages for the caravans' supply and the weekly markets. The Fioti week is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called *onduelo*, 'little,' 'insignificant.' On the Lower Congo each market bears the name of one of the days of the Fioti week, followed by the name of the village where it is held.²⁶ The Khāsis of Assam,²⁷ the Battak of Sumatra,²⁸ the tribes of the Lower Niger,²⁹ and the Akikūyu³⁰ hold a market every four days. On the Lualaba the

²⁶ Duncan, i. 100. 'Where a town or city has two walls, the public market is held within the outer walls. This market is often attended by strangers from a great distance. The private market is invariably held within the walls' (*ib.* ii. 101).

See Alexander's observations regarding the Bornu markets quoted above. A similar practice prevails in some of the towns of Adamaua (Passarge, p. 36). A. W. P. Verkerk Pistorius, in his *Studien over de inlandsehe huishouding in de Padangsehe Bovenlanden*, Zalt-Bommel, 1871, p. 13, observes that the market-place, situated on a large open space in the middle of the village, is called *perdameran*, or place of peace. But, when circumstances permit, the site chosen for the market is outside the village; and some markets are held on spots quite uninhabited.

²⁷ Clapperton, pp. 135, 158.

VOL. VIII.—27

market is held every fourth day, other markets being frequented in the interval.¹ At Amba Bay the market takes place every third day.² There are daily markets at Loango,³ at Kanó,⁴ and at Mogelo.⁵ The Bini have now eight days in their week; but formerly they had four only. On each day there is a market in or near Benin city.⁶ Three markets a week are held at Kassa-Kanó;⁷ and two a week at Marrakesh,⁸ at Koolfu,⁹ and at Banjaribuan.¹⁰ Weekly markets are held in Morocco,¹¹ at Popalahun in the Sherbro,¹² in Lega-land,¹³ among the Oromó,¹⁴ among the Kabyles,¹⁵ and at Passumah in the southern part of Sumatra.¹⁶ In the Kuantan districts of Central Sumatra each market has its own special day of the week allotted to it.¹⁷ In Silindong there is a daily market, but the place at which it is held varies from day to day.¹⁸ In this last instance, and in many other cases,¹⁹ the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market.—In Kúkawa, Maseña, Kanó, Sókoto, and Timbuctu, the market is held in the hottest hours of the day.²⁰ According to Clapperton,²¹ the market at Kanó is crowded from sunrise to sunset. The Yo (Bornu) market begins about 9 a.m. and ends about 3 p.m.;²² and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m.²³ In some places in the neighbourhood of Harar the markets begin about noon;²⁴ and at Gire in Adamaia they are in full activity by that hour.²⁵ At Saria the busiest time of the market is from 2.30 p.m. to 5.30 p.m.,²⁶ and at Kulka in Bornu about 3 p.m.²⁷ In Tshambá the market is held in the late afternoon,²⁸ and at Coosoo²⁹ in Yoruba in the evening. It takes place at Aden two hours after sunset,³⁰ and at Bida and Ilorin³¹ and in some parts of Malacca³² in the night. On the upper Ubangi it is held from 8 to 10 in the morning.³³ On the Livingstone it is deserted after noon.³⁴ In the Padang district of Sumatra it

is little frequented in the early morning, but by 10 o'clock it is full.¹ Markets in the early morning are less frequent, for the obvious reason that they interrupt the day's work of those who resort to them more than do markets held towards the close of the day, and also because those at a distance cannot attend them.²

7. Frequenters of the market; market-women.—H. H. Johnston³ observes that both men and women make long journeys to sell their goods, the men always travelling furthest.

Among the Bondel, if the market be near, the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone.⁴ At Whydah on the Gold Coast,⁵ and among the Battak of Sumatra,⁶ traffic in slaves was confined to the men. Among the Bakuba the men bring goats and palm-wine to market,⁷ and in the Mandingoes markets they trade in cloth.⁸ At Woodie the women sell milk and honey, fowls and herbs, while the men sell oxen, sheep, and slaves.⁹ At the Harar markets the frequenters are grouped by sexes, i.e. according to the articles which they sell.¹⁰

In many instances the business of the market is entirely in the hands of women.

Thus, in the districts near Kilimanjaro, 'the women do all the trading, have regular markets, and will, on no account, allow a man to enter the market-place.'¹¹ At Koolfu, the principal town of Nupe, nine out of ten of those who resort to the daily market are women;¹² and the Foulahs or Fallatas leave the market in their hands.¹³ A similar state of things is reported from many quarters.¹⁴ It is of interest to observe in this connexion that, in the Congo area, when a thief is caught, his punishment—that of being stoned to death—is inflicted by the women.¹⁵ In Nicaragua no male above puberty might enter the market-place of his own village to buy or sell. He might not even look at it from a distance. But men and women from other friendly or allied villages might go to it.¹⁶ The women selling at the market of Brunei in Borneo are generally old slaves.¹⁷ At Kuka in Bornu the principal slaves are generally the traders, while their masters loiter about, spear in hand.¹⁸ The Oromó market people form a caste by themselves; they attend all the larger markets in person, and send their servants to the smaller ones.¹⁹

8. Religion and the market; the market peace.—The market peace is sacred; and this quality may be due to one cause or to a concurrence of

³³ Schurtz, p. 118.

³⁴ Stanley, ii. 167.

several causes. It may be due to the nature of the relation between traders which the act of exchange creates, to the sacredness of the place where the trading takes place, to the consecration of the market at the time of its foundation,¹ or to the fact that the market is under the protection of a god,² or is associated with a religious festival.³

Large fairs, held at different points on the Niger, are professedly regarded as sacred ground, whatever wars there may be in the land; and, although this neutrality is not infrequently violated, still the traders return with remarkable pertinacity.⁴ The Shilluks enticed the Khartum traders to their camp by a display of attractive merchandise, and then butchered them for their arms and ivory;⁵ at the close of a Bakuba market the chief allowed his bodyguard to plunder the market-women;⁶ and Livingstone speaks of a massacre of Manyema market-women by Arab traders.⁷ 'But,' he observes, 'they have great tenacity and hopefulness. An old established custom has great charms for them; and the market will again be attended, if no fresh outrage is committed.'⁸

Sometimes such violence kills the market.⁹ 'To revive' a "dead" market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market

¹ It is said that, at Stanley Pool, the establishment of a market was the occasion for the sacrifice of a slave (Costermans, 'Le District de Stanley Pool,' *Bulletin de la société d'études coloniales*, 1896, p. 62); and it seems not improbable that the object of this sacrifice was to convert the soul of the victim into a protecting demon (PC4, London, 1893, i. 108; GDB, pt. II, *Taboo and the Perils of the Soul*, do. 1911, p. 90; F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 ff.; cf. A. Wuttke, *Der deutsche Volksaberglaube der Gegenwart*³, Berlin, 1900, § 440, and L. Proctor, *The Story of the Laddlers done into English*, London, 1903, ch. 17, where we read that Hrapp desired to be buried standing in the firehall doorway that he might look after his household gods; see also the story of the Phileni (Sall, *de Bell. Jugurth.* 79). A. B. Ellis, *The Tshi-Speaking Peoples of the Gold Coast of West Africa*, London, 1887, p. 63, tells us that it was regarded as impossible for a hostile force to make its way into Elmina, if the body of a human victim were cut up and distributed round the outskirts of the town so as to enclose it. The victim, for which nowadays a sheep is substituted, was offered to a river-god. With this may be compared C. Coquilhat's statement (*Le Haut Congo*, Brussels, 1883, p. 85) that, among the Bayanzi, when an agreement has been made between two villages as to the price of victuals, it is solemnized by digging a ditch between them, and throwing into it a slave whose arms and legs have been broken, and to whom no one may give either meat or drink. Among the Bondel, when a market is founded, the witch-doctor sets up his *finjo* at every road which opens into it (Dale, *JAI* xxv. 231); and in the Congo countries a gun is buried on a like occasion, and an agreement made that no arms of any kind shall be introduced (Dennett, p. 48). Cf. also, in general, art. FOUNDATION, FOUNDATION-RITES.

² M. H. Kingsley ('African Religion and Law,' in *National Review*, xxvii. [1897] 134) tells us of a W. African market-god who punishes the cheat and the thief; and among the Ewe-speaking peoples Aisan is the protector of markets and public places, performing the functions of the multitudinous gods of the Tshi-speaking peoples (A. B. Ellis, *The Ewe-Speaking Peoples of the Slave Coast of West Africa*, London, 1890, p. 52). See also Hamilton-Grierson, p. 58 and note 2. Lasch (p. 711) holds the view that the market-trees either are personifications of market-gods or serve as their abodes, and that, as a consequence, they are regarded as 'tabu,' or sacred. He bases his view upon the facts that, according to primitive conceptions, the market-place is holy ground, and the sanction which secures its peace is supernatural; but, while we admit these facts, we cannot regard them as in themselves justifying the inference which he draws from them.

³ See above, § 2. In the ancient North the market peace was a peace of God, when the market was held during a religious festival. When the king went to the frontier to settle boundary questions, and a trade arose, the peace was a host's peace (K. Lehmann, p. 50 f.). In Greece a special religious peace extended beyond the territory where the great festivals were celebrated, and secured the person and property of those who frequented them, even in their passage through a hostile district (Huvelin, p. 76 ff.; see above, § 2).

⁴ Allen and Thomson, i. 398.
⁵ G. Schweinfurth, *The Heart of Africa*, tr. E. E. Frewer, London, 1873, i. 101.

⁶ Von Wissmann, etc., *Im Innern Afrikas*, p. 250.

⁷ *Last Journals*, ii. 133 ff.

⁸ *Ib.* ii. 139. It is for this reason that sellers prefer to do their business at the market. If an offer is made, the reply is 'Come to the market' (*Ib.* ii. 112, 132). The same view prevailed in Mexico (Torquemada, xiv. 18).

⁹ When the market has been 'killed,' all law is suspended, and crimes may be committed, the responsibility for which falls upon the family of the person in fault, until he has been delivered up (M. de Saegher, 'Les Coutumes des indigènes de l'état indépendant du Congo,' *Bulletin de la société d'études coloniales*, Brussels, 1894, p. 91).

belongs, and slaughtered, and divided up among the towns represented. Whenever possible, the culprit who caused the disturbance, or his substitute, if he is a wealthy man, is burned or buried alive; if other ways of killing are resorted to, his skull is fixed up on a post in the market-place to "strengthen the law."¹

The Congo markets, held at points equidistant from several villages, are neutral spots;² and the market at Mogelo, held within an enclosed space, is neutral.³ Market-places on the banks of the Livingstone, at intervals of three or four miles, are resorted to by the aborigines of either bank, and are regarded as neutral ground;⁴ and a similar privilege attaches to a fair held on the Lukalla, in the territory of the Kalosh,⁵ and to a trading-place which lies deep in the forest at a point where the countries of the Baluba, the Babinde, and the Balunga touch.⁶

Dennett⁷ says of the 'silent' markets of the Bavill that he has never known of their being abused; and in many places in the Philippines, especially in Mindanao, commerce is carried on at regular intervals on neutral ground by the method of the silent trade.⁸

During the last two months of one year and the first and seventh month of the following year, war was suspended throughout Arabia, and fairs were held;⁹ at Guzzula there was a complete truce three days a week, when the markets were held, and for two months during the annual fair.¹⁰ Again, at the great fair at Prairie du Chien hostile tradersmen abstained from all unfriendly acts;¹¹ and during the Batta markets hostilities are entirely suspended.¹² Each man who possesses one carries his musket with a green bough in the muzzle as a token of peace, and afterwards, when he comes to the spot, following the example of the director or manager of the fair, discharges his loading into a mound of earth, in which, before his departure, he searches for his ball.¹³

Among the Kabyles the market is a neutral ground placed under the *amaya* of its owners; and, while within their territory, all who frequent it are under their protection.¹⁴ By the Rifis the market, with the roads leading to it, is regarded as safe from the exercise of private vengeance.¹⁵ Women from different districts, even when those districts are engaged in actual hostilities, pass to and from the Luabala markets unmolested;¹⁶ and a like immunity is secured to the women of the Masai and Wachaga by agreement, although those tribes are mortal enemies.¹⁷ A compact to the same effect holds good between the Masai and Wa-kikuyu;¹⁸ and at Nyangwé¹⁹ and among the Somali²⁰ feuds are suspended during the passage of traders to and from market. This protection is afforded by the tribe where the form of society is tribal, by the king where it is monarchical, and by the king or the feudal lord where it is feudal.²¹

The history of the boundary-stone and of the market-cross is of great interest in this connexion. It has been pointed out²² that the intimate relation of the market, the border-land, and the supernatural is illustrated by the characteristics of Hermes-Mercury. His symbol was an upright stone; and, as boundaries were marked by such

stones, he came to be regarded as the god of boundaries. In many cases the border-land consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders.¹ Now we are told that the ancient Germans used to raise poles at their public meetings, which were consecrated to the god of the public assembly.² These poles were, in all probability, erected upon a stone;³ and it has been suggested that this 'truncus super lapidem,' replaced in later days by a stone column, is the prototype of which Irminsulen, Rolandsaulen, *perrons*,⁴ and many of the market-crosses of Scotland⁵ are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone.⁶

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary peace became a permanent peace.⁷

In China an official notified the beginning and end of the market peace by hoisting and lowering a flag;⁸ in British New Guinea a drum is beaten at the opening and closing of the market;⁹ the trade between the people of the Rifi and the Spanish garrison whom they were besieging ceased on the ringing of a bell.¹⁰

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over.¹¹

² Goblet d'Alviella, *The Migration of Symbols*, Westminster, 1894, p. 116. This god was probably Thingus, the Germanic equivalent of Zeus Agoraios (see note below); see, however, Mogk's art. *God (Teutonic)*, vol. vi. p. 304a. According to Cæsar (*de Bell. Gall.* vi. 17), the Gauls worshipped a deity whom he identified with Mercury.

³ D'Alviella, p. 117.

⁴ D'Alviella (*Les Perrons de la Wallonie et les Market-Crosses de l'Écosse*, Brussels, 1914, pp. 27, 42, *The Migration of Symbols*, p. 103 ff.) indicates his agreement with the views of E. Monseur (*Supplément littéraire de l'indépendance belge*, 3rd May 1891). He observes that, before the diffusion of Christianity, the poles, to which we have referred, were at once the symbol of the god of assemblies (Thingus, the equivalent of Zeus Agoraios) and of the autonomy of those assemblies. It is not improbable that, for the purpose of ornament, a representation of the god in the likeness of an armed man was attached to them or carved upon them; and that, when the meaning of these representations came to be forgotten, the popular imagination gave to them the name of the Paladin most popular at the time, and the Irminsaulen became Rolandsaulen. When the Church established herself among the barbarous peoples, the old columns continued in many places to serve as the rallying points of collective life. Sometimes they bore the emblem of Christianity; sometimes they were altered or transformed so as to symbolize something new or additional; and sometimes they were replaced by the crosses planted by the Church in sign of possession.

⁵ The resemblance which many of the market-crosses of Scotland bear to the *perron* has been pointed out by W. G. Black (*Glasgow Cross, with a Suggestion as to the Origin of Scottish Market-Crosses*, Glasgow and Edinburgh, 1913), and his suggestion as to their origin has been approved by d'Alviella in the later of his two works cited above. At p. 39 of this work d'Alviella figures certain of the Scottish crosses, and it is curious to observe how close is the similarity of some of them with the image of Hermes figured by him on p. 194 of *The Migration of Symbols*.

9. The law of the market and its enforcement.

—We have already seen¹ that acts of violence perpetrated upon the frequenters of a market may and probably will 'kill' it—for a time, at all events. The recognition of this fact appears to produce two results. In the first place, offences committed within the market are punished with exceptional severity, as imperilling its peace. In the second place, since offences committed outside of the market are not regarded as a danger to its peace, those who have committed them are in consequence not subjected to punishment so long as they are within it.

On the lower Congo every breach of the regulations of the market renders the culprit liable to death. He is 'either buried to his neck in a hole, in the centre of the market place, and his skull crushed by a heavy stone; or he is beaten to death with sticks, and his body is subsequently lashed to a pole, which is erected alongside a native path.'²

Bentley³ tells us that in some of the Congo markets 'a man who brought a gun with him would be promptly buried alive, and the muzzle of his gun would be left protruding' as a warning to the rowdy elements in the fair. 'Sometimes a pile of firewood is ready to burn the culprit alive. On some markets no stick or knife may appear, a heavy fine being imposed in case of infraction.'

Among the Kabyles every offence committed in the market is punishable with death without trial. The crowd seize the offender and stone him without mercy. It is the strangers that execute the law. The tribesmen try to avoid these executions as they discredit the market.⁴ At Berbera any one from the interior or the coast who by his conduct does serious injury to trade must pay the death penalty. Still, as such an execution occasions reprisals, it is avoided as far as possible.⁵

The fairs of ancient Ireland were regulated by strict rules, any breach of which was punished with death.⁶

In ancient Greece,⁷ in ancient Norwegian and Danish law,⁸ and in the France and Germany of the Middle Ages⁹ a breach of the special peace of the market was dealt with more severely than was a breach of the common law.

In Mexico he who stole in the market was punished with death;¹⁰ and he who was suspected of selling stolen goods, if he could not tell from whom he had received them, was condemned to death.¹¹

As we have already indicated, there is evidence to show that, in many instances, those who had committed deeds of violence or contracted debt before coming to the market were safe from pursuit or arrest so long as it lasted and they remained within it.

Thus, among the Kabyles the avenger of blood who kills a man in the market suffers the same penalty as a common murderer;¹² and the same rule seems to have been observed at Berbera.¹³ There, too, the trader who brought stolen goods to the market could not be proceeded against.¹⁴ Those who resorted to the fairs of the Middle Ages were safe from prosecution or arrest for crimes committed or debts incurred beyond their bounds,¹⁵ and enjoyed privileges, and were allowed relaxations

of the common law which attracted not only the merchant but those in search of pleasure.¹

10. Administration and execution of the law of the market.—It has been observed² that, where the market lies within the territory of a tribe, its law is administered and executed in part by those who resort to it and in part by officials appointed by the tribe of the district. Where, however, it is held within the territory of a king, chief, or feudal lord,³ it is his officers that act as police, and, in some instances, as judges.

In the Kabyle markets, e.g., an official—the chief of the market, who belongs to the leading family of the tribe which owns it⁴—sees to the preservation of the peace, escorts those who fear attacks on the road, summarily expels the quarrelsome, and fines those who create disturbance.⁵ He is concerned only with offences which affect the public, while civil and commercial disputes are referred to a marabout of the tribe.⁶ At the same time, it is the strangers in the market that execute its law by stoning the delinquent.⁷ Again, in the Berbera market, there is no supreme authority to whom the enforcement of the law is entrusted. Its execution is in the hands of the market chiefs. An assembly of those belonging to the district is sole judge in disputes; but the disputants need not abide by its decision. If they ignore it, they must leave the market.⁸

But where the market lies within the territory of a king, he or his officer sees to the maintenance of order.⁹

Thus, at a fair on the Lukalla, within the country of the Kaloshi, 'the chief kept watch in his greatest pomp with half a dozen guards, in order that no dispute might disturb its peace. His companions were all well-known by the broad axe which they carried on their shoulders.'¹⁰ Among the Baganda a chief appointed by the king performs similar duties;¹¹ and these are discharged at Wairuku by the king's collectors,¹² and among the Gallas by the local headman.¹³

At Maidugari—the largest market of Bornu—there is a market king who settles disputes between buyers and sellers; and the women choose a market queen for their protection, through whom they transact all their business.¹⁴

This last instance shows that, while, in some cases, the duties of the officers of the market are confined to the preservation of the peace,¹⁵ they are, in many others, of a much more varied character.

Among the Waschambala the superintendent of the markets collects the dues and attends to matters of police.¹⁶ At Wairuku the king's collectors are the general arbiters of disputes;¹⁷ and throughout the country of the Gallas, on the western Abyssinian plateau, the market is held under the superintendence of the local headman, who decides all questions arising out of broken contracts.¹⁸ At Whydah the chief constable of the market attends to its cleanliness;¹⁹ and a high officer named Onagongia sees that the strings of beads which serve as money are composed of the proper number. Those which are deficient he confiscates for the king's benefit and for his own.²⁰ Among the Gallas the duties of direction of the market are exercised by an important official who is entrusted with the conduct of foreign trade and the supervision of the exchequer.²¹ In the Congo markets there is, in most cases, a chief of the market, perhaps an old fetish-man, who regulates all disputes, and fines both the litigants so heavily that all are aghast of invoking his assistance.²² At Kanó the judge of the market sits all day to try disputes

arising in the course of trade;¹ and in the Loango markets an official is charged with seeing that no deceptions are practised in the trade between natives and Europeans.²

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The milk brought to the market of Jakoba, however, is daily subjected to examination;³ and in Morocco an officer is appointed to inspect the provisions offered for sale.⁴ He must constantly attend the markets and see that purchasers are not overcharged; and, in view of the plenty or scarcity of the goods exposed, he must fix the prices.⁵ At Kanó the shahk of the market fixes the prices;⁶ and among the Bangala the price is fixed by the chiefs with reference to a standard.⁷ At Mecca and Jidda a public officer fixes a maximum price to all victualing traders.⁸ In some of the markets in Hawaii the chiefs regulated the prices;⁹ and in ancient Mexico they were fixed by the superintendents of the market.¹⁰ In China the officer placed over the market was charged not only with the maintenance of order, but with the supervision of weights and measures, and with the administration of justice in more important cases.¹¹ The Greek ἀγοραῖοι appear to have exercised similar functions in regard to the preservation of the peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally.¹² The Roman ædile preserved order by means of his officers, and imposed fines upon the peace-breakers. He allotted their positions to the traders, and saw to the accuracy of weights and measures. To assure the *bona fides* of transactions within the markets was his special care, both by exposing frauds and by rejecting articles which were unfit for sale.¹³ In the market of Tenoxtitlan ten or twelve judges sat in a house on the market-place to deal with cases as they arose and to see to the punishment of delinquents. There were also officers who went among the people, saw what was bought and sold, and broke any false measures which they found in use.¹⁴ It was the duty of these officers to fix the prices and to prevent frauds.¹⁵

11. Market dues and their collection.—In some markets—e.g., at Silindong—dues are not exacted.¹⁶ Among the Hausa, while dues are levied, entrance into the town is free to the market people.¹⁷ At Etcho men can enter the market and trade without charge, but every woman must pay ten cowries to the government.¹⁸

When trade took place in the temple of the sun, the priest collected dues on behalf of the divinity.¹⁹

At a fair on the Lukalla, in Kashama's country, each district whose representatives were present must make a gift to the prince. Kashama, who performed a series of dances in the market, after each dance received their contributions from the market-women, who danced as they paid.²⁰ In the Bomma markets the king grants his protection and collects the dues;²¹ and in the horse-market of Fez,²² and at the market of Rabat,²³ an officer levies a small percentage on behalf of the government. At Adamaua,²⁴ and in Hawaii,²⁵ king's collectors are present in the markets; and in those of Usambara the superintendent (*mgelu*) takes a double handful of the market-women's pro-

visions for the king, and levies a contribution for himself.¹ Among the Baganda a chief appointed by the king collects a tax upon every sale;² and at Quampanissa the people pay a tax on every article of food exposed for sale.³ In the Loango markets the chief of police sees to the payment of the dues;⁴ and at Kanó the shahk of the market lets out the stalls at so much a month, the rent forming a part of the governor's revenue.⁵ In China there are special market-dues, which are collected by a special officer.⁶ In ancient Greece the ἀγοραῖοι collected dues, which were applied in the first instance to the needs of the market;⁷ and in the markets of imperial Rome, and especially in those of the Middle Ages, a fully developed system of taxation obtained.⁸ In the Mexican markets a fixed tribute was paid to the emperor, in return for which he granted his protection against thieves.⁹

In ancient India the king was entitled to market dues, which varied, according to circumstances, from a twentieth to a tenth of the value of the goods.¹⁰ The frequenter of the Baluba market at Kabao must pay three cowries to the chief, whatever the value of his goods may be;¹¹ and in the Bondel market every person who brought articles for sale had to hand over one of each kind.¹² In the Aruwint district the dues amount to one-twentieth of the value of the goods brought to market;¹³ at Nyangwé to a tenth or a sixth.¹⁴ Those who expose goods in the Whydah market pay very heavy dues to the king of Dahomey,¹⁵ while in the Hawaiian markets two-thirds of the proceeds of whatever the natives sold was demanded by the chief.¹⁶

12. The arrangements of the market-place.—Among the Lega-Gallas the markets are held only if the weather permits; for the climate is variable, and the market-places are wholly without shelter.¹⁷ In the markets of Madagascar there are neither shops nor booths, the articles for sale being set out upon mats.¹⁸ The markets on the Lualaba are held at uninhabited places, except at Nyangwé, where there are houses for traders and huts for slaves and porters.¹⁹ When the caravans arrive at Berbera from the interior, booths and dwellings are erected; and, within a week, on what was previously a desert spot several hundred huts are ready for the strangers coming thither over sea.²⁰ At Sennâr the traders transact their business protected by temporary erections of boughs and mats;²¹ and at Guzzula the wares are exposed in tents and shelters of boughs, where stranger merchants are entertained and housed,²² while in some of the Sumatran markets huts are provided, where stranger merchants can display their merchandise, and pass the night for a mere trifle.²³

At Maidugari, the largest market in Bornu, lines of sheds and stalls cover an extensive area;²⁴ similar erections are found in the markets at Tusawa and Katsena;²⁵ and Passarge²⁶ says of the markets in Adamaua that they contain numerous flat-roofed huts, which form a long street.

At Kinsay (Hang-Chau) the markets were held in great squares surrounded by shops, where all kinds of crafts were carried on and goods sold²⁷—a description which recalls to us the accounts of the markets of ancient Mexico.²⁸

In many markets the position assigned to the different traders depends on the nature of their wares,²⁹ the result being that, where those wares are traded in by one only of the sexes, a specific portion of the market is allotted to each sex.³⁰

¹ Lang, p. 265 f. Similarly, at the market of Bobo Dioulasou, a man carrying a gris-gris staff, accompanied by a drummer and a crowd of urchins, sets down his staff before each merchant ceremoniously, and, unopposed, helps himself, by means of a small calabash holding about a litre, from the merchant's calabash (Binger, i. 371).

³⁰ Paulitschke, i. 314.

In the markets of ancient Mexico each class of merchandise had its appointed place,¹ the more cumbrous kinds being stored in the neighbouring streets, or in floats on the canals;² in those of the Middle Ages what determined the trader's position was not only the character of his goods, but his nationality; and, in some cases, the latter was the sole determinant.³

13. Modes of bargaining in the market.—One of the most characteristic practices of the primitive trader is that of transacting business by means of a third person. Dall⁴ tells us that the Aleuts never trade with one another directly; and we have suggested that some light is thrown upon the origin of this method by the instance of the exercise of the silent trade reported by Lander.⁵ It is said that, among the natives of Australia, children are made *ngia-ngiampe* in order that they may act as the agents of their respective tribes in the business of barter;⁶ and many cases may be cited in which the man who takes a stranger under his protection not only acts as his host, but assists him in buying and selling, and is generally responsible for his conduct.⁷

At Berbera each stranger must choose a protector (*abban*). He dare not trade without him, and must pay him one per cent on the value of every article which he brings into the market. The *abban* is his broker, he protects him against the extortions of the natives, and settles all disputes in which he may have become involved.⁸ A similar account is given of the part played by the host at Dioulasou.⁹ In Nigeria, whenever an article changes hands, the seller pays a commission to a third party, who is supposed to have facilitated the purchase.¹⁰

In the markets of many Asiatic countries a curious practice prevails by which traders, when bargaining in the presence of others from whom they wish to conceal their business, drive and conclude their bargains by touching the points of each other's fingers under a shawl without a word being spoken. It has been found in use at Mecca,¹¹ at Calicut,¹² among the Somali,¹³ at Jidda,¹⁴ at Pegu,¹⁵ in Malacca,¹⁶ in Mongolia,¹⁷ and elsewhere.¹⁸

Torquemada¹⁹ notes a curious practice which prevailed among the Indian women in the markets of ancient Mexico. They exchanged their wares without a word being spoken. The one party held out the article of which she wished to dispose; and the other, taking it in her hand, made signs that it was not a fair equivalent for what she proposed to give in exchange. If the first party refused to add anything, she ran the risk of losing her customer; if she added what was demanded, the bargain was concluded.

14. Methods of securing attendance at the market; its place in public and social life.—In some of the Congo countries it is penal for a woman to go to her farm on a market day.²⁰ To the desire to induce the stranger to come to market Heeren²¹ ascribes certain Lydian and Babylonian regulations.

¹⁹ xiv. 23.

²⁰ Bentley, i. 400. According to the ancient laws of India, in ancient Mexico, and during the Middle Ages, the market was the only place where it was permissible to sell movables. He who sold outside of it was regarded as an illicit trader, and he who bought from him as his accomplice (Lasch, p. 778; Torquemada, xiv. 16; Huvelin, p. 457 f.).

²¹ Heeren, *Hist. Res. into the Politics, Intercourse, and Trade of the Principal Nations of Antiquity*, i. 106 f., ii. 199.

tions regarding the relations of foreigners with the women of the country; and we may assign to a like origin such customs as the temporary marriages of Central Asia, and similar usages there and elsewhere.¹

In the Batta markets gaming, cock-fighting, and, in some cases, boat-racing form special attractions.² At the fair of Ukätz transactions intertribal and communal were adjusted, truces were declared, evil-doers were proclaimed, and tribute was brought in. It was there that betrothals were arranged by parents, who brought their daughters with them, that poets produced their verses, and that great men, ambitious of reputation, sought to gain it by exercising a profuse hospitality.³

In Ireland the *aeonach*, or fair, was 'an assembly of the people of every grade without distinction: it was the most common kind of large public meeting, and its main object was the celebration of games, athletic exercises, sports, and pastimes of all kinds.'⁴ The most important of the *aeonachs* were those of Tailteann, Tlachtga, and Ushnagh.⁵ The people of Leinster held a provincial *aeonach* at Carman, or Wexford, once every three years, which began on 1st August and ended on the 6th.⁶ 'Professors of every art, both the noble and the base arts, and non-professionals were there selling and exhibiting their compositions and their professional works to kings; and the rewards were given for every [work of] art that was just or lawful to be sold or exhibited or listened to.'⁷ New laws were promulgated, old laws were rehearsed, peace was proclaimed. There was music, recitation of poetry, feats of arms, athletic sports, horse-racing, and juggling.⁸

In Madagascar the market is a place of public resort, and it

is there that the public announcements of the sovereign are made.¹ In the Kabyle market feasts and fairs and all matters that affect the community are proclaimed. It is the place of news, gossip, and friendly intercourse, of plannings, and of plots.² The Papuan markets last all day, and are enlivened with feasting and dances;³ and similar amusements accompany some of the Eskimo markets.⁴ Those who resort to the Congo markets go not only to buy and sell, but to meet friends, to drink *malafou* and enjoy a gossip with them, to settle thorny questions, to hold palavers, to arrange disputes between clans and villages, to decide on war and peace, to bargain about the purchase of a wife, to describe slaves lost or stolen, and to give publicity to transactions such as the release of hostages or prisoners of war, or the payment of the price of blood. It is there that the man who is robbed gives information of the robbery, and that the creditor, if he cannot get payment, proclaims the infamy of the debtor. It is there, too, that ordeals are administered and criminals executed. Under the trees in its vicinity the drinkers of palm-wine, the politician, and the news-monger hold rendezvous.⁵

LITERATURE.—The authorities are cited in the course of the article; but special reference must be made to three works, to which the writer of the article owes a special debt: R. Lasch, 'Das Marktwesen auf den primitiven Kulturstufen,' *Zeitschrift für Sozialwissenschaft*, ix. [1906] 619 ff., 700 ff., 764 ff.; P. MARRIAGE (Introductory and Primitive).—Marriage has two main functions: it is the means adopted by human society for regulating the relations between the sexes; and it furnishes the mechanism by means of which the relation of a child to the community is determined. Owing to the preponderant importance which has been attached to the former function, the more strictly social functions of marriage have been largely overshadowed by its moral aspect, and it has not been sufficiently recognized that the function of marriage as the regulator of social relations may be of the most definite kind where the institution is of a very lax and indefinite order when regarded from the moral standpoint of civilized man.

The institution of marriage may be regarded as

the central feature of all forms of human society with which we are acquainted. It stands in an especially close relation to the family—using this term for the group consisting of parents and children. This social group rests absolutely on the institution of marriage. Where marriage is monogamous, the group formed by the family will consist of the consorts and their children; where marriage is polygynous, it will consist of a man, his wives, and their children; while in polyandry, the family will consist of a woman, her husbands, and her children by those husbands or assigned to those husbands by social convention.

The institution of marriage also underlies the extended family, this term meaning the social group consisting of all persons related to one another either by consanguinity or by those social conventions which so often take its place (see art. KIN, KINSHIP). It is the marriages of the members of the extended family that immediately determine the limits and functions of this mode of social grouping.

The relation of the clan and other similar social groups to marriage is less simple. While marriage is the foundation of the family, it is possible that the clan-organization has grown out of a state of society in which individual marriage did not exist; but, whether this has been so or not, the clan-organization as it now exists is intimately related to marriage, this institution being the means by which descent, inheritance of property, succession to rank, and other social differentiations are regulated.

1. Regulation of marriage.—In all forms of

human society there are definite rules regulating whom the members of the community may and may not marry. These rules are of many different kinds, but they all fall under one or other of two main forms: regulation by kinship or genealogical relationship; and regulation by some form of social mechanism, consisting of clans or similar social groups. The rules may also be distinguished according as they prohibit or enjoin certain unions.

Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the 'table of prohibited kindred and affinities.' Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kinship, the two modes of regulation co-existing, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with rules of prohibition, there are often definite rules which enjoin marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as exogamy, endogamy, and hypergamy.

2. Exogamy and endogamy.—Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed to one another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is a custom in which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term 'exogamy' is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term 'clan' is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which must marry outside their own group. If they must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being endogamous, while the clan within the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the *gotra* (*q.v.*) or other corresponding sub-group the exogamous unit (see art. CASTE). The social system of the Todas is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who are isolated from their neighbours, either by physical or, still more frequently, by social conditions, such as constant warfare, who habitually marry within their own community, but their case differs fundamentally from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages meet with no opposition. Even in Europe there are cases in which marriage within the village or other social group is so habitual and departure

from this custom meets with such social reprobation that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the people of the village follow one occupation, and this association of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, which occurs in Africa in the case of the smiths, who often form a social group kept separate, by having to marry within their own body, from the rest of the community to which they belong. It is noteworthy also that there is a definite tendency towards the association of endogamy and occupation in the cases of priesthood and royalty, and in some cases marriage within these classes is so strictly enjoined that it amounts to a form of endogamy.

The practice of exogamy occurs in many forms according to the nature of the social system of which it forms part. If the community is totemic, the exogamous social group will be the totemic clan. If the community is organized on a social or territorial base, the exogamous unit will be the village, the hamlet, or the quarter of a town. If the grouping rests on a belief in common descent, the exogamous group may take its name from the ancestor, this mode of organization differing from regulation by kinship in that the common ancestor is remote, and in some cases mythical or fictitious. In one frequent form of exogamy the whole community consists of two moieties, the men of one moiety marrying women of the other. The rule that two people with the same family name may not marry, which is found in China, may be regarded as another variety of exogamy. In Australia this mode of organization is modified so as to produce a complicated system consisting of social groups known as matrimonial classes.

3. Australian matrimonial classes.—These form a special variety of exogamous system in which a person has not only to marry outside his own class, but has to marry into another specified group. In one form, known as the four-class system, each moiety is composed of two sections, the marriages of members of one section of one moiety being limited to one section of the other. This system is associated with a peculiar mode of descent in which a child does not belong to the class of either father or mother, but to the other section of the moiety of one or other. In another form, known as the eight-class system, each of the four classes is composed of two sections, in which descent follows the same kind of rules as in the four-class system, but of a more complicated kind. This form of social organization has until recently been supposed to be unique, but A. R. Brown has shown¹ that it is nothing more than a systematization of the regulation of marriage by kinship which is generally associated with exogamous systems. In Melanesia there are probably similar groupings, though of a less definite kind than in Australia.

4. Hypergamy.—This name has been given to a peculiar form of the regulation of marriage, only known to occur in India, in which a woman must marry a man of a caste or sub-caste higher than her own. Where this custom is found, men and women of the same caste or sub-caste are sometimes also allowed to marry, but there is the strictest prohibition of the marriage of a woman with a man of a caste lower than her own.

5. Regulation of marriage by kinship.—Among peoples whose social system is based specially on the family and the nature of whose system of relationship shows that this mode of social organization has been of long duration, marriage is

¹ *JRAT* xliii. [1913] 143 ff.

regulated exclusively by genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while other marriages may not be strictly prohibited, though looked upon with more or less disfavour by the community, the chief example of this difference of attitude occurring in the case of first cousins. We do not know, however, of any such people among whom marriages with certain relatives are obligatory, or even so habitual as to stamp their presence on the nomenclature of relationship.

The regulation of marriage solely by relationship is not limited to peoples whose system of relationship is based on the family, but occurs also among many people who follow the classificatory system of relationship. It is found in many parts of Africa and America; it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among all these peoples, however, the results of this type of regulation differ widely from those already considered in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among such peoples we have not to do with the prohibition of marriage merely between brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rule forbids marriage with a person with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibition to certain classes of genealogical relationship, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different sexes. Thus, among many peoples the marriage of the children of two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, these relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system shows them to have once possessed. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are prohibited outside the circle of the exogamous group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related. Many gradations occur between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-mechanism, but we know no people who have been carefully investigated and have been found to be wholly devoid of the mode of regulation by kinship.

6. *Marriage with relatives.*—Among many peoples, and especially among those who use the classificatory system of relationship, the regulation of marriage by kinship is not confined to prohibitions, but there are often definite regulations which make marriage with certain relatives the orthodox unions, and even in those cases in which such marriages occur but are not especially frequent the influence which they have had upon the nomenclature of relationship shows that they must once have been habitual. The influence upon

systems of relationship is so definite that it is possible to infer from their nature the existence of forms of marriage in the past which are no longer in vogue, thus affording evidence which makes it possible to trace the past history of marriage.

(a) *Parent and child.*—We know of no people who allow marriage between mother and son. In many places, especially in Africa, a man may marry one of his father's wives, but in these cases his own mother is definitely excluded. Marriage between father and daughter is said to occur occasionally, though it is probable that in such cases the marriage is not that of a man with his own daughter, but with one whom he calls daughter in the classificatory sense. The marriage of a man with his brother's daughter would be a union of this kind, and such marriages certainly take place in some parts of Melanesia and in Australia.

(b) *Brother and sister.*—The case in which we have the most definite evidence for this form of marriage is that of royal families. Examples of the marriage of brother and sister are known from history in the royal families of Egypt and Persia, and occurred also among the Incas of Peru. In recent times the marriage of brother and sister is, or has been, the custom in Siam, Burma, Ceylon, Uganda, and the Hawaiian Islands. In the last case the highest kind of chief was one whose father and mother were own brother and sister, who were themselves the offspring of a similar union. In this case certainly, and probably in the others, this form of marriage is definitely forbidden to those of other than royal or chiefly rank, and the practice is due to the belief in the virtue of royal blood and the desire to keep this blood as pure as possible.

Marriage between brother and sister has occasionally been recorded as the general custom of a people. There are well-established cases where marriage is allowed between half-brother and half-sister, usually where they are the children of one father by different mothers, more rarely by one mother and different fathers. No other cases are well authenticated, and some records of the marriage of brother and sister, such as the case of the Veddas, are now known to be mistaken. In general, not only is this form of marriage prohibited, but its prohibition forms the central and most definite feature of the moral code; and this applies to the marriage not merely of own brother and sister, but of those relatives in the widest classificatory sense.

It has been supposed by Morgan and others that the marriage of brother and sister was once general among mankind, and that it formed a stage in the history of the institution of marriage, but this opinion is chiefly based on misinterpretation of the evidence. Thus, avoidance between brother and sister (see KIN, KINSHIP, III. 2) has been held to show the former presence of sexual relations between these relatives. This is probably correct; but in Melanesia, from which region some of our best examples of this form of avoidance come, the custom is almost certainly a relatively recent practice due to external influence.¹ In all cases where marriage or sexual relations are allowed between brother and sister, they are probably of late occurrence, due either to relaxation of morality, or to the working of special ideas, such as that of the virtue inherent in royal blood.

(c) *Cousins.*—It is necessary to distinguish here between the marriage of cousins in general and the marriage of those cousins, usually known as cross-cousins, who are descended from persons of different sex. The marriage of cousins in general is sometimes allowed and sometimes prohibited, this prohibition being a necessary consequence of the

¹ Rivers, *History of Melanesian Society*, Cambridge, 1914, II. 158.

classing of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Muhammadans, usually with the daughter of the father's brother, and here, as in other cases in which this form of marriage occurs sporadically, the motive is the desire to keep property within the family.

The most frequent form of marriage of cousins is that which takes place between cross-cousins, namely, cousins who are the children of brother and sister. In many places this marriage is not merely allowed, but is the orthodox union, and is so habitual that it determines the form of the system of relationship and gives a special character to the whole social system. All the peoples who are known to practise this form of marriage use the classificatory system of relationship; but usually the marriage is not between cross-cousins in the wide classificatory sense, but between the children of own brother and sister. In some communities these relatives are regarded as husband and wife without the need of any ceremony or other social arrangement, and still more frequently they apply to one another the terms used between husband and wife, even when they are not actually married to one another.

In the most frequent form of this union a man marries the daughter either of his mother's brother or of his father's sister, but occasionally his choice is limited to one or other of these relatives, the case which occurs the more frequently being that he may marry the daughter of his mother's brother but not of his father's sister. This form of marriage occurs among a few peoples of Australia, in several parts of Melanesia, including Fiji, and in India, especially in the south of the peninsula, though it was probably once more widely distributed.¹ It is also found among the Haida and a few other peoples of N. America, but has not yet been recorded from S. America. In Africa it has recently been found by Mrs. R. F. A. Hoernle among the Hottentots.

This type of marriage has usually been regarded as a secondary consequence of the dual organization of society, and has probably arisen in most, if not in all, cases out of this form of social organization. In Melanesia it has probably had as its immediate antecedent marriage with the father's sister or with the wife of the mother's brother, but elsewhere it seems to be actuated by the desire to keep property within the family.² In some parts of Australia the form taken by the matrimonial classes involves the marriage of second cousins, but we do not know how far such marriages occur between true second cousins or between more distant relatives. In some parts of the New Hebrides it is the custom to marry certain relatives whom we should class as first cousins once removed. Thus, a man may marry the daughter of his father's sister's son or daughter, the daughter of his mother's brother's daughter, or the daughter of his mother's mother's brother. One of these forms of marriage is especially frequent, viz. that with the daughter's daughter of the father's sister.

(d) *Uncle and niece*.—In general, marriage between these relatives is prohibited, but occasionally a man is allowed to marry his brother's daughter, and this marriage would seem to have sometimes been so habitual as to have influenced the system of relationship. This marriage occurs in northern Australia and in some parts of Melanesia. It has also been recorded elsewhere, and is allowed in some parts of Europe. Several peoples of S.

India permit a man to marry his sister's daughter. In some cases it is only the daughter of an elder sister who may be married.

Another marriage which may be included under this heading is one occurring in Melanesia, in which a man marries the wife of his sister's son, or in which he and his sister's son have their wives in common.

(e) *Aunt and nephew*.—Marriage with the father's sister occurs sporadically in certain parts of Melanesia, and is a regular practice among some of the Déné peoples of N. America, and marriage with the mother's sister is said to occur among the Ossetes of the Caucasus. Marriage with the wife or widow of the mother's brother is still practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have once been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) *Grandparent and grandchild*.—In Pentecost Island in the New Hebrides it is, or has been, the custom to marry the daughter's daughter of the brother; and this marriage with one who, through the classificatory system, has the status of a granddaughter has imprinted itself so deeply on the nomenclature of relationship that it must once have been the habitual custom of the people. This form of marriage has also been recorded among the Dieri of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambrim, adjacent to Pentecost Island. In this island a man marries the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. The occurrence of this form of marriage was first inferred from the nature of the terminology of relationship in Fiji and in Bougainville Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with some wife of the father's father, but with the actual grandmother.

We do not at present know of marriage between grandparents and grandchildren outside of Australasia, but there are features of some African systems of relationship which suggest its occurrence at present or in the past.

7. *Polygamy*.—The forms of marriage so far described are characterized by the social status of the partners to the union. The varieties now to be considered arise out of the number of the persons who enter into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. *Polygyny*.—Though this form of marriage exists, or has existed, in every part of the world, it is very rarely, if ever, practised by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife are in vogue, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddystone Island in the Solomons, where a second wife is allowed to men who have taken ten heads in warfare.

¹ J.R.A.S., 1907, p. 611.

² C. Hill-Tout, *British North America*, London, 1907, p. 145; F. J. Richards, *Man*, xiv. [1914] p. 194.

Polygynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one household, or each may have her own establishment. Sometimes one wife is superior to the rest, and her children differ from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage (see below, § 11). Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the practice is so frequent and has so impressed itself upon the social organization that it has influenced the nomenclature of relationship, and special terms are used to distinguish from one another the children by the different wives of a polygynous marriage. Other regions where polygyny is well established are Australia and parts of Melanesia, where the polygyny forms part of an organized system of monopoly of the young women by the old men of the community.

It is sometimes the custom in polygyny that the wives shall be sisters, a man who marries a woman having the right to take her sisters also as they reach marriageable age.

9. **Polyandry.**—This custom is far less frequent than polygyny. At the present time its chief home is in India and its neighbourhood, and it also occurs in a definite form in the Marquesas Islands and among the Bahima and Baziba, Bantu peoples of Africa. In ancient times it has been recorded among the Arabs, Britons, Picts, and Guanches, but our information about these and many of the recently-recorded cases is not sufficient to show whether the condition was one of true polyandry or a variety of sexual communism. Even in India there is a distinct tendency for polyandry to be associated with polygyny, thus producing one form of communal marriage. Two varieties of polyandry are generally recognized, in one of which husbands are brothers, while in the other they are not necessarily related to one another. Following McLennan, these two forms are often called Tibetan and Nair (Nayar) respectively, but are better distinguished as fraternal and non-fraternal.

Both among the Todas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the eldest son of a family marries, and, as his brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayars, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as *cisibet* rather than husbands—a point difficult to decide, since the purely matrilineal institutions of the people make the fact of fatherhood of little social importance.

A variety of polyandry which may be distinguished is one which occurs among several peoples of India, in which a young boy marries a wife who consorts with the boy's father or maternal uncle or some other man. The wife's offspring are counted as the children of the boy-husband, and, when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said

to be that the boy shall have a son to take him out of *Put* (hell). A similar practice has been recorded elsewhere, as among the Ostiaks and Ossetes. In Melanesia a man and his sister's son might share a wife or wives in common, but this was almost certainly part of a system of communal marriage, and it is probable that this is also the true nature of some or all of the other cases of this variety of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the status of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to the different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among this people there is no need for any special ascription of the children to the different husbands when these are brothers, owing to their common habitation and their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by means of a ceremony at the seventh month of pregnancy, the man who performs this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and possibly elsewhere, polyandry is associated with female infanticide, and it has been supposed that the polyandry is a result of the scarcity of women so produced. It has also been supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. **Communal or group-marriage.**—The question whether this form of marriage exists has been the subject of a lively controversy between different schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts that cases occur which conform to the definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polygyny with polyandry. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term 'marriage.' If this word be employed for relations between the sexes, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are met by our very imperfect knowledge of the exact nature of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and *cisibet*.

The recorded case which seems most to deserve the name of group-marriage is that of the Ngarrabana (Urabunna) of Central Australia. It is stated that, among this people, no man has exclusive rights over any woman, and that we have

not to do with a confusion between wife and concubine appears from comparison with an adjoining people, the Dieri. The Dieri have a definite term for individual marriage, viz. *tippa-malku*; this exists side by side with the *pirrauru* relationship, which is certainly one in which a group of men and a group of women have the right to sexual relations with one another. The Ngarabana have consorts called *piraungaru*, who evidently correspond with the *pirrauru* of the Dieri, and the relations between the Ngarabana men and women who call one another *nupa* would, therefore, seem to correspond with the *tippa-malku* union of the Dieri, except that they are group-relationships, while the *tippa-malku* union occurs between individuals. The *tippa-malku* marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the *tippa-malku* union is regarded as true marriage, it is difficult to withhold this name from the union between *nupa* which seems to correspond with it among the Ngarabana. In order to reach a positive decision on the matter, however, we should like to be more fully informed about the exact social relations which exist between children and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between the group of men formed by the husband's brothers and the group of women formed by the wife's sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may be of considerable size. This case is, now at any rate, confined to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with individual marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Seligmann¹ among the Massim of New Guinea, in which all the members of a brotherhood who called one another *eriam* have marital rights over the wives of the *eriam*.

11. Concubinage and cicisbeism.—Reference has already been made to the difficulty of distinguishing these conditions from marriage. The most convenient use of the word 'concubine' would be to denote a woman with whom sexual relations are permitted, although the union does not involve fatherhood if there should be offspring. Similarly, the term *cicisbeo* would be most conveniently used of the male partner in a similar union. If the terms were used in this sense, the *pirrauru* and *piraungaru* of the Dieri and Ngarabana would be concubines or *cicisbei*. The distinction would be especially applicable in such a case as that of the Todas, whose *mokthodvaiol* would be distinguished as *cicisbei* from the husbands proper, there being the important difference between the two that the *mokthodvaiol* partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The *mokthodvaiol* also never obtains the status of father to his partner's children except in those rare cases in which, being of the same endogamous group as an expectant mother whose husband is dead or missing, he is called upon to perform the ceremony which determines fatherhood.

The difficulty in using the term 'concubine' in the sense thus proposed is that in some of the cases,

¹ *Melanesians of British New Guinea*, Cambridge, 1910, p. 473.

such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of fatherhood, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE [Introductory]).

12. Marriage and sexual relations.—In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized social system. People among whom marriage is a social institution of the most definite kind may vary greatly in their attitude towards the sexual relations of married persons. All gradations can be found between peoples who regard any sexual relations other than those between husband and wife as a heinous offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the clue to the nature of these restrictions resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have transgressed, will nevertheless freely allow others access to their wives if their consent is asked, or will offer no objection if relations with other men form part of the *saturnalia* or other occasions when relaxation of the ordinary moral rules is allowed.

The chief modes of departure from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of a wife in return for money or other kind of compensation is more rare, and is often only a feature of the relaxation of morality which follows contact with external influence.

13. Sexual relations before marriage.—Peoples differ greatly in their attitude towards sexual relations before marriage. In general, pre-nuptial freedom is allowed to men, but great divergencies are found in the views held about female chastity before marriage. Among many people the pre-marital chastity of the wife is so highly valued that it may lead to such a practice as infibulation (cf. *ERE* iii. 668*, 669*), and the testing of chastity may form an important part of the marriage ceremony, the failure of this test leading to annulment of the marriage or depriving the relatives of the woman of the bride-price or other benefits which they would otherwise obtain from the marriage.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded as a regular preliminary to marriage, and those who have been successful in this career may be especially sought as brides. In other cases sexual relations before marriage may take place more or less freely, though they are not openly condoned. Among many peoples such sexual relations are allowed so long as they do not result in offspring, and often, as in many parts of Europe, the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

In addition to the forms of marriage dependent upon the social status of husband and wife and the numbers of partners who enter into union, other varieties can be distinguished according to the place of residence of the married persons, and the age at which the union takes place.

14. Patrilocal and matrilocal marriage.—These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children

will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian sociology, by means of the Sinhalese words *deega* and *deena*, but the above terms, first proposed by N. W. Thomas, are now coming into general use. Intermediate cases between the patrilocal and matrilocal forms occur in which the man goes to live at his wife's home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of months or years, to serve the parents of the woman he hopes to obtain as a wife (cf. § 19).

Sometimes, as in the island of Tikopia, the visit to the wife's home is of so short a duration that it is probably only a survival in ceremony of a former condition of matrilocal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sūdān, in which the wife returns to the home of her parents in order to give birth to her children.

15. Infant marriage.—It is necessary to distinguish between infant marriage and infant betrothal, though the line between the two is often indefinite. Children are often promised as husbands or wives when very young or even before they are born, but it is only when ceremonies are performed or transactions carried through which are of the same nature as those accompanying the marriage of adults that we ought to speak of infant marriage.

Even in this limited sense, infant marriage is a very widely distributed practice. It is especially prominent in India, where its combination with the prohibition of re-marriage of widows makes it a very important feature of social life. Infant marriage occurs as an established practice in Australia and Melanesia, but here, as in other parts of the world, the process is often one of betrothal rather than of marriage. Sometimes a girl married in infancy goes at once to live with her husband's people; in other cases she continues to live with her own parents until she is of age for the marriage to be consummated.

Infant marriage has probably had two chief causes. It is a means of promoting the chastity of the young, adopted by peoples who attach importance to chastity before marriage, and this is especially the case when the girl goes to live with her husband's parents, who are thus able to watch over their son's wife. It may also be the result of any social condition which makes it difficult to obtain a wife, such as scarcity of women due to infanticide or natural causes, or monopoly of women by one section of the community. A lowering of the age of marriage for these reasons only accentuates the difficulty in obtaining a wife, and the lowering of age thus tends to be progressive, producing, in course of time, the marriages in extreme infancy which are found among some peoples (cf. art. CHILD MARRIAGE [in India]).

16. Arrangement of marriage.—In the very rare cases in which the choice of a consort is absolutely free the arrangement of marriage is a simple matter, and the same is true of the condition which seems to occupy the other end of the scale, in which the marriage of a person is pre-determined by the social rules of the community, as in those cases in which a man has to marry a certain relative. Even, however, in cases in which the choice is largely free, it is often the custom to make use of an intermediary, or the transactions connected with the marriage are arranged by the relatives or friends of the partners in the proposed union.

An important difference in the nature of the process of courtship turns upon whether the initiative comes from man or woman. Among many

peoples proposals of marriage should come from the women.

The part played by other persons in the arrangement of marriage largely turns upon the extent to which relatives and friends take part in the pecuniary transactions which so often accompany marriage; but in many communities the consent of certain relatives is necessary, quite apart from this. Among those peoples whose social system is based on the family it is the consent of the parents that is chiefly needed. Among other peoples the place of the parents in this respect may be taken by some other relative, such as the mother's brother or the father's sister. In some parts of Melanesia the consent of the father's sister is essential. She usually chooses a wife for her nephew, and has the power of vetoing his marriage if he should choose for himself.

17. Marriage by purchase.—In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payments are made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatives of the bride, these being usually known as a dowry. In other cases again there are complicated transactions in which payments pass between the two parties, but often these are chiefly of a ceremonial nature, either existing alone or, more frequently, accompanying the transference of the bride-price or dowry.

Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large the common ownership of property distributes the payments over a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion for them.

Among peoples who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

The most frequent mode of marriage by purchase takes the form of the bride-price; but in India, and in some parts of Europe, the dowry or payment to the husband is the more usual custom.

18. Marriage by exchange.—The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practise it is that it does away with the necessity of paying for a wife; but there is some reason to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. Marriage by service.—This kind of marriage, which has become well known through its occurrence in the OT, is probably not very common, and, as already mentioned (§ 14), passes insensibly into the matrilocal form of marriage.

20. Marriage by elopement.—Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of

restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has become the custom to connive at their infraction by taking a lenient view of elopement. In Australia and some parts of Melanesia where elopement is frequent it may be the secondary consequence of the monopoly of women by the old men. In other cases it may be a means of escape from the obstacles to marriage due to the bride-price.

21. Marriage by capture.—This form of marriage has aroused great interest in consequence of the idea of McLennan that, at one period of the history of human society, it was the normal mode of obtaining a wife. The capture of wives is known to occur, and the marriage ceremonial of many parts of the world includes either a definite conflict for the possession of the bride or features which may be interpreted as survivals of this process. It is very doubtful, however, whether any people habitually obtain wives from without their tribe, though the Khonds of India are said to do so, and it is probable that the conflicts of wedding ceremonial are derived from other social processes, such as the custom of marrying relatives, which gave certain persons a vested interest in the women of their own community. The vogue of the cross-cousin marriage in southern India makes it probable that a conflict which takes place between the husband and his wife's cousin in some parts of Malabar is a survival of that form of marriage in which the cousin had a proscriptive right to the bride.

It is probable that many of the other customs which have been regarded as survivals of the capture of women from hostile tribes are rather the results of a social condition in which it was the custom that women should become the wives of certain members of their own community.

22. Trial marriage.—Unions to which this term has been applied have been recorded among many peoples, but many, if not most, of these cases should be regarded as trials before marriage rather than as examples of marriage in the sense in which the term is used in this article. Temporary unions are especially frequent where marriage is contracted with little or no ceremonial, and these cases shade off insensibly into trials before marriage on the one hand and into ease and frequency of divorce on the other. A union should be called a trial marriage only if there is a definite contract or ceremony entered upon with the condition that the union shall be annulled if it is unfruitful or if the parties to it wish to separate after a certain period.

23. Social functions of relatives by marriage.—Marriage brings the partners to it into definite social relations with large groups of persons in whom they had previously no special interest. Among some peoples, and especially among those who use the classificatory system of relationship, these social functions may take very definite and well-established forms. Prominent among those is the custom of avoidance (see KIN, KINSHIP, III. 9) between a married person and his or her parents-in-law. The restrictions on conduct are usually most pronounced in the case of a man and his wife's mother, and the avoidance in this case may be so strict that the two are not allowed to see one another or to be in the same house or even in the same village. A more frequent form of avoidance is that a man may not speak to his mother-in-law or may not speak to her familiarly, and still more frequent is the custom that he may not use her personal name, but must address her by the appropriate term of relationship. A similar

mode of conduct often accompanies the relationship of a man to his wife's father, but usually the avoidance is less strict, and the avoidance between a woman and her husband's parents is also, in general, less rigid than that between her husband and her parents. In some places certainly, and probably everywhere, these customs of avoidance are definitely associated with the idea of the likelihood of sexual relations between those who avoid one another, but the occurrence of similar customs of avoidance between persons of the same sex shows that this is not the only explanation.

Similar customs of avoidance also occur between brothers- and sisters-in-law, using these terms in the classificatory sense; but they are usually less strict, and often limited to prohibition of the use of the personal name or of familiar conversation. Often these customs are combined with certain duties on the part of these relatives towards one another—duties which may be summed up as those of mutual helpfulness. This is especially the case with the relationship of brother-in-law. Sometimes the duty of helping one another goes so far that a man may use any of the property of his brother-in-law. Sometimes the men must defend one another in case of danger, while the presence of the relatives on different sides may put an end to a fight. Still another duty sometimes assigned to these relatives is that one must dig the grave or take the leading part in the funeral ceremonies of the other.

This combination of customs of avoidance with the obligation of mutual helpfulness may possibly be explained as having grown out of the relations which arise when marriages habitually take place between hostile peoples, or they may be the result of the marriages which form part of the process of fusion of two peoples.

24. Marriage ceremonial.—The rites accompanying marriage vary greatly in duration and complexity among different peoples. Sometimes they are so fragmentary that they can hardly be said to exist, while in other cases the ceremonial may consist of rites of the most diverse and elaborate kinds, prolonged over weeks or months. In the lower forms of culture the ceremonial of marriage is, in general, scanty, especially where it is the custom to marry relatives. Its greatest complexity, on the other hand, is reached in India, south-eastern Asia, and the Malay Archipelago, the elaboration in the last region being almost certainly the result of Hindu influence. It is possible to distinguish certain main varieties of ceremonial. Putting on one side feasting and adornment as the expression of æsthetic motives natural to any important event in social life, we find a number of ceremonies which are connected with the economic side of marriage. Such is the transmission of objects from the friends of one partner to those of the other which form the bride-price or dowry. In some parts of the world, as in Melanesia, the transactions of this kind are numerous and complicated and form nearly the whole of the ceremonial. Sometimes, however, these transactions have aspects which suggest a religious character, especially in the customs of exchange which are so prominent in the ceremonies of Polynesia, Melanesia, and some N. American peoples.

Another group of ceremonies which may have a motive chiefly economic is the conflicts and other features which are probably indications of interference with vested interests affected by the marriage.

A large group of ceremonies consists of acts symbolic of features of marriage. Such are the joining of hands and the tying together of garments. Allied to these are the acts which seem

to show the superior status of one or other partner to the union. Thus the superiority of the bridegroom may be symbolized by presenting him with a whip or by his boxing the bride's ears, and possibly tying the *tali* in India and the use of the wedding ring of our own ceremony may have had a similar meaning. Elsewhere, as in Morocco, the bride may perform various acts, such as riding a pack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rite in which bride and bridegroom eat together or march round a fire. Other rites, such as that of pouring rice or wheat on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that rites of this kind at marriage form part of a general custom of performing ceremonies at any transition from one period of life to another—the 'rites de passage' of A. van Gennep.¹ Another motive may be the idea of the danger accompanying sexual intercourse to which so great an effect has been ascribed by Crawley.²

Among features dependent on ideas of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage is allowed, and the frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. The many rites of purification, the assumption of new garments, and such disguises as dressing in the clothes of the opposite sex may also be of this order. It is probable that some rites of marriage are designed to impart to others the spiritual sanctity which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head.

Among most people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to actuate the ritual, its performance tends to pass more and more into the hands of a class of persons especially set aside for the performance of this and other religious functions.

25. Marriage to inanimate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this kind of marriage is the entrance of a dancing-girl upon her career, the motive being apparently that, though the future occupation of the girl will render a husband superfluous, she shall, nevertheless, be married.

Another motive for this form of marriage is the belief in the unlookiness of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an inanimate object in order that his succeeding union with a woman shall be his third marriage. It is probable, also, that marriage to a tree may, in some cases, especially where this forms a part of the ordinary marriage ceremonial, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an

ancestor represented by, or whose representative is present in, the tree.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of dead bachelors seems to have been a feature of ancient Aryan culture (*ERE* ii. 22). The Aryan practice seems to have been connected with the custom of killing the wife on the death of her husband, and to have had as its motive the desire to provide the man with a wife in the life after death. We do not know the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which their marriage is allowed, but is not subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, wives are killed as part of the funeral ceremonies of their husbands, and there is reason to suppose that there is a connexion between this practice and the total prohibition of re-marriage, particularly as the latter practice is often found in the neighbourhood of places where the killing of wives on the death of the husband is or has been practised. Two places where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported in the latter locality by the fact that widows undergo a period of seclusion after death, with features suggesting that the seclusion is intended to represent a ceremonial death. It would seem that the prohibition of re-marriage is adopted when the more extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband; but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is limited to the case in which the dead husband has no children, the motive of the marriage being to raise up seed for the dead brother. The term is now used for any case in which a man marries his deceased brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no right over his younger brother's wife. It is not easy to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the levirate is a survival of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected with some social functions of the relationship between elder and younger brother of which at present we have no knowledge.

Though the OT motive does not wholly account for the custom of the levirate, it shows itself in

¹ *Rites de passage*, Paris, 1909.

² *The Mystic Rose*, London, 1902.

other forms among many peoples. In many parts of Africa a child born to a widow even many years after the death of her husband is held to be the child of that husband, and the Dinkas of the Anglo-Egyptian Sudan have a custom according to which a widow without male offspring who is beyond the age of child-birth will purchase a girl and pay a man to beget children by this girl for her dead husband. Again, where there is a need for male offspring, especially to perform religious rites, a man without sons may call on his brother or some other man to beget children by his wife.

29. **Re-marriage of widowers.**—We know of no people who prohibit the re-marriage of widowers, and the chief point of interest in this subject is the difference of attitude towards marrying with the deceased wife's sister. It has already been mentioned that in polygynous unions it is often the custom to marry sisters, and among people who follow this custom and many others the wife's sister is the natural spouse of a widower. Other peoples prohibit this form of union. Among many of these peoples the wife's sister is regarded as a sister, a conventional relationship often shown in terminology, and the prohibition of marriage is definitely connected with this idea. It is an expression of the general reprobation of marriage between persons who stand in the relationship of brother and sister, even when this relationship has come about through some social convention, and when the use of the term is only metaphorical.

30. **History of marriage.**—Widely different views on this topic are at present current. On the one side are those who regard monogamy as the original state from which the other forms of marriage have developed; on the other are those who believe that monogamy has come into existence by a gradual process of evolution from an original condition of complete promiscuity through an intermediate stage of group-marriage. Lewis Morgan, who has been the chief advocate of an original state of promiscuity, based his opinion on evidence which we now know to be fallacious, and at present not only do we have no knowledge of any promiscuous people, but there is also no valid evidence that a condition of general promiscuity ever existed in the past.

The problem of group-marriage stands on a different footing. Whether the communistic unions of different parts of the world be regarded as marriage or not, there is no question that such unions exist, and there is much reason to believe that they have been more general in the past than they are at the present time. The nature of the classificatory system of relationship is most naturally explained by its origin in communistic conditions. Even if this view be accepted, however, it does not commit us to the position that this condition was once universal among mankind. It is possible that only some of the main varieties of mankind have been communistic. Still less does it follow that sexual communism was the primitive condition of mankind. No people now in existence can be regarded as primitive, or even as a sure representative of primitive conditions. Even if it be accepted that sexual communism was once widely distributed or even universal, it would remain possible, if not probable, that it is not a primitive condition, but only represents a stage in the evolution of human society. If, as there is much reason to believe, mankind originally lived in small groups, perhaps consisting only of parents and children, the original state would have been monogamy, and, if so, the wide prevalence of communistic forms of marriage must be ascribed to some factors which came into action as the social group increased in size. Even if the classificatory system be founded in communistic conditions, it has features, such

as the clear recognition of generations, which are most naturally explained by its growth out of a still earlier condition in which the unions between the sexes were monogamous, or were restricted to such small groups of persons as to approximate to that condition.

W. H. R. RIVERS.

MARRIAGE (Celtic).—1. **Gaul.**—Polygamy does not seem to have been customary in Gaul. In the only passage that we have on the subject (Cæsar, *de Bell. Gall.* vi. 19) the plural *uxores* is certainly due to the plural *viri*. At the time of Gaul's last struggle against the Romans every Gaul bound himself by a sacred oath neither to enter his house again nor to see his children, relatives, or wife (*uxorem*, vii. 66) until he had ridden twice through the enemy's lines. We know that, as in other places, the wife (*uxor*) brought a dowry, but the husband also added an equal amount taken from his own property.

On the death of either husband or wife, the survivor received both portions, along with the revenues accumulated after marriage (vi. 19). Marriage was often employed as a means of securing political alliances; thus Orgetorix gave his daughter to Dumnorix; and the latter had his mother wedded to a noble of the Bituriges, and married his sister and other female relatives into other cities (i. 3, 9, 18). The wife's position, then, was very much superior to that of a slave. Plutarch relates that, before the Gauls had crossed the Alps, the women reconciled the opposing parties after a terrible civil war, and ever afterwards the Celts continued to admit their wives to their council when deliberating on peace and war, and to let the disputes with their allies be ruled by their wives' judgment. An agreement was made, later, between Hannibal and the Celts that, if the Celts had any grievance against the Carthaginians, the Carthaginian generals would judge, and, if the Carthaginians had any complaints against the Celts, the case would be judged by the wives of the Celts (*de Mul. Virt.* 6; cf. Polyænus, vii. 50). The numerous stories handed down to us by the ancients about the women of the Celts—Chiomara (Polyb. xxii. 21), Camma (Plut. *de Mul. Virt.* 20), Eponina (Tac. *Hist.* iv. 67), Gyptis (Athen. xiii. 38; Justin, xliii. 3)—seem to prove that the Celtic wife was not the passive being that the wife has remained among most barbarous peoples. Cæsar, who often gives her the title of *materfamilias*, relates nevertheless that, when a *paterfamilias* of high birth was about to die, his relations assembled, and, if there was any suspicion in connexion with his death, they cross-examined his wife like a slave; if any delinquency was proved, they put her to death by fire and all kinds of torments. But there is really nothing more in this than the exercise of the power

of life and death which the *paterfamilias* had over his wife as well as his children (vi. 19).

2. **Ancient Britain and Ireland.**—Among the ancient Britons the position of woman was quite different. The women were the common possession of ten or twelve husbands, especially of brothers, or of fathers and their sons; but the children born from these unions belonged to the man who had married the woman first (Cæsar, *de Bell. Gall.* v. 14). Women were common property also in Caledonia (Dio Cass. lxxvi. 12; cf. lxii. 6). In Ireland, it is stated, it was quite a natural thing for men to have intercourse with the wives of other men, with their mothers, or their sisters (Strabo, IV. v. 4; cf. Jerome, *in Jovm.* ii. 7), but we find a much more advanced social state among the Irish and Britons described in the ancient epics and the collections of laws and customs.

3. **Mediæval Ireland.**—In Ireland, although the wife might bring all her own personal belongings (*tinol*) with her, it was the husband first of all who provided a dowry (*tinnsra*) for his wife. This dowry consisted of metals (gold, silver, copper, brass), clothing, or cattle; sometimes it consisted in some condition to be fulfilled by the future husband. In fact, marriage was generally a sort of sale, for the laws stipulate that the wife's father has a right to the whole dowry for the first year, to two-thirds the second year, half the third year, and so on, his share decreasing until the twenty-first year, when the debt is cancelled; during all this time the wife has control of what remains of her dowry each year. As a rule, marriages were celebrated by preference on the first days of August, at the time of the Fair of Tailteann, or in the month of November. Polygamy seems to have been practised, perhaps as an exception, a little before the Christian era. In any case, if it was very uncommon to have several wives of the free class, a king often had one or more concubines of a servile class in addition to his lawful wife (*cétmuintir*, 'first wife'). Kinship ties were not always an obstacle to marriage: Lugaid, king of Ireland, married his mother; and a king of Leinster had his two sisters as wives.

The rights of the woman after marriage depended largely on her personal status in the community. In cases of separation for serious offence or by mutual consent, the wife received either the part of her dowry that was left her or what she brought on her marriage-day; in dividing the property, all that she had acquired by work and manufactured articles was taken into account, and the very smallest details were controlled by law.

4. **Mediæval Wales and Brittany.**—The laws of Wales show in their archaic parts a similar social state. The woman brought with her a dowry (*agweddy*) equal to half of what her brother would have (*gwaddol*), and articles for her own use (*argy-freu*); she received from her husband a present proportionate to her position and payable on the morning after the consummation of the marriage (*cowyll*). The conditions of separation depended on how long the union had lasted. If it had continued for a period of seven years all but three days, the belongings were divided equally between the couple; but, if the wife left her husband before this time, and without good reason, she had no right to anything beyond her *cowyll*. Polygamy was forbidden. Postterage seems to have been less wide-spread than in Ireland.

The Britons who emigrated from Great Britain to Armorica in the 6th cent. called the dowry given by the husband to the wife *enepuert*, 'face-price.' It was often property in land. Cf. also artt. CHILDREN (Celtic), ETHICS AND MORALITY (Celtic), POSTERAGE, II. 5-7.

MARRIAGE (Christian).—1. The Christian ideal.—The NT does not profess to set forth any new law or theory of marriage. Our Lord's answer to the Pharisees who questioned Him on the subject of divorce (Mt 19³, Mk 10²) implies that the perfect ideal of marriage is sufficiently declared in the passage in Genesis which professes to record the original institution of the holy estate of matrimony (Gn 2^{18, 24}). The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teachings of the NT, and is for the most part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord's deliverances on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all to the same purport: divorce is in itself sinful and inconsistent with the original divine institution of marriage. In the Epistles we have a number of practical exhortations in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognized, and the duty of wifely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as 'one flesh' is duly emphasized.¹

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognized duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Græco-Roman and the Jewish world in their time monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognize that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage. Extra-matrimonial connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children, it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts could quote as distinctly forbidding polygamy, viz. 1 Co 7² 'Let each man have his own wife, and let each woman have her own husband.'

Yet, although the NT does not profess to put forth any new laws on the subject, it is most true that the religion of the gospel has done inestimable service, not only in restoring and preserving preci-

¹ The passages of the NT dealing directly with marriage are Mt 5:31-32, Mk 10:2-12, Lk 16:18, Mt 22:26-30, Mk 12:19-34, Lk 20:27-34, Ro 7:1-4, 1 Co 6:16-18, 7: passim, Eph 5:22-32, Col 3:18, 1 Ti 2:11-12, 5:14, He 13:4, 1 P 3:1-8.

ous principles which were being forgotten in an age of luxury and grievous moral laxity, but also in changing profoundly men's ideas of the marriage-relation and of its duties and responsibilities. This result is the direct outcome of the teaching of the NT.

(1) The spirit and teaching of the NT tend to put the mutual love of husband and wife in the foremost place. Marriage has been described as a provision for the propagation of the race and the proper bringing up of children. The NT recognizes the importance of the Christian household and the rightful education of Christian children, but does not describe this as the main object of marriage. Again, marriage has been regarded as a provision for the satisfaction of a natural desire and a restraint upon unbridled indulgence. St. Paul acknowledges that marriage serves this purpose, but does not give it any great prominence (1 Co 7^{9c}). According to the book of Genesis, marriage was instituted, in the first instance, to satisfy the need of man's social nature. Because it was 'not good that the man should be alone,' because companionship with his fellows was necessary for the perfect development of his nature, marriage was instituted to provide him with the closest and most intimate form of companionship. Thus the words, 'The twain shall become one flesh,' imply much more than a merely carnal relationship—a thought which is instructively developed by St. Paul in Eph 5^{22ff}.

(2) It is not too much to say that our whole conception of the marriage-relation has been changed, and changed for the better, by the high and honourable position accorded to women in the NT, and the general improvement in the status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. A system in which 'there can be no male and female' (Gal 3²⁸) so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3⁷), must of necessity tend to elevate, and, if it may be so expressed, to equalize, the marriage-relation.

When St. Paul compares the marriage-bond to the union between Christ and the Church, he is, no doubt, making use of a very familiar idea frequently expressed by the OT prophets, and applying it to the Christian community. It is easy to see, however, that the substitution of Christ—our brother—for the awful Jahweh of the OT makes all the difference in the world, the essential difference, in fact, between the old world conception and that of the Christian Church. The ancient Romans had a high ideal of the sanctity of married life—an ideal which, as the very bitterness of the satirists proves, was not wholly lost in the terrible immorality of the times when Christianity made its appearance. Nevertheless, among Jews and Romans alike, as also, to a considerable extent, among the Greeks, the relation of the wife to the husband was, to all intents and purposes, that of a slave to her master. Under the gospel the superiority of the husband is more that of the parent to the child or, rather, of a protecting brother to a sister. It is sometimes asserted that the terms in which the supremacy of the husband and the duties of obedience and reverence on the wife's part are put forth in the NT are too strong to be in harmony with our ideas to-day, and that we have, in fact, passed beyond the point of view of the NT. If so, this very advance is the natural and necessary outcome of the gospel just as truly as the abolition of slavery—another social institution which is nowhere directly condemned in the NT. It may be argued on rational grounds that

the natural characteristics of the sexes must involve a certain superiority and controlling power on the man's side in the nuptial relation; but such questions cannot be decided by the mere appeal to isolated texts of the Bible.

(3) The union of the sexes has been purified, and the happiness of the married relation secured, by the absolute prohibition of every kind of extra-matrimonial connexion. Such connexions were regarded with absolute indifference by the Greeks, and, in consequence, the temporary connexion with the *éralpa*, or courtesan, came to be much more highly valued than the legitimate marriage, to the manifest injury of the home life and the status of the lawful wife. By the Romans, it may be said, such connexions, though not so lightly regarded as among the Greeks, were, on the whole, regarded with contemptuous indifference. Although the case was different, so far as the Jewish law was concerned, we cannot doubt that the Jews would be much influenced by the prevailing tone of thought in the Gentile world and would imbibed something of the very lax principles of morality current in their day. All such connexions are emphatically condemned in the NT, and it is expressly taught that the physical connexion of itself involves the obligation of the marriage-bond (see 1 Co 6¹⁸).

(4) The gospel emphatically condemned divorce as essentially sinful. In ancient Rome divorce was regarded as in some sense dishonourable, and therefore undesirable. For five hundred and twenty years it was boasted that divorce was unknown in Rome (Val. Max. ii. 1), and the very bitterness with which the satirists denounce the laxity of their time in this matter shows that the old idea has not yet been wholly lost. Nevertheless, it is only too evident that, in the time of luxury and advanced civilization in which the gospel was first preached, divorce was coming to be looked upon with the utmost indifference as a commonplace fact in ordinary social life.

The Jews had no doubt as to the lawfulness of divorce (cf. art. 'Divorce,' in *JE* iv. [1903] 624-628), and it is probable that Mt 19⁹ most truly represents the form of their question to our Lord. They desired to have His opinion, not on the question of the lawfulness of divorce, but as to the causes for which divorce might be legitimately instituted. Our Lord's answer declares the essential sinfulness of divorce as inconsistent with the original institution of marriage.

(5) The teaching of St. Paul about marriage as the symbol or analogue of the mystical union of Christ with His Church (Eph 5²²⁻³⁴) has had a profound effect on Christian thought, elevating and purifying the conception of marriage. Marriage for the Christian is something more than the ordinary social institution; it is, above everything else, 'a holy estate.' Man and wife are no longer twain, but one flesh. This, as has already been pointed out, implies more than a merely physical union. How much more? It may be said that it implies a perfect union of love and affection, and entire community of aims and interests, as also of worldly possessions, and a perfect mutual understanding. This positivist explanation may perhaps seem sufficient to the modern mind; but it is easy to see that the comparison with the spiritual union between Christ and the Church might, to Hellenic readers, very naturally suggest something more, something in the nature of a metaphysical basis for the union of aims, affections, and interests. This basis may be conceived as a sort of mystic, or, possibly, psycho-physical bond, uniting the two spirits so as to form a kind of single personality. It is quite conceivable—we may even say that it is probable—that some such idea was in the

mind of the Apostle. The idea may not seem altogether absurd to a modern metaphysician; but, if it should seem inconceivable, we are not bound to defend the infallibility of St. Paul's metaphysics, and may be quite satisfied with the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in matrimony is, essentially, that sacramental view of marriage which was authoritatively defined in the Middle Ages, which is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.¹

2. Marriage rites and ceremonies.—The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as those rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief notice of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at all events, accompanied by religious rites and ceremonies. The solemnization of marriage by a religious ceremony is, therefore, no new thing peculiar to the Christian Church. In fact, there is not a single feature in the marriage-services of the Christian communities that cannot be traced back to the *sponsalia*, or to the nuptial ceremonies, of the Roman Empire. On the other hand, the form of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter upon so important a step as the contract of matrimony without the advice and approval of the whole congregation. This is implied in the words of Ignatius:

πρῶτοι δὲ τοῖς γαμοῦσι καὶ τοῖς γαμουμένοις² μετὰ γνώμης τοῦ ἐπισκόπου τὴν ἐνοσίχθονα ποιῆσαι, ἢ οὐ γάμος ἢ κατὰ κύριον καὶ μὴ κατ' ἐπιθυμίαν (Ep. ad Polycarp. v.).

It is inconceivable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomed marriage-rites should not have been celebrated as a solemn religious function. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 3rd cent. onwards, shows that what we should now describe as civil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly discountenanced by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition of Christian communion, it was felt that the right and proper course was for all Christian

people marrying honourably to seek the benediction of the Church upon their union.¹

From the 5th cent. onwards there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 802 Charlemagne prohibited marriage without benediction (*Capit.* vii. 363) and that so late as A.D. 900 Leo the Philosopher issued a similar edict (*Novel.* 89), that purely civil marriages were very common up to the end of the 8th or 9th cent., is not borne out by anything that we know of those ages.

Nevertheless, marriage without benediction, though thus condemned by the civil law, was, if otherwise unobjectionable, regarded as valid in the Church up to the time of the Council of Trent. That Council (A.D. 1563, sess. xxiv.) decreed that henceforth no marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, clearly expresses the principle that the ceremony is not of the essence of the sacrament, the matter of which remains, as before, the consent of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds good only in those countries in which the decrees of the Council have been published.

In the Eastern Churches the Confession of Peter Mogilas of Kieff (A.D. 1640), in which the priestly benediction, the accustomed formularies, and the invocation of the Holy Spirit are declared to be essentials of marriage, is regarded as authoritative.

The marriage-ceremonies in use all over the Christian world for hundreds of years past contain elements derived from two sources, viz. the *sponsalia*, the ancient ceremony of betrothal, and the *nuptia*, or marriage-ceremony proper. The solemn troth-plight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the *arrhae*, pledge of the dowry—were the principal features of the betrothal ceremony. The veiling of the bride, the crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal procession to her future home were the accustomed nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctively Christian addition to the ancient ceremonies, yet even this may have been simply a special sanctification of the ancient congratulations of the family; it is even possible that in the Christian service there was some attempt to recall the ancient *confarreatio*, which had by Christian times become practically obsolete, but which, with its accompaniment of sacrifice and solemn benedictions, was the only form recognized by Roman law for the celebration of an absolutely indissoluble marriage. The reference to the demand for ten witnesses in St. Ambrose² would naturally suggest the *confarreatio*. Old customs are often preserved in an imperfect fashion even when they have become obsolete (see MARRIAGE [Roman]).

¹ The following passages may be referred to as bearing out the view here presented: Clem. Alex. *Pæd.* iii. li. *Strom.* iv. 20; Tert. *ad Uxor.* ii. 9, *de Pudic.* 4 (this passage is worth quoting in full: 'Ideo penes nos, occultæ quoque coniunctiones, id est non prius apud ecclesiam professæ, iuxta moechiam et fornicationem iudicari periculatissimæ. Nec inde consortia obtentu matrimonii crimen elidunt'); Ambrose, *Ep.* xix. 7, condemning mixed marriages with unbelievers, which the Church censured, but could not wholly prevent in the earlier centuries; Synesius, bishop of Ptolemais, *Ep.* cx.; Basil, *Ep.* xvii., canon 69, etc.

² 'Nam si inter decem testes confectis sponsalibus, nuptiis consummatis, quævis femina viro coniuncta mortali non sine magno periculo perpetrat adulterium' (*de Lapsu virginis consecrata*, v.). This passage may, of course, simply refer to the old Roman custom by way of example.

¹ Whenever the sacramental idea is referred to in this article, it may be taken that the idea herein explained is meant.

² J. B. Lightfoot prefers *γαμουσας*.

There is no express evidence that the veiling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the nuptials proper. In Tertullian's time, however, it was a betrothal ceremony amongst Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day (Tert. *de Virg. velandis*, xi.).

A passage in Tertullian would seem to imply that the giving of a ring, though a harmless heathen custom, was not practised by Christians in his day (*de Idolol.* xvi.). This may have been the case with some of the stricter or more old-fashioned Christians, but the universal custom of the Church from the 4th cent. onwards would seem to show that the giving of the ring had always been generally practised.

The crowning of the bride and bridegroom was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his day. In the Eastern Church it prevails to the present day, and is regarded as the most important part of the marriage-ceremony, marriage in the East being often described as 'the crowning.'

That *sponsalia* and actual nuptials were still regarded as distinct ceremonies, between which an interval of time might elapse, up to the middle of the 9th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 865 [*PL* cxix. 980]), in which he treats of the marriage customs of the Western Church. It is, however, most probable that from much earlier times the two ceremonies had been generally combined in practice. Formal *sponsalia* were not required by Roman law, and were frequently omitted. In such cases it would be natural that the giving of the ring, the troth-plight, and other espousal ceremonies would take place at the actual marriage. The Anglican custom of celebrating the first part of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between espousals and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as a somewhat grudging concession to human weakness, finds no place in the teaching of the NT. Notwithstanding the strict inculcation of the general principle of self-denial, there is nothing to suggest that the celibate or virgin state is in any way higher or holier than the estate of marriage. There is just one passage, in the Apocalypse of John (14th), which, however interpreted, seems to imply a preference for the virgin state; otherwise the NT gives no support to the doctrine. If St. Paul prefers the unmarried state, it is on purely utilitarian grounds, because of the greater freedom from worldly cares enjoyed by the unmarried. If we may accept the Pastoral Epistles as his, or as expressing his mind, the Apostle thought it most desirable that younger widows should contract a second marriage. Yet, inasmuch as what we may call ascetic ideas were widely prevalent, not only among the Essenes (*g.v.*) in Judaism, but in certain circles in the heathen world, it is very likely that such ideas were to some extent prevalent in the Church from the very first. The awful prevalence of vice and immorality, the consequent demand for a resolute fight against those 'fleshly lusts which war against the soul,' and a sense of the strength of sensual desires and impulses would naturally create a feeling of repulsion against all forms of indulgence, even the most innocent, in those newly aroused to a desire for a new and higher life. It is not surprising, therefore, that from the middle of

the 3rd cent. the ascetic view should have taken a firm hold on the Christian Church and should have speedily become the predominant and, in fact, universally accepted view. The rise of monasticism and the admiration aroused by the devotion of the monastics and also, from the middle of the 4th cent., the intensified worldliness of the now fashionable Church would naturally foster the growth of the ascetic ideal. The command, 'Love not the world' (1 Jn 2¹⁵), had to find some new interpretation when the world was no longer a professedly heathen world, but a community of nominal Christians. The doctrine of the earlier Gnostics, Basilidians, Saturninians, Encratites, etc., and of the Manichæans, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extravagant laudations of virginity in the writings of St. Jerome, and even the more moderate utterances of St. Augustine, the disparagement of the married state sometimes approaches very closely to the views of those heretics. Throughout the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disparagement of marriage.

It was not until the Reformation of the 16th cent. that any serious attempt was made to vindicate the claims of healthy home life and happy marriage to a position of equality with the virgin state. In Luther's eyes all monastic vows were essentially sinful (*de Votis monasticis*, 1521), and, in general, the Reformers maintained a similar position. The question of the superiority of virginity became an essential point of controversy between the Roman Catholics and their opponents, and the Council of Trent (sess. 24, can. x.) condemned with anathema the doctrine of the equality of the married state with, or its superiority over, the state of celibacy.¹

The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Montanists, was one result of the ascetic spirit. This we should now regard as a mere harmless eccentricity of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the enforcement of the celibacy of the clergy.

It is significant that it was in the course of the 3rd cent. that the question of the propriety of clerical marriage seems first to have become prominent. Hitherto the clergy, like other Christian men, might be married or not, according to their discretion. Those who held the essential superiority of the celibate life would naturally consider that the clergy, as especially belonging to the class of holy persons, should be unmarried. At all events, in the 3rd cent. it came to be recognized that, as each man should 'abide in that calling wherein he was called' (1 Co 7²⁰), the clergy should not contract marriage after their ordination. Decisions to this effect are found in the canons of some local synods, though the Council of Ancyra (A.D. 314) made an exception in the case of deacons, who, before ordination, should inform the bishop if they intend to marry. From this position it was a natural step to the view that after ordination clerics should cease to maintain conjugal relations with their wives—a view which could scarcely have been put forth except by a council of celibates. The Council of Elvira (Illiberis; A.D. 305) laid down this rule under penalty of deprivation. The ecumenical Council

¹ In some of his Homilies—e.g. *Hebrews*, serm. 4, in *Seraphim*, serm. 1—Chrysostom strongly asserts the equal blessedness of the married state. Jovinian, the opponent of St. Jerome, was a warm advocate of the same view, but the general consensus of Christian opinion was on the other side.

of Nicæa (A.D. 325) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Paphnutius, who pleaded earnestly in favour of the perfect sanctity of married life. From the close of the 4th cent. the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. Pope Siricius (A.D. 385) in his *Epistle to Himerius* (PL xiii. 1132 ff.), described by H. H. Milman¹ as 'the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church,' absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Boniface I., St. Gregory the Great, St. Anselm, and St. Dunstan, despite papal edicts and decrees of councils, the marriage of the clergy continued to exist in every part of Europe. It was regarded in general with indifference, sometimes with approval, by the laity, and was zealously contended for as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1020-85), the 'scandal,' as it was considered, of 'clerical concubinage' maintained its existence here and there, though it was probably never after Hildebrand's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy. By the 6th Council of Constantinople (in Trullo; A.D. 680) the marriage of clerics after ordination was forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted; the wife of a bishop was compelled either to become a deaconess or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not merely permissible but compulsory for the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected congeries of societies claiming as a right and duty to exercise moral supervision and discipline over individual members. Church law and ecclesiastical jurisdiction are, then, no late outgrowth or corruption of primitive Christianity, but trace their origin to the earliest time, and even to the days of the Apostles. It was inevitable that in the Apostolic Age such questions connected with marriage should arise as would be considered suitable for the judgment of the community. In 1 Co 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage-contract for the approval of the bishop has already been quoted.

Nor is it at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage is a holy estate which the Church may claim to regulate in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two juris-

dictions, and that, consequently, difficulties in practice may often result.

¹ *Aliae sunt leges Caesarum, aliae Christi; aliud Papianus aliud Paulus noster praecepit* (Jerome, *Ep.* lxxvii. 3).

But, while in theory it is very simple to say that the Christian must at all events give the 'leges Christi' the first place in his obedience, in practice he may often find himself confronted with the question whether a law or supposed law of the Church must really be received as a divine ordinance. So long as the Church was a small and unimportant body in the heathen world, it did not much matter whether its regulations for the discipline of its members came into conflict with generally received opinions or not, and, as a general rule, in the earlier centuries Christians were content to abide by the rulings of their ecclesiastical authorities, though even then we have reason to believe that Church censures were sometimes defied or evaded when Christians wished to avail themselves of some legal right in opposition to the rule of the community. The case of mixed marriages with Jews or pagans, which often took place despite the ecclesiastical prohibitions, is an example in point.

In the Middle Ages the matter was settled by allowing marriage, for Christians at all events, to become entirely an affair of the Church. Much laxity of observance might prevail, and the lawless men of the mediæval period might often flout the wholesome restraints of the law; the princes of the Frankish, Teutonic, and other new nations might decline to abandon their ancient right to have a plurality of wives; but, none the less, it was fully recognized that the Church's jurisdiction in such matters ought to be respected as supreme. It is in the modern period, since the Reformation, that the question of the two jurisdictions and the proper relations of the one to the other has come into prominence and has given occasion to many practical difficulties arising from the conflict of two different ideals. The Reformers vindicated the claims of the State and of the civil magistrate as against the extravagant claims of the mediæval Church, holding that the laws of the Christian State must be regarded as Christian laws and must be obeyed, and that no law-abiding citizen should be subjected to Church censure or other social inconvenience for neglecting some ecclesiastical ordinance, so long as he did nothing illegal or dishonourable. It was, of course, understood that no law contrary to the teaching of the gospel should be obeyed. The Roman Catholic party, on the other hand, while in general admitting the duty of obedience to the law of the State, held that it was the province of the Church to define what should or should not be considered lawful in the matter of marriage. Both parties would agree that the object of all marriage laws should be to safeguard purity and morality, and would probably admit that the Church had no right to impose anything in opposition to the law of the State, unless it were in some sort necessary for that object; but the Reformers would by no means concede to their opponents that it was for the Church to impose any regulations which it pleased, whether in conformity with the laws of the State or not. The two questions which in modern times have given occasion to most difficulty have been the question of divorce and the question of the conditions of valid matrimony.

(a) *Divorce*.—Divorce, in the strict and proper acceptance of the term, means the complete rupture of the marriage-bond, the persons divorced being left free to marry again. Canonists and theologians, however, frequently apply the term to what is more properly called 'separation' or, when sanctioned by legal process, 'judicial separa-

¹ *Hist. of Latin Christianity*, London, 1872, i. 97; see also A. P. Stanley, *Lectures on the Hist. of the Eastern Church*, do. 1881, lectt. i. and v.; H. C. Romanoff, *Rites and Customs of the Greco-Russian Church*, do. 1868; Photius, *Nomocanon*, xxiix, 1615.

tion,' in which the *vinculum* is not supposed to be broken and re-marriage is, therefore, not permissible. The latter is described as *divortium a mensa et thoro*, in contradistinction to the more complete *divortium a vinculo matrimonii*.

It has been universally admitted that adultery and, perhaps, some other grave offences justify the separation of man and wife. Such separation is, indeed, contrary to the high Christian ideal of marriage; but under the new dispensation, as under the old, it is necessary for the hardness of men's hearts in this imperfect world to make provision for occasional failures to attain the perfect ideal. But, while this is the case with regard to separation, there has been considerable difference of opinion on the more difficult question of divorce in the proper sense of the word. The broad general principle is that divorce is something which ought not to be, that it ought not even to be thought of as a possibility by Christian people. But is the broad general principle to be regarded as a law binding universally and unconditionally? If any exceptions are to be allowed, in what cases do they apply? Should man and woman stand on the same footing as regards the right to claim divorce? Should any difference be made between cases where both partners are professing Christians and those in which one is an unbeliever or a heretic? These and similar questions have from century to century occupied the attention of Christian teachers and legislators.

The teaching of our Lord on this subject, as it has come down to us, is found in four passages in the Synoptic Gospels, viz. Mt 5³¹⁻², 19³⁻⁹, Mk 10²⁻¹², and Lk 16¹⁸. In Mark and Luke the prohibition of divorce and re-marriage is absolute and unqualified; in Matthew the qualifications 'saving for the cause of fornication,' 'except for fornication',¹ are added. Roman Catholic divines and those Anglicans who adopt the stricter view maintain that, as each Gospel must be taken in and by itself as authoritative, the passage in Mark must be accepted as the decisive rule for Christians, while the qualified statement in Matthew must be understood as merely giving sanction to separation '*a mensa et thoro*' in case of adultery.

On the other hand, it is contended that the ordinary rules of exegesis require us to interpret the unqualified statements in Mark and Luke by the fuller and more balanced statement in Matthew, so that we must not take each Gospel as an independent entity, but must compare one with another to ascertain what Christ really taught. Moreover, it is contended that, when He spoke about divorce, our Lord must have had in mind the complete severance of the marriage-bond, since that was the only meaning His hearers could possibly attach to the word. It is pointed out that the sayings in Mark and Luke are simply ordinary examples of the method of the great Prophet, who was accustomed to set forth broad principles in an absolute and sometimes an extreme form, leaving it to His people to apply His teachings with all the necessary qualifications in the manner of legislation to their individual cases and needs. That this principle has always been recognized in the interpretation of the Sermon on the Mount without in the least detracting from the supreme value of that great utterance cannot well be denied. Our Lord as teacher was a prophet rather than a legislator. Hence it is maintained that the passage in Matthew may be taken as a fuller expression of the Lord's mind than the briefer passages in the other Gospels, that we have His express sanction for divorce in case of adultery, with consequent permission to marry again in the case of the innocent partner. It is not, of course,

denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance except by abstaining altogether from marriage, such guilty partner must necessarily be refused the Church's benediction in the case of re-marriage. The latter principle has been invariably and universally accepted.

Although it is evident that adultery affects the marriage relation more closely than any other offence, yet it may fairly be said that there are other things which may make married life so intolerable, and the perfect ideal union so impossible, that, if divorce or separation be allowed at all, the grounds for such separation ought not in reason to be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more than a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no restoration of affection, that, where the tie of affection has been absolutely destroyed, the real *vinculum* has been ruptured, and that, therefore, such offences may rightly be put in the same category as conjugal infidelity in the strict sense of the word.¹

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be acknowledged that the recent higher criticism of the Synoptic Gospels has thrown a new light upon the matter and, to a certain extent, strengthened the case of those who condemn divorce absolutely. A large and increasing number of competent critics are of opinion that the qualification, 'except for the cause of fornication,' formed no part of our Lord's teaching (e.g., A. B. Bruce, H. Weiss, H. H. Wendt, P. W. Schmiedel, B. W. Bacon, C. G. Montefiore), and that He forbade divorce simply and absolutely. The four passages are reduced to two. The passage Lk 16¹⁸, probably derived from the source Q, may be regarded as the original and genuine form which has been edited by the first Evangelist in Mt 5³². It is quite evident that Mt 19³⁻⁹ and Mk 10²⁻¹² are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. C. Allen, ICC, 'St. Matthew,'² Edinburgh, 1912, *ad loc.*).²

If the modern critical view is generally accepted, it will, no doubt, be admitted that the case of those who absolutely condemn divorce will be somewhat strengthened, but it is not likely that the existing state of opinion on the whole will be very much affected. The acceptance of the critical view will simply bring into greater prominence the fact that questions of this kind have never really been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, *παρεκτός λόγου πορνείας* and *μη ἐπὶ πορνείᾳ*, may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those

¹ Augustine frequently expressed the idea of the wider interpretation of 'fornication.' 'Si infidelitas fornicatio est, et idololatria infidelitas, et avaritia idololatria, non est dubitandum evantiam fornicationem esse' (*de Serm. Domini*, l. xvi. 46). See also several passages to the same effect in the *de Conjugiis adulterinis*. In the *Retractiones* Augustine expresses doubt as to the legitimacy of this exegesis (i. 19). Passages from Hermas and Origen in which the idea is expressed are also cited (cf. Bingham, *Antiq.* xiii. v. 2).

² W. C. Allen, though holding the critical view, yet protests, in letters to *The Guardian* (lxv. [1910] 920, 935, 1684 f., 1782), against making use of critical results to decide dogmatic questions, and justifies the use of the NT as received by the Church. J. Keble, in his pamphlet, 'An argument for not proceeding immediately to repeal the laws which treat the nuptial bond as indissoluble' (Oxford, 1857), attempted to defend the stricter view on the ground that the passages in Matthew were meant only for the Jews of Christ's own time, and were not to apply to Christians, for whom the absolute prohibitions were intended. This view does not seem to have met with much approval, and is not now advanced.

¹ *παρεκτός λόγου πορνείας* (5³²); *μη ἐπὶ πορνείᾳ* (19⁹).

who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7, where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he has the special case of conjugal infidelity before his mind. The presumption is rather the other way, and it would seem as if he were merely thinking of the case of separation for what we should describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation 'a mensa et thoro' (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other. Even though he were not actually considering the case of separation for conjugal infidelity, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the *Shepherd* of Hermas.

The Jewish husband who divorced his wife was forbidden by the law to take her back; but it is characteristic of the gospel to give prominence to the possibility of repentance; and so Hermas charges the husband who has put away his unfaithful wife to remain unmarried (*δὲ τὴν μετάνοιαν*) so that the sinner might have an opportunity for repentance with consequent restoration (*Mand. iv. 1*).

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union should continue, well and good; if not (v. 13), a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. Ro 7^{2a} for the use of the terms 'freedom' and 'bondage'). This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Innocent III., *Decretales Gregorii*, iv. 19, 'de Divortiiis,' ch. 7).

The canon law of the Roman Catholic Church unqualifiedly forbids divorce 'a vinculo matrimonii,' if both parties at the time of marriage had been baptized Christians. In the Eastern Churches, on the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, designs by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e. after the middle of the 3rd cent.—the Fathers were strong in their denunciations of re-marriage, even in the case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Eastern Church, however, has, from the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was more unfettered.

In the matter in hand this difference is very well illustrated in the 5th cent. by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though he could not approve of it, and of Lactantius, as compared with the Western teachers of the same period. Yet even up to the 12th cent., when the present canon law of the Roman Church was finally formulated, it is evident, from a careful study of the various decrees of synods and councils, that it was not possible in practice to enforce strictly the principle of the absolute indissolubility of marriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the following Councils: Elvira (Iliberris, c. 305), Vannes (465), Agde (506), Orleans (533), Compiègne (756), and Bourges (1031); to these we may add the testimony of the *Penitential* of Theodore of Canterbury, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation from the time of Constantine to Justinian bears witness, indeed, to the growth of Christian influence in the attempts made to limit the grounds for divorce and, in general, to make divorce more difficult. Nevertheless, the law permitting divorce by mutual consent remained in force until the time of Justinian, while the grounds on which it might be obtained were numerous enough. Under the legislation of Theodosius the Second and Valentinian a wife might divorce her husband for (1) treason, (2) adultery, (3) homicide, (4) poisoning, (5) violating sepulchres, (6) forgery, (7) stealing from a church, (8) robbery, (9) cattle-stealing, (10) attempts on her life, (11) introducing immoral women into the house, and (12) common assault. A husband might divorce his wife for any of the above causes, and also for (13) dining with men not relatives without her husband's permission, (14) going from home at night without permission or reasonable cause, and (15) frequenting circus or theatre without permission; to which Justinian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid mediæval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical authorities to supreme jurisdiction, and as inspired by the spirit of asceticism. The Protestant and Reforming divines held that divorce with the permission of re-marriage was justified in the case of adultery and, generally speaking, of cruelty or prolonged desertion. In the 16th and 17th centuries the same view was generally expressed by Anglican teachers, even by those who, like J. Cosin and H. Hammond, are generally considered as belonging to the High school in theology.

The Reformers rejected the sacramental theory of marriage, and held that the words 'the twain shall become one flesh' signified no more than a very comprehensible union based on common interests and mutual affections. The doctrine that marriage could be dissolved only by death, since husband and wife could no more cease to be husband and wife than brother and sister to be brother and sister, seemed to them to be the natural outcome of the sacramental doctrine. This is not, indeed, wholly true; for it is quite possible to hold the sacramental view, or something very like the sacramental view, and yet to believe that grievous sin may rupture the mystic bond as really and completely as death itself. Still it is evident that rejection of the sacramental theory makes it easier to reject the strict doctrine of indissolubility.

In the next place, the Reformers maintained

that, since separation 'a mensa et thoro' was permitted, it was more conducive to morality and more in accordance with the teaching of 1 Co 7⁹ that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin should be multiplied. Further, they pointed out that the strict enforcement of the canon law forbidding divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void *ab initio*, implying the consequent dissolution of perfectly honourable unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his *Doctrine and Discipline of Divorce* (1643). Probably no Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the liberty to women—in this matter. He is, indeed, willing to admit that 'what God has joined together man may not put asunder,' but he will by no means allow that a mere marriage contract or ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily constitute such a joining together. Marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton's doctrines would lead if pushed to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding age.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it is permitted to those who are not members of the Roman Catholic Church. France is an exception. The *Code Napoléon* (1804-10) restricted the unlimited licence which had been permitted in the earlier years of the Revolution, but allowed divorce on various grounds, including 'mutual consent.' With the restoration of the monarchy (1816), the older law was again adopted and divorce was forbidden. It was not until 1884 that the provisions of the *Code Napoléon* were revived, with certain modifications, serious injuries or cruelty being admitted as sufficient cause, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the Report of the Commission appointed by Edward VI. (*Reformatio legum ecclesiasticarum*) had resulted in legislation, it is probable that the opinions of Cranmer, Bucer, and Peter Martyr in favour of divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of any alteration of the old law passed away. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be

considered as absolutely unbiased. The Marquis, however, was advised to have his second marriage legalized by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled English practice until the passing of the Divorce Act of 1857. The canons of 1604 (can. 107) confirmed the authority of the ecclesiastical court to grant judicial separation, but only on condition that a definite pledge was given by the parties not to contract a second marriage. Divorce proper with privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the Divorce Act 317 cases had been dealt with by Act of Parliament in England and 146 in Scotland.

The Act of 1857 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil court for the purpose. In England and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England cruelty or other serious offence on the husband's part must be proved in addition. In both countries a wife may be divorced on the ground of adultery alone.

In 1909 a Royal Commission was appointed to consider the whole question of the laws relating to divorce and separation. The Commission, after very careful investigations, extending over two years, published their report in Nov. 1912. No attempt has as yet been made, however—up to the middle of 1915—to give effect to their recommendations by way of legislation. On two points the commissioners were unanimous: if divorce is to be allowed, the method of procedure should be cheapened by the institution of special courts, so that the divorce should be made, not easy for any class, but as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone. The majority of the commissioners were in favour of extending the grounds on which divorce might be granted so as to cover cases of wilful desertion for at least three years, cruelty, incurable insanity after five years' confinement, and imprisonment under commuted death sentence; but a strong minority protested against this proposal, and claimed that divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1888, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

(1) Inasmuch as Our Lord's words expressly forbid divorce except in the case of fornication or adultery, the Christian Church cannot recognize divorce in any other than the excepted case, or give any sanction to the marriage of any person who has been divorced contrary to this law during the life of the other party.

(2) That in no case, during the lifetime of the innocent party in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage.

(3) That, recognizing the fact that there has always been a difference of opinion in the Church on the question whether Our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the sacraments and other privileges of the Church to those who under civil sanction are thus married. These resolutions were reaffirmed by the Conference of 1908, with an addition to the effect that 'when an innocent person has by means of a court of law divorced a spouse for adultery, and desires to enter into another contract of marriage, it is undesirable that such a contract should receive the blessing of the Church.'

The increase of wealth and luxury, and the growth of a spirit of self-indulgence so characteristic of the present age, together with the widely spread

intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience of old-fashioned restraints and a certain loosening of old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christianity has fostered makes the bond more irksome than ever where such union is supposed not to be ideal. Those who realize how much the stability and sanctity of home life depend on the unbroken firmness of the marriage-tie, and who recognize that the frequency of divorce must have a degrading effect upon individual character as well as on society in general, naturally regard with some anxiety the tendency in the present day to make divorce easier and more common. It is undoubtedly necessary for the Christian Church to make resolute protest against this tendency. It is, however, certain that the effects of nineteen centuries of Christian influence can never be wholly shaken off. We shall never again be able to regard divorce with the same easy indifference with which it was commonly regarded in the 1st cent. of our era. Christian influence will make itself felt on behalf of the Christian view of marriage, not in the modern world in the way of conciliar decrees and authoritative edicts, but by the weight of Christian public opinion guided by the principles of the NT.

(b) *Conditions of valid marriage.*—(1) *Equality of rank or condition* between the contracting parties, though required by Roman law, has never been regarded as essential in the Christian Church, however desirable in itself.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, being regarded as perfectly honourable and moral. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would be by no means uncommon—the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us seem to show that this was the case, and that such connexions were regarded by the Church as essentially marriages.

'Si quis habens uxorem fidelis concubinam habeat, non communicet. Caeterum qui non habet uxorem et pro uxore concubinam habet, a communione non repellatur tantum ut unus mulieris aut uxoris aut concubinae, ut ei placuerit, sit conjunctione contentus' (1st Council of Toledo [c. 400], can. 17) 'Christiano non dicam plurimas sed nec duas simul habere licitum est, nisi unam tantum aut uxorem aut certo loco uxoris si conjux deest concubinam' (Isidore, *ap.* Gratian, *Diss.* 4, quoted by Natalis Alexander, *Hist. Eccles.*, Lucca, 1734, I. 29).

(2) The question of *mixed marriages* between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian ought to continue such a union so long as the unbelieving partner is willing that it should be so. The children born of such a marriage were holy, i.e. rightful subjects for Christian baptism. If the unbeliever decided to dissolve the union, 'the brother or the sister is not under bondage in such cases'—which must mean that the Christian would be at liberty to contract another marriage (see, for St. Paul's use of terms 'bondage' and 'freedom,' Ro 7²⁵). In 1 Co 7³⁹ the Apostle declares that a Christian is at liberty to contract marriage 'only in the Lord.' The general principles laid down in this chapter have always been regarded as the primary authority on this matter, though

there has been much controversy as to the practical application, and even as to the exact meaning, of his teaching. Do the words 'only in the Lord' mean that any marriage contracted between one already a Christian and an unbeliever is unlawful? Does 'in the Lord' mean only with a fellow-Christian, and, if so, must the words of St. Paul be taken as a positive command or merely as a counsel of prudence? On these questions St. Augustine expresses himself with some doubt and hesitation, but his opinion on the whole may be taken as expressing the general view of the Church in the preceding centuries. Mixed marriages with unbelievers were discouraged, and even declared, though with some hesitation, to be unlawful for Christians; yet such marriages could not be wholly prevented, nor was any penalty attached to them in the first three centuries, so far as appears. The Council of Elvira affords the earliest example of a specific penalty (five years' penance) being attached to such unions. From the beginning of the 6th cent. the decrees of councils are more numerous and more distinct, while the penalties are in general much more severe.

The civil law supported the ecclesiastical judgments, the Theodosian Code making such wedlock a capital offence. In the Middle Ages the question of the exact interpretation of the Apostle's permission to converts to separate from unbelievers was the subject of much controversy, the chief question being whether the separation should be the deliberate act of the unbeliever, or whether any circumstances making it impossible for the believer to remain 'sine contumelia creatoris' might not justify the separation. The question was decided, on the whole, in the broader sense, by Innocent III. (*de Divortis*, 1198).

In early times marriage with heretics and schismatics was generally brought under the same condemnation as marriage with Jews or pagans. It is now, however, generally recognized both in the Eastern and in Roman Catholic communions that all marriages duly celebrated between baptized persons are valid and indissoluble, though in the case where one of the parties is a heretic or schismatic the other may be subjected to censure or penalty. Where the decrees of the Council of Trent have been published, however, this ruling does not free those contracting mixed marriages from considerable inconvenience, inasmuch as 'due celebration' is defined to be celebration in the presence of a priest in a Roman Catholic place of worship, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise celebrated is declared to be null and void. The publication of these decrees, for all practical purposes, in these countries by Pope Pius X. in the well known 'Ne temere' decree (1907) has given rise to much controversy. Roman Catholic divines defend the decrees on the ground that the Church has a right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of marriages blessed by her shall be brought up in the faith. Their opponents urge that it is inevitable that mixed marriages will sometimes occur in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to cast a slur on respectable persons who have, admittedly, been guilty of no immoral conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon conscience, while to demand a pledge for the education in a particular way of children to be born is to override the law of the land and the

natural rights of parents, and that such interference is unjustifiable.¹

(3) *Kindred and affinity*.—It was a common complaint with the Reformers and those who sympathized with them that the multiplication of grounds of prohibition of marriage, the custom of papal dispensations in doubtful cases or cases of illegality, and the facility with which decrees of nullity of marriage could be obtained had created much uncertainty in the matter of marriage-relations and had been the source of grave scandals. This is forcibly expressed in the statute of Henry VIII. for the regulation of marriages (1533-34):

'Many persons, after long continuance together in matrimony without any allegation of either of the parties or any other at their marriage why the same matrimony should not be good, had been divorced contrary to God's law on the pretext of pre-contract or by reason of other prohibition than God's law permitteeth. Marriages have been brought into such uncertainty thereby that no marriage could be so surely knit or bounden but it should lie in either of the parties' power to prove a pre-contract, a kindred and alliance, or a carnal knowledge to defeat the same.'

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz. blood-relationship or consanguinity, affinity or connexion by marriage, and spiritual affinity, as, e.g., the connexion between godparent and godchild, or between two persons who are god-parents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of prohibition more numerous than in the Western, while at the same time the custom of dispensation commonly practised in the West since the 8th cent. is unknown in the Eastern Church. In the East two brothers are not allowed to marry two sisters, and, in general, marriage between the members of two families debarb the members of either from marriage with members of the other within the prescribed limits.

A different method of describing relationships prevails in the two branches of the Church. In the East uncle and nephew are related in the third degree, first cousins in the fourth, and so on; marriage is forbidden within the seventh degree of kindred or affinity, natural or spiritual. In the West first cousins are related in the second degree, second cousins in the fourth, and so on, marriage being forbidden—since the Lateran Council (1215)—within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the score of affinity within the second degree according to the Western reckoning. No trace of these somewhat burdensome restrictions is to be found before the 5th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (=Lv 18) and with the ordinary Roman law, which were, to all intents and purposes, to the same effect—marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of those codes.

The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the much-vexed question of marriage with a deceased wife's sister. Such marriages have long been legal and customary in America, in the British colonies, and in several European countries. In England they were not unknown prior to 1835, though condemned by the canon law of the English Church. Such marriages were held by the civil courts to be perfectly valid and unim-

peachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1835 declared all such marriages within the prohibited degrees absolutely illegal. After many futile attempts, and in face of very strong opposition, an Act legalizing marriage with a deceased wife's sister in the United Kingdom was passed in 1908. A saving clause permits clergymen who have a conscientious objection to refuse to celebrate such marriages, but in the case of *Bannister v. Thompson*, in which proceedings were taken against a clergyman for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married though within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1604 to hold that such marriages are 'incestuous and unlawful and altogether null and void' (can. 99). The logical course might seem to be to revise the table of kindred and affinity, but to this a very influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in Lv 18, though attempts more or less ingenious have been made to prove that they are. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Law of Holiness, that a greater number of cases of affinity than of consanguinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's brother that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 18²⁷) shows that the prohibitions are regarded as matters of universal moral obligation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes us regard with loathing and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment ought to prevail, and anything which may tend to destroy it must be regarded as morally injurious and degrading. Those who hold the sacramental view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, it is said, to tamper with so long established a custom or, indeed, with any well-established custom in connexion with so delicate a subject as the marriage-relation. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider the arguments which have been brought forward on the other side.

It is very doubtful, it is urged, whether the Levitical law relating to a different state of civilization and specially intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it be accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister, but, on the contrary, it is implied that such marriage is perfectly lawful (v. 18²⁶). The Jews have never regarded such

¹ On the subject of mixed marriage in general see Decrees of Councils: Nîmes (305), Arles (314), Laodicea (c. 341), Agde (506), Orleans (583). See also *Cod. Theod.* iii., xvi., *Decretum* of Gratian, c. 1-17, C. xxviii. q. 1 (a. p. 1139-42); Innocent iii., *de Varris questionibus*, c. 1200; Augustine, *de Fide et operibus*, xix.

unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic canon (date probably late in the 3rd cent.) forbids such marriages to the clergy shows that they were not generally regarded at that time as unlawful *per se*.

No injury has resulted, it is held, either to married life or to the general tone of social morality from the permission of such marriages in America and in the British colonies. It is evident from experience that such marriages are in very many cases desired, and in large centres of population among the poorer classes it is absolutely necessary as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as *respectus parentelæ*. The marriage of a man with his step-daughter or with his nephew's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern ideas, this relationship would also prevail between a woman and her deceased husband's brother, now become the head of the house. That marriage with a deceased husband's brother was not regarded with moral repulsion, in itself, is shown by the fact that it was commanded in the case of a man dying without children. There is no reason, therefore, for thinking that any other principle than that of the *respectus parentelæ* governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident total absence of any sense of repulsion against such unions among the majority of modern civilized people, no reason can be given why they should be forbidden. It is further urged that, even if the sacramental theory of marriage be accepted, since the mystic bond is dissolved by death, it may be fairly held that the connexions formed are no longer binding. That a great distinction is made between marriage with a deceased wife's sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely and frequently grants dispensations for the former, notwithstanding her high sacramental belief.

Some Anglicans, while not prepared to condemn marriage with a deceased wife's sister as absolutely wrong or immoral, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objectionable, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical, and is at the same time unjust to Christian people. The majority of Christians have come to regard the nuptial benediction as almost, if not altogether, an essential of marriage and the right of every Christian. If members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to hallow their union.

5. Conclusion.—Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists

have generally directed attention to the sterner aspect of the matter, dwelling exclusively on restraints and prohibitions, and scanning with watchful suspicion every form of natural indulgence. Nevertheless, the Scriptural ideal of marriage has maintained its hold in the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unbridled licence and excessive indulgence; it brings with it duties and responsibilities which must tax our powers and energies to the utmost and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other connexion, we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sakes, but as a means to truer and more abiding blessedness. Holy matrimony has been divinely instituted for man's good, and to be a source of blessing. In happy married life man is to find his truest and most lasting happiness, and to reach the fullest perfection of which his nature is capable.

MARRIAGE (Egyptian).—Amid the abundance of documents from ancient Egypt there is singularly little to enlighten us on this subject. No representation of the ceremonial or festivities of marriage has been recognized among tomb or temple scenes; the scenes of the divine marriage of Ammon with the queen mother at Luxor and Deir el-Bahri can hardly be quoted for illustrating the human rite. Written contracts of marriage are first found in the XXVth dyn. (c. 600 B.C.), and first became common in the Ptolemaic period; and, notwithstanding the multitudes of relatives recorded in tombs and on stele, it is difficult to ascertain what degrees of consanguinity and how many wives were permitted or usual.

To secure hereditary rights in a community with matriarchal tendencies and where women held property, close endogamy might often be convenient. This would especially be the case with the Pharaohs, who claimed the distinction of divine descent, and to them would be permitted acts which could hardly be allowed to their sub-

jects. A genealogical statement regarding the prince Nefermaat at the end of the IIIrd dyn., literally interpreted, would seem to show that he was the offspring of the union of King Seneferu with his eldest daughter (K. Sethe, in *ZÄ* i. [1912] 57), but a more probable interpretation of the same genealogy is given in Erman's *Aegypten*, p. 227, and by H. Sottas, in *REg* xiv. [1914] 150, making him grandson of Seneferu and son of his eldest daughter. There is plenty of evidence that later Pharaohs married their sisters or half-sisters (cf. Erman, p. 221); a case of a less exalted person doing so in the XXIIInd dyn. (9th cent. B.C.) is noted by J. H. Breasted (*Ancient Records of Egypt*, Chicago, 1906-07, iv. 388). In the XXIst dyn. two marriages of uncle and niece in one family are pointed out by A. H. Gardiner (*ZÄ* xlviii. [1910] 50). The Ptolemys followed the precedent of the Pharaohs. In the Roman age marriage of half-sisters and full sisters occurred commonly in the families of cultivators of the soil and artisans (K. Wessely, *Karanis und Soknopaiou Nesos*, Vienna, 1902, p. 23; J. Nietzold, *Die Ehe in Ägypten zur ptolemäisch-römischen Zeit*, Leipzig, 1903, p. 12; the evidence there quoted comes from the Greek papyri of the Fayyum or Arsinoite nome, but A. S. Hunt assures the present writer that there is similar evidence also from Oxyrhynchus). The divine example of Osiris and Isis may have had special force at that period. In the First Story of Sethon Khamwese (Ptolemaic period), the ancient Pharaoh's argument about his son Neferkephah and his daughter Ahure seems to be that it would be impolitic, when there were only two children in the royal family, to risk the succession by marrying them together. His preference, following a family custom, would be to marry them to a son and a daughter of two of his generals in order to enlarge his family. At a banquet he questioned Ahure, and was won over by her wishes to the other plan; thereupon he commanded his chief steward to take the princess to her brother's house that same night with all necessary things; Pharaoh's whole household gave her presents, and Neferkephah made a 'good day' and entertained them all on the marriage eve. This is the only account that we possess of an Egyptian betrothal or marriage that is not of the fairy-tale order, and it is noticeable that there is no mention in it of the writing of a contract, perhaps because this marriage was an affair within the family.

Marriage was no doubt entered on soon after puberty and the circumcision of the male, though evidence here is lacking. Müller (*Liebespoesie*, p. 3, note 5) quotes an instance at the end of the Ptolemaic period of the wife of a priest being married at twelve and a half years of age. Some of the ancient Egyptian stories offer examples of love-matches, but parents or guardians would naturally have had the first word in the disposal of young people.

Although several wives may be recorded on a man's tomb, there are few clear cases of more than one living at the same time except in the large *harims* of royal wives and concubines (cf. Erman, p. 219). For all these questions see CIRCUMCISION (Egyptian), FAMILY (Egyptian), CONCUBINAGE, vol. iii. p. 811, CHILDREN (Egyptian); also ADULTERY (Egyptian), ETHICS AND MORALITY (Egyptian), vol. v. p. 481 f., § 9 f. Divorce is provided for in the late contracts mentioned above, sometimes on behalf of the man, sometimes of the woman, and writings of divorce are known (see LAW [Egyptian]). Of the treatment of widows nothing is known beyond that their defenceless state made them objects of help and pity to the just and charitable.

F. LL. GRIFFITH.

MARRIAGE (Greek). — I. General. — The Greeks, as a rule, seem to have entered upon marriage from religious or prudential motives rather than on sentimental grounds.¹ The generation of children² was, in fact, the recognized main end of marriage, with which went also the desire to obtain a capable housekeeper.³ This utilitarian motive lies at the root of that long conversation of Socrates and Ischomachos on household management which, as reported by Xenophon, is our most illuminating evidence on Greek married life in the 5th and 4th centuries B.C. (see esp. *Æc.* vii. 19 f.). The purely physical significance of marriage in relation to the State itself found, doubtless, its strongest and most logical recognition in Sparta, where wives were taken simply *ἐπὶ τὸ τῆς τεκνώσεως ἔργον* (Plut. *Comp. Lyc. cum Num.*, iv. 77), and their interchange for this object was both permitted and encouraged.⁴ Yet even in Athens, as a result of the development of city life, in which women could not take any direct part (cf. the oft-quoted words ascribed to Pericles [Thuc. ii. 45]), marriage lost the delicate and romantic bloom which belongs to it in the Homeric poems.⁵ Indeed the average Athenian woman must have been too ignorant to have been a helpmeet for her husband, intellectually or spiritually, at least in any but the lowest class of society. It would, however, be a mistake to regard the exaggerations of the comic poets, or the *chroniques scandaleuses* of the orators, as complete and faithful reflexions of the ideals and facts of the social life of their time. Nor, again, is it possible to deduce the precise degree of affection, respect, or influence actually enjoyed within the precincts of the home by the Athenian wife, from the regulations of the legal system of which she appears to be the passive victim. That the position of women and the conditions of married life in historical Greece exhibit a considerable variation, apparently for the worse, from the state of things depicted in the Epic is undeniable, however it may be explained; but it is an error to contrast the idealizations of Homer with the crudities of Attic law. The actual content of life, then as now, was just what the man and wife chose to make it.

Monogamy was the Hellenic rule, as among the Egyptians (Herod. ii. 92). Examples to the contrary, however, are not lacking; e.g., in Sparta King Anaxandrides kept a double establishment (Herod. v. 40).⁶ It is doubtless true enough that no definite law of Athens nor reference to any law asserting the principle can be adduced, and, on the other hand, that cases of bigamy occurred in Athens as elsewhere; but neither of these facts justifies the statement that Attic law simply took no account of polygamy one way or another.⁶

¹ *ἐπὶ παίδων γνησίων σφόδρ, ἢ ἀρότρῳ*, betrothal formula given in Clem. Alex. *Strom.* ii. 23; cf. Menander, *Petrik.* 435: *ταύτην γνησίῳ παίδων ἐν' ἀρότρῳ σοὶ δίδωμι*.

² Cf. the naïve confession in Dem. lix. 122: *τὰς μὲν γὰρ ἑταίρας ἡδονὴν ἐνεκ' ἔχομεν, τὰς δὲ παλλακὰς τῆς καθ' ἡμέραν θεραπείας τοῦ σώματος, τὰς δὲ γυναῖκας τοῦ παιδοποιεῖσθαι γνησίων καὶ τῶν ἔνδον φύλακα πίστην ἔχειν*. See also Aristotle, *Eth. Nic.* viii. 12. 7: *οἱ δ' ἀνθρώποι οὐ μόνον τῆς τεκνοποιίας χάριν συνοικοῦσιν, ἀλλὰ καὶ τῶν εἰς τὸν βίον*.

³ Xen. *Rep. Lac.* i. 8: *εἰ δὲ τις αὖ γυναῖκί μὲν συνοικεῖν μὴ βούλοιο, τέκνον δὲ ἀξιολόγον ἐπιθυμοίη, καὶ τοῦτ' ὅνον ἐποίησεν, ἦντινα εὐτέκνον καὶ γενναῖον ὄρη, πείσαντα τὸν ἔχοντα, ἐκ ταύτης τεκνοποιεῖσθαι*.

⁴ Cf. the description of a perfect marriage, put into the mouth of Odysseus, in *Od.* vi. 182-185.

⁵ In Herod. vi. 61, *Ἀριστῶν βασιλεύοντι ἐν Σπάρτῃ καὶ γήμαντι γυναῖκας δύο παῖδες οὐκ ἐγένοντο*, the brevity of the expression leaves it uncertain whether Ariston had two wives at once. In vi. 63 he divorces the second, to marry a third—from which, perhaps, he may be allowed the benefit of the doubt (cf. E. Meyer, *Gesch. des Alterthums*, Stuttgart, 1884-1901, ii. § 59 A). But the feature of Sparta was rather practical polyandry (Polyb. xii. 6).

⁶ Cf. Hruza, *Polygamie und Peliklat*, p. 31: 'Das attische

That concubinage existed at Athens to a considerable extent cannot be doubted, owing to the influx of free women and their men-folk from the rest of Greece. Lysias mentions a law which authorizes an injured husband to slay with impunity an adulterer caught *flagrante delicto*, whether it be with his wife or with his concubine, though the latter are 'less valuable' than wives (Lys. i. 31: *καὶ ἐπὶ τοῖς παλλακαῖς τοὺς ἀδελφόνους ἀξίας τὴν αὐτὴν δίκην ἐπέθηκε*). So also in a law of Drakon quoted by Dem. xxiii. 53: *ἡ ἐπὶ παλλακῇ ἢ ἐν ἐπ' ἀνευθέρους πατρὶς ἐκτ.* These passages must cover free foreign women, from which class, as well as from that of slaves and freedwomen, the majority of παλλακαὶ at Athens doubtless came. It is clear, however, from Is. ii. 89, *ἐπεὶ καὶ οἱ ἐπὶ παλλακίᾳ δίδοντες τὰς ἐαυτῶν πάντες πρότερον διουλοῦσιν περὶ τῶν δοθησομένων τὰς παλλακὰς*, and from other passages that native Athenian women (πολίτιδες, ἀσται) also sometimes became εταῖραι and παλλακαί. No special laws touching the case of these and giving them privileges over foreign women living ἐν παλλακίᾳ with Athenian citizens can be produced. Hence the hypothesis¹ of the existence at Athens of a status of 'legitimate concubinage,' in which an Athenian citizen, already lawfully married, contracted another union with another Athenian woman, who was, like the wife, formally betrothed (ἐγγυητή) by her κύριος, her children being therefore legitimate, but who nevertheless was not a wife, falls to the ground, as being simply the assertion of legalized bigamy.

Here also should be mentioned Müller's theory²—that after the failure of the Sicilian expedition, probably in 411 B.C., changes were introduced into the Athenian marriage law with a view to increasing the number of citizens. His theory is that another form of union (*Nebenehe*) was set up by the side of regular marriage. Marriage in the proper sense could be contracted only with an Athenian woman, but the new legislation permitted a man to take, in addition to his Athenian wife, a partner who was neither γυνή nor παλλακή—a secondary wife, who had, in fact, no specific title. This *Nebenfrau*, or secondary wife, might be either an Athenian or a foreign woman; her children were citizens, but νόθοι, not being admitted to their father's *φάρπλη*. If the father left no children by his real wife, these νόθοι had full rights of inheritance, but had a claim only to νόθεια, a prescribed fraction of his estate, if he left legitimate issue by the real wife. This institution was abolished on the restoration of the democracy in 403 B.C.

2. Permissible marriages.—It was illegal for an Athenian citizen to marry a foreigner, the alien wife or husband being liable to be sold into slavery (law in Dem. lix. 16, dating perhaps only from the time of Pericles, 451 B.C. [cf. Plut. *Per.* 37], and revived in 403 B.C.). Such marriage, however, was legal if Athenian citizenship had been bestowed on the individual, or if he or she belonged to a community to which the Athenian assembly had granted rights of intermarriage (ἐπιγαμία); but, in spite of the law and its penalties, Athenians not infrequently did contract such marriages and smuggle their issue into their *φάρπλη*. Legally, the issue of such marriages were illegitimate (νόθοι), like the issue of ἀνέγγυοι.³

Forbidden degrees were few, the practical working of the laws of inheritance and adoption (*q.v.*) being to encourage marriage between near relatives, and even to enforce it. Marriage of cousins was common (cf. Dem. xliii. 74); union of uncle and niece was possible (cf. Lys. xxxii. 4; Is. iii. 74),⁴ and even of aunt and nephew (case of Demosthenes, father of the orator, betrothing on his death-bed his prospective widow to his nephew [Dem. xxvii. 5]). A man might marry his half-sister by the same father, but seemingly not by the same mother.⁵ Recht hat die Polygamie gewiss nicht ausdrücklich verboten, aber wahrscheinlich auch nicht geradezu erlaubt. Das Gesetz enthielt keine Bestimmung, und damit war der Willkür der Bürger freier Raum gegeben. The law of Charondas of Thurii, inflicting loss of political rights on a man who gave his children a stepmother (Diod. xii. 12, 14), clearly implies universal monogamy (cf. Hruza, p. 56).

¹ See Buermann, 'Drei Studien,' etc. (= *Jahrbücher für cl. Philol.*, 1877-78, Supplementband ix. pp. 578 f., 688 f.); cf. R. Zimmermann, *De notorum Athens conditione*, Berlin, 1886.

² O. Müller, 'Untersuchungen,' etc. (= *Jahrbücher für cl. Philol.*, 1899, Supplementband xxv. p. 687 f.); cf. Wyse, *The Speeches of Isaeus*, p. 280.

³ Pollux, iii. 21: γνήσιος μὲν ὁ ἐκ γυναικὸς ἀσπίης καὶ γαμετῆς . . . νόθος δ' ὁ ἐκ ξένης ἢ παλλακίδος.

⁴ At Sparta King Anaxandrides had his niece to wife (Herod. v. 80).

⁵ Cf. Dem. lvii. 20: ἀδελφὴν γὰρ ὁ πάντως οὐδὲς ἔγμεν οὐχ ὁμομητρίαν, Paus. i. vii. 1: ὁ Πτολεμαῖος Ἀσυνίης ἀδελφῆς ἀμφότερων ἱερᾶς ἔγμεν αὐτῇ, Μακεδόνα οὐδαμῶς ποῶν νομίζοντα, Αἰγυπτίους μόνον ἐν ἄρχῃ, Plut. *Them.* 32: Μητροπαιστέμην ἐκ τῆς ἐπιγαμίας γενομένην Ἀρχέτολις ὁ ἀδελφός, οὐκ ὅν ὁμομητρίος, ἔγμεν. Marriage of full brothers and sisters was, however, not outside the range of Greek ideas;

There were, it seems, no other prohibited degrees of affinity, except between individuals in the direct line of descent or ascent (cf. Plat. *Laws*, 838); there is, however, some indication that law and public opinion were not in accord in this matter (Aristoph. *Frogs*, 1081).

It follows from the above that even considerable disparity of age cannot have been generally regarded as an obstacle to marriage. The elder Demosthenes arranged that his five-year-old daughter should marry his nephew *ὅταν ἡλικίαν ἔχῃ*, explained as signifying in ten years' time (Dem. xxvii. 6). The wife of Ischomachos was not fifteen years old at the time of her marriage (Xen. *Œc.* vii. 6). The relatively early age at which girls became nubile in the climate of Greece is to be remembered.¹ The Gortynian Code pronounces a girl nubile at twelve years of age; in Athens the lower limit was perhaps fourteen.² The husband must at least have passed his *ἑκταμία*, i.e., he must be turned eighteen. It seems to have been the rule that the husband should be a good deal senior to the wife; and this was approved by the philosophers.³ Inequality of social position was felt to be a more serious obstacle to marriage than mere disparity in age; but neither this sentiment itself nor the consequences of its violation are specially Athenian (cf. Aristoph. *Clouds*, 41 f.; *Œsch. Prom. Vinc.* 890: *τὸ κηδεύσαι κατ' ἐαυτὸν ἀποστρέφει μακρῶς*). The point lay in the fact that, in historical times, a wife brought a dowry with her, which sometimes had the effect of making her the dominant partner in the household.

3. Choice of wife.—In the selection of a partner neither bridegroom nor bride had much voice; the respective parents arranged the match—often with the aid of a match-maker (*προμηνήστρα*). Moreover, the Athenian bridegroom had little opportunity of making his bride's acquaintance, or even of seeing her, before marriage, unless she was a near relative, owing to the strict conventions under which Athenian women in general lived—more strict, apparently, than those which obtained in the rest of Greece⁴ (see art. FAMILY [Greek]).

4. Betrothal.—By Attic law betrothal (ἐγγύησις)⁵ was the indispensable condition of valid marriage, except in the case of an 'heiress' (ἐπικληρος), who was, of course, claimed before the Archon by the next-of-kin (cf. Is. vi. 14: *ἡ ἐγγυηθεῖσαν κατὰ τὸν νόμον ἡ ἐπιδικασθεῖσαν*; see art. INHERITANCE [Greek]). Failing the formal ceremony of ἐγγύησις, illegitimacy attached to the issue of the marriage. It was simply a contract made between the suitor (or his father or guardian) and the person who as κύριος had legal authority over the woman, viz. her father, full brother, paternal grandfather, or

cf. *Od.* x. 5 f. (sons and daughters of Aiolos)—on which a schol. remarks: ἀρχαῖον ἔθος τὸ συνοικεῖν ἀδελφόν. καὶ ὁ Ζεὺς ἀδελφῇ οὐκ συνοικεῖ τῇ Ἑρῃ. Cf. also Paus. iv. ii. 8. According to Phil. *Jud. de Spec. Leg.* ii. 779, the Spartan law just reversed the Athenian. See Plat. *Rep.* v. 461 B, and H. Richards, in *CIR* iv. [1890] 6; Hruza, *Polygamie und Polygynie*, p. 169 f.

¹ Soranus, *παθ. γυν.* iv. 20: τὸ δὲ ἔμμηρον ἐπιφαίνεται τὸ πρότερον περὶ τὸ τεσσαρεσδέκατον ἔτος κατὰ τὸ πλείστον ὅτε καὶ τὸ ἡβᾶν καὶ τὸ διοικουῖσθαι τοὺς μαστοὺς.

² Deduced from F. Blass's restoration of Aristotle, *Ath. Pol.* lvi. 7: *μυθόι δὲ καὶ τοὺς οἴκους τῶν ὀρφανῶν καὶ τῶν ἐπικλῆρων, ὧς ἂν τις τετταρακαίδεκάτῃ γένηται*. For the early age at which girls were married at Troezen, see Arist. *Pol.* 1385a, with W. L. Newman's note (*The Politics of Aristotle*, iii. [Oxford, 1902] 464).

³ Cf. Ar. *Pol.* 1385a: διὸ τὰς μὲν ἀρμόττει περὶ τὴν τῶν οὐκ οὐκαὶ ἐτῶν ἡλικίαν συζευγνύναι, τοὺς δ' ἐπὶ καὶ τριάκοντα ἐν τοσούτῳ γὰρ ἀκμάζουσιν τε τοῖς σώμασι συζεύξῃς ἔσται, καὶ πρὸς τὴν παύσαν τῆς τεκνοποιίας συγκαταβήσεται τοῖς χρόνοις εὐκαίρως. Sometimes, however, the husband was very young (cf. Dem. xl. 4: *συνέβη γὰρ μοι δεσπότην τοῦ πατρὸς δεκτακαίδεκάτῃ γῆμαι*). Hesiod (*Works and Days*, 695 f.) recommends a man to marry at about 30, the woman at 18 or 19. Plato, *Rep.* v. 460 E, says: *ἀρ' οὐν σοὶ ἐνδοκεῖ μέτρον χρόνος ἀμάρ, ὅταν ἔγῃ γυναικί, ἀνδρὶ δὲ τὰ τριάκοντα*; cf. Solon, fr. 14.

⁴ Hence the curious expression in Xen. *Œc.* vii. 10: *ἐπεὶ ᾗ μοι χειροσφῆς ἦν καὶ ἐπιτάσσοντο*, 'after she was accustomed to my hand, that is, was tamed,' used by Ischomachos of his girl-wife.

⁵ The form ἐγγύησις is used by Isaeus only in iii. 58: *τὴν μαρτυρίαν περὶ τῆς ἐγγύησεως τῆς γυναικός*. Elsewhere he uses the form ἐγγύη (and so Dem. xli. 18; Plat. *Laws*, 774 E; Hyper. iii. (v.) 16). But modern writers have in general agreed to use the form ἐγγύησις in reference to betrothal, and so restrict the form ἐγγύη to signify 'pledge' or 'surety,' which is, in fact, its ordinary significance. The verb ἐγγυᾶν is used of the κύριος of the woman, ἐγγυᾶσθαι (mid.) of the suitor, and ἐγγυᾶσθαι (pass.) of the woman; but the last use is not common, its place being taken by periphrases with the noun ἐγγύη or the adj. ἐγγυητή (Wyse, on Isaeus, iii. 4).

legally constituted guardian.¹ It was essentially a family ceremony (although regulated by law)² at which, besides the principals, relatives and other witnesses were present, in numbers corresponding to the social distinction of the parties (cf. Is. iii. 18: ὁ μὲν γὰρ ἐγγυῶν μέλλων εἰς τὸν τριτάλαντον οἶκον, ὡς φησὶ, τὴν ἀδελφὴν, διαπραττόμενος τηλικαῦτα ἕνα μάρτυρα παρῆναι αὐτῷ προσποιήσας). Nothing, however, is said in any passage as to the presence of the woman, which certainly was not legally necessary, any more than her consent to the match; in point of law she was simply the object of a purely business arrangement or barter between her κύριος and the suitor. Of the formalities necessary or usual we know nothing. Herodotus, in his account of the wooing of Agariste of Sicily, seems to preserve in part the verbal formula of the Athenian marriage-contract in the 5th cent. B.C.³ It is strange that there is no allusion to any written record of the contract, at any rate at Athens, where, indeed, there was much laxity in this regard; but it is hard to believe that the proceedings were purely oral—more especially as it was at the ἐγγύσις that the dowry agreed upon was actually paid, or agreements entered into as to its future payment.⁴

It should be clear from the above that the use of the term 'betrothal' as a rendering of the Greek term ἐγγύσις (ἐγγύη) is simply by way of analogy and in default of a more appropriate word. For the essentials of a modern betrothal, namely (1) free consent of the woman, and (2) that the act takes place between the two individuals who so declare their will and intention, without any necessary intervention of third parties, are entirely lacking in the Athenian ceremony. The origin of the latter lies in the primitive marriage by purchase, and Athenian law did as a matter of fact select this primitive element, namely, the formal validity of the compact preparatory to the surrender (ἐκδοσις) of the woman, rather than the formalities of the consequent nuptials, as decisive in regard to the all-important question as to the legitimacy of the offspring. It does not appear that the wedding ceremonies and home-bringing of the bride had actually any legal significance, except as the natural and public consequences of the formal private contract, and, just because these were the natural and normally inevitable consequences, Athenian jury-courts, so far as our knowledge goes, were never called upon to decide at what precise moment the status of marriage became actual, or what was the precise juristic significance of the γάμος in which the suitor asserted the rights bestowed upon him by virtue of the marriage contract (ἐγγύσις).⁵

The question, therefore, which has been debated,⁶ as to whether ἐγγύσις was an act of betrothal or affiancing preceding marriage, or was not rather the beginning of the married state itself—the first and most important of the ceremonies of the wedding-day, and actually constitutive of marriage *per se*—seems to receive its solution through purely

historical considerations. Primarily and originally, the ceremony of ἐγγύσις was a literal putting of the woman by her κύριος into the hands of the suitor for price paid, the interval between the striking of the bargain and exercise of conjugal rights (γάμος) being filled by the leading home of the newly-purchased bride. This home-leading, being that part of the entire transaction which was of a striking and necessarily public character, came to possess ever increasing social significance, while at the same time it was the moment at which religion intervened to invest the ceremonies with its own special solemnities, whether of a prophylactic or of a prognostic sort. The whole mass of ceremonial, of infinite variety, and of very various degrees of consciously realized import, which constitutes the actual procedure of marriage, in its social and non-juristic sense, interesting and important as it is for the student of anthropology, can be given here only in barest outline.

5. Wedding ceremonies.—The Greek γάμος was essentially a religious ceremony (τέλος),¹ covering the deportation of the bride from her parents' house into that of her husband. The month Γαμηλιών (Jan.-Feb.) was generally selected, and Greek custom seems to have prescribed in general the winter season as proper for marriage; and the speculations of the philosophers were in accord (cf. Arist. Pol. iv. (vii.) 14=1335a: τοῖς δὲ περὶ τὴν ὥραν χρόνοις ὡς οἱ πολλοὶ χρώνται καλῶς καὶ νῦν, ὁρίσαντες χειμῶνος τὴν συναυλὴν ποιεῖσθαι ταύτην). The bride dedicated to various deities (θεοὶ γαμήλιοι) her girlish toys and other gifts, and more especially her maiden tresses, now shorn (Pollux, iii. 38, says that before marriage girls offered their hair to Hera, Artemis, and the Fates; cf. Hesych. s.v. γάμων ἔσθ).² The most important pre-nuptial ceremony was that of the bath (λουτρὸν νυμφικόν);³ at Athens the water must be fetched from the Kallirrhoe (Thuc. ii. 15), tall water-jars of peculiar shape (λουτροφόροι) being used for the purpose—which it was also the custom to set up on the tomb of those dying before marriage.⁴

The order of the details of the nuptial ceremonies is not certainly known, and doubtless varied according to the locality. A feast was given in the house of the father of the bride, thus securing publicity of the event, for the guests were really witnesses (Dem. xxx. 21; Is. viii. 18).⁵ Associated with this was the unveiling of the bride (the ἀνακαλυπτήρια).

¹ Cf. Pollux, iii. 38: καὶ τέλος ὁ γάμος ἐκαλεῖτο· καὶ τέλει οἱ γεγαυμένους διὰ τοῦτο καὶ Ἥρα τέλει, ἡ ζυγία. The Danaids, who, in pseudo-Plato, *Asiarch.* 578 E, are ἀτελεῖς, are τὸν οὐ μνηνυμένων in Paus. x. xxxi. 9. The sacrifice preliminary to a wedding was called προτέλεια, and the first night was the νύξ νυμφική. Cf. J. E. Harrison, 'The Meaning of the Word τελετή,' in *CLR* xxviii. [1914] 36 f.

² Cf. Paus. ii. xxxii. 1: ἐκάστη παρθένος πλόκαμον ἀποκείρεται οἱ [sc. Hippolytos] πρὸ γάμου, κειραμένη δὲ ἀνέστηκεν ἐς τὸν ναὸν φέρονσα, at Troezen; i. xlii. 4: καθέστηκεν δὲ ταῖς κόραις χοὰς πρὸς τὸ τῆς Ἰδινῆς μῆμα προσφέρειν πρὸ γάμου καὶ ἀπάρχασθαι τῶν τριχῶν, at Megara, he compares the Delian custom (for which cf. Herod. iv. 84); ii. xxxiii. 1: κατεστήσατο δὲ καὶ ταῖς Τροιζηνίων παρθένοις ἀνατίθειναι πρὸ γάμου τὴν ζώνην τῇ Ἀθηναίᾳ τῇ Ἀπατουρίᾳ. See J. G. Frazer, *Pausanias's Descr. of Greece*, London, 1898, ii. 279 f. For the dedication of the girdle (ζώνη, or μίτρα) to Aphrodite, see Theocr. xxvii. 55; Mosch. ii. 78.

³ In Troas the bride bathed in the river, saying λαβέ μου, Σκάμανδρε, τὴν παρθενίαν (*Aschines, Epist.* 16). See M. P. Nilsson, *Griechische Feste*, Leipzig, 1906, p. 366 f. We must be content here with bare reference to the strange survival, apparently, of pre-nuptial defecation, in the island of Naxos, to which allusion is made in the opening lines of the recently discovered frag. of the *Atthis* of Callimachos (*Oxyrh. Pap.* vii. [1910] 15 f.: ἥδη καὶ κοῦρον παρθένος εὐνάσας) τῶθιμον ὡς ἐκέλευε προνυμφίον ἵπνον ἰαδσαι | ἀρσενίαν τὴν ῥάιν παιδὶ σὺν ἀμφιβαλεῖ) about which much literature has gathered; see A. Puech, *REG* xxii. [1910] 265 f.; D. R. Stuart, *Class. Philol.*, Chicago, vi [1911] 302 f.; C. Bonner, *ib.* 402 f.; K. Kuiper, *REG* xxv. [1912] 318 f.

⁴ Cf. Dem. xlv. 18: τελευτῇ τὸν βίον . . . ἀγάμος ὢν τί τοῦτον σημείον, λυτροφόρος ἐφέστηκεν ἐπὶ τῷ τοῦ Ἀρχαίου τάφῳ (see also § 80); P. Walters, 'Rottgurge Lutrōphoros,' in *Mith. arch. Inst. Ath.* xvi [1891] 871 f.

⁵ Cf. the story of the unfortunate affair of Orgiaos at Delphi given in Plutarch, *Resp. gerend. prac.* 32; cf. Arist. Pol. vii. (v.) 4=1305b.

¹ Cf. law quoted in Dem. xlv. 18: "Ἦν δὲ ἐγγύσις ἐπὶ δικαίους δάμαρτα εἶναι ἢ πατὴρ ἢ ἀδελφὸς ὁμοπάτωρ ἢ πάππος ὁ πρὸς πατρός, ἐκ ταύτης εἶναι παῖδας γνησίους.

² Cf. Hyper. iii. (v.) 16: ἀλλὰ μὴν οὐκ ἀπέχρησε τῷ νομοθέτῃ τὸ ἐγγυηθῆναι τὴν γυναῖκα ὑπὸ τοῦ πατρὸς ἢ τοῦ ἀδελφοῦ, ἀλλ' ἐγράψε διαρρήδην ἐν τῷ νόμῳ, κτλ.; Dem. xlvii. 18: σκέψασθε τοῖνυν καὶ τοὺς νόμους, παρ' ὧν κεινέουσι τὰς ἐγγίας ποιεῖσθαι, κτλ.

³ Herod. vi. 130: "τῷ δὲ Ἀλκιμένης Μεγακλῆϊ ἐγγυῶ παῖδα τὴν ἑμὴν Ἀγάριστην νόμοισι τοῖσι Ἀθηναίων." φαιμένον δὲ ἐγγυῶσθαι Μεγακλῆος ἐκεκέρυτο ὁ γάμος Κλεισθένει.

⁴ Dem. xli. 6: μάρτυρας παρέφομαι τοὺς παραγενομένους, ὅτ' ἡγνία μοι Πολυεύκτος τὴν θυγατέρα ἐπὶ τετραράκοντα μναῖς. In the island of Myconos, in Macedonian times, public record was made of the amount of the dowry. See inscr 817 in W. Dittenberger, *Syll.*², Leipzig, 1898-1901, where the entries are of the type Σώστρατος τὴν θυγατέρα Εἰσθὴν ἐγγυήσας Ἐπαρχίδει καὶ ποῖκα ἔδωκε χιλίας καὶ τρακοσίας δραχμῶν . . . ἀργυρίου δὲ προσέθηκεν ἑκατὸν δραχμῶν, ἐσθὴν δὲ ρετιμυμένην διακοσίῳ δραχμῶν. See R. Dareste, B. Haussoullier, and T. Reinach, *Recueil des inscr. jurid. grecques*, i. [Paris, 1895] 431.

⁵ Yet ἐγγύσις as such did not give either party an action for specific fulfilment (in spite of the assertion to the contrary by Patsch, *Griechisches Bürgerrechtsrecht*, p. 49, relying upon *Ellian, Var Hist.* vi. 4). Action for breach of promise of marriage was unknown in Athens. But, if the dowry had been paid, the κύριος of the woman could recover it with interest (Dem. xxvii. 17).

⁶ Especially by Hruza, who sums up his position (*Ehebegr. nach att. Rechte*, p. 40) thus: "Sie (ἐγγύσις) ist kein bloß präparatorischer Akt, wie die Sponsalien, sondern die Ehebegründung selbst. Ware die ἐγγύσις nur ein Verlöbniß, so müsste später noch die Ehe durch einen besonderen Akt begründet werden. Davon ist aber nichts überliefert."

The procession accompanying the bride *ἐφ' ἑμαυτῆς* to her new home took place in the evening, by torchlight, the Hymenaios song being meanwhile sung to the piping of flutes (see the description of the scene on the Shield of Achilles in *Il.* xviii. 491 f.). The bride was introduced to the hearth amid showers of dates, figs, and other sweetmeats (*καταχύσματα*).¹

In Sparta a survival of the primitive capture of the bride lay in the custom of the bridegroom taking his bride from her mother's arms with simulated violence (*Plut. Lyc.* 15; *Dion. Hal.* ii. 80). For other survivals see M. P. Nilsson, 'Die Grundlagen des spartanischen Lebens,' in *Klio*, xii. (1912) 308 f.; E. Kessler, *Plutarch's Leben des Lykurgos*, Berlin, 1910.

6. *Bride-price*.—In primitive times, remarks Aristotle, men bought their wives (*Pol.* ii. 8 = 1268b; cf. Plato, *Laus*, 841 D). The Epic contains frequent mention of the bride-price (*ἔδνα*), normally calculated in oxen, paid by the suitor to the bride's father. It must sometimes have happened, even in very early times, and under a general system of marriage by purchase, that a father must give something to boot with his daughter in order to secure the desired son-in-law. The economic factor, the relation between population and food-supply, may have contributed largely to establish the custom of dower in place of the bride-price. In historical times, at any rate, the bride-price has been wholly replaced by the dowry given to and with the girl by her parents.

The Epic contains evidence of the transition stages. Of Andromache it is said that Hector took her from her father's house, 'having given bride-price untold' (*Il.* xxii. 472).² Of the slain Iphidamas it is said that he fell 'far from his bride, of whom he had known no joy, and much had he given for her' (*Il.* xi. 242 f.; he saw no return for his expenditure of 100 kine). In order to appease Achilles, Agamemnon offers to let him have a daughter of his free (*Il.* ix. 146 f.)—nay, more, to give a present with her (*ἐγὼ δ' ἐπὶ μετὰ δόσω | πολλὰ μάλ', ὅσσ' οὐπὺ τις ἐπ' ἐπέδωκε θυγατρὶ*);³ cf. *Od.* vii. 814, xx. 342.

Ultimately the *ἔδνα* come to be a dowry given by her parents to the bride—perhaps through a transition stage in which the bride-price received from the suitor was used wholly or in part to equip the bride and to furnish the feast.⁴ In the *Odyssey* the two systems are both found; e.g., in *Od.* ii. 58, 'Ἰκαρίου, ὡς κ' αὐτὸς ἐδνόνεσσετο θυγάτηρ, the meaning is 'give for the bride-price' (cf. *Od.* xvi. 77, 391 f., xix. 529); but in *Od.* i. 277 f. = *Od.* ii. 196 f., οἱ δὲ γάμον τεύχοντες καὶ ἀρνυμένους ἔδνα | πολλὰ μάλ', ὅσσα εὖκε φίλης ἐπὶ παῖδος ἐπείθεσθαι, a dowry given by the parents is meant, just as by Pindar and Euripides *ἔδνον* is used as equivalent to *φενή*.⁵

7. *The dowry*.—In historical times, in Athens, the marriage settlement or dowry (*προίξ*, *φενή*) was almost a criterion of honourable marriage as distinguished from concubinage; for the freedom of divorce allowed by Athenian law to the husband made the position of a portionless wife very precarious (cf. *Is.* iii. 28 : *κὰν ἀργύριον πολλῶ μᾶλλον ὁ ἐγγυῶν διωμοιολογήσατο ἔχειν αὐτὸν ἐπὶ τῇ γυναικί, ἢ να μὴ ἐπ' ἐκείνῳ γένοιτο ῥέδιον ἀπαλλάττεσθαι, ὅποτε βούλοιο*).

The marriage was followed by some ceremony or act for which the technical and fixed phrase was *γαμψίαν ὑπὲρ τῆς γυναικὸς τοῖς φράτεσιν εἰσφέρειν* (cf. *Is.* iii. 79, vii. 18; *Dem.* i. vii. 48). This has been variously interpreted by both ancients and moderns as an introduction or enrolment of the wife among the members of her husband's *φρατρία*, or as a banquet, sacrifice, or donation (see Wyse, *Isaeus*, p. 368).

² Cf. *Il.* xvi. 178, 190; *Od.* xi. 282. It is clear from *Od.* xv. 287 that the *ἔδνα* were given to the parents, not to the bride. Hence is explained the term used in *Il.* xviii. 593, *παρθένου ἀλφεσίβοιας*, 'realizing a high price in oxen' (see G. Murray, *Rise of the Greek Epic*, Oxford, 1911, p. 185 f.). In *Od.* viii. 818 f. there is talk of getting the price of a 'bad bargain' refunded. In *Il.* xiii. 386 Othryoneus receives Cassandra *ἀνέδνον*, but gives service in war in lieu of bride-price.

³ Leaf in his note on this passage prefers to see in it an example of an intermediate stage, in which the *ἔδνα* are given by the suitor to the bride herself, and may be increased by gifts from her parents, the word *μετὰ* being the technical term for such additional gifts (cf. *Il.* xxii. 51). The example quoted from *Od.* vi. 159 as an illustration of this intermediate stage ('loading thee with gifts') is not in point, the meaning being 'prevail over other suitors with offers,' so, to the parents of the girl.

⁴ Such a transition stage would enable us to explain the difficult expression in *Il.* xiii. 382 : (*συννυμθα*) ἀμφὶ γάμῳ, ἐπεὶ οὗτοι ἐδνόνται κακοὶ εἰμεν, where *ἐδνόνται* is by Leaf translated 'match-makers,' 'marriage-brokers,' or (Lang, Leaf, and Myers, tr., London, 1883) 'exacters of gifts of wooing.' It means 'one who makes a profit out of the *ἔδνα*.'

⁵ See on this development P. Cauer, *Grundfragen der Homer-kritik*, Leipzig, 1909, p. 286 f.

τῆς γυναικὸς). Instances, indeed, are found where no settlement was made; in the lower classes the amount must always have been trivial. Moreover, no legal obligation to provide a dowry can be proved for the father,¹ just as for brothers also the obligation to dower sisters suitably and not suffer them to grow old unmarried was moral, not legal (*Lys.* xiii. 45).²

The dowry did not become the husband's property, but he enjoyed the usufruct;³ he was generally required to mortgage real estate as security (*ἀποτίμημα*) for its eventual repayment.⁴ If the capital sum was not to be paid at once, either because the woman's *κύριος* had not enough ready money or because her husband could not give adequate security for the whole sum, interest upon the outstanding balance was paid to the husband according to agreement (*Dem.* xii. 6; *Inscr. jurid. grecques*, i. 133 f.). All these arrangements were made before witnesses (cf. *Dem.* xxx. 9, 21), but were not put in documentary form before an official and published, as at Myconos and Tenos; at Athens the permanent stone record of the mortgage was deemed sufficient safeguard of the rights of the parties. Naturally all this implied the necessity of keeping clearly distinct the property of husband and wife (cf. *Dem.* xlvii. 57, liii. 28); neither Athens nor, so far as our knowledge goes, the rest of Greece knows community of property between husband and wife, in spite of the recommendations of philosophers.⁵ It is clear that the Athenian dowry system, which was probably that of Greece in general, tended to maintain the connexion of the wife with her father's family; the wife did not, as in early Rome, become once for all a member of her husband's family (*Dion. Hal.* ii. 25).

(a) *Amount of dowry*.—According to Plutarch,⁶ a law of Solon limited the size of dowries at Athens; but this, if ever enforced, was certainly obsolete in the 4th cent. B.C., and was, in fact, virtually abrogated by the law fixing the minimum amount to be settled on a poor *ἐπίκληρος* by her next-of-kin—a law which equally passed as Solonian (*Dem.* xlii. 54). Hippocraticus, the richest Athenian of his time, gave his daughter ten talents on her marriage with Alcibiades (*Plut. Alc.* 8). The father of Demosthenes the orator, with a property estimated at fourteen talents, gave a dowry of two talents (*Dem.* xxvii. 5). The orators contain mention of dowries ranging from ten *minae* to more than 100 *minae*. Athenian mortgage-pollars, set upon property pledged as security for the repayment of dowries, show sums ranging from 300 to 4500 *drachmae* (6000 *drachmae*, or 60 *minae*=1 talent); but it is not certain, under the circumstances, that these sums constitute the whole dowry. The register from Myconos (3rd cent. B.C.) shows amounts varying from 700 *drachmae* to 14,000 *drachmae* (*Inscr. jurid. grecques*, i. 48; Dittenberger, *Syll.* 2, 817). The widow of the rich banker Pasion received three talents (*Dem.* xlv. 28, 35 :

¹ A father might settle a dowry on his daughter by will (*Lys.* xxxii. 6), but was not obliged to make this provision; failing which, a daughter had no legal claim on his estate. The Code of Gortyn is more liberal, giving daughters a legal claim to one-half of a brother's share, in lieu of a dowry—an already portioned daughter having no further claim. That is to say, at Gortyn there was legal obligation to dower. Ephoros, as quoted by Strabo, p. 482, *φενή δ' ἐστίν, ἢ ἀδελφοὶ ὄντι, τὸ ἡμῖν τῆς τοῦ ἀδελφοῦ μερίδος*, attributes the Gortynian rule to Crete generally, and may be correct in so doing.

² The nearest male relative of a poor *ἐπίκληρος* or *ἄθνη* was under legal obligation either to marry her himself or to portion her on a scale fixed by law (*Is.* i. 39; law in *Dem.* xliii. 54). Contempt of the law was possibly construed as *κακῶς ἐπὶ κληρῶν*, involving partial *ἀτιμία*.

³ Hence Euripides makes Medea complain that women have to buy a husband (*Med.* 230 f.).

⁴ Harpocr. xxx. 15 : *Εἰδόμενον δὲ οὐ τότε, εἰ γυναικὶ γαμουμένη δίδουν οἱ προσήκοντες, αἰτεῖν παρὰ τοῦ ἀνδρὸς ὥστερ ἐνέχυρόν τι τῆς προικὸς ἄξιον, οἷον οἰκίαν ἢ χωρίον*. A mortgage-stone (*ῥος*) was set up on the pledged property, with an inscription of the following type : 'Ὅρος χωρίου καὶ οἰκίας ἀποτίμημα προικὸς Πυθοστράτη Μενάκου Ἀναφλυστίου xxx (i.e. 3000 *drachmae*); see E. S. Roberts and E. A. Gardner, *Introd. to Greek Epigraphy*, pt. ii, *The Inscr. of Attica*, Cambridge, 1905, p. 497; Dittenberger, *Syll.* 2, 818).

⁵ Cf. *Plut. Praec. conj.* 20.

⁶ *Plut. Sol.* 20. See the explanation given by G. Glotz, *La Solidarité de la famille dans le droit criminel en Grèce*, Paris, 1904, p. 380 f. Plato, in *Laus*, 742 C, lays down the principle *γαμύνοντα δὲ καὶ ἐκδιδόντα μήτ' ἐν δόδονα μήτ' δέχεσθαι προίκα τὸ παράπαν μὴδ' ἡντινόου* (cf. 774 D). The νόμος περὶ τῆς προικὸς (*Dem.* xl. 19) has not been preserved.

προσθεῖς προίκα ὅσην οὐδεὶς τῶν ἐν τῇ πόλει φαίνεται; cf. Menander, Περικεραιμένη, *Oxyrh.* Pap. ii. 211, line 40, where the father promises three talents dowry, to the lover's great content. Apparently there was at Athens no law on the subject, but in other places it was found necessary to fix a legal maximum in order to prevent extravagant dowries; e.g., at Massalia the maximum was fixed at 100 χρυσοί, with an additional five χρυσοί for clothes, and five for ornaments (Strabo, p. 181). The aim of the Gortynian Code, in fixing a daughter's share in her father's estate, was probably rather to curtail dowries than to extend women's rights. The general tendency in the 4th cent., at any rate, was to give large dowries; and this in Sparta, as Aristotle remarks, was in part responsible for the concentration of property in the hands of women and their preponderant influence in the State (Arist. *Pol.* ii. 9=1270a: ἐστὶ δὲ καὶ τῶν γυναικῶν σχεδὸν τῆς πάσης χώρας τῶν πέντε μερῶν τὰ δύο, τῶν ἑπικλήρων πολλῶν γινομένων, καὶ διὰ τὸ προίκας δίδόναι μεγάλας; cf. *Plut. Agis*, 4, 7).

(b) *Refund of dowry.*—In Athens the dowry usually consisted of a sum of money, rarely of real estate (cf. *Plut. Aristid.* 27).¹ The bride's trousseau, however, was in some cases valued and expressly reckoned in the dowry, so that its equivalent was recoverable from the husband—otherwise it was held to be a free gift of the κύριος, and was not recoverable (cf. *Is.* iii. 35, viii. 8; see note in Wyse, p. 314).

Whilst the union continued, the dowry could not be withdrawn; but, upon dissolution of marriage on the initiative of either party² or by mutual agreement, it must be refunded to the woman's κύριος. It is usually held, however, that in case of the wife's adultery restitution was not enforceable upon her repudiation; but there is no sufficient evidence of this exception.³ The principles observed are: (1) rupture of union *inter vivos* compels restitution of the dowry, the existence of issue being immaterial; and (2) rupture by death of either party compels restitution, if there is no issue; if there is issue, the children benefit, except when the widow (mother) exercises her option of going back with her dowry to her father's house. Thus the dowry follows the wife, or goes to her children.⁴

The Code of Gortyn shows that there, as at Athens, the wife's dowry was not merged in the family estate, and it was forbidden to the husband to sell or mortgage her property; for in case of dissolution of marriage the wife returned to her own family, taking with her her dowry, together with half the increase thereof, and half the fruits of her own labour, as well as five *staters* if the husband was to blame for the separation. On the other hand, the interests of the husband's family were protected by the provision that he might not make any larger donation than 100 *staters* to his wife, nor might a son make a larger gift to his mother—the intention being the same in both cases, namely, to prevent absorption of the husband's estate by the wife, for all such gifts belonged to her absolutely. If her husband predeceased her, she might, if she chose to remarry, take her own property out of his estate into that of her second husband; the existence of issue was only so far material that, if there were children, she was limited to taking her dowry and such donation as her husband might have made within the legal limit aforesaid, and in the presence of three adult male witnesses. If there were no children, she might take, in addition to her dowry, half the fruits of her own labour, and half the produce in the house—the balance going to her dead husband's heirs-at-law. If she did not wish to remarry, her property remained in her own hands until she died, and then it was divided among her children; she enjoyed, therefore, a more independent position than the Athenian widow, whose property, in similar circum-

stances, passed into the hands of the eldest son as soon as he came of age.

Under the Gortynian Code, if the wife died before her husband, having had no children, her next-of-kin was entitled to recover her dowry, with the half of its fruits and half of the work of her hands; but, if the widower was left with children, he had the management and use of his dead wife's property until he died or remarried, in which cases it went to her children.⁵

8. *Dissolution of marriage.*—Dissolution of marriage in Athens was easily effected. The husband's power of repudiation was unfettered by any legal conditions or formalities. He simply sent the woman, with her dowry, back to her father's house. A prudent man would, as usual, summon witnesses, but need not do so (*Lys.* xiv. 28). When the wife sought a separation, she must lodge with the Archon τὸ τῆς ἀπολείψεως γράμμα (*Plut. Alc.* 8; *Andoc.* iv. 14: ἀπολειπεῖν, ἐλθοῦσαν πρὸς τὸν ἀρχοντα κατὰ τὸν νόμον); but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, condonation of the offence being visited with *ἀτιμία* (*Dem.* lix. 87). On the other hand, it is certain that adultery of the husband gave the wife no legal right of divorce,² and it is probable that it was not generally regarded as sufficient ground of separation.³ It is evident that the possession of a dowry must have been a strong protection to the wife against a husband's caprice, and in many households must have made her virtually mistress of the situation.

Two special features call for remark in this connexion. It was competent for husband and wife to agree to a mutual dissolution of marriage in order that another more congenial union might be made. Thus Pericles so parted from his wife with her consent, to take Aspasia (*Plut. Per.* 24).⁴ Again, the operation of the laws respecting heiresses (*ἐπικλήροι*) often, according to *Is.* iii. 64, severed husband and wife (see *INHERITANCE* [Greek], vol. vii. p. 304). The latter occasion of dissolution of marriage differs from the first-mentioned in that it came about as the result of an application to a court of law by the next-of-kin as claimant (*ἐπιδικασία*). In all other cases there is no sufficient evidence that any public legal procedure was in use, for even the wife's application to the Archon does not seem to have been more than an application or formal notice to him *in camera*. It is doubtful whether the *δίκη ἀπολείψεως* and the *δίκη ἀποπέμψεως*, which are said to have been available for husband and wife respectively, as if a sort of suit for restitution of conjugal rights, are not mere figments.⁵

¹ For comparison of the Gortynian regulations with the later regulations in the East ('jenem spätgriechischen Stadtrecht, welches man heute fälschlich als syrisches Rechtsbuch diagnostiziert,' p. 240) see Mitteis, p. 230 ff.

² Athenian sentiment on this matter was very far removed from the position of Arist. *Ec.* i. 4=1844a: ὥστερ ἰκέτιν καὶ ἀφ' ἐστίας ἡγμένην ὡς ἡκιστα δεῖ ἀδικεῖν ἀδικία δὲ ἀνδρὸς αἱ θύραζε συνουσίαι γινόμεναι; cf. *Pol.* iv. (vii.) 16=1335b; Plato, *Lysis*, 784 E. 'Dass die Ehe dem Manne keine Treupflicht auferlege, gehört zu den Grundmerkmalen der antiken Ehe gegenüber unseren Anschauungen und Rechtseinrichtungen' (Hruza, p. 20).

³ According to Herod. v. 89, at Sparta barrenness was good ground for divorce, at any rate for the royal house; cf. vi. 61.

⁴ Other examples: *Dem.* xxxvi. 28 f.; *Is.* ii. 61, 9: κάκειναι τὸ μὲν πρῶτον οὐδ' ἠνέσχετο αὐτοῦ λέγοντος, προϊόντος δὲ τοῦ χρόνου μόλις ἐπέστη· καὶ οὕτως ἐκδόμεν αὐτήν; cf. the case of Protomachos who, becoming entitled to a rich heiress, persuaded his wife to agree to a dissolution and fresh marriage (*Dem.* lvi. 41). In Thuri, according to Diod. xii. 18, freedom of divorce was limited by a law forbidding the person to whom the divorce was due to marry one younger than the original partner.

⁵ The *δίκη προίκας* or *δίκη σίτου*, suits brought by the woman's κύριος for the restitution of her dowry or payment of interest thereon, protected the woman's interests in respect of aliment. From this it follows that a woman who married without a dowry was in practically the same position as a *παλλακή*, and had no protection whatever against a husband's caprice short of actual violence to her person.

¹ Cf. Dittenberger, *Syll.* 2, 826: Ἡγησοῦς τῆς Κλεομένηου θυγατρὸς προίξ τὸ χωρίον (inscr. from Syros).

² *Dem.* lix. 52: κατὰ τὸν νόμον δε κελεύει εἰν ἀποπέμψῃ τὴν γυναῖκα, ἀποδίδοναι τὴν προίκα, εἰν δὲ μή, ἐπ' ἐνείκῃ δολοίς τοκοφορεῖν καὶ σίτου εἰς ὅθειον εἶναι δικάσασθαι ὑπὲρ τῆς γυναῖκος τῷ κυρίῳ, i.e., alimony at the rate of 18 per cent interest upon the dowry was recoverable from a recalcitrant husband (cf. *Is.* iii. 8, 35, ii. 9).

³ Certainly not to be proved for Athens in the 4th cent. B.C., by inference from the Ephesian inscr. of the 2nd cent. (Dittenberger, *Syll.* 2, 610, 60): ἡ γήμαντες καὶ διαλυθέντες μὴ ἀποδοῦναι τὰς φερὰς οὕτως ἀποδοῦναι κατὰ τὸν νόμον—even if that will prove anything at all (see T. Thalheim, *Lehrbuch der griech. Rechtaltertümer*, Freiburg i. B., 1895, p. 163).

⁴ Cf. L. Mitteis, *Rechtsrecht und Volksrecht in den ostl. Prov. des röm. Kaiserreichs*, Leipzig, 1891, p. 232: 'Die vom Vater bestellte Mitgift enthält eine Erbabfindung der Tochter'; cf. Plato, *Lysis*, xi. 923 D, E: ὅτε δ' ἂν τῶν νέων ὑπάρχων οἶκος ᾗ, μὴ νέμεν ταύτῃ τῶν χρημάτων, θυγατρὶ τε ὡσαύτως ᾗ μὲν ἂν ἐγγενημένος ὡς ἀνὴρ ἐσόμενος ᾗ, μὴ νέμεν ᾗ δ' ἂν μὴ, νέμεν.

9. Widows.—The Athenian regulations concerning widows were as follows. If there were no children, born or adopted, the widow must return with her dowry to her father's house; she must, as a rule, if of suitable age, marry again in accordance with the wishes of her dead husband or those of her *kúrios* (Is. viii. 8). If there were children, she might remain in her husband's house, where she passed under the authority of her children's guardian, if they were still minors, and under that of her eldest son when he came of age—her dowry becoming the property of her children, subject to her right to support (Dem. xlii. 27, xli. 20). She might, however, return with her dowry to her father's house, and be given again in marriage (Dem. xl. 6 f.). The same option was open to her if, on her husband's death, she declared herself pregnant (Dem. xliii. 75), in which case it was the Archon's duty to protect her interests (Arist. *Ath. Pol.* 56. 7). It is clear that here again the existence of the dowry secured on mortgage put the final decision completely into the hands of the widow and her *kúrios*.

10. Marriage law in the papyri.—In Egypt, under the Ptolemys, Hellenic legal ideas and principles came in contact with those of another, in some respects more highly developed, type; later, both were influenced by the legal conceptions and practices of the Romans. In the Papyri we have, therefore, to distinguish between the enchorial marriage, in which the parties are Egyptians, and the Hellenic marriage, the regulations concerning which are partly derived from the older Greek law and partly developed under the influence of native models.

The technical term for marriage in the Papyri is *γάμος* or *συνοικισίον*. Dissolution of marriage (and probably therefore entry upon marriage) is no longer a purely private act, but requires the lodging of an *ἀπογραφὴ* before an official (cf. what was required of the women in Athens, Dem. xxx. 17, 26; Is. iii. 78: *πρὸς ὁποῖον ἄρχοντα ἢ ἐγγυητὴν γυνὴ ἀπέλυσε τὸν ἄνδρα ἢ τὸν οἶκον αὐτοῦ*, as well as the intervention of *τεροθύται*).¹ The precise relation between the religious element thus imported into the transaction and the civil element represented by the *ἀπογραφὴ* and the marriage contract itself is by no means clear as yet.

The extant marriage-contracts exhibit, when taken together, the following elements. (1) Statement of the giving or receiving of the woman in marriage; e.g., Mittels-Wilcken, *Grundzüge*, ii. 317, n. 238: *λαμβάνει Ἑρακλείδης Δημητρίαν Κόψαν γυναῖκα γεννησάν παρὰ τοῦ πατρὸς, ὡς ἐν τῇ ἀρχαίᾳ ἐπιγραφῇ, ὅτι ἐὰν ἐλάμβανε Θεόφραστος ὁ ἐμὸς πατὴρ τὴν ἐμὴν μητέρα παρὰ Ἱεροκλέους*.² (2) Acknowledgment of receipt of the *φερνή* brought by the woman. (3) Mutual marital obligations; the husband promised to support the wife and to treat her properly (*μὴ ὑβρίζειν μηδὲ κακοχεῖν*), and engaged not to repudiate her (*μὴ ἐκβαλεῖν*) or to be unfaithful (*μὴ εἰσαγεῖσθαι ἄλλην γυναῖκα μηδὲ παλλακὴν μηδὲ τεκνοποιεῖσθαι ἐξ ἄλλης γυναίκος*); on her side the woman promised to be faithful (*μὴδ' ἄλλῳ ἀνδρὶ συνειναί*), and to look after their joint interests in the household (*μηδὲ φθεῖρειν τὸν κοινὸν οἶκον*). (4) The sanction of the mutual obligations; the husband guilty of breach of his promises must repay forthwith (*παραχρήμα*) the dowry with addition of half its amount (*τὴν φερνὴν ἡμιόλιον*); the wife so guilty lost her dowry entirely. Apparently the ordinary courts settled disputes so arising. (5) Divorce on the man's side (*ἀποπομπή*) was tantamount to breach of his promise *μὴ ἐκβαλεῖν*, and rendered him liable to the aforesaid penalty; separation on the woman's part (*ἀπαλλαγὴ*) was not regarded as breach of promise, but provision was made for repayment of the dowry within a stated time. That is to say, the husband had entirely lost that unfettered power of repudiation, under condition of simply refunding the dowry, which belonged to him under the older Hellenic law. On the other hand, the dowry retained here also the overwhelming importance which it had in Hellas.³ Here also it was, if not a definite sum of money, valued and expressed as

such, and the husband was liable only for refund of that stated amount—the principle being, as at Athens, that the wife's dowry should neither increase nor diminish (cf. the Code of Gortyn); from which it follows that the management of the dowry must have been in the hands of the husband, as was the case at Athens.

W. J. WOODHOUSE.

MARRIAGE (Hindu).—I. General characteristics.—The earlier Vedic texts, which may be said to cover the period down to the end of the 5th cent. B.C., present with practical uniformity the same account of the condition of marriage among the Hindu tribes whose life they depict. Among these tribes marriage was a union of man and woman, for all practical purposes indissoluble save by death, and normally monogamic except among the highest strata of the population. Marriages were contracted between persons of full age, and often by mutual consent; while there are clear traces of the payment of a bride-price for a wife, there is also proof of the giving of dowries by fathers or brothers in order to secure the marriage of daughters or sisters. Traces of marriage by capture are scanty and confined to the warrior class.

The position of the wife in these conditions of society was one of security and dignity. She was, indeed, under the complete control of her husband, though we do not know to what extent of personal restraint his power extended. But she was the mistress (*patnī*) of the household, as her husband was the master (*pati*). In the marriage-hymn of the Rigveda (x. lxxxv. 46) she is told to exercise authority over her father-in-law, and her husband's brothers and unmarried sisters. The case contemplated seems to be one in which the eldest son of a family marries at a time when his father, through decrepitude, has ceased to exercise full control over the family, and when, therefore, the wife of the eldest son becomes the mistress of the joint family. This is not inconsistent with the respect elsewhere mentioned as due from a daughter-in-law to her father-in-law, which doubtless applies to the case in which the father is still able to control his son and to exercise the rightful authority of the head of the house. The wife was also a participator in the sacred rites performed by her husband; but in this regard a certain deterioration of her position can be traced in the Vedic period, doubtless as the result of the growing importance of the priestly class and the rule that women could not be priests. This regulation seems to have been due to the view that women were impure as compared with men, and the same idea may have been at the root of the practice, which appears first in the *Satapatha Brāhmaṇa* (i. ix. 2. 12), requiring a woman to eat after her husband, just

¹ For these see W. Otto, *Priester und Tempel im hellenistischen Ägypten*, 2 vols., Leipzig, 1908, I. 163 f., II. 295 f.

² A curious exception in *Pap. Glæ*, II. 8 (*ἐξέβορ ἐμὴν Ὀλυμπιάδα . . . γυναῖκα γεμετήν*), in which the woman, of Macedonian origin, gives herself away in marriage, may be a survival of native Macedonian law, which in this respect, therefore, must have resembled that of the Lydians, of whom Herodotus remarks with surprise that the women give themselves in marriage (I. 98: *ἐκδοῦσθαι δὲ αὐταὶ ἐώνυράς*—besides collecting their own dowries *ἐν αὐτῇ ἐργασμένηται*).

³ Mittels-Wilcken, II. 1. 219: 'Im Gerippe dieser Urkunden bildet die *φερνή* das Rückgrat, an welches alle anderen Bestimmungen sich nur anlehnen.'

as in Bengal at the present day a wife normally feeds on the remnants of her husband's meal.

Naturally enough, there were different views as to the character of women. A wife completes a husband and is half of his self, we are told (*Brhadaranyaka Upaniṣad*, I. iv. 17; *Satapatha Brāhmaṇa*, V. ii. 1. 10), and her good qualities are frequently mentioned. On the other hand, the *Maitrayaṇi Samhitā* (I. x. 11, III. vi. 3) describes woman as untruth and as connected with misfortune, and classifies her with dice and drink as the three chief evils. Elsewhere (*Taittirīya Samhitā*, VI. v. 8. 2) a good woman is ranked below even a bad man, and the *Kāthaka Samhitā* (xxx. 1) alludes sarcastically to her ability to obtain things from her husband by cajolery at night.

The most important function of a wife was doubtless that of bringing into the world a son in order to perform the necessary funeral rites to his father and to continue the race. Adoption, indeed, was known as early as the *Rigveda*, but it was not popular (cf. art. ADOPTION [Hindu]), and lack of a son (*avīratā*) was regarded as the greatest of evils. On the other hand, the birth of a daughter was regarded as a misfortune; the *Aitareya Brāhmaṇa* (vii. 15) contrasts a daughter as misery (*krpana*) with a son as a light in the highest heaven. But the view once widely held, that the Vedic Indians practised infanticide in the case of girls, has been disproved by O. von Böhtlingk.¹

In political life women took no part; men alone went to the assembly. But, while the position of the wife in the sacrificial ritual was narrowed by the priests, there is evidence that women took part in the speculative activity which manifested itself in the 6th cent. B.C. in the *Upaniṣads*. We learn there not only of several women teachers, who may or may not have been married, but also of one of the two wives of the great sage Yājñavalkya, who shared her husband's intellectual activities.

In the *Gṛhyasūtras* and *Dharmasūtras*, which mark the end of the Vedic period proper, and which may be held to represent the views of the period from the 4th cent. B.C. onwards, in the epics (c. 200 B.C.-A.D. 200), in the *Arthasāstra*, and in the *Kāmasūtra* we find in full force the tendencies which reveal themselves in the later classical literature, and can be observed in their development at the present day. Different types of marriage are now recognized and classified, being assigned to the different classes of the population. Marriages between people of full age are still allowed; thus the warrior class is permitted to marry by capture or to form love matches, while the *Kāmasūtra* permits love matches generally. Against these special cases must be set the general rule, which first appears as a counsel of perfection in the *Mānava* (I. vii. 8) and *Gobhila Gṛhyasūtras* (III. iv. 6), but which by the time of the later *Smṛtis*—i.e., not later probably than the beginning of the Christian era—has won full acceptance, viz. that it was sinful on the part of a father² to allow his daughter to attain puberty without being married, and the girl herself fell to the condition of a *Sūdra* (*vṛṣālī*), marriage with whom involved degradation on the part of a husband. The date of marriage is placed earlier and earlier as the authority is later in date. Thus the *Smṛti* of Manu (ix. 94) fixes the ages of husband and wife at 30 and 12 or 24 and 8 respectively; the later work of Bṛhaspati (*ZDMG* xli. [1892] 416 f.) and the didactic portion of the *Mahābhārata* (XIII. xlv. 19) give the wife's age in these cases as 10 and 7 respectively, while yet later texts give 4 to 6 as the lower and 8 as the upper limit. There is

abundant evidence that these dates were not merely theoretical: the old marriage-ceremonial, which included as its essential part the taking of the bride to her new home, whence the name of marriage (*vivāha*) was derived, was divided into two parts; the actual ceremony took place shortly after the betrothal (*vāgdāna*), but the taking of the bride to her husband's home was delayed until after puberty. The unmarried daughter (*kumārī*) living at home was distinguished from the married daughter (*svāsinī* or *svavāsinī*), whose connexion with her parents was still recognized to the extent that, contrary to the rule that no mourning was observed for a married daughter, a brief period of mourning was prescribed in the event of her death before her departure from her old home. The early prevalence of the custom is also vouched for by the Greek authorities,¹ and was noted by al-Bīrūnī in the 11th cent. A.D.² At the present time, despite the efforts of reformers, it is still the prevailing practice among all Hindus who stand under the influence of the Brāhmins to marry their daughters before puberty, and the practice has spread even among Muhammadans.

The better side of such marriages is put before us in the *Hārta Smṛti* (iii. 3). The wife is to devote her whole thought to her house and her husband, to prepare his food, eat what is left over by her husband and sons, wash the utensils, strew cow-dung on the floor, make the domestic offerings, embrace her husband's feet before going to rest, in the hot season fan him, support his head when he is weary, and so forth. On the other hand, to her falls the place of honour in the household, and she is undisputed mistress of her daughters and any other women living under her husband's roof. The description in the *Smṛti* is confirmed by the literature and by the practice of the present day. On the other hand, it must be noted that the intellectual achievements of women in India since the rule of early marriage became effective have not been in accord with the normal development which might have been expected from the state of society depicted in the *Upaniṣads*, and the heroines of the epic and the classical poetry are chosen, as a rule, from those women who, for some reason or other, have not fallen under the operation of the ordinary practice. There is also much evidence in the proverbial literature of the demerits which were attributed to women in general and wives in particular.

2. Forms of marriage.—In the Vedic period the normal form of marriage appears to have been one in which much was left to the choice of the two persons concerned. It is, at any rate, not proved that the father could control the marriage of either son or daughter of mature age, though doubtless parents often arranged marriages for their children. Of the practice of giving a bride-price there is clear evidence from the later *Samhitās*, but there is also clear evidence of the practice of a father and, in his absence, a brother giving a dowry to enable a daughter or sister to obtain a husband; or a daughter might be given to a priest in return for his assistance at some rite. There is also a trace of marriage by capture in the *Rigveda*, where we hear (I. cxii. 19, cxvii. 20, x. xxxix. 7, lxx. 12) of the carrying off by Vimada of the daughter of Purumitra, apparently with the good will of the maiden but against her father's desire. The normal marriage was duly celebrated at the house of the father of the bride, and its ceremonial, which is fully described in the *Gṛhyasūtras*, is marked by many features which have been found in the marriage-ritual of other Indo-European and non-Indo-European peoples. Of these practices the most

¹ *ZDMG* xlv. [1890] 494-496.

² In his default a brother, grandfather, maternal uncle, or mother, or an agnate or cognate, should act (Nārada, xii. 20-22).

¹ Hopkins, *JAOS* xii. [1889] 343.

² *India*, tr. E. Sachau, London, 1888, ii. 154.

important and wide-spread were the solemn handing over of the maiden by her father (*kanyādāna*), the joining of the right hands of the bride and bridegroom (*pānigrahaṇa*), the recitation of Vedic formulae, including a speech by the bridegroom to the bride asserting their unity, the offering of libations in the fire and the threefold circumambulation of the fire, the seven steps taken together by the wedded pair, and, finally, the taking away of the bride to her new home by the bridegroom. There is evidence in the later literature that these customs formed the kernel of the normal marriage-ceremonial throughout the Middle Ages, and much of the ritual is still observed at the present day.¹

In the *Smṛti* literature eight forms of marriage are recognized and described, but with many differences in detail. In the case of Brāhmins Manu (iii. 24) recognizes as approved four forms: the *brāhma*, *daiva*, *arsha*, and *prajāpatya*. The characteristics of these forms are that in the first the father spontaneously offers his daughter to a suitable husband, in the second he gives her to a priest engaged in performing a rite for him, in the third the suitor gives a pair of oxen, and in the fourth the initiative in proposing the marriage comes from the bridegroom. The first and fourth forms, therefore, practically represent marriages by mutual consent and parental arrangement, while the second and third have traces of marriage by purchase, though the texts are careful to explain that the pair of oxen was not intended as a price (*śulka*), but was to be given to the daughter by her father as a mark of honour. It is perfectly clear, however, that the original sense of the custom was a purchase, and this fact is borne out by references in the older *Grhyasūtras* of Pāraskara (i. vii. 18) and Sāṅkhāyana (i. xiv. 16) to the practice of giving the father-in-law a hundred oxen with a waggon, and by the recognition in the *Grhyasūtras* of the Kāthaka and the Mānava schools (i. vii. 11) of a usage by which the bride-price was paid in money to the father.

Marriage by purchase was recognized among the warrior class; in the *Mahābhārata* (i. cxiii. 9 f.) we are told that Pāṇdu paid the Madra king in gold, jewels, horses, elephants, ornaments, etc., for the hand of his sister, and that the purchase of women was the family practice of the king. Still more was the custom prevalent among the lower classes of the people. Manu admits (iii. 24) that some allowed the Vaiśyas and the Sūdras the *āsura* marriage, which was an open, out-and-out sale, though he condemns the practice *in toto*. But facts have prevailed over the objections of the Brāhmins to the sale of children, and even at the present day marriage by purchase is common enough in Bombay, Madras, and the Panjāb, and is the normal form in Assam. In Bengal it is restricted to the lower classes of the population, but there the practice of the purchase of bridegrooms prevails instead, the practice of child-marriage having placed a high price on eligible husbands.

In addition to the *āsura* form, the warrior class was allowed the *rākṣasa*, the *gāndharva*, and the *paśācha* forms, though the last is condemned by Manu along with the *āsura* as altogether improper. The former type of marriage was marriage by capture in its simplest form, and its performance is related of many of the heroes of the epic, though the rape of women of high rank is elsewhere regarded as a capital offence. But, outside the epic, we hear little of this remarkable privilege of the warrior class, and this practice has left no survivals in modern India, though it is found among some primitive hill tribes, where it is of independent origin. Some, indeed, of the details

of the marriage-ritual given in the *Grhyasūtras* have been interpreted in this sense, but the interpretation is neither necessary nor probable. The *gāndharva* rite, which some authorities recognize as applicable to all classes, and which the *Kāmasūtra* eulogizes as the best form of all, is described as a mutual union by desire, the classical example of which is that of King Duśyanta and Sakuntalā. The *Kāmasūtra* recommends that its performance should be accompanied by the usual offerings in the fire and the circumambulation of the fire by the wedded pair, on the ground that the observance of these formalities would compel the parents of the bride to recognize the validity of the marriage. The *paśācha*, which is variously described, was marriage with a girl when drunk or insane, and is not recognized as a legitimate form by some authorities, like Āpastamba and Vasīṣṭha.

For the Vaiśya and Sūdra the forms of marriage recognized were the *gāndharva* and the *āsura* with, according to some authorities, the *paśācha*. In modern times the forms of marriage recognized are, even for Vaiśyas and Sūdras, either the *āsura* or the *brāhma*, under which term is understood a form of marriage containing the essentials of the first four forms of the *Smṛtis*.

The *Smṛtis* do not recognize a form of marriage which plays a great part in the epic—the *svayamvara*, or self-choice, a ceremony at which a princess chooses for herself a suitor at a great assembly held for the purpose. The act of choice might be preceded by a trial of strength on the part of the suitors, the victor being rewarded with the hand of the maiden, and, even when this formality was omitted, it is probable enough that the choice was only nominally free, and that the princess was guided by the will of her father or brothers. The only *svayamvara* which the *Smṛtis* mention is the right of a daughter in any class, if her father does not find her a husband, to seek one for herself; in this case the daughter ceases to have any right to any ornaments received from her own family, while the husband need not pay any bride-price, and is permitted to steal her away.

Only the first four forms of marriage are at all religious in character; the marriage hymn of the R̥gveda (x. 85), which serves to provide verses for the normal form of marriage, deals with marriage in general and the prototype of all marriage in the form of the wedding of Soma, the moon, with Sūryā, the daughter of the sun. This legend is certainly recondite in character, and it is legitimate to deduce from this fact, and from the fact that the *Smṛtis* do not deal with the forms of marriage, that the religious ceremonial was not the essential or primitive part even of the higher forms of marriage.

3. Restrictions on marriage.—It is uncertain how far the modern rule of marriage, which permits alliance between members of the same caste only, was in vogue in the early Vedic period, when the distinction of castes (*jāti*) was only in process of evolution from the system of classes (*varṇa*). It is clear from the *Brāhmanas* that purity of descent was an important qualification for Brāhminship, but cases are recorded (e.g., *Āitareya Brāhmaṇa*, ii. 19) which show that the son of a Brāhman and a Sūdra wife might yet be a Brāhman, and that Brāhmins could marry the daughters of members of the warrior class. With this accords the evidence of the *Grhyasūtras* and *Dharmasūtras*, which recognize with a good deal of agreement the right of each class to marry women of the classes below them in the established order, Brāhman, Kṣatriya, and Vaiśya, and which differ seriously only on the validity of marriages with the Sūdra women. Arrian, probably on the authority of Megasthenes, records (*Indica*, xii. 8)

¹ See M. Winternitz, *Das altindische Hochzeitsrituell*, Vienna, 1892; A. Weber and E. Haas, *Indische Studien*, v. 177–411.

that marriages were not allowed between *γέρη*—probably a reference to the castes which were certainly in existence by 300 B.C. The Buddhist texts¹ yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Manu still recognizes mixed marriages subject to the rule of hypergamy, but the later *Smṛtis* tend to rule them out as objectionable. The modern rule is strict against mixed marriages, confining the possibility of marriage to the modern castes; but the date when this practice finally prevailed is unknown, as even late texts repeat the permission for such marriages sanctioned by the older authorities, and the Kulin Brāhmins of Bengal still avail themselves of this now pecuniarily very valuable privilege.

Simultaneously with the growth of the prohibition of marriage within the caste were developed restrictions on marriage within the family. In one hymn in the Rigveda (x. 10) the marriage of brother and sister is expressly treated as improper, and there is no reason to suppose that this was an innovation, as suggested by Weber.² No other restriction is alluded to, and the *Satapatha Brāhmaṇa* expressly refers (I. viii. 3. 6) to marriage as permitted in the third or fourth generation, the former being the rule, according to the commentator, among the Kānvas, the latter among the Saurāṣṭras, while the Dākṣiṇātyas, or people of the south, permitted marriage with the son of the father's sister or daughter of the mother's brother, but not, apparently, with the son of the father's brother or the daughter of the mother's sister. The *Gṛhyasūtras* and the *Dharmasūtras* in effect agree in prescribing that marriage should not take place between a man and a woman of the same *gotra* (q.v.) as his father, or a *sapindā* of his mother, and these terms extended at least to all relatives within five degrees on the mother's and seven on the father's side. Later texts add to the restrictions by extending the prohibitions in the case of the mother, and by forbidding unions with the daughter of a spiritual teacher or pupil. At the same time, concessions are made to local customs, and the practice of marriage of cousins in S. India is recognized by Baudhāyana (I. ii. 3). But the practice of marrying outside the *gotra*, a term of wide extension and indefinite sense, but covering all those of the same family name, is recorded by al-Bīrūnī,³ and is the general rule at the present day throughout India—at any rate, among all the higher castes. The chief exceptions are found in S. India, where some tribes practise the opposite rule of endogamy.

In Rājputāna, among the Rājputs who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture; but there is no sufficient evidence for the view⁴ that the development of the custom generally was connected with marriage by capture.

Of much less importance are the restrictions arising from the feeling that the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a penance, and not a fatal bar to the validity of the marriage. The rule is, however, very old, being found in the *Yajurveda* (*Maitrāyaṇī Samhitā*, IV. i. 9), and recognized throughout the later literature. In the south members of Brāhman castes adopt the practice of a mock marriage of the elder brother with a

branch of a tree in order to avoid the evil result of a breach of this rule by a younger brother.

The bride should be a virgin, and the importance of this rule lies in the fact that it renders the re-marriage of widows difficult. In the Rigveda (VI. xlix. 8) there is some indication¹ that a woman might re-marry if her husband had disappeared and could not be found or heard of, and in the Atharvaveda (IX. v. 27 f.) mention is made of a spell to secure that a woman married twice may be united in the next world with her second, not her first, husband. The reference here may be to re-marriage in the case of an absent husband or one who had lost caste. The doctrine of Manu is that a woman should never be re-married, and that the marriage formulæ are intended only for maidens, but he admits one exception in the case of a woman whose husband dies before the completion of the marriage. Other authorities permit re-marriage in the case where a husband has disappeared, is dead, has entered a monastic order, is impotent, or has been expelled from his caste; but the authorities differ widely as to the length and condition of absence which entitle a woman to re-marriage. The son of a widow who has re-married (*pauṇarbhava*) is ranked by Manu and other authorities only among the second six of the twelve kinds of son admitted by Hindu law. But the dislike of re-marriage was one which developed gradually; the actual reprobation of such a son first occurs in Brhaspati (xxv. 41), and the forbidding of the re-marriage of a widow occurs only in the *Ādipurāṇa* and later works. The objections to such marriages in modern India are very strong among those castes which lay most stress on child-marriage, and, despite the legalizing of them by Act XV. of 1856, and efforts of social reformers, they are still disapproved by the higher castes.

In the case of a man, while impotence was recognized as a ground on which the wife might contract a new marriage, the marriage was not in itself null, and even mental derangement was not regarded as justifying re-marriage on the part of the wife.

4. Polygamy.—The practice of polygamy among the Vedic Indians is abundantly proved by direct references in the Rigveda and other texts, though in the main monogamy is recognized as normal. In the case of the king four wives are expressly mentioned—the *mahisi*, the first wedded, the *parvṛktī*, or discarded (apparently one who bore no son), the *vāvātā*, or favourite, and the *pālāgati*, who is explained as the daughter of one of the court officials. The *mahisi* seems to have been the wife proper, though the others were evidently not mere concubines. In the *Arthashastra*, the *Smṛtis*, and the epic the rule is laid down that a man may have wives from his own caste and each of those below his, either including or excluding the Śūdra, and in such cases the wife of the same caste was the wife *par excellence* (*dharmapatnī*), with whom the husband performed his religious duties. The heroes and Brāhmins of the epic are frequently represented as having several wives, but one of them always ranks first, and, similarly, later in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to caste and, within the caste, to date of marriage might, however, be overridden by the husband, who could degrade a wife from her position as chief wife; in that case he was required to make her a present equivalent to that made to the new wife whom he was marrying. The modern rule permits the husband to contract as many marriages as he wishes without any need for justification or consent on the part of his existing wives.

² See Macdonell and Keith, *Vedic Index*, I. 475, n. 7.

³ Tr. Sachau, II. 155.

⁴ See Jolly, *Recht und Sitte*, p. 68.

In addition to wives proper, the *Smṛtis* recognize the existence of concubines (*dāsi*, *bhujisṛā*), who were distinguished from wives by not being married in due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was regarded as adultery. Similarly, at the present day the keeping of concubines by wealthy Hindus is a recognized usage.

The *Smṛtis* show some preference throughout for monogamy. Apastamba (II. xi. 12) expressly disapproves the re-marriage of a man who has a wife living, and other authorities restrict the right to become the heir of a husband to the chief wife, who is the surviving half of her husband. In all religious observances the husband is to act with his chief wife only, and marriage is treated by Manu (ix. 101) as a pledge of mutual fidelity between husband and wife.

5. Polyandry.—While polygamy is recognized in the Vedic period, though chiefly among kings and important Brāhmins, there is no clear trace of polyandry, all the passages adduced from the *Rigveda* (x. lxxxv. 37 f.) and the *Atharvaveda* (xiv. i. 44, 52, 61, ii. 14, 17) admitting of more probable explanations. On the other hand, the heroes of the epic, the five Pāṇavas, are represented as marrying Draupadi and having her as wife in common—a fact which is elaborately explained and defended in the epic. This form of polyandry is recognized by Brhaspati (xxvii. 20) as practised in the south, and by Apastamba (ii. xxvii. 2) as an antiquated use. At the present day polyandry is still found among Brāhmins, Rājputs, and Śūdras alike in Kumaon, where children are shared by the brothers as by the Pāṇavas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Jāts of the Panjāb the wife of the eldest brother has to serve often as the wife of the younger brothers also, and the practice is common in the case of the Himalayan tribes. The custom also prevails in the south among the Nairs of the Kanara country and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetan and Dravidian tribes, and there is no indication that the practice was ever widely spread among tribes of Aryan culture.

6. Divorce.—The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the Dravidian and Tibeto-Burman usages, marriages among Hindus were seldom broken by divorce. In the *Smṛti* literature,¹ however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (*tyāga*), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a serious crime, which must be expiated by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and might in certain cases be punished with death, but, according to other authorities, it could be expiated by severe penances. Any serious offence against a husband might, according to Yājñavalkya (i. 72), be a ground of divorce, and Nārada (xii. 92, 93) gives as offences justifying such treatment attempts to murder, wasting property, or the procuring of abortion. In modern Hindu law divorce depends on local custom and, where allowed, is permitted only for adultery, but divorces

are very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearance, long-continued absence, impotence, or loss of caste of their husbands.

7. Position of widows.—In the funeral rites of the *Rigveda* the wife of the dead man is represented (x. xviii. 7 f.) as lying beside him on the pyre and as being summoned to leave the dead in order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmistakably suggests the existence of an older custom to this effect, and the *Atharvaveda* (xviii. iii. 1) refers to this as an old practice.¹ It was evidently not approved by the Brāhmins of the Vedic age, for it is not mentioned in the *sūtras*, and appears first in the late *Vaiṣṇānasa Gṛhyasūtra* (vii. 2) and in interpolated passages of the *Viṣṇu Smṛti* (xxv. 14, xx. 39). The later *Smṛtis* approve it, but not without occasional dissent. In the epics it plays little part,² though one of Pāṇdu's wives insisted on being burned with her husband (*Mahābhārata*, i. cxxv. 31); but in the later romances and historical works it is often mentioned, and as early as A.D. 509–510 an inscription is found to celebrate a *sati*. Forbidden in British India in 1829, it was observed in 1839 in the Panjāb at the death of Ranjit Singh, and in 1877 at that of the Maharāja of Nepāl. The primitive character of the rite is shown by the fact that often other attendants perished with the queen or queens when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from home, she might be burned alone (*anumarāṇa*), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy doubtless reinforced considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the *Smṛtis* and modern usage, despite the efforts of reformers, condemn to a life of fasting, devotions to her dead husband, pilgrimages, and abstinence from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to maintain her so long as she remained faithful to her late husband. The later texts also recognize her right to be heir to her husband, but only on condition that she remained unmarried—a disability which is not altered by Act XV. of 1856. The harshness of the rule is better realized when it is remembered that the practice of child-marriages enormously increases the number of widows.

In the *Rigveda* it seems to have been the practice for the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already. This, the natural interpretation of the funeral hymn (x. xviii. 8; cf. also xl. 2), is borne out by the fact that the modern usage in the Panjāb,³ which has preserved much of ancient practice, is for a man to marry his brother's widow, with the result that many men have two wives. In the *sūtras*, however, this practice is whittled down to the permission given to the brother of the dead or, if there is no brother, a near kinsman to beget a son with the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, would be managed by his mother or by his real father, to

¹ A. Hillebrandt, *ZDMG* xl. [1886] 710, explains these passages quite differently; but his view can hardly be correct.

³ Cf. Brhaspati, xxvii. 20, ii. 31; *Arthashastra*, iii. iv. 59.

¹ The *Kautilya Arthashastra* (possibly 4th cent. B.C.) goes far in allowing divorce (ii. ii. 59, iii. 59).

whose estate also he might in certain cases succeed. By an extension of the principle the texts allow an impotent or ill man to appoint another during his life to beget a son for him, and in the epic the right to act in these cases is frequently recognized as specially appropriate for Brāhmins. But the general tendency of the later *Smṛtis* is more and more against the practice, which was subjected to increasing restrictions or absolutely forbidden, and in modern times the practice of appointment (*niyoga*) has been replaced by the more primitive form of actual marriage with a brother's widow.¹

8. Marriage and morality.—Though fidelity on the part of both parties to a marriage was doubtless an ideal, there is abundant evidence throughout the literature that infidelity on the part of the husband was neither rare nor considered worthy of moral censure. In the case of the wife there is no doubt that in the *Smṛti* literature and in modern usage adultery is regarded as a serious offence which may in certain cases be punished by death. Some of the Vedic passages (*Taittirīya Samhitā*, v. vi. 8. 3; *Maitrāyaṇī Samhitā*, III. iv. 7) cited as showing tolerance of adultery are susceptible of other interpretations, but there remain the facts that a special ritual at the *Varuṇapraghāsa* is clearly intended to remove the ill-effects of adultery (*Maitrāyaṇī Samhitā*, I. x. 11; *Śatapatha Brāhmaṇa*, II. v. 2. 20), that the *Bṛhadāraṇyaka Upaniṣad* (VI. iv. 11) contains a spell to expiate adultery with the wife of a Brāhman, and that the *Bhāradvāja Gṛhyasūtra* (ii. 28) advises a husband how to proceed in the case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently allude to cases of infidelity, and the *Arthasāstra* and the *Smṛtis* recognize as one kind of son the *gūḍhotpanna*, or secretly born, an illegitimate son who can, nevertheless, succeed to the property of his mother's lawful husband. Baudhāyana (II. iii. 34) and Apastamba (II. xiii. 7) preserve a saying of a sage to the mythical king Janaka, referring to a time when the virtue of married women was lightly estimated, and the *Mahābhārata* refers (I. cxxii. 4 ff.) to a time when wives were used in common, a practice terminated by Śvetaketu. The lack of chastity of the women of the East is recorded by Brhaspati (ii. 30). Too much stress must not, however, be laid on these notices; the reference to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times are made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

9. Marriage and property.—The widow of the dead man, according to the *Nirukta* (iii. 4) and Baudhāyana (II. iii. 44-46), was denied the power of becoming an heir. Gautama (xxviii. 21 f.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of *niyoga* for providing the son in whose absence alone could the mother be heir. In Viṣṇu (xvii. 4) and Yājñavalkya (ii. 135) is first found the express mention of the widow as the next heir in the absence of male issue. But the extent of the right thus obtained is expressly limited by the texts: the widow could not give away, or mortgage, or sell the property thus inherited; she held it for her enjoyment for life, subject to continued chastity and to her not contracting a second marriage, but she held it under the control of her husband's kindred and with the limitation that it should return to them on her death.² If there were several widows, the chief wife seems to have

been entitled alone to succeed as heir, but on her fell the duty of maintaining the other wives—a rule which is not recognized in modern Hindu law, where all the wives have an equal right of succession.

Distinct from the property obtained by inheritance was the *strīdhana* of the wife, which is mentioned by Gautama, but first described in detail in the *Arthasāstra* (III. ii. 59) and by Viṣṇu (xvii. 18). It included any presents from parents, sons, brothers, or kinsmen, the marriage gifts, the bride-price when given by her father to her, and the fine paid by her husband in the case where she was degraded from her position as chief wife in favour of another. This property fell on her death to her daughters, if she had any; if not, apparently to her sons, who, according to some authorities, shared it with their sisters in any event; and, in the case of failure of all issue, to her husband only if she had been married according to one of the four superior forms of marriage; otherwise it went to her father. In some cases the unmarried daughter was preferred to the married in heirship to her mother. In the later *Kātyāyana Smṛti* (xx. 80 ff.) are found elaborate rules as to the power of a woman over her *strīdhana*. She was at liberty to dispose in any way of presents from living relatives, even if consisting of immovables; her husband could not use them without her consent. She was also entitled to receive from her sons any property promised by their father and not paid to her, while gifts to wives were encouraged, if not exceeding 2000 *panas* or consisting of immovables. On her death her property went back, in so far as it consisted of gifts from relatives, to those relatives; the rest went to any unmarried daughter, or, failing such, to her sons and married daughters, while, if she left no children, her property passed to her parents if she were married in one of the lower forms of marriage, and any landed property went to her brothers. The later texts and the commentators develop in much detail the doctrine of *strīdhana*, and the *Mitākṣarā* (a commentary on Yājñavalkya) argues that all property which women receive in any way falls under that head, and must obey the special laws of devolution of *strīdhana* proper. This is contrary to the earlier evidence, which expressly differentiates between *strīdhana* in the narrow sense and property inherited from a husband, earned by a woman's own exertions, or given by strangers, over which she can exercise power of disposal only with her husband's consent.

LITERATURE.—In addition to many notices scattered throughout the literature, the Hindu marriage of the end of the Vedic period and in the classical period is dealt with in the *Dharma-sūtras* and in the *Smṛtis* with their commentaries, and in comprehensive treatises based on the *Smṛtis*. Of the *sūtra* texts, those of Apastamba, Gautama, Vasiṣṭha, and Baudhāyana have been translated by G. Bühler (*SBE* II. 2 [1897] and xiv. [1882]). The *Smṛti* of Manu has also been translated by Bühler (ib. xxv. [1886]), and those of Viṣṇu, Nārada, and Brhaspati by J. Jolly (ib. vii. [1900] and xxxiii. [1889]). Yājñavalkya has been translated by A. Stenzler, Berlin, 1849. Of these Manu is the oldest, Yājñavalkya may be dated in the 4th cent. A.D., Nārada about A.D. 500, and Brhaspati about 600. Somewhat earlier than Brhaspati is Kātyāyana. Of the later texts the *Mitākṣarā* of Viṣṇūśaṅkara (c. A.D. 1100) is the most important, as having become authoritative throughout India except in Bengal. Of modern works, for the Vedic period the most important are: A. Weber, *Indische Studien*, Berlin and Leipzig, 1849-54, v. and x.; B. Delbrück, 'Die indogermanischen Verwandtschaftsnamen,' in *ASG* xxv. [1889] 381-406; H. Zimmer, *Altindisches Leben*, Berlin, 1879; and A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912. For the epic a full account is contained in E. W. Hopkins, art. in *JAO* xiii. [1889], and much material is also given by R. Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902. The rules of the law-books and the modern law are dealt with in R. West and G. Bühler, *Digest of Hindu Law*, Bombay, 1884, and in J. D. Mayne, *Hindu Law and Usage*, Madras, 1883, and a summary of the whole subject with full citations and references to the literature is given by J. Jolly, in *Recht und Sitte*, Strassburg, 1896 (= *JALP* n. 8).

MARRIAGE (Iranian).—1. Zoroastrian.—According to the sacred texts of Zoroastrianism, marriage is divinely favoured (*Vendīdād*, iv. 47; cf. artt. ASCETICISM [Persian], FAMILY [Persian]). The second happiest place in the world is that in which a righteous man sets up his household (*Vend.* iii. 2). In the *Gāthās* the pair who wed are urged to strive to live a life of righteousness and to help one another in good deeds (*Ys.* liii. 5).

Since marriage is regarded as almost a religious duty, Zoroastrians hold it a meritorious act to help their co-religionists to enter the wedded state, and such assistance may even serve to atone for sin (*Vend.* iv. 44, xiv. 15). It is by no means unusual, therefore, for Parsis to enjoin by will or by a trust that a certain amount of their wealth be expended in aiding poor brides to marry, and certain institutions, as the Parsi Pañchayat of Bombay, provide special funds for this purpose.

The Parsi community in India has passed through so many vicissitudes that it is difficult to determine which of the various marriage customs of the Parsis were originally Zoroastrian, although it appears to be practically certain that the strictly religious portion comes under this category. At the very beginning of the *Āširvād*, or blessing known as the *Pāvēnd-nāmah*, which is recited at the wedding ceremony, the officiating priest declares that the ceremony is 'according to the law and custom of the Mazdayasnian religion.'

According to the *Avesta*, both manhood and womanhood were attained at the age of 15 (*Ys.* ix. 5; *Yt.* viii. 13 f., xiv. 17; *Vend.* xiv. 15; *Bundahishn*, iii. 19). Since in the *Avesta* we find maidens praying for suitable husbands (*Ys.* ix. 23; ¹*Yt.* v. 87), it would appear that child-marriage was not practised. The ritual recited at the marriage ceremony, bidding the pair to express their consent after 'truthful consideration,' points in the same direction. The present Parsi Marriage Act enjoins the age of 21 for males and 18 for females; if the contracting pair are below that age, the marriage certificate must be signed by their parents.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first (Hormuzd) or twentieth (Bāhram) day of the Parsi month. At times, especially in Mofussil (provincial) towns, the parties consult Hindu astrologers, who name one or more auspicious days for the betrothal, marriage, etc. The match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choice with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the *Pand-nāmak-ī-Ātūrpāt-ī-Māraspandān* (xlii.) and attested in the *Sāh-nāmah* (tr. A. G. and E. Warner, London, 1905 ff., i. 177 ff., ii. 125, 86–88) by the marriages of the three sons of Farīdūn with the daughters of the king of Yemen, of Rustam with Tahminah, and of Kāūs with Sūdābah. Until recently professional match-makers were not unknown, and they still exercise a certain amount of activity.

On the day of betrothal² the women of the groom's family visit the house of the bride and present silver coins to her, and the groom receives a similar present from the women of the bride's family. The older term for this ceremony, now called *adrāvūn*, was *nām pādūn*, 'to name' (from Pers. *nāmzād shudān*), since after the

¹ Geiger, *Ostiran. Kultur*, p. 241, sees in this passage an allusion to the custom of asking the hand of the bride from her parent or guardian (cf. also *Vend.* xv. 9).

² A considerable time might elapse between betrothal and marriage (*Vend.* xv. 9; cf. Geiger, p. 242).

betrothal the bride receives in religious recitals of prayers for her the name of the groom, even though, by some mishap, marriage does not take place. An unbetrothed girl was said to be 'unnamed' (*nā kardak nām*). Betrothal is regarded as a solemn part of the marriage ceremony, the *midra virō-maza*, or 'pledge of the magnitude of a man' (*Vend.* iv. 2, 4, 9, 15), being considered by the *Rivāyats* to mean a promise of marriage. At the present time the priests do not take an active part in the betrothal, except in Mofussil towns, where two priests—one for each family—formally ask the parents that the bride and groom respectively be given in marriage to each other. The priests took part in the *nāmzād* (betrothal) at Surat in the middle of the 18th cent. (Anquetil du Perron, *Zend-Avesta*, Paris, 1771, ii. 557 f.), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other.

The betrothal is followed by the Divō, when a lamp (*divō*) is lit early in the morning, and the women of the two families interchange visits and gifts. This day is regarded as more important than the betrothal proper, because on it the dresses and wedding rings are usually presented. The Divō is followed by the Adarni, when the dowry given by the bride's father is presented to the groom's family.¹ Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are inauspicious.

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

In the morning or afternoon of the marriage day the bride and groom take a sacred bath—a custom which is mentioned in the *Sāh-nāmah* (ed. T. Macan, Calcutta, 1829, p. 1579), where Bahram Gūr takes his Indian wife to the fire temple for that purpose. The religious portion of the wedding is usually performed shortly after sunset, perhaps to symbolize that, just as day and night unite and blend, so the wedded pair should be united in weal and woe.

The marriage is generally celebrated with much pomp, as was the case in ancient Irān, as recorded in the *Dinkart* (ed. F. B. Sanjana, Bombay, 1874 ff., ii. 97). The groom, wearing a white ceremonial robe and holding a shawl in his hand, sits among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (*kūnkun*). In colour this is held by some to represent in India an earlier custom of the sacrifice of animal life, and in shape to symbolize the brilliant, fructifying sun, whereas the round *kūnkun* of the bride is supposed to be a symbol of the moon, which absorbs the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men seat themselves in the compound, and the women in the house. At the door, the side posts of which—like those of the groom's house—are

¹ In early times it was apparently more customary for the groom to give presents. The sum of 2000 silver dirhams and 2 gold dinars, mentioned in the *Āširvād*, seems to have been the average sum which a groom of moderate means was expected to provide for his bride. On the *Āširvād*, with Pahlavi, Pāzand, and Skt. text and tr., see Shapurji Kavasji Hodivala, *Zarathushtra and his Contemporaries in the Rīgveda*, Bombay, 1918, pp. 77–80.

marked with turmeric (whose yellow colour is held to symbolize the sun, and hence abundance and fertility), the groom is welcomed by his future mother-in-law, a fresh mark of *kūh-kun* is made on his forehead, and rice is made to adhere to it, and is also thrown over his head.

During the marriage ceremony the officiating priest again sprinkles rice over the bride and groom, and before the recital of the marriage blessing the pair throw a handful of rice on each other, some mothers making the couple eat a few grains of rice thus thrown.

An egg, a coco-nut, and a little tray of water are now passed three times round the groom's head and cast away, and in the course of the evening the women of the bride's family make the groom dip his hand in a water-jar, in which he leaves for them a silver coin. Formerly it was also the custom for the feet of the bride and groom to be washed after the marriage ceremony, but the adoption of English foot-gear has caused this to survive only in washing the tip of the boots.

After the groom has been thus welcomed at the door, he is made to cross the threshold without touching it, and with his right foot first, these precautions being observed also by the bride when she first enters her husband's house. Having entered the house, the groom awaits the bride, who sits on his left, the chairs being placed in the centre of the apartment. On stands beside the chairs are trays of rice to be thrown over the pair, and lighted candles, while beside the bride is a small vessel of *ghī* and molasses (typifying gentleness and sweetness); a servant stands before the pair, holding a burning censer in one hand and a little frankincense in the other. Beside each of the contracting parties stands a witness, usually the nearest kin, and generally married persons.

The following requisites are necessary for a regular marriage: (1) the marriage must be celebrated before an assembly of at least five persons who have been summoned for this special occasion; (2) the contracting parties are asked by the officiating priest whether they consent to be united in wedlock; (3) the hands of bride and groom are joined (*hāthvarō*, 'hand-fastening') and a symbolic knot also plays a prominent part in the ceremony; (4) the actual marriage ceremony is followed by a benediction accompanied by sprinkling with rice, etc.

Before being seated side by side, the bride and groom are made to sit opposite each other, separated by a piece of cloth as a curtain. The senior officiating priest now joins the right hands of the pair, and, with the recital of the *Yathā ahū vairyo*, a piece of cloth is passed round the chairs of both so as to form a circle, the ends of the cloth being tied together. With a repetition of the *Yathā ahū vairyo* the *hāthvarō* is then performed by fastening the right hands with twists of raw yarn, which is passed round the hands seven times, then seven times round the bridal pair, and, finally, an equal number of times round the knot in the encircling cloth. The fee for this ceremony is the perquisite of the family priests, even though the rite may be performed by other priests. The attendant next puts frankincense on the fire, and the curtain between the pair is dropped, while the bride and groom throw over each other a few grains of rice which they have held in their left hands. The one who first throws the rice is said to 'win,' and during the recital of the benedictions the priests also throw rice over the pair. They are now seated side by side.

The more strictly religious portion of the ceremony follows. Two priests stand before the pair, the elder of whom blesses them, praying that Ahura Mazda may grant them 'progeny of sons and grandsons, abundant means, strong friendship, bodily strength, long life, and an

existence of 150 years.' He then asks the witness who stands beside the groom whether, on behalf of the bridegroom's family, he consents to the marriage 'in accordance with the rites and rules of the Mazdayasniāns, promising to pay her [the bride] 2000 dirhāms of pure white silver and 2 dinārs of real gold of Nishāpūr coinage.' A similar question is asked of the witness for the bride's family, and then of the contracting parties, the questions being repeated thrice. Next follows the recital, by both the officiating priests, of the *Paēvand-nāmah* or *Āšīrvād* (tr. F. Spiegel, *Avesta übersetzt*, Leipzig, 1852-63, iii. 232-234, and, in great part, by the present writer, in Dosabhai Framji Karaka, *Hist. of the Parsis*, i. 182 ff.). The admonitions in the *Āšīrvād* are followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the *yazatas* (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Irān, that they may live long, and have many children, etc. A portion of this address is repeated in Sanskrit—probably a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hosts.

The *Āšīrvād* is followed by another group of benedictions in Pāzand, this group being called the *Tan darustī* (ed. E. K. Antia, *Pāzand Texts*, Bombay, 1909, p. 160 f., tr. Spiegel, *op. cit.* iii.).

The marriage ritual is repeated at midnight. From Anquetil du Perron (i., pt. i. 319, ii. 558, n. 5) this appears to be a reminiscence of the earlier Persian custom when, in Kirmān, the marriage ceremony was performed at midnight. This custom is not, however, universal.

A number of minor usages, not regarded in any way as part of the solemn ritual, are also observed, especially by women, in the Mofussil towns. The first of these, which, like the others of this class, is now observed more as a joke, is *chhedā chedi*, in which the nearest friends or relatives tie the skirt of the *jāmā*, or flowing dress, of the groom to that of the *sāri* of the bride; thus united, the pair go to the bridegroom's house. This is followed by foot-washing (cf. above), after which comes the *dahi kūmrō*, or making the newly-wedded pair partake of food consisting of *dapi* (curd) and rice from the same dish, each giving the other to eat. Another custom, now almost obsolete, is making the bride and groom play *eki beki* ('odd or even'). Each takes several rupees in the right hand and asks the other whether the number is odd (*eki*) or even (*beki*); if the opposite party guesses the number rightly, he or she is said to win. The underlying principle is probably similar to that of the rivalry of bride and groom to be the first to cast rice on the other, as already noted.

Marriage songs are sung frequently through the nuptial ceremony; and the whole concludes with a banquet, at which courses of fish (a symbol of good omen) and sweets are essential, but meat is forbidden, either out of deference to Hindu scruples or from motives of economy.

JIVANJI JAMSHEDJI MODI.

2. Next-of-kin marriage.—A problem of peculiar delicacy in connexion with Iranian marriage is the question of the *avaētvadatha* (Pahlavi *avētōkdas*), usually translated 'next-of-kin marriage'.¹ The modern Parsis maintain that this is a marriage

¹ The etymology of the word is apparently *avaētu*, 'belonging to (esp. the community or sib)'—cognate with Lat. *suus*—and *vadatha*, 'marriage' (C. Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, col. 1880). For a less plausible etymology, based on native tradition (*Dinkart*, iii. 82, tr. West, *SEE* xviii. 400), see Darmesteter, *Zend-Avesta*, i. 126 n.

between first cousins, and such is certainly its present connotation. The Greek and Latin writers, on the other hand, regarded *avaēvadatha* as referring to marriages of parents with children and of uterine brothers and sisters; and in this view they are followed by the great majority of non-Parsi scholars of the present day.

The Avesta itself offers no data for the solution of the problem, and mentions *avaēvadatha* only in five passages—all late.

The Mazdayasnan religion commands *avaēvadatha* (Ys. xii. 9); in certain religious ceremonies a young man is to be chosen who has contracted it (Ys. iii. 8; cf. Gāh iv. 8); corpse-bearers may be purified, not only with the urine of cattle, but also with the mingled urine of a man and woman who have performed *avaēvadatha* (Vend. viii. 13, no other human beings can produce this vehicle of purification); and Vishtāspa is the protector, among others, of the youth who fulfils the requirement of *avaēvadatha* (Yt. xxiv. 17). Bartholomae's claim (col. 1822) that Vishtāspa's wife Hutaosa was also his sister, on the basis of Yt. xv. 35 f., can scarcely be deemed cogent (see Moulton, *Early Zoroastrianism*, p. 206 f.), in spite of the assertion of the late Pahlavi *Yātkār-i Zarīrān*, 48. The Pahlavi commentator on Ys. xiv. 4 clearly sees an allusion to *avaēvadatha* between father and daughter, but the text does not sustain his exegesis.¹

The evidence of the Greek and Latin writers is unambiguous as regards the nature of *avaēvadatha*. That the royal house should practise the marriage of parents and children, or of brothers and sisters, is not inexplicable. It probably rests, at least in historic times, upon a desire to keep the royal blood absolutely pure, and finds a conspicuous illustration in the history of Egyptian dynasties.² Thus Cambyses married his sister, and, though Herodotus says (iii. 31) that before this ruler's time 'the Persians were not wont to cohabit with their sisters,' we are told that the notorious Parysatis urged her son Artaxerxes Longimanus to wed his sister Atossa (Plut. *Artax.* 23; cf. Euseb. *Præp. Evang.* vi. 275 C; for a less certain instance see Ctesias, *Pers.* 2), to whom her own brother Darius later offered marriage (Plut. *Artax.* 26). The Bactrian satrap Sysimithres married his mother (Quintus Curtius, viii. ii. 19), and Terituchmes his sister (Ctesias, *Pers.* 54). The only case alleged in the Sasanian period was the marriage of Kavāt with his daughter Sambyke (Agathias, ii. 23). The custom is reported, however, not only of the royal family, but also of the Persians generally. Marital relations with mother, daughter, or sister are ascribed to them by Diogenes Laertius (*Proem.* 7, ix. 83), Strabo (p. 735), Plutarch (*de Fort. Alex.* i. 5), Antisthenes (quoted by Athenæus, v. 63), Jerome (*in Jovin.* ii. 7), Clemens Alexandrinus (*Pæd.* i. 7), and Minucius Felix (*Octav.* 31). Philo states (*de Spec. Legg.*, p. 778 B) that children from union of mother and son were deemed particularly well-born, and Catullus says (lxxxiii. 3 f.) that 'magus ex matre et gnato gignatur oportet.'

This last quotation is of considerable significance in determining the real origin of a custom which excited horror among the classical authors. Xanthus Lydus, as cited by Clemens Alexandrinus (*Strom.* iii. 2, ad fin.), had, centuries before, recorded such marriages as peculiarly Magian, and Strabo (p. 1068) declared them to be an ancient usage (cf. also Sotion, cited by Diog. Laert. *Proem.* 7). In the Sasanian period the Christian martyr Mihrāmguhšnasp had, before his conversion, married his sister (G. Hoffmann, *Auszüge aus syr. Akten pers. Martyrer*, Leipzig, 1880, p. 95); and, some

¹ See L. H. Mills, *Gāthas*, Oxford, 1892-1913, p. 224 f.; West, *SBE* xviii. 892 f. The latter scholar dates the final revision of the Pahlavi version in the 6th century. For another possible, though uncertain, reference to the *avaēvadatha* of Ahura Mazda and Spenta Armaiti, see *Dinkart*, ix. ix. 2-5. There is an unmistakable allusion to it in *Dinkart*, iii. lxxxii. Darmesteter, *Zend-Avesta*, i. 344, n. 12, misunderstands the Pahlavi commentary on Ys. liii. 8 as containing a possible reference to *avaēvadatha*; for the correct rendering see Mills, p. 376 f.

² For many other instances see F. Justi, *GrP* ii. [1904] 437; E. Westermarck, *Hist. of Human Marriage*, London, 1894, pp. 220-225. Cf. also 'Egyptian' section above.

two centuries later, the reformer of Magianism, Bah Afriid, forbade his followers to marry their mothers, sisters, daughters, or nieces (al-Birūnī, *Chronology of Anc. Nations*, tr. E. Sachau, London, 1879, p. 194; al-Shahrastānī, *Religionspartheien und Philosophenschulen*, tr. T. Haarbrucker, Halle, 1850-51, i. 284; cf. also above, p. 401^b). Yet there was a tradition, reported by Mas'ūdi (*Præf. d'or*, ed. and tr. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ii. 145), that Faridūn (the Thraētaona of the Avesta) begot a daughter by his granddaughter, another by his great-granddaughter, and so to the seventh generation (cf. also Justi, *Iran. Namenbuch*, Marburg, 1895, p. 192).

In the Pahlavi texts allusions to *avētōkdas* are common. Observance of it is one of the surest signs of piety in the coming days of evil, i.e. the Arab conquest (*Bahman Yt.* ii. 57, 61); it expiates mortal sin and forms the one insuperable barrier to the attacks of Aēshma, the incarnation of Fury (*Sāyast lā-Sāyast*, viii. 18, xviii. 3 f.); it is especially obnoxious to demons, whose power it impairs (*Dinkart*, iii. 82); it is the second of the seven good works of religion, and its neglect the fourth of the thirty heinous sins, and it is the ninth of the thirty-three ways of gaining heaven (*Dinā-i Mānōg-i Xrat*, iv. 4, xxxvi. 7, xxxvii. 12). It is even said to have been prescribed by Zarathushtra as the eighth of his ten admonitions to mankind (*Dinkart*, iii. 195; cf. *Selections of Zāt-Sparam*, xxiii. 13), and to arrange it is a work of merit (*Dāstistān-i Dinik*, lxxviii. 19). In a word, from it is to arise 'complete progress in the world . . . even unto the time of the renovation of the universe' (*ib.* lxxvii. 6 f.).

These Pahlavi texts, however, cast no light on the precise connotation of the term. Yet there are references in this literature which are the reverse of ambiguous. The Pahlavi synopsis of the 18th *fargart* of the lost Avesta *Varaštman-sar Nask* clearly refers to the *avētōkdas* of brother and sister (*Dinkart*, ix. xli. 27),¹ and that of the 21st *fargart* of the lost *Bakō Nask* to the wedlock of father and daughter (*ib.* lxxvii. 7, 9).² The most explicit statement is found in the account of a controversy between a Zoroastrian theologian and a Jewish objector, recorded in *Dinkart*, iii. 82 (tr. West, pp. 399-410):

'The consummation of the mutual assistance of men is Khvātōkdas. . . That union . . . is . . . that with near kinsfolk, and, among near kinsfolk, that with those next-of-kin; and the mutual connection of the three kinds of nearest kin—which are father and daughter, son and she who bore him, and brother and sister—is the most complete that I have considered.'

These three forms are illustrated, respectively, by the union between Ahura Mazda and his daughter Spenta Armaiti (cf. on Ys. xlv. 4, above; and on its probable origin as a cosmogonic myth of the *lepos γάμος* of Heaven and Earth, cf. L. H. Gray, *ARW* vii. [1904] 367), from which sprang the primeval being Gāyōmarš; by the return of some of the seed of the dying Gāyōmarš to Spenta Armaiti (cf. also *Bundahishn*, xv. 1; *Dāstistān-i Dinik*, lxiv. 6; al-Birūnī, p. 107), resulting in the birth of the first human pair, Mas̄yō and Mas̄yāōi; and by their prolific union (cf. also *Dinkart*, vii. i. 10, *Dāstistān-i Dinik*, xxxvii. 82, lxxv. lxxvii. 4 f.).³

In the 8th chapter of a Pahlavi *Rivāyat*, probably

¹ The statement that Arjā-i Virāf 'had seven sisters, and all these seven sisters were as wives of Virāf' (*Arjā-i Virāf Nāmak*, ii. 1-3, 7-10; scarcely earlier than the 6th cent. A.D.) may be compared, but is not absolutely certain in meaning (West, p. 367 f.).

² So West, p. 397; later (*SBE* xxxvii. [1892] 382) he retranslates the passage so that *avētōkdas* is not necessarily implied.

³ Another stock argument for brother-and-sister marriage was found in the legend of the union of the primeval twins Yima and his sister (Pahlavi Yim and Yimak; see *Bund.* xxiii. 1, and West, *SBE* xviii. 418 f.), which is not mentioned in the extant Avesta, though it evidently dates from the Indo-Iranian period, since it forms the theme of *Rigveda* x. 10.

written between the Arab conquest of Persia and the 16th cent., found preceding the *Dāstān-i Dīnik* in many MSS, there is a lengthy polemic in favour of *xvətōkdas*, there written *xvətōdāt* (ed. Bamanji Nasarvanji Dhabar, *Pahlavi Rivāyat accompanying the Dāstān-i Dīnik*, Bombay, 1913, pp. 9-21, tr. in extracts West, *SBĒ* xviii. 415-423). Defending it by the old examples of Ahura Mazda and Spenta Armaiti and of Masyē and Masyāōi, it declares that, when contracted with mother, daughter, or sister, *xvətōkdas* is superior in religious merit even to the ceremonial worship of Ahura Mazda, the replenishing of the sacred fire, or showing becoming reverence to a priest, and that it saves the most heinous sinner from hell.

When the millennium is about to dawn, 'all mankind will perform Khvētūdād, and every fiend will perish through the miracle and power of Khvētūdād.' The first time that a man practises it, 'a thousand demons will die, and two thousand wizards and witches . . . and when he goes near to it four times, it is known that the man and woman become perfect . . . Whoever keeps one year in a marriage of Khvētūdād becomes just as though one-third of all this world . . . had been given by him . . . unto a righteous man. . . . And when he keeps four years in his marriage, and his [funeral] ritual is performed, it is known that his soul thereby goes unto the supreme heaven (garōdmān); and when the ritual is not performed, it goes thereby to the ordinary heaven (vahištō)'. The good deeds of those who observe *xvətōkdas* are a hundred times more efficacious than the same deeds performed by other pious men; and the penalty for dissuading from it is hell.

From certain passages in the same chapter it is very evident that *xvətōkdas* in the narrow sense here advocated was by no means pleasing to the Parsi community.

Thus, when Ahura Mazda and Zarathushtra held colloquy, 'Zarātšht spoke thus: "Which duty and good work shall I do first?" Auharmazd spoke thus: "Khvētūdād." . . . Zarātšht spoke unto Auharmazd thus: "In my eyes it is an evil (vadō) which is performed." . . . Auharmazd spoke thus: "In my eyes, also, it is just as in thine; but"—since nothing is so perfect that there is no evil mixed with it—"it should not seem so" (West, p. 423).

As early as the date of composition of *Dīnkart*, iii. 82, however, there are indications that *xvətōkdas* had come to bear its present meaning of marriage of first cousins, and this is the teaching of more modern Parsi *Rivāyats* (West, pp. 404, 425 f.) and the practice of Zoroastrians at the present day.

The Parsi theory of the origin of *avaētvadatha* is fairly clear. The *Dīnkart* holds (iii. 82) that its basis was a desire to preserve purity of race, to increase the compatibility of husband and wife, and to increase the affection for children, which would be felt in redoubled measure for offspring so wholly of the same family. Another reason—doubtless well founded, especially after the Arab conquest—was that marriage outside the family might tend to religious laxity and even to perversion to another faith (*Rivāyat* viii., tr. West, p. 416 f.). As a matter of fact, however, these arguments are inadequate to explain the real origin, and the suggestion of Justi (*GIrP* ii. 435) that the source is to be found in Egypt (cf. 'Egyptian' section, above) is equally improbable.

There is no evidence that incestuous *avaētvadatha* was known in the Avesta,¹ and it is not until Pahlavi writings of the 6th-9th centuries that it is unmistakably advocated (West, p. 427 f.). At the same time, the testimony of the Greek and Latin writers cannot be ignored; and, while we may grant, for the sake of argument, that in the later Sasanian period there was vital religious reason for incestuous *avaētvadatha*, as set forth by the *Dīnkart* and the *Rivāyat*, no such reason can be alleged for the Achæmenian and succeeding periods. It is clear, moreover, that incestuous *avaētvadatha* was then not restricted to noble and royal families,

¹ It is true that the Pahlavi summaries of lost Avesta texts affirm in them the presence of this type of *avaētvadatha* (see above, p. 457b), but the baseless reading of *avaētvadatha* into Ys. xiv. 4 by the Pahlavi commentator (above, p. 457a) hints that we cannot repose implicit confidence in the accuracy of these summaries.

but that it was also practised widely among the common people. On the other hand, the present writer knows at present of no cases in the historic (as distinguished from the legendary) period of Zoroastrianism, except the Sasanian royal instance mentioned above, and the marriage of Mihrām-gushnasp.

We must also note that incest was abhorrent to the Indian branch of the Indo-Iranian family (for the strong exogamy of India see J. Jolly, *Recht und Sitte* [= *GIAP* ii. 8], Strassburg, 1896, p. 62 f.).¹ Among the other Indo-European peoples the Greeks permitted marriage between uncles and nieces, nephews and aunts, and half-brothers and half-sisters on the paternal side (see 'Greek' section, above, § 2); the ancient Prussians and Lithuanians are said to have allowed marriage with any kinswoman except one's own mother (O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 909 f.); and equal licence is ascribed to the ancient Irish (cf. 'Celtic' section, above).

There remain, then, two hypotheses on the origin of incestuous *avaētvadatha*. (a) It may be derived from a non-Indo-European people. This is the theory maintained by Moulton (pp. 204-208), who holds that the custom was Magian, and so neither Indo-European nor Semitic (cf. *ib.* chs. vi.-vii., and art. MAGI)—not Iranian at all. (b) Without denying or even criticizing Moulton's very plausible, even probable, theory, it may be suggested that the practice was genuinely Persian. In view of the extremely primitive character of the Balto-Slavic peoples, who have, not without reason, been claimed as those who have retained most truly the original type of Indo-European civilization (S. Feist, *Kultur . . . der Indogermanen*, Berlin, 1913, p. 478; O. Schrader, *Sprachvergleichung und Urgesch.*, Jena, 1907, ii. 129 f.; and art. ARYAN RELIGION, *passim*), the occurrence among them—as among the almost equally primitive ancient Irish—of what is practically identical with incestuous *avaētvadatha* is certainly significant. On this hypothesis, Zarathushtra's reformation did away with *avaētvadatha*, as with so much else of the older Iranism which his loftier teaching rejected; but, when the more ancient folk-religion returned, it restored *avaētvadatha*, together with many other things that had been discarded. In the present state of our knowledge the writer does not attempt to decide between these hypotheses; he merely presents his own for what it may be worth.

Whatever the origin of incestuous *avaētvadatha*—which is perhaps nothing but endogamy carried to its extreme—so much is clear: pure Zoroastrianism never knew it; it was practised by non-Zoroastrian Persians; it was advocated at least during the Sasanian and early Arab periods by a Magianized priesthood; it appears to have then been a theoretical ideal, prompted by the religious and political situation of the period, rather than an actual practice; it was constantly resisted (even as an ideal) by a large—and, doubtless, ever increasing—body of the faithful; it has disappeared. It had a certain justification during the days of Arab persecution, and Parsis should recognize this. It has been one of the cheap taunts of the type flung against every religion by the ignorant or malevolent outsider, and no Parsi can be reproached for sensitiveness on the subject. Yet it was at worst

¹ The instance of Yama and Yami, already mentioned, does not militate against this; for in the hymn *Rigveda* x. 10 (on which see especially L. von Schröder, *Mysterium und Mimus im Rigveda*, Leipzig, 1908, p. 275 f.) Yama manifests extreme reluctance to the union. The problem involved was the origin of the human race from a primeval pair of twins. The same remarks apply to the myth of Brahmā's union with his daughter, a cosmogonic myth comparable with the *igōs yēnos* of Ahura Mazda and Spenta Armaiti, noted above (cf. *Rigveda*, i. cxxiv. 38, v. xlii. 18, x. lxi. 5 ff., and especially Muir, *Orig. Sanskrit Texts*, i.² [1872] 107-114, iv. [1873] 46-48).

merely a temporary excrement, never a real tenet; and it was repudiated, no doubt, as intensely by Zarathustra as by his modern followers.

3. **Old Persian.**—Concerning the specifically Old Persian marriage rites we possess only meagre information. Strabo tells us (p. 733) that marriages were performed at the beginning of the vernal equinox, and that before the bridegroom went to the nuptial couch he ate an apple or camel marrow, but nothing else during the whole day. We also learn from Arrian (*Anab.* vii. iv. 7) that a seat of honour (*θρόνος*) was provided for the groom, and that his prospective bride came 'after the cups had gone round' (*μετὰ τὸν πότον*), being welcomed by her husband with the giving of the right hand and a kiss. Naturally a banquet formed part of the wedding (*Est* 2¹⁸; *Jos. Ant.* xi. vi. 2).

To the Scythians (*q.v.*), at least some of whom were Iranians, the Greeks ascribed the practice of each man having free access to the wives of his fellow-tribesmen, although Herodotus (i. 216, iv. 104) restricts this to the Massagetæ and Agathyrsi. The latter were possibly Iranian (E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. 102; cf. W. Tomaschek, in Pauly-Wissowa, i. 764 f.); the former are considered Iranian—their name is certainly so—by J. Marquart (*Untersuchungen zur Gesch. von Iran*, Göttingen and Leipzig, 1896-1905, ii. 77 f., 240, *Eränsahr*, Berlin, 1901, p. 156), though this is doubted by Minns (p. 111), who, probably rightly, regards them as 'a mixed collection of tribes without an ethnic unity.' In any event, as he says (p. 93), this form of marriage (for other Indo-European instances of which see H. Hirt, *Indogermanen*, Strassburg, 1905-07, p. 703; Schrader, *Reallex.* p. 634) is probably non-Aryan. See, further, art. **FAMILY** (Persian).

LOUIS H. GRAY.

MARRIAGE (Japanese and Korean).—I. **JAPAN.**—From ancient times marriage and marriage regulations have been considered important by the Japanese people. Both ideas and legal regulations concerning marriage, however, seem to have passed through three distinct stages: (1) that of the age of the Taiho-ryo (A.D. 701-1192), much influenced by Chinese morals and laws; (2) that of feudalism (from the end of the 12th cent. to the Meiji era), moulded by *bushido*, Japanese knightly morality, to a much higher development; and (3) that of the period since the Restoration, characterized by Christian influences.

1. **Consent of parties.**—The chief point of difference between Japanese and Western marriage laws may be found in the family system. From the earliest times the Japanese people have been grouped in families as social units, to one of which every individual belongs, and in each family there is a head, who governs the rest. The authority of the head (*patria potestas*) has varied from age to age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the

Taiho-ryo was often very large, including over one hundred persons, but the numbers gradually decreased, until at present a family usually consists of only five or six individuals. Marriage under such a system not only brings changes in the status of the contracting parties, but also means the removal of a member of one group to another. In other words, marriage is an act between a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free contract of the parties is required, but also the consent of the heads of the two families.

From the time of the Taiho-ryo to that of the Meiji era, a marriage engagement was first made between the parents of the parties, and often the consent of the parties was not required, for filial obedience was considered one of the highest and noblest virtues. Lately, with the development of the idea of freedom, the point of view has somewhat changed; according to the regulations of the present civil code, it is necessary to have the free consent of the parties in addition to the consent of the parents. Moreover, when a man reaches the age of thirty and a woman that of twenty-five, the law no longer requires the consent of the parents for the sanction of marriage.

2. **Caste.**—While caste in the strict sense of the term never existed in Japan, by the Taiho-ryo a humble class, which was not allowed to intermarry with others, was recognized, and the child of such a marriage belonged to the humble class. During the feudal age the people were divided into lords, knights, and commoners including farmers, artisans, and merchants; and intermarriage required special permission. A marriage between members of the lordly class required sanction from the central government until 1871. According to the Taiho-ryo, Buddhist priestesses were not allowed to marry; and one who transgressed was sent to a far island or put to death; but this ban was abolished in 1872.

3. **Age of consent.**—At the time of the Taiho-ryo a male was allowed to marry at the age of 15 and a female at 13; but the present civil code requires the age of 17 for the male and 15 for the female. There has been no prohibition of marriage on account of old age.

4. **Monogamy.**—Old laws and customs in Japan forbade multiple marriages, but not concubinage. According to the Taiho-ryo, concubines occupied the position of relatives in the second degree, and no limitation was made as to their number. The child by a concubine held an inheritance right. The custom of concubinage was prevalent among the noble and rich, and society did not condemn it. Moreover, in the opinion of some, concubinage was considered necessary, with the existing family-system, in order to preserve the family line from possible extinction. In the Meiji era, however, through the influence of Christianity, the idea of monogamy became strong; and in 1882 concubinage ceased to be recognized by law, though the long-established custom still lingers to some extent.

5. **Second marriage.**—When a marriage contract has been dissolved by divorce or the death of one of the parties, a second marriage is permitted. In ancient times, however, the proverb 'A chaste woman never sees two men' had great force; and for a woman to refrain from re-marriage was regarded as a beautiful virtue. There were not a few women who cut off their hair, or became priestesses, or committed suicide, on hearing of the death of their husbands in battle. Such forms of devotion gradually declined; and the civil code does not forbid a woman to re-marry, merely requiring six months to elapse between the dissolution of the first marriage and the consummation of the second.

6. **Marriage of adulterers.**—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry—a prohibition which has existed since the time of the Taiho-ryo. Social disapproval of such union is very severe; and, even when the husband or wife forgives and consents, the prohibition is binding and cannot be evaded, so that those found thus married are separated by law.

7. **Marriage of relatives.**—Marriage between near relatives in direct and collateral lines is forbidden for the sake of health and protection from degeneracy. The marriage of cousins, or of a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are not rare.

8. **Relation of husband and wife.**—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband's consent in many cases, and the wife's property is always under the supervision of her husband while they are married. In Japan a woman's private property is very limited; and those who possess property in addition to their dresses and ornaments are very few; for, according to the law of succession, all property is inherited by the eldest son, and only in the case of disinheritance or of there being no son by marriage or adoption can the woman inherit in regular succession. Thus, as a rule, the wife has no property, but is dependent upon her husband for support. Some change, therefore, must be made in the law of succession if the position of woman is to be materially raised.

9. **Engagement and ceremony of marriage.**—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Taiho-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintanceship. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a match-maker who renders service to the parties and parents. When consent is given and the engagement made, gifts are exchanged, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage intermediary, escorting the bride in her best attire, takes his seat at an appointed place, and the bride and bridegroom drink wine, exchanging cups nine times. This constitutes the entire ceremony, after which the bride and bridegroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in churches; and recently the custom has arisen of holding services at Shintō shrines. The law, however, requires no religious sanction, as it is only a civil marriage that is officially recognized.

10. **Divorce.**—Before the promulgation of the present civil code (1896-98), divorce, or, rather, repudiation, was very easily secured at the husband's will. No legal procedure was necessary beyond the husband's writ with his signature, but the law fixed seven causes, one of which must exist in order to make the *repudium* effective.

Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: by mutual consent, and by judicial decree. The former requires only the mutual consent of the parties, while the latter requires an act of the court upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1908 show the total number of marriages to have been 8,583,168 and of divorces 60,376, *i.e.* about 7 divorces out of 1000 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. **Judicial separation.**—This system does not exist in Japan.

12. **KOREA.**—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 20 for men and 16 for women. It is usual for a girl of 12 or 13 years to marry a boy of 10 or less. Wives are usually a few years older than their husbands. Second marriage is not prohibited, but is considered a disgrace by most; and those above the middle class never re-marry. Arrangements for marriage are made by fathers, grandfathers, or elder brothers and relatives in authority; and the wishes of those who are to be married are not taken into account. The ceremony is performed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can divorce, and the wife has no way of refusal. There is no system of divorce by consent, but by the new law, since annexation, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,993, and that of divorces only 9058.

T. NAKAJIMA.

MARRIAGE (Jewish).—'Every man is bound to marry a wife in order to beget children, and he who fails of this duty is as one who sheds blood, diminishes the Image [of God], and causes the Divine Presence (*sh'khînâh*) to depart from Israel'—thus runs the rule in the Code of Qaro (*Shulhân 'Arukh, Eben ha-'ezer*, i. 1). It is based on ancient Rabbinic (Tannaitic) prescription (*Yebhāmōth*, 63b, 64a), itself inferred from well-known Biblical texts (esp. Gn 9th combined with following verse), and it is emphasized by the somewhat later apophthegms: 'Whoever has no wife rests without blessing'; such a one 'is not called a man' (*ib.* 62b). Marriage was the means by which the human race imprinted on the generations the divine image; it, with the consequent domestic felicity, was the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and primitive systems (cf. Maimonides, *Ishūth*, i.). The social obligation was strengthened by Messianic hopes: 'the son of David—*i.e.* the Messiah—will not come until all souls stored up for earthly life have been born' (*Yebh.* 62a). Though the purpose of marriage was the begetting of children, other aspects of marital life were fully appreciated (see art. **FAMILY (Jewish)**; and cf. the quotations in M. Mielziner, *The Jewish Law of Marriage and Divorce*, New York, 1901, p. 18f.; I. Abrahams, *Jewish Life in the Middle Ages*,

London, 1896, p. 114). Very profound is the Rabbinic view that man's *yēser* is in this instance the cause of good; but for his passions man would not build a house, nor marry a wife, nor beget children (*Genesis Rabbā*, ch. ix.). Man, in Rabbinic theology, is impelled by two *yēser*s ('impulses,' 'inclinations'), one good and one evil, both of which are to be used in turning him to the love of God (*Sifrē* on Dt 6^s, *Mishnāh Berākhot*, ix. 5). The bodily passions are not in themselves evil (cf. F. C. Porter, 'Yezer Hara,' in Yale Bicentenary vol. of *Biblical and Semitic Studies*, New York, 1901, pp. 91-156, and M. Lazarus, *Ethics of Judaism*, Eng. tr., Philadelphia, 1901, ii. 79 ff.); Torah was the means by which the control of passion and its direction into holy ends were effected (cf. Maimonides, *Guide of the Perplexed*, iii. 33). The Rabbinic theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: 'Three are associated in every human being: God, father, and mother' (*Qiddūshin*, 30b).

With regard to the authority of parents in arranging the marriages of their children while minors see *ERE* v. 74^{2a}. When the parties were adult, the consent of parents was not necessary to make a marriage valid (Maimonides, *Ishūth*, vii.), but, as Mielzner adds,

'In consequence of the high respect and veneration, however, in which father and mother have ever been held among Israelites, the cases of contracting marriages without the parents' consent fortunately belong to the rarest exceptions' (p. 69).

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the usual age of the bridegroom in Talmudic times was 18 to 20 (S. Krauss, *Talmudische Archäologie*, Leipzig, 1910-11, ii. 28). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (*Ebhen hā'ezér*, i. 2), but such pressure was not applied in the case of students, while (as the gloss *ad loc.* points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride. Girls were treated as marriageable from the beginning of their thirteenth year, and at various times very youthful marriages have prevailed (see Abrahams, ch. ix.). In recent times, while, on the whole, Jews probably marry at a somewhat earlier age than the general population, assimilation in social customs is modifying differences (statistics in *JE* viii. 339). The general impression prevails that Jews more frequently than others marry their cousins. Inter-marriage between Jews and Christians has increased (statistics in *JE* vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbance of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law, with certain extensions (*Yēbh.* 21; Maimonides, *Ishūth*, i. 6; Mielzner, p. 37), the latter being partly theoretical prolongations of lineal ascendants and descendants; but in one case a 'new degree homogeneous to the Biblical was added'; for, 'while the Mosaic Law [Lv 18⁴] expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and, besides, the father's uterine brother's wife' (Mielzner, p. 38). The Karaites (see *ERE* vii. 663^a) imposed still further rigours on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is

historically and legally considered in the monograph of H. S. Q. Henriques, *Jewish Marriages and English Law*, London, 1909. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized in England while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman may not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a *kōhēn*—i.e. one tracing descent from the ancient priestly family—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a *Bēth Din* (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in general use (though a few instances are recorded) at the beginning of the Christian era (the Sadducean question in Mt 22²³ was probably theoretical), has now lost all vogue (*Ebhen hā'ezér*, clxv., and commentaries; *JE* vi. 171). In the case of a childless widow the brother-in-law goes through the ceremony of *hālīqāh* (Dt 25⁷⁻¹⁰), which frees her to marry a stranger (Mielzner, p. 54 f.; *JE* vi. 170 f., where the rite is illustrated). On the levirate marriage see, further, I. Mattuck, in *Studies in Jewish Literature*, Berlin, 1913, p. 210; on marriages between uncle and niece, S. Krauss, *ib.* p. 165.

Except for rare cases in countries where Muhammadan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, ii. 27). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage fell into disuse. That monogamy was the Biblical ideal is shown by Gn 2⁴, Pr 31¹⁰⁻³¹, and the whole tendency of the Song of Songs (cf. A. Harper, *Song of Solomon*, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic imagery in which marriage typifies the relation between the one God and the unique people Israel. Polygamy survived among the Jews into the Christian era (see references in *JE* viii. 658), but monogamy was then and thereafter the general rule. The difficulty was that, as the end of marriage was the begetting of children, childless marriages were no fulfilment of that end, and in case of the wife's sterility the older authorities were divided in view as to the relative advisability of insisting on divorce or of permitting a second simultaneous marriage (on this and several other questions of Jewish marriage and divorce, see the writer's evidence before the Divorce Commission); but by the beginning of the 11th cent. monogamy was made the binding and absolute rule for all western Jews (Abrahams, ch. vii.).

The ancient and mediæval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (*ērūstin* or *qiddūshin*) in Rabbinic law was not a mere agreement or contract for a future marriage (*nissūin*); though not involving the actual privileges or responsibilities of the married state, betrothal was so far the initiation of marriage that it could be terminated only by death or divorce.

'Faithlessness on the part of the betrothed female was treated as adultery. Without having been formally divorced, she could not enter a marriage contract with another person; if entered upon it was void' (Mielziner, p. 77; on the status of the betrothed woman in the 1st and 2nd centuries A.D., cf. A. Buchler, in *Festschrift zu Israel Lewy's 70ten Geburtstag*, Breslau, 1911, p. 110).

Since the 16th cent. the two ceremonies of betrothal and marriage have been performed on the same day, though in Talmudic times a year might intervene between them (*Mishnâh, Qiddushîn*, v. 2). The legal betrothal was always preceded by an 'engagement' (*shiddukhîn*), and this 'engagement' gradually replaced the older betrothal. Often a professional match-maker (*shādikhān*) was employed in the Middle Ages, and the custom is still in some vogue (Abrahams, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony is the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value, and the recital of the formula: 'Be thou consecrated unto me by this [ring] according to the law of Moses and Israel.' The marriage rite was and is invalid without the bride's consent—her consent is formally stated in the *kethubbâh* (see below); but, until recent times, she took a passive part in the ceremony, the formula being spoken by the man only. In some orthodox and in most liberal synagogues the bride's part is now more active. For the validity of a marriage the presence of a Rabbi is not essential, but such presence is usual, and so are other ceremonies: the use of a ring and a canopy (*huppâh*), the breaking of a glass, the recital of the *kethubbâh*, and the repetition of the 'Seven Benedictions.'

The ring, now so usual in Jewish weddings, is not mentioned in the Talmud, but was introduced in the Gaonic age (A. Harkavy, *T'shubbôth hag-g'ônîm*, Berlin, 1887, § 65), perhaps in the 7th century. The ring replaced the older gift of money or of an article of value; it must not contain gems (Abrahams, p. 183), and need not be of gold. Possibly the use of the ring was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landsberger, in *Jud. Zeitschrift für Wissensch. und Leben*, vii. [1869] 81). In the Middle Ages Friday was a favourite day for Jewish marriages, though the Talmud objected to such a choice. Wednesday was also a common day for virgins, and Thursday for widows. In modern times there are no restrictions as to days of the week, except that marriages are not celebrated on Sabbaths or festivals. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During the marriage ceremony the ring is put on the forefinger of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in the synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated by L. Löw in his *Gesammelte Schriften*, where many other Jewish marriage questions, historical, social, and legal, are also discussed (iii., Szegedin, 1893, pp. 13–334).

The bride and bridegroom usually stand under a *huppâh*, or 'canopy,' during the marriage ceremony; the rite has been abrogated in some of the modern Jewish congregations. Originally the *huppâh* was the marriage chamber, into which the bridal pair were conducted after a procession; but it is now merely symbolical, and consists of four upright posts covered by an awning of silk

or tapestry (for details see Abrahams, p. 193; for illustrations, *JE* vi. 504 ff.). A regular preliminary of the ceremony is the signing by the bridegroom of the *kethubbâh* (lit. 'writing'), or marriage contract (for the ordinary wording see Mielziner, p. 87), which sets forth the amount payable to the wife in case of the husband's death or the wife's divorce, and in olden times often rehearsed the wife's dowry, in respect of which, as of the husband's settlement, the *kethubbâh* conferred on her an inalienable claim on her husband's property. The wife had considerable rights over her own property (see Mielziner, p. 104 f.), and the *kethubbâh* protected those rights, and also formed a potent restraint against rash divorces. Mielziner's statement (p. 89) that the *kethubbâh* is 'now almost entirely dispensed with' refers only to certain American and other reform congregations; it is still retained in most Jewish marriages, though it has little legal significance in many countries. The *kethubbâh* is ancient, being perhaps referred to in To 7¹⁴; it is certainly as old as the beginning of the 1st cent. B.C. (*Kethubbôth*, 82b; Abrahams, p. 207, note 2; E. N. Adler, in *JE* vii. 474; for the earliest instance of the terms of the wife's jointure the reader may refer to L. Ginzberg, *Geonica*, New York, 1909, u. 72). In Oriental lands the *kethubbâh* often included a solemn undertaking by the bridegroom to observe strictly the law of monogamy (see Abrahams, p. 120, and the document published by him in *Jews' College Jubilee Volume*, London, 1906, p. 101).

Of the many marriage customs which have prevailed in Jewish marriages one deserves special mention. The bridegroom breaks a glass, but the meaning of the rite is uncertain. Some have seen in it a symbolical allusion to the close of the ante-nuptial condition, but 'the most acceptable theory is that the custom arose from . . . a desire to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forgotten memory of the mourning for Zion' (see *Annotated Edition of the Authorised Daily Prayer Book*, London, 1914, p. cxxvii). The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abrahams, p. 188 f., and 'Hebrew Love Songs,' in *Book of Delight*, Philadelphia, 1912, p. 184 ff.). The same phenomenon is seen in the 'Seven Benedictions' cited below, where Jer 33¹⁰ is effectively used. As regards the *memento mori* idea the following incident is recorded in the Talmud (*B'râkhôth*, 30b):

'When the son of Rabbînā was married, the father saw that the Rabbin present were in an uproarious mood, so he took a costly vase of white crystal worth 400 zuzim and broke it before them to curb their spirits.'

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The dowering of poor brides was an act of sanctified loving-kindness (*Shabbath*, 127a); and the assistance at wedding festivals was an element in pious life (*P'sâhîm*, 49a). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the eulogies (*Kethubbôth*, 17a). On the subject of other wedding customs, both Oriental and Western, see Abrahams, chs. ix. and x.; *JE* viii. 340 ff.; Krauss, ii. 37; W. Rosenau, *Jewish Ceremonial Institutions and Customs*, Baltimore, 1912, ch. xi.

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (*Kethubbôth*, 8). First comes the benediction over wine (on the use of wine in Jewish ceremonial see *Annotated Prayer Book*, p. cxxxix); then follows the praise of God as the creator of all things to His glory; after this

eulogy of the creator of all comes the praise of Him as creator of man; and next the benedictions pass to the creation of woman, the memory of Zion, the bridal joy, and the hope of Israel's restoration. The current text is as follows (*Annotated Prayer Book*, p. 299):

'Blessed art thou, O Lord our God, King of the universe, who createst the fruit of the vine.

Blessed art thou, O Lord our God, King of the universe, who hast created all things to thy glory.

Blessed art thou, O Lord our God, King of the universe, Creator of man.

Blessed art thou, O Lord our God, King of the universe, who hast made man in thine image, after thy likeness, and hast prepared unto him, out of his very self, a perpetual fabric.

Blessed art thou, O Lord, Creator of man.

May she who was barren (Zion) be exceeding glad and exult, when her children are gathered within her in joy. Blessed art thou, O Lord, who makest Zion joyful through her children.

O make these loved companions greatly to rejoice, even as of old thou didst gladden thy creature in the garden of Eden. Blessed art thou, O Lord, who makest bridegroom and bride to rejoice.

Blessed art thou, O Lord our God, King of the universe, who hast created joy and gladness, bridegroom and bride, mirth and exultation, pleasure and delight, love, brotherhood, peace and fellowship. Soon may there be heard in the cities of Judah, and in the streets of Jerusalem, the voice of joy and gladness, the voice of the bridegroom and the voice of the bride, the jubilant voice of bridegrooms from their canopies, and of youths from their feasts of song. Blessed art thou, O Lord, who makest the bridegroom to rejoice with the bride.'

Thus the married state is brought into relation with the story of creation and with Israel's Messianic hopes. The Seven Benedictions, which were recited during the grace at the wedding banquet as well as during the wedding ceremony, cover the whole of Israel's history. The popular maxim, 'Marriages are made in heaven,' was accepted as a commonplace truth by the Rabbis (Abrahams, *Book of Delight*, p. 172 ff.). The reverence for the wife was shown by the husband's recital every Friday eve of the eulogy of the virtuous woman from the last chapter of Proverbs. In many other ways the sanctity of wedded life was symbolized, both in its human aspects and as a type of perfect harmony with the divine scheme of creation.

LITERATURE.—This is cited in the course of the article.

I. ABRAHAMS.

MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the subject is complicated by its antiquities; and these cannot be wholly omitted, for they are interesting to a student of marriage systems, and they reflect the earlier conditions of Roman society from which the later practice descended. We shall begin, then, with these antiquities, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. Pre-historic.—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race; but at what stage, whether among the people of the *terremare* in N. Italy or still further back, we cannot tell. The simulated rape of the bride at the *deductio* (see below), the parting of her hair with a spear, possibly the lifting her over the threshold of her husband's house, taken together with the legend of the rape of the Sabine women, may well suggest capture. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which there was no trace in historical Rome; marriage was originally within the limits of the *gens* (Marquardt, *Privatalterthümer*, p. 29, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been so before the development of the *gens* as a social

institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later *coemptio*, which, as we shall see, was a simulated transference of the bride by purchase from the *potestas* of her father to the 'hand' (*manus*) of her husband (for the possible connexion of the *dos* with marriage by purchase see Westermarck, *MI* ii. 384 ff.).

2. Early forms of marriage: confarreatio, coemptio, and usus.—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a *iustum matrimonium*, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (*sacra*) of the family, and also of serving the State in war and peace. Children of *concubitus*, i.e. cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was *connubium*; as Ulpian says, in the clearest exposition that we have of the subject (v. i. 2), '*iustum matrimonium est si inter eos qui nuptias contrahunt connubium sit.*' *Connubium*, or *ius connubii*, is thus the right of contracting true or legal marriage, and belonged, as Gaius tells us (i. 56), to Roman citizens only, to Latins and foreigners only when it had been granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the *sacra* of one family to those of another (see FAMILY [Roman]), and from the *potestas* of one *paterfamilias* to the *manus* of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—*confarreatio* or *farreum*, so named from the sacred cake of *far* (the old Italian wheat) used sacramentally in the rite.

Confarreatio stood alone as needing the presence of the Pontifex Maximus and the Flamen Dialis, the former, no doubt, representing in the Republican age the Rex of an earlier time (see Fowler, *Religious Experience of the Roman People*, London, 1911, p. 271), and the Flamen representing Jupiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (*sponsalia*, *auspicia*, etc. [see below]) which were common to all *iusta matrimonia*, a cake of *far* was offered to Jupiter Farreus, and sacramentally shared by bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Dialis, and ten other witnesses. This number ten has given rise to much conjecture; but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxxvii. 3, it apparently has a religious meaning, and so perhaps in *confarreatio*). A victim also was offered (to what deity is uncertain), the skin of which was stretched over two seats, on which the bride and bridegroom had to sit (for these and other details see Gaius, i. 112; Serv. *ad Æn.* iv. 103, 374, *Georg.* i. 31; Dion. Hal. ii. 25). The priests, it must be noted, do not perform the service, but witness it, giving this rite a peculiar solemnity which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage

in the Roman State, which must be imagined as consisting entirely of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priestships descended from that patrician State, viz. the Rex Sacrorum and the three *Flamines maiores*, *Dialis*, *Martialis*, and *Quirinalis* (see Gaius, i. 112). Of late, however, it has been suggested (by Cuq, *Institutions juridiques*, p. 215 ff., followed by Launspach, *State and Family in Early Rome*, p. 159 ff.) that it came into use only when the old custom of marrying within the *gens* was broken through, when the religious difficulty of transferring a bride from one *gens* to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamen must have been constantly in requisition for weddings, more often than would be consistent with their other duties. But it is possible that *confarreatio* may have been a very special religious form, originating in the marriage of the Rex only, or in families forming an inner circle of aristocracy, from which the Rex might be chosen, and which would be likely or willing to supply children qualified to become *camilli patrum* et *matrum* in the service of the State (Serv. ad Georg. i. 31). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the *confarreatio* probably represents an early form of it, but not exactly that which we have been accustomed to imagine.

There were two other ancient methods of transferring a bride from one family to another, from the *potestas* of her father to the *manus* of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below under marriages which did not produce *conventio in manum*. In other words, the true marriage rite was, except in *confarreatio*, distinct from the act which transferred the bride from the *potestas* of her father to the *manus* of her husband, or to that of his father, if he were a *filius familias* in the *potestas* of his father. Thus *coemptio*, the form by which, in the presence of five witnesses and a *libripens* (a form which could be used for other purposes besides marriage), the bride was made over to the *manus* of her husband by a symbolic purchase (Gaius, i. 113), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in *confarreatio*. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this article.

The other method which produced *conventio in manum* took a whole year to complete the process; if a duly qualified pair lived together for an entire year without a break, *manus* followed of necessity by *præscriptio*; but by the XII Tables it was possible for the bride to escape this result by absenting herself yearly for three nights from her husband's house, by which means, in legal language, the *usucapio* would be barred (Gaius, i. 111). It is not unlikely that this was really the oldest form by which the husband could acquire *manus*, and the one most commonly in use. *Confarreatio* and *coemptio* both presuppose the existence of the law and religion of the State in full development, but *usus* may go much further back. *Usus* and *coemptio* are, however, alike in this, that they have

a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to non-patricians, plebeians or Latins, when these attained *connubium*; but this could not be so with *confarreatio*, if, as we have assumed, the main object of the latter was at all times to produce children capable of holding the exclusively patrician religious offices.

In these three methods of marriage the union was accompanied by *manus*, though in the case of *usus* not till after a year had elapsed. *Usus*, indeed, shows us plainly that the Roman of early times did not think of marriage and *manus* as inseparable: for the bride must have been properly married under *usus*, if her children were to be Roman citizens, though for a year at least she was not under *manus*. We must also remember that, if the husband were not *sui iuris*, but a *filius familias* under the *potestas* of his father, as must constantly have happened, the wife passed under the *manus*, not of her husband, but of his father. Quite early marriage and *manus* became separable both in thought and in fact; under the XII Tables, as we have seen, the wife was given the option of escaping a change of *manus* altogether, and this may be taken as proving that a tendency in this direction had shown itself much earlier. After that time, mainly, no doubt, from reasons of convenience connected with the family property, marriage without *manus* came to be almost universal. *Usus* died out altogether (Gaius, i. 111); *coemptio* survived as a legal expedient in certain cases (e.g., CIL vi. 1527—the *Laudatio Turiae*, line 14); and *confarreatio* became so irksome that its bonds had to be relaxed by Augustus in order to get a supply of candidates for the old patrician priestships (Gaius, i. 136; Tac. Ann. iii. 71, iv. 16; Sueton. Aug. 31). Yet marriage long continued to be as complete and binding a union as before, and we now have to see what made it so, by briefly examining the process as we know it in historical times.

3. The historic period.—(a) *Conditions of marriage*.—The necessary conditions of marriage were: (1) the families of both parties must possess the *ius connubii* (as explained above); (2) the parties must not be within the prohibited degrees of relationship (*cognatio*). Originally no *cognati* could marry who were within the seventh degree of relationship; i.e., second cousins could not marry; this was, no doubt, a survival from a period in which families of three generations lived together under the same roof, and were therefore, by a well-known psychological law, unsuited for intermarriage (see E. Westermarck, *Hist. of Human Marriage*, London, 1894, p. 320 ff.). Traces of such large households are not wanting in Roman history (Val. Max. iv. iv. 8; Plut. Crassus, 1, and Cato the Elder, xxiv.). But these strict rules were gradually relaxed, and from the time of the Punic wars it seems to have been possible for first cousins to marry (see Marquardt, *Privatalterthümer*, p. 30, note). When the Emperor Claudius married his brother's daughter, he had to obtain a decree of the Senate for the purpose, and this licence, which was afterwards repealed, was not generally approved (Tac. Ann. xii. 6; Gaius, i. 62). (3) The consent of the parents was absolutely necessary, but not that of the parties themselves, who were often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, *Social Life*, p. 140 f.). This was a survival of a practice still common in many parts of the world, where the maintenance of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried. The betrothal (*sponsalia*), however, at Rome was a promise rather than a legal contract, and might be broken by

consent if there was a strong dislike on the part of either boy or girl (see, however, Serv. Sulpicius, in Aul. Gell. iv. 4). The early betrothal serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the procreation of children capable of such service, and that love and romance lay wholly outside it. Steady affection there might be and often was (Fowler, *Social Life*, pp. 141, 159 ff.); but the modern idea of passion with marriage as its consummation, which too often subsides and ends in divorce, was unknown at Rome. (4) As a last condition, we must note that bride and bridegroom must be of proper age, i.e., they must have reached the age of puberty and laid aside the *toga praetexta* of childhood; this might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(b) *Ritual*.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with us, May was an unlucky month for this purpose, and so was the early part of June, while certain other *dies religiosi* were to be avoided (Fowler, *Rel. Exper.*, p. 38 ff.). At earliest dawn, according to ancient usage both public and private, the auspices were taken by the flight of birds; but by Cicero's time this seems to have dropped out, and the examination of the *exta* of a victim took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the parties, usually but not necessarily recorded on *tabulae nuptiales*. Then the bride assumed the wedding dress, viz. the *flammeum*, or hood of red or yellow, and the *tunica recta* with a woollen girdle fastened with the *nodus herculeus*; this knot, we learn from Pliny (*HN* xxviii. 63), was also used for binding up wounds, and we may therefore suppose that it was a charm against various kinds of evil (cf., however, *ERE* vii. 749ⁿ). Her hair was parted into four separate locks with a spear-head (*hasta calibaris*), which may have been a survival from pre-historic marriage by capture; and under the *flammeum* she carried a bunch of herbs picked by her own hand (Festus, s.v. 'Corolla' [p. 56, Lindsay]). She was then ready for the actual marriage rite, which, as will now be seen, was a matter not only of secular contract, but of religious usage; it is occasionally called a *sacrum*, as in Lucan, *Phars.* ii. 350 (of the marriage of Cato): 'sacrisque deos admittere testes.'

(1) The first act of the ceremony was the *dextrarum iunctio*, a symbolic act of union, in which, under the guidance of a *pronuba*, who must be a matron only once married, the bride placed her right hand in the right hand of the bridegroom (Festus, p. 242 [p. 282, ed. Lindsay]). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rossbach, *Römische Hochzeits- und Ehedenkmäler*, Leipzig, 1871, *passim*; these are, however, all of very late date, and not easy to interpret. The *dextrarum iunctio* took place, so far as we can discern, either in the bride's house before the hearth or in front of some temple (Nonius, 531); but what temple this was we do not know, nor is it clear to what deity sacrifice was offered. On the monuments we see both cow and pig, which suggest Juno and Tellus (Varro, *de Re Rust.* ii. iv. 9, refers to the pig as an Etruscan marriage victim). Possibly Tellus was the usual deity in early times (Fowler, *Rel. Exper.*, pp. 121, 138), and Juno later on; but Vergil combines the two in *Æn.* iv. 166. When the sacrifice had been offered by the pair, the persons present shouted 'Feliciter' by way of good omen, and the wedding-meal followed, and lasted till evening.

(2) The next act was the *deductio*, in which the bride was conducted to her new home—a beautiful

ceremony, exquisitely described by Catullus in his 61st poem. She was taken, as it were by force, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (*patrini et matrimi*), pure and of good omen, one of whom carried a torch of white-thorn, while the other two held her by the hands; flute-players and torch-bearers went before, the mysterious and unexplained cry 'Talasae' was raised, and nuts were thrown to the youthful lookers-on. When the bride reached the house, she smeared the doorposts with oil and fat (of wolf or pig), and tied a thread of wool around them; probably these old customs were originally charms to avert evil (for wool see J. Pley, 'De Lanæ in antiquorum ritibus usu,' in *RVV* xi. ii. [Giessen, 1911] 82). She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obscure in its detail, but the general meaning is plain. It was called 'reception into community of fire and water' ('*aqua et igne accipere*'), i.e. into partnership in these necessities of human existence (E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901, p. 18 ff.). We are also told that she brought with her three coins (*asses*), one of which she gave to her husband, one she laid on the hearth, and the third she threw down at the nearest *compitum* ('crossways' [Nonius, p. 852, Lindsay]). Here she seems to be making an offering to the genius of her husband, to the spirit of the hearth-fire, and to the Lar of the family's land allotment, who dwelt in a *sacellum* at the *compitum* (see Fowler, *Rel. Exper.*, p. 77). She was now in the *atrium*, at the end of which, opposite the door, the *lectus genitalis* had been made ready. The morrow would find her a *materfamilias* sitting among her maids in that *atrium* or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a *dos*, or dowry, which in strict law became the property of the husband (for modifications of this rule see art. 'Dos,' in Smith's *Dict. of Gr. and Rom. Antiquities*). As Cuius puts it (p. 231), her position of dignity in the house, and her title of *domina* as mistress of its slaves, would have been impaired if she entered it with empty hands and lived at the expense of her husband. The *dos* was also the means of securing to the children born of the marriage succession to their mother's property as well as to the *patrimonium* of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see MARRIAGE [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the *atrium*, and was never shut away in a woman's chamber. She took her meals with her husband; in all practical matters she was consulted, and only on questions political or intellectual was she expected to be silent.

'When she went out arrayed in the graceful stola matronalis, she was treated with respect, and the passers-by made way for her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort' (Fowler, *Social Life*, p. 144).

The character induced and expressed by such a position is exemplified in the legendary Volumnia of the story of Coriolanus, in Cornelia the mother of the Gracchi, in Cæsar's mother Julia, and, among many others, in the perfect lady whose courage, good sense, and domestic virtues live for ever on the marble of the *Laudatio Turiae* (*CIL* vi. 1527; Fowler, *Social Life*, p. 159 f.).

4. Divorce.—No doubt towards the end of the

Republic the type of womanly virtue just described was growing rare, owing to the gradual break-up of the old type of family life—the result of a moral degeneracy which even Augustus was unable effectually to check. This downward tendency is best seen in the history of divorce. Marriage by *confarreatio* had been practically indissoluble; we hear of *diffarreatio*, but it is said (Plut. *Quest. Rom.* 50) to have been so awful a rite that we assume that it was used only for penal purposes. But the other forms of marriage, not being of the same mystical or sacramental character, did not present the same difficulty, and the legal formula of divorce is as old as the XII Tables, and therefore probably earlier than the 5th cent. B.C. ('*claves adimere or exigere*' [Cic. *Phil.* ii. 28; cf. above, p. 122*]). By the 2nd cent. marriage was becoming unpopular in high social circles, and divorce was becoming common (Fowler, *Social Life*, p. 147 ff.). In the Ciceronian age it was extraordinarily frequent; almost all the well-known ladies of that period were divorced at least once. Pompey, though a man of excellent character, was married five times, Cæsar four times, Cicero three times, and under the Empire the virtuous Pliny the Younger also three times. There was no difficulty in the operation of divorce; it was purely a private matter, and either party could send the other notice of it without any given reason or any complaint of misconduct. No remedy was found for a disorder so universal; and to the looseness of the marriage-tie, and the corresponding disregard of what had once been the chief object of marriage, must be ascribed in part at least the degeneracy of Rome and Italy in the first three centuries of the Empire (L. Friedländer, *Sittengeschichte Roms*, Leipzig, 1901, Eng. tr., London, 1908–13, i. 242 f.).

LITERATURE.—A. Rosbach, *Untersuchungen über die römische Ehe*, Stuttgart, 1853 (still the standard work); O. Karlowa, *Die Formen der röm. Ehe und Manus*, Bonn, 1868; art. 'Matrimonium,' in Daremberg-Saglio and Smith's *Dict. of Greek and Roman Antiquities*, London, 1875; J. Marquardt, *Privatalterthümer der Römer*, Leipzig, 1868, p. 27 f.; A. de Marchi, *Il Culto privato di Roma antica*, i. (Milan, 1896) 146 ff.; E. Cuq, *Institutions juridiques des Romains*, Paris, 1891, p. 204 ff.; C. W. L. Launspach, *State and Family in Early Rome*, London, 1908, ch. x.; W. Warde Fowler, *Social Life at Rome in the Age of Cicero*, do. 1908, ch. v. The most complete ancient authority is Gaius, i. 108 ff.

W. WARDE FOWLER.

MARRIAGE (Semitic).—Students of social evolution seem justified in holding that the family of primitive man was an intermediate development between those of the highest animals and the lowest living men. In the lowest known human societies the form of marriage is usually a temporary monogamy.¹ This temporary monogamy has been accompanied among most early men by a greater or less degree of sexual irregularity, and has varied according to economic circumstances and the bent of the people. So far as can be ascertained from the existing evidence, it underwent some interesting variations among the primitive Semites.

1. **Primitive Semitic.**—Among many savage or semi-savage peoples it is customary to allow unmarried girls complete sexual liberty. In such communities it might in time easily come to be thought that a woman who had exercised such liberty was more likely to bear children than one who had not. There is reason to believe that something like this prevailed among the primitive Semites, and that superstitious value attached to this exercise of liberty, for in many widely-scattered portions of the Semitic world it became a sacred duty for women to sacrifice their virtue by one or more acts of free love. It was thus, apparently,

¹ See E. Westermarck, *Hist. of Human Marriage*, London, 1894, pp. 141, 60; F. H. Giddings, *Principles of Sociology*, New York, 1898, pp. 264, 266.

that the temporary *hierodouloi* originated (see *HIERODOULOI* [Semitic and Egyptian], vol. vi. p. 672 f.). Besides the existence of *hierodouloi* among the Semites, both temporary and permanent, there is also evidence of much sexual irregularity among them.

It is the working hypothesis of most Semitic scholars to-day that Arabia was the cradle-land of the Semitic people. Naturally, the peculiar desert and oasis environment of the Arabian peninsula left its impress on the Semitic family life. In the oases dates and fruit were raised, and some sustenance for the flocks was produced, but it was necessary to lead the flocks into the desert in search of pasturage. Whether, however, men lived in an oasis or wandered from place to place, women would always be needed to perform the duties of the household and the camp, that the men might be free to fight, either in defence or for plunder. There are two reasons for believing that the women were for the most part the sisters and mothers of the men, whether the clan was resident in one fertile spot or was nomadic: (1) Semitic marriage was notoriously temporary, and (2) kinship was reckoned through the mother.

That marriage was, on the whole, temporary seems probable from the frequency of divorce in Semitic lands, especially among the Arabs and Abyssinians (see below). The researches of W. Robertson Smith established as well as the evidence will permit that among the early Semites kinship was reckoned through the mother.¹ The reasons for this view are as follows. (1) The well-known Biblical phrase for relationship is 'bone of my bone and flesh of my flesh.' 'Flesh' (*bāsār*) is explained in Lv 25⁴⁹ by the general word for 'clan.' The Arabs attach great importance to a bond created by eating together; we must suppose, therefore, that the bond between those of the same womb and nurtured at the same breast would be more nearly of the same 'clan' and the same 'flesh' than any others. (2) The word *rahim*, 'womb,' is the most general word for kinship, and points to a primitive kinship through the mother. (3) The custom called '*aqīqah*,' by which a child is consecrated to the god of his father's tribe, cannot have been primitive, but must have sprung up in a state of transition to ensure the counting of the offspring to the father's side of the house. (4) Cases occur in the historical period in which a boy when grown attaches himself to his mother's tribe. The poet Zuhair is a case in point, and the Arabic antiquarians appear to have known that such cases were not uncommon. (5) The fear that sons would choose their mother's clans led men who were wealthy to marry within their own kin. (6) Kinship between a man and his maternal uncle is still considered closer than that between a man and his paternal uncle. (7) Joseph's sons born of his Egyptian wife were not regarded as members of Israel's clan until formally adopted by him (Gn 48⁵⁴). (8) Tamar might legally have been the wife of her half-brother Amnon, the relation being on the father's side (2 S 13¹³). Such unions were known in Judah as late as the time of Ezekiel (Ezk 22¹¹). Tabnith, king of Sidon, married his father's daughter,² and such marriages were known in Mecca. Since the marriage of those really regarded as brothers and sisters was abhorrent to the Semites, kinship must in these cases have been counted through the mother. (9) In the Arabic genealogical tables metronymic groups are still found. (10) In Aramaic inscriptions found at Hegra metronymic clans appear.³ To this evidence may be added a few items gathered by other scholars. Noldeke noted that among the Mandæans a man is described

¹ *Kinship and Marriage in Early Arabia*, p. 175 ff.; cf. also Barton, *Semitic Origins*, p. 51 f.

² *CIS* i. i. 3. ll. 13–15.

³ *IB.* ii. i. 198, 209.

as the son of his mother, which indicates that kinship was reckoned through the mother.¹ F. E. Peiser pointed out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom.² Wellhausen has observed that in the Pentateuch J counts descent through the mother, while P reckons it through the father.³ Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the father in reproduction;⁴ among others, as, e.g., the Nairs of the Malabar coast, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child.⁵ Which of these causes led to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternity was unknown to them. On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In three of the *Mu'allagāt* poems there are specific statements that the women whom the poets visited only occasionally were members of other clans, and that they often visited them at personal risk,⁶ on account of the strained relations of the clans. The marriages of Samson (Jg 14, 16) were of this nature. Such marriages were often terminated by the migration of the tribes in different directions.⁷ Ammianus Marcellinus was, no doubt, speaking of this type of marriage when he said that among the Arabs the bride presents her husband with a spear and a tent, and, if she chooses, withdraws after a certain day.⁸ In this type of marriage kinship would necessarily be reckoned through the mother, and the fact that such alliances prevailed would be sufficient to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia in parts of the peninsula like Oman and Hasa, which are not so dominated by Islām as the rest of it.⁹

The type of marriage which seems to have prevailed, at least in part, was a combination of polyandry and polygamy. Just as a woman might receive successive husbands, so the husbands also might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girl babies to death prevailed down to the time of Muhammad (see Qur'an, xvi. 61, lxxxi. 8), so that women must have been fewer than men. Marriages of this early Semitic form were not always exogamous, for Imr-al-Qais boasts in his *Mu'allagāt* that he followed one day the women of his tribe and spent a day in their company, and the Unaizah with whom he afterwards rode and whose fruit he boasts he repeatedly tasted was the daughter of his uncle.¹⁰ In like manner Lailah, the woman celebrated in the poem

of 'Amr b. Kulthūm, was 'Amr's kinswoman.¹ Whether the marriages which occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were. Out of these general conditions there developed a type of temporary marriage for a specified time—three nights or more—called *mut'ah* marriage, which continued till the time of Muhammad.²

Another type of polyandry, that called Tibetan, because first studied in Tibet, was the form of marriage in vogue at one time in the southern part of Arabia. In this form of marriage a whole family of brothers possess one wife in common. The most important witness to this type of marriage is Strabo, who says, in describing Arabia Felix:

'All the kindred have property in common, the eldest being lord; all have one wife, and it is first come first served, the man who enters to her leaving at the door the stick which it is customary for every one to carry; but the night she spends with the eldest. Hence all are brothers of all; they also have conjugal intercourse with mothers; an adulterer is punished with death; an adulterer is a man of another stock.'³

The reference to conjugal intercourse with mothers is probably not to be taken literally, but it is to be explained by Qur'an, iv. 26, where it appears that men had married wives of their fathers.⁴ In other respects the passage describes all the features of Tibetan polyandry. Its existence in that part of Arabia is also attested by epigraphic evidence.⁵

W. Robertson Smith collected considerable evidence to show that this type of polyandry was also known in N. Arabia.⁶ His points are:

(1) Bukhārī relates that two men made a covenant of brotherhood, which resulted in their sharing goods and wives—a fact which seems to betray a survival of a custom of fraternal polyandry. (2) In Arabic *kannah* means the wife of a son or brother, but is used also to denote one's own wife; in Hebrew *kallāh* means both betrothed and daughter-in-law, while in Syriac *kalāthā* means both bride and daughter-in-law. These facts can be most easily explained as remnants of fraternal polyandry. (3) The Arabic law that a man has the first right to the hand of his cousin, and the fact which the fourth *surah* and its attendant traditions attest, that, if a man died and left only female children, the father's male relatives inherited the property and married his daughters, are regarded as the results of a previously existing condition of fraternal polyandry. (4) The Qur'an (iv. 23 ff.) forbids men to inherit women against their will, and forbids them to take their step-mothers in marriage 'except what is past.' This is regarded as evidence that down to the time of Muhammad these attendant circumstances of polyandry had continued, and that the Prophet did not dare to annul existing unions, though he forbade such marriages in future.

Wellhausen,⁷ F. Buhl,⁸ I. Benzinger,⁹ and Barton¹⁰ have also held that the existence of the levirate marriages in Israel was an outgrowth of fraternal polyandry. This has been contested by C. N. Starcke¹¹ and Westermarck,¹² but their arguments appear inconclusive. It is difficult to explain why one should ever have thought of counting the seed of one brother as that of one who had died, if there had not been a previous state of polyandry in which all brothers shared in the offspring. The levirate was known in Arabia,¹³ in Abyssinia,¹⁴ and in Israel.¹⁵

It would seem that fraternal polyandry of the Tibetan type may have been an intermediate stage between the less well regulated polyandry of an

earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. R. Smith so regarded it. But, be this as it may, by the time of Muhammad there had come into vogue in Arabia a type of marriage in which the husband was practically the owner (*ba'al*) of the wife, and which is, consequently, known as *ba'al* marriage. In this type of marriage children belonged, of course, to the father's clan. Smith attributed the origin of the *ba'al* marriage to wars and to the consequent custom of marriage by capture. Marriages of this type might be either monogamous or polygamous, according to the caprice or the wealth of the husband. In much earlier times they had become the custom among the other Semites, who had migrated to lands more fertile than Arabia.

What form of marriage ceremony the early Semites had is largely a matter of conjecture. The type of marriages of which the early poets boast was probably without ceremony. A simple affinity or agreement between the parties sufficed.¹ This must often have been the case also with the later *muf'ah* marriages. After a marriage of this kind was recognized by the clan of the bride, a feast was celebrated for a week, during which there was much jollity of a type suited to the rough character of the civilization (see Jg 14³⁴). As marriage became more permanent, somewhat similar festivals became the rule and have persisted in all parts of the Semitic world.

2. *Babylonian and Assyrian*.—There is little direct evidence of marriage and the position of women in Babylonia earlier than the time of Hammurabi (c. 2000 B.C.), though it is certain that the regulations embodied in his Code of laws are for the most part only the expression of customs that had then been of long duration.

The most conspicuous instance of the position of a married woman of the earlier time is that of Barnamtarra, wife of Lugalanda, Patesi of Lagash about 2825 B.C. From an archive of tablets discovered at Telloh, which contained the pay-rolls of the attendants of her palace, memoranda of her gifts to temples and festivals,² and even a record of her accouchement,³ it appears that she held a position in Lagash analogous to that of a queen in a modern European country. One cannot say that her husband had no other consorts, but it is certain that her position and importance were shared by no others. Her freedom and prominence in the eyes of the public have few parallels in Babylonian history, and are in striking contrast to the insignificance of the women in the *harem* of Assurbanipal (668-628 B.C.), into which many princesses went, never to be heard of again.⁴ Sammuramat, the wife of Adad-nirari IV. (810-782 B.C.), was prominent enough to be described as 'lady of the palace and its mistress.'⁵ She is the nearest Mesopotamian parallel to Barnamtarra. In the light of later Babylonian laws, however, it is probable that Barnamtarra was the only wife of Lugalanda, and that he was, at least in theory, a monogamist. If this was true of the ruler, it would be true for most of the men of his kingdom.

For the period of the first dynasty of Babylon (2128-1924 B.C.) the Code of Hammurabi affords an authoritative source of information on marriage. The Code contains this regulation: 'If a man

takes a wife and does not execute contracts for her, that woman is no wife' (§ 128). This is proof that in Babylonia marriage had passed from the less formal stage of early Semitic life, and had, in consequence of long legal development, become a matter of record. The marriage ceremony was incomplete without the signing of contracts. The law did not recognize anything like our modern 'common law' marriage. One reason for this was that the bride usually brought a dowry from her father's house, which the law safeguarded for her and her children. The husband also generally gave a bride-price to his father-in-law, which, upon certain conditions, reverted to him (§§ 138 f., 162-164). As Babylonian law dealt much in the evidence of written contracts, these were regarded as necessary to a legal marriage. The terms of the marriage, according to the Code, bore somewhat more heavily upon the woman than upon the man. True, if a man was caught defiling the wife of another, both he and she suffered capital punishment (§ 129); if he forced the betrothed of another, he was put to death and the woman went free (§ 130); but a woman, if only slanderously suspected of infidelity, was required to purge herself by the ordeal of throwing herself into the sacred river. The man, on the other hand, might have children by a concubine and suffer only the inconvenience of rearing the children (§ 137). If a man was taken captive, and there were means in his house to support his wife, she must remain true to him; if means were lacking, she was free to marry another (§ 133 f.). If she contracted such a marriage and bore children to her new husband and her former husband afterward gained his freedom and returned, she was bound to return to him, but the second husband retained his children (§ 135). If the husband's absence was due to desertion of his city, he had no claim on his wife on his return, if she had remarried (§ 136).

The Code assumes that marriages shall be monogamous, although it imposes on the father the duty of raising the children of his concubines. Nevertheless, it recognizes that in the case of women who had served as sacred servants in the temple (see *HIERODOULOI* [Semitic and Egyptian]), and had married late and were, accordingly, unlikely to bear children, and also in the case of wives who through sickness were rendered barren, he may take another (§§ 145-149). If the second wife is taken because of the chronic illness of the first, the first may, if she wishes, take her dowry and return to her father's house (§ 149). Slave concubinage was frequently practised, but a female slave who had borne her master children could not be sold (§§ 146 f., 171).

According to the Code, a man might divorce his wife, if he wished, but in that case he must make certain specified monetary settlements, which varied according to whether the wife had or had not borne him children (§ 137 f.). A woman might take the initiative in a divorce. If she did so, her husband could, if he wished, divorce her without alimony (§ 141). If the wife complained of ill-treatment, the life of the family was subjected to investigation. If her claim proved true, she could take her marriage portion and return to her father's house; if untrue, she was to be thrown into the river (§ 142 f.).

In the marriage contracts of the time of the 1st dynasty it appears that greater privileges of divorce were sometimes secured to the bride than the Code would have granted her. *E.g.*, a priest married, and his contract provided that, if he divorced his wife, he must return her dowry, and pay a *half-mana* as alimony.¹ Another contract, which seems to equalize the penalties for

divorce, provides that, if the husband divorces the wife, he shall be driven out to the oxen of the palace; if she divorces him, she shall be driven to the carriage-house of the palace.¹ Another contract provides for a divorce on the part of the man by payment of the usual alimony; on the part of the wife, on pain of having her hair cut off and being sold for money.² The latter was a less severe penalty than being thrown into the river. In general, however, the penalties for initiating divorce imposed upon the wife in the marriage contracts are as severe as those of the Code, though not always identical. In one case the wife is to be thrown from a tower;³ in another, impaled.⁴ Nevertheless, the penalty most often imposed is that mentioned in the Code.⁵ One marriage, concerning which two documents bear witness,⁶ records the wedding of two sisters by one man, but provides that the older shall be the chief wife, and that the other shall perform for her certain specified duties.

From the Neo-Babylonian and Persian periods several marriage contracts have come down to us.⁷ The stipulations in them as to bride-price and dowry are in general the same as in those of the time of the 1st dynasty, but the conditions on which the parties may separate are generally omitted from the contracts of that period, although divorce did then occur.⁸ In most of the marriage contracts the man acts for himself and arranges with the parents of the bride, though, if the husband is a minor, the parents make the arrangement for him. The bridegroom enjoyed in this respect more liberty of action than the bride. In Babylonia, as in the ceremony of the English Church, she had to be 'given away.'

We have no knowledge of ancient Babylonian marriage ceremonies further than that before marriage every woman had to act once as a temporary *hierodoulos* (see *HIERODOULOI* [Semitic and Egyptian], vol. vi. p. 674*).

3. Hebrew.—In the story of Samson there are, as noted above, some faint traces of that early Semitic type of marriage in which the wife belonged to a hostile clan, lived with her people, and was visited by her husband for longer or shorter periods. The stories of the Patriarchs reflect various phases of matrimonial development. The marriage of Jacob to the daughters of Laban indicates a type of marriage in which the husband resides in the wife's clan and the children are counted to her family, for Laban says: 'The daughters are my daughters, and the sons are my sons' (Gn 31⁴⁰). Then Jacob broke away, and the children were counted to his stock. This narrative forms a transition from one system of kinship to the other. A number of survivals of the two matriarchal types of marriage just mentioned are found in the narratives of the OT; Shechem, e.g., consented to circumcision to render himself acceptable to the clan of his proposed wife (Gn 34¹⁰). A number of instances also occur in which a son inherits his father's concubines: Ishbosheth regarded Saul's concubine as his own, and resented Abner's taking her (2 S 3⁷); Solomon for the same reason regarded Adonijah's desire to marry Abishag as treason (1 K 2²²; cf. v.¹⁸); Reuben was denounced for endeavouring to anticipate the inheritance of

his father's concubine during his parent's lifetime (Gn 35²²). As noted above (§ 1), these are survivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take the widow of a deceased brother and count the first fruit of the union as the child of the deceased (Dt 25⁵, Gn 38⁷⁻¹¹, Ru 3, 4). The influence of these early forms of marriage is also seen in the great liberty enjoyed by women of the early period (see 1 S 25¹⁸, 2 K 4²²). In the stories of Abraham and Jacob the type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see *Code of Hammurabi*, §§ 144, 146). The general type of marriage of which we have evidence in the Hebrew writings was, however, *b'at* marriage, the regular Hebrew word for husband being *b'at*, and that for a married woman *b'atlah*, which means 'owned,' 'possessed.' Another evidence of this conception of marriage may be seen in Ex 20¹⁷, where the wife is counted among a man's possessions. Among the poor, marriages were probably often monogamous, but there was no sentiment against polygamy, and it was often practised by the rich and powerful, as the large *harem*s of David and Solomon abundantly show. Dt 21¹⁵ presupposes that a man will also often have two wives. The law of Ex 21⁷⁻¹¹ takes it for granted that female slaves will become the concubines either of their owner or of his sons. A similar assumption underlies Dt 21¹⁰⁻¹⁴.

The list of the degrees of kinship in which marriage was prohibited in Lv 18, 20, and Dt 27 belongs to the period of Judaism, which began with the Babylonian Exile. At no period were young people allowed to arrange matrimonial affairs for themselves; such arrangements were made by the parents (cf. Gn 21²¹ 24² 28¹ 34⁴ and Jg 14²). Down to about 650 B.C. a man could divorce his wife without any formalities whatever (see Hos 3⁸ and 2 S 3¹⁴). This liberty was somewhat modified by the Deuteronomic Code, which provides (24¹²) that, if a man wishes to divorce a wife, he must give her a written statement to that effect. It permits him to issue the divorce for any cause; she need only 'have found no favour in his eyes.' Apparently this law was designed to make divorce less easy than in earlier times, when no written statement was necessary; for, in an age when writing was not a usual accomplishment, it was quite an undertaking to get the document composed. In Judaism, however, this provision was held to justify frequent divorces.

The law of Deuteronomy permitted only the man to initiate divorce; it granted to the woman no corresponding power. It represents, no doubt, the usual custom among the Hebrews. One instance, however, is known in which a Hebrew bride secured by her marriage contract a similar liberty. Among the Jewish papyri discovered at Elephantine in Egypt a marriage contract was found, which contains this passage:

'If to-morrow or any later day Miphtahyah shall stand up in the congregation and say, "I divorce As-Hor, my husband," the price of divorce shall be on her head. . . . If to-morrow or any later time As-Hor shall stand up in the congregation and say, "I divorce my wife, Miphtahyah," her marriage settlement shall be forfeited,'¹ etc.

Whether other Jewish women at Elephantine were accustomed to gain this liberty by contract, or whether there were special reasons why it was secured to Miphtahyah, we do not know, but in any event it is a significant modification of the OT status of women in such matters.

The Deuteronomic law defined two cases in which a man was for ever powerless to divorce a wife: if he had falsely charged his bride with not

being a virgin, and if he had been forced to marry a woman whom he had violated (Dt 22^{19, 28f.}).

The penalties for adultery bore more heavily on the woman than on the man, the only cases where they were equal being when the crime was committed with the wife or betrothed of another; then both the man and the woman were to be stoned (Dt 22²²⁻²⁷). The point of view was that adultery with a married woman was an offence against her husband's property (cf. art. ADULTERY [Semitic]). The wife was accordingly compelled to be faithful, but no similar fidelity was exacted of him. So long as he did not violate the honour of those who were really or prospectively the wives of others, he was not punished, except that, if he violated a maiden, he might be compelled to take her as an additional wife. The penalty imposed on a wife or a betrothed maiden for adultery seems in the earlier time to have been burning (Gn 38²⁴), but was later changed to stoning (Dt 22^{19, 28f.}). If a woman was simply suspected of adultery, she was tried by ordeal (Nu 5¹¹⁻³¹). As the ordeal consisted, however, in drinking water into which holy dust from the sanctuary floor had been thrown, it must generally have resulted in the release of the accused woman. The frequent denunciation of adultery on the part of the prophets would indicate that the penalties were not well enforced and that it was of frequent occurrence (2 S 11 and Hos 3 afford specific instances in which the penalty was not enforced).

4. *Arabian*.—The early Arabian marriage customs have been sufficiently treated above (§ 1); it remains to note how these customs were affected by Islām. By the time of the Prophet *ba'al* marriage had apparently become the normal type, and polygamy prevailed among the rich. The husband had full power over the wife and could enforce his authority by beating her (Qur'an, iv. 38). Some survivals of customs which belonged to the earlier time were, as noted above, condemned by the Prophet (iv. 26). Before the time of Muhammad no limit had been set to the number of wives a man might possess. In the interest of moderation, Muhammad ordained that legal wives should be not more than four, but that a man might also enjoy as concubines as many slaves as he was able to possess (iv. 3, 29). The Prophet himself was allowed as many as he wished (xxxiii. 49). Marriage with one's mother, daughters, sisters, paternal and maternal aunts, nieces, mother-in-law, step-daughters, and daughters-in-law was prohibited (iv. 27). Marriages with foreign women were permitted, if the women were believers (ix. 10). Adultery was a crime for a woman, but apparently not for a man. Before the time of the Prophet an adulteress had been literally immured,¹ but Muhammad changed this to imprisonment in the house of the wronged husband (iv. 19). A slave girl was to receive half the penalty of the married woman (iv. 30). Divorce of a wife, as among the Hebrews, was possible to the husband at will. Before the time of Muhammad, the formula of divorce consisted of this sentence, which the husband pronounced to the wife: 'Thou art to me as my mother's back!' After this had been pronounced over her, it was considered as unnatural to approach her as it was to approach a real mother,² and so it was regarded as wrong to re-marry a divorced wife. Muhammad called this 'backing away' from wives (lviii. 2). He declared, however, that the utterance of this formula did not constitute a real relationship, and so permitted a man to marry a wife whom he had divorced (xxxiii. 4). A man might not divorce a woman who was pregnant, or who was nursing a child (lxv. 4, 6), but apart from this

condition a man and wife who did not agree might separate at any time (iv. 129), though liberal alimony was enjoined (iv. 24). It is assumed (xxxiii. 48) that men will frequently divorce their wives for mere whims after marriage, even before consubial relations have been established. Liberty of divorce has been freely exercised by the faithful both in ancient and in modern times.³ Thus 'Alī, the son-in-law of the Prophet, married, including all that he married and divorced, more than two hundred women. Sometimes he included as many as four wives in one contract, and he would divorce four at one time and marry four others in their stead.⁴ A certain Mughairah b. Sha'abah is said to have married eighty women in the course of his life,⁵ and Muhammad al-Tayib, a dyer of Baghdad († 423 A.H.), is said to have married in all more than nine hundred women.⁶ Palgrave relates that the Sultan of Qatar in E. Arabia married a new wife every month or fortnight, who was then divorced and placed on a pension.⁷ C. M. Doughty tells how Zaid, his host, a petty shaiikh, not only permitted his wife to be courted by another Arab, but offered to divorce her so that Doughty could marry her.⁸

Naturally a woman could not marry so many men, because she had not the right of divorce, and because she could have only one husband at a time; some of them, nevertheless, managed to have a surprising number. A certain Umm Kharijah of Yemen is said to have had upwards of forty husbands, and her son Kharijah did not know which one was his father.⁹

In parts of Arabia certain old marriage customs still survive in spite of Islām. Thus in Sunan and among the 'Asir in S. Arabia marriage for a definite term still exists,¹⁰ and a man who has a permanent wife may also take a temporary one. In Sunan the agreement is witnessed before the *qāḍī*, and so has the sanction of Islām. At the expiration of the contract, the couple may separate without the formality of a divorce; if they continue to live together, a new contract is necessary. Such marriages are still practised in Mecca at the time of the pilgrimage.¹¹ Marriage ceremonies among the Arabs vary greatly according to circumstances. Sometimes they consist of a feast,¹² sometimes of a civil contract before the *qāḍī*,¹³ and sometimes there is no ceremony at all. The much married woman Umm Kharijah, mentioned above, is said to have reduced the contract to very simple terms. A man approached her and said to her, 'Betrothed?' and she replied, 'Married!' and was from that moment his lawful wife.¹⁴

5. *Abyssinian*.—Abyssinia is Christian, though its form of Christianity is the result of an arrested development. Marriages celebrated by the Church assume something of the permanent character of marriage in other Christian countries. Such marriages are solemnized by a priest, and the contracting parties partake of the Holy Communion. A candidate for holy orders is compelled to marry once, as in the Greek Church, but he cannot divorce his wife, and, if she dies, he may not marry again; one matrimonial venture alone is permitted to him.¹⁵ Among the people religious marriages are not popular. All travellers agree that the Abyssinians prefer to be married by civil contract, as these

marriages may be dissolved at the desire of either party to the contract. This liberty is freely exercised. Wives are changed at will, by mutual agreement, a man divorcing his own and marrying the wife divorced by another.¹ Divorces do not necessarily dissolve friendly relations between those who separate; Parkyns visited a man whose divorced wife and her children lived in the same compound with him and his new wife and family.² It frequently happens that those who have been divorced and have each married others divorce their second spouses and are again reunited. If the separating couple have children, the children are divided. The eldest son falls to the mother, the eldest daughter to the father; if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot.³

In addition to these irregularities, there is also much concubinage in Abyssinia, as in other Semitic countries. The levirate exists there, and its compulsion operates not only when a brother dies, but when, as so often happens in African wars, he is emasculated, so as to be incapable of begetting children.⁴

These peculiarities of Abyssinian matrimonial life are clearly a survival from early Semitic conditions, and Christianity has never been able to eradicate them.

When a man desires to marry a girl, he applies directly to her parents or nearest relatives; when their consent is obtained, and the dower arranged, the affair is considered settled, the girl being given no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends by themselves. After a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed no matter how many times the bride may have been married before.

GEORGE A. BARTON.

MARRIAGE (Slavic).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture of a girl belonging to another family or tribe, and marriage by purchase. In the Christian period only the latter was sanctioned by the Church as a more civilized and noble form of marriage, whereas marriage by capture was prohibited and gradually disappeared. Nevertheless, a series of traditions and observances which visibly reflect traces of the old form of marriage by capture is

preserved in the wedding ceremony. To these customs belongs, e.g., that of stopping the bridegroom on his way to the house of his bride and that of shutting the door before the bridegroom and hiding the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In S. Russia the wedding-guests engage in symbolical fights, which may rightly be deemed a survival of the ancient marriage by capture. The companions of the bridegroom violently attack the house where the bride lives, while her kinsfolk defend it and repel the aggressors, but at last the two parties put an end to the hostilities and restore harmony by a peaceful negotiation. The Southern Slavs (the Yugoslavs) have preserved the custom of marriage by capture to the present time, and, where this form of marriage has died away, symbolical traditions have taken its place.

The wedding ceremonies celebrated by the different Slavic nations vary widely, but it is possible to discover in them some fundamental traits which are common to all Slavs, and which may be regarded as a survival of ancient times, while their antiquity is also confirmed by their accordance with the chief type of Indo-European wedding ceremony, as reconstructed by H. Hirt and O. Schrader.¹ Among all the Slavic peoples the first preliminaries to the ceremony proper are the 'wooing' and the marriage contract. The deputies of the bridegroom (*družba*, *svat*, *starosta*, *djevoj*, etc.) negotiate with the bride's father concerning the conditions of the marriage and arrange the precise date for the wedding ceremony. The ceremony begins with the crowning of the bride with a wreath variously arranged and more or less ornate; the bride and the bridegroom shake hands as a mark of their mutual consent, and pass three times round the table or the hearth. Thus the nuptial knot is formally tied, and the pair give each other various presents of symbolical meaning (rings, apples, wedding-shirts, etc.). Afterwards the bride is veiled and conducted in solemn procession to the house of the bridegroom, where a hearty reception is given her, and bread and honey are distributed among the guests, who cast upon the bride various fruits, such as corn, millet, peas, nuts, hops, rice (nowadays sweets), etc., to express their wish that she may bear many children. A similar meaning underlies the custom practised by some Slavic peoples of placing a child in the bride's lap when she arrives at her new home. It is customary, when she reaches the door of the bridegroom's house, to carry her over the threshold and to place her upon a fur, the hair of which is turned upwards. One of the most significant gifts which the wedding-guests bring to the couple is a cock and a black hen. In S. Russia the bride throws such a hen under the hearth, probably as a sacrifice for the domestic genii. A very important place in the wedding pastry is occupied by a large wheat cake, decorated with eggs, flowers, ribbons, and sweets, which is cut in pieces at the wedding feast and distributed among the guests. To the symbolic nuptial ceremonies belong, further, the untwisting or cutting of the bride's plaits and the covering of her hair with a cap-like scarf. There was a rule among the Slavs—which is still, for the most part, observed—which obliged unmarried women, for the sake of distinction, to wear their hair in long, loose plaits, while married women wore a cap. The bride's entrance upon the status of a married woman was symbolized by the ceremony just mentioned, which was performed in a closed room by the women present. Then the bride used to unloose the shoes of her bridegroom

¹ H. Hirt, *Indogermanen*, pp. 480-447; O. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, pp. 353-362, *Sprachvergleichung und Urgesch.*, ii. 818-822, 833-835.

to show her submission (sometimes she even received symbolical blows), and, after being clothed in new garments by the women and the 'best man,' she went to bed with her husband in the presence of the witnesses. After the nuptial night purification was performed in a clear stream or at a well; later on, this procedure was reduced to a mere sprinkling with water.

Besides these chief and almost fundamental ceremonies, the various Slavic peoples have other customs connected with the popular wedding, the details of which cannot be described at full length in this article. It is interesting, however, to notice that for a long time the people attached far greater importance to these domestic wedding ceremonies than to the rites prescribed by the Church. Historical documents testify that, even in the 16th and 17th centuries, not only the common people but also the more cultured classes regarded the ecclesiastical ceremony as a purely religious act without any legal significance. A marriage became legal only after the precise performance of all prescribed observances inherited from the ancestors and consecrated by the family tradition; and this conviction is still to be found among some of the Slavic nations.

MARTINEAU.—James Martineau (1805-1900) was born in Norwich, April 21, 1805, the fourth son and seventh child of Thomas Martineau, a manufacturer of bombazine. Of Huguenot ancestry, he was also descended through his father's mother from John Meadows, one of the ejected ministers of 1662. After four years at the Norwich Grammar School he was placed under the care of Dr. Lant Carpenter at Bristol (1819-21), to whom he owed his 'spiritual rebirth.' His teacher was a pioneer in education, and combined instruction in the elements of science as well as psychology and moral philosophy with classical and mathematical training. Thus equipped, he was placed in machine-works at Derby, but relinquished his apprenticeship after a year (partly under the shock of a bereavement which 'turned him from an engineer into an evangelist' [speech at Nottingham, 1876; Carpenter, *James Martineau*, p. 24]), and in 1822 he entered Manchester College, York, as a student for the ministry. He had been brought up in the Unitarian theology of Priestley, and embraced his necessitarian pantheism with ardour, though at Bristol he had read Wilberforce and Hannah More, and was not without occasional misgivings concerning the freedom of the will. On the completion of his College course he took charge of Dr. Carpenter's school for a year (1827-28), and, after a short period of ministerial service in Dublin (1828-32), terminated through his refusal of the endowment known as the Regium Donum, he began his longest pastorate in Liverpool (1832-57). In 1840 he undertook the additional duty of Professor of Philosophy and Political Economy in Manchester New College, on its return from York to the city of its foundation. During the erection of the Hope St. Church by his congregation (1848-49) he spent fifteen months with his family in Germany, returning to resume his ministry. The transference of the College to London led to his settlement there in 1857, and from 1859 he also ministered in Little Portland St. Chapel till 1872, when a threatened failure of health led to his retirement. In the meantime he had succeeded to

the Principalship of the College in 1869, which he held till June 1885.

For more than fifty years he had been actively engaged in literary work of many kinds. To the religious denomination of his birth and education he gave unstinted service, and his was the chief influence in transforming its fundamental theological conceptions, while in the wider field of philosophy he was the powerful antagonist of the empiricism and utilitarianism of the Mills, the monism of Spinoza, scientific materialism, and the agnostic philosophy of Spencer.

The Unitarians of Martineau's youth followed the tradition of Locke. Accepting the NT as the final authority in Christian doctrine, they recognized Jesus Christ as the Messiah, whose teachings were authenticated by miracles. To this interpretation Martineau remained faithful till after 1832. But further study of the Gospels confronted him with the predictions which implied the return of Jesus in the lifetime of His disciples to judge the world, and this begot an investigation into the significance of revelation which led him to declare in his first work, *The Rationale of Religious Inquiry* (1836), that 'no seeming inspiration can establish anything contrary to reason, that the last appeal in all researches into religious truth must be the judgments of the human mind' (p. 125). To work out this principle was to be one of the main occupations of his life. He followed the progress of German critical study; he was familiar with Paulus and Strauss; he adopted the general results of the Tübingen school, and became their earliest and most accomplished English exponent ('The Creed and Heresies of Early Christianity,' *Westminster Review*, 1853). By 1845 he had abandoned the apostolic authorship of the Fourth Gospel, and in the third edition of the *Rationale* (1845) he ceased to demand belief in the gospel miracles as essential for the Christian name. In the *Prospective Review* (1845-54) and its successor, the *National Review* (1855-64), he secured an organ for his theological and philosophical essays, while others not less brilliant appeared in the *Westminster*. Indefatigable in study, a constant teacher of the young, he devoted long courses of lectures to the exposition of the NT and the history of Christian doctrines, and in his last large treatise, *The Seat of Authority in Religion* (1890), he returned to his earliest theme. He re-examined the claims of the Roman Catholic Church, the infallibility of the Bible, and the historical significance of Christianity, and presented Jesus no longer as the Jewish Messiah, but as the 'prince of Saints,' revealing the highest possibilities of the soul. Looking back at ninety (1895), he wrote to William Knight:

'The substitution of Religion at first-hand, straight out of the immediate interaction between the soul and God, for religion at second-hand, fetched, by copying, out of anonymous traditions of the Eastern Mediterranean eighteen centuries ago, has been the really directing, though hardly conscious aim of my responsible years of life' (Carpenter, p. 540).

Martineau thus remained to the last a Unitarian in his interpretation of the Deity, and a Christian in his allegiance to Jesus Christ. But his position was often misunderstood, partly because of his sympathy with many aspects of traditional devotion, and partly because of his steadfast refusal to belong to a Unitarian Church. This was due to the discovery of the real nature of the foundation on which the majority of chapels occupied by Unitarians were held. Some of these had been founded in the 17th cent., others in the 18th, by the English Presbyterians, who, under the leadership of Baxter, had stood for 'catholicism against all parties,' and repudiated creeds of 'human imposition.' In dedicating their chapels 'for the worship of God by Protestant Dissenters' (sometimes specified as Presbyterians, sometimes as

Independents, sometimes as both together), they deliberately rejected all limiting doctrinal names. By slow processes of Scripture study many ministers and congregations gradually became Unitarian in theology. Attention was at length called to this issue, and a suit was instituted against the trustees of a charity in York founded by Lady Hewley, whose husband, Sir John Hewley (M.P. for York in the reign of Charles II.), had been a warm supporter of the Presbyterians. The decision (December 1833), which displaced the Unitarian trustees, was at once seen to imperil the tenure of all the chapels of similar foundation; and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a lifelong effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic; it seemed to involve treachery to his spiritual ancestors; it barred the way to those very possibilities of change which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to various schools of religious life, Martineau endeavoured (1868) to form a Free Christian Union, which was joined by representative men of every British Church, but was disbanded two years later. Subsequently he worked out a scheme for 'the National Church as a Federal Union' (*CR* li. [1887] 408 ff.), which proposed to abolish the Act of Uniformity, to release the Church of England from State control, and associate it with the other communions in a United English Christian Church. The plan aroused considerable academic interest, but the Bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a habitual tension of obligation without realizing its significance. Many influences now contributed to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected depths of thought and passion in human nature; Channing emphasized its freedom and dignity. In reviewing Bentham's 'Deontology' (*Monthly Repository*, 1834), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress, against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1839) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and the affections; its supreme historic type was seen in Christ as the image of the Father.

Reinforced by his reading of Kant, and in opposition on the one hand to the 'association' philosophy of James Mill, and on the other to the monistic schemes of Spinoza and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred

from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as higher, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All moral estimates, therefore, were *preferential*; there was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded in the *Prospective* (1845), in an essay on Whewell's 'Elements of Morality,' and led to the definition: 'Every action is *right* which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower' (*Essays*, iii. 352). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as 'the victim of conscience.' He was to become the greatest English moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the perennial Indwelling of God in Man and in the Universe.' Alongside this view of man's ethical constitution ran an exposition of our knowledge of the external world (in a review of J. D. Morell's *Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century*, London, 1846, in *Prospective*, 1846): 'The act of Perception gives us simultaneous knowledge of subject and object' (p. 562). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and vigorously defended the veracity of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of the I and the not-I, a cause-relation was revealed in the same antithesis. In the strenuous conviction of personality which he derived from his ethical experience, Martineau found the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-self' must be comprehended personally; its varied energies were but the manifestations of one living Will. Science, by the rising doctrine of the correlation of forces, might point to their ultimate identity. Martineau entrenched himself securely in his prophetic recognition of the part played by the same energy in the constitution of human nature. The relation of the soul to God was a moral relation. Known in the conscience, He was one; the manifoldness of the world, therefore, was only the veil of a hidden unity; and the foundations of theism were thus laid on the conception of God as cause of the universe and revealer of righteousness in man.

Such was the general scheme of the philosophy of religion which Martineau worked out with rich elaboration in the next forty years. His sojourn in Germany and his renewed studies in Plato and Hegel gave him a securer hold of great ontological conceptions. He described it afterwards as 'a new intellectual birth.' But he remained faithful to the English tradition of psychological method, and slowly built up the fabric of thought on the basis of self-knowledge. Again and again he sought to construct a table of the springs of action in the order of their relative worth. This was finally embodied in the first of his three large treatises, *Types of Ethical Theory* (2 vols., 1885). After reviewing 'unpsychological theories,' transcendental (Plato), immanent (Descartes, Male-

branche, Spinoza), and physical (Comte), he expounded (vol. ii.) his own interpretation of the nature of moral authority. This involved a classification of the propensions, passions, affections, and sentiments, and an arrangement of them in a scale of values. The scheme thus wrought out of human experience was then contrasted with the hedonist ethics of the older utilitarians, and the modifications introduced by the idea of evolution. In emphasizing 'Hitches in the Evolutionary Deduction' he denied that laws of matter and motion could explain the genesis of consciousness, while the feeling of moral right and freedom involved another point of fresh departure. The section on 'Conscience developed into Social Consensus and Religion' further supplied hints which modified the stress of individualism in some of his earlier writings.

The stream of Essays had ceased for some years after the suspension of the *National Review* (1864); but an important address on *Religion as affected by Modern Materialism* (1874), suggested by John Tyndall's discourse to the British Association at Belfast, and its sequel, *Modern Materialism: its Attitude towards Theology* (1876), brought Martineau again prominently into the field of philosophical discussion. Two other addresses, *Ideal Substitutes for God* (1879) and *The Relation between Ethics and Religion* (1881), belonged to the period in which he was slowly completing the treatise modestly entitled *A Study of Religion* (2 vols., 1888). It opened with an investigation of the limits of human intelligence, a fresh defence of 'natural realism,' a plea for the objective reality of space and time, a reply to the empirical doctrine that we know nothing but phenomena, and a refutation of the agnosticism of Spencer. God had been presented at the outset as a 'divine Mind and Will ruling the Universe and holding Moral relations with mankind' (vol. i. p. 1); and the bases of theism in the doctrine of His sole causation in the natural order and His perfection in the moral order were re-established and supported with fresh illustration. The teleological conceptions which had been discarded in earlier revolt against Paley were now revived on a far wider scale, and the presence of rational ends was displayed with varied scientific knowledge in the vast process of evolution. Assuming the results of his analysis of human nature in the previous treatise, Martineau then argued that the principle of obligation implied the presence within us of a moral order in which God was disclosed as transcendently holy. The intelligent Purpose and the righteous Will were then identified; the place of pain and sin under such a rule was defined; and the theodicy concluded with a refutation of pantheism and a defence of human freedom. A final book carried the argument up to 'the Life to come.'

Martineau's last word on the grounds of belief and their illustration in the NT was uttered in *The Seat of Authority in Religion* already cited, in which the origins of Christianity were expounded with remarkable force and daring (1890). The work was less technical than its predecessors, and appealed to the wide circle of those who had found invaluable help in the author's devotional writings. In the *Endeavours after the Christian Life* (2 vols., 1843-47) he had unfolded secrets of personal religion and moral experience in language often of lyrical poignancy. Successive collections of hymns (1831, 1840, 1874) testified to his deep sympathy with many types of Christian devotion. Later series of *Hours of Thought on Sacred Things* (1876, 1879) carried on the application of his thought to the varied incidents of the human lot. A small book of *Home Prayers* was issued (1891) in response to the urgency of many friends, and in four

volumes of *Essays, Reviews, and Addresses* (1890-91) he gathered up those of his detached writings which he wished to preserve. Even their wide range, over history, science, and philosophy, does not exhaust the whole scope of his productiveness, which included political economy and psychology. In the theological timidity and the ecclesiastical strife of the early Victorian era he stood forth (often alone) as the fearless advocate of the principle of religious freedom. Later years brought unsought appreciation. Gladstone designated him as 'the greatest of living thinkers'; and a younger philosopher (A. Seth Pringle-Pattison, *HJ* i. [1903] 444) aptly fixed the character of his service to his age by describing him as 'an ideal champion of the spiritual view of the world in a time of transition and intellectual insecurity.'

LITERATURE.—Besides the works already named, some of Martineau's earlier writings were collected by American friends in *Miscellanies*, Cambridge, Mass., 1852, *Studies of Christianity*, London, 1858, and *Essays Philosophical and Theological*, 2 vols., do. 1883. We may also name his Lectures in the Liverpool Controversy (1839), *A Study of Spinoza*, do. 1882, and *National Duties and other Sermons and Addresses*, do. 1903. See, further, A. W. Jackson, *James Martineau, a Biography and a Study*, do. 1900; J. Drummond and C. B. Upton, *The Life and Letters of James Martineau*, 2 vols., do. 1902; J. E. Carpenter, *James Martineau, Theologian and Teacher*, do. 1905.

J. ESTLIN CARPENTER.

MARTYRS.—See SAINTS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, starts from the Scriptural and orthodox positions (1) that our Lord Jesus Christ, being the eternal Son of God, became man, being conceived by the Holy Ghost and born of the Virgin Mary; and (2) that, inasmuch as He is thus God and man in two distinct natures and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgo Deipara—the Mother or Bringer-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the manhood which of her substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which, though Scripture is silent upon it, unquestionably exercised a powerful influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelmingly the larger part of Christendom, viz. her perpetual virginity: 'virgo concepit, virgo peperit, virgo permansit.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall inquire historically (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

1. In Holy Scripture.—Over and above the witness borne by the four Evangelists to our Lord's having a human mother (Mk 3³⁸, Jn 2¹⁻⁵ 6⁴²) whose name was Mary (Mk 6³), and the direct statements of two of them (Mt 1²⁰, Lk 1^{27, 34}) that she was a pure virgin when by the power of the Holy Ghost she conceived and bore our Saviour, we have in the third Evangelist several notes expressive of the high reverence and honour due to her. St.

Luke records the angelic salutation, 'Hail, thou that art highly favoured, the Lord is with thee' (1²⁶); and the angelic assurance, 'Thou hast found favour with God' (1³⁰). He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation; he brings out her wonderful faith, believing in God's power, seeking no sign, though she gets one, and asking only what course the divine call may require her to adopt (1³⁴); his narrative evinces her conscious risking 'the reproach among men with which the poor Jews still blaspheme her Son and revile herself' (Pusey, *Eirenecon*, ii. 25); and he records how 'Elizabeth, filled with the Holy Ghost,' saluted her, 'Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? . . . And blessed is she that believed' (1⁴²⁻⁴⁵). Mary herself, in her inspired song, while acknowledging that God is her Saviour too, expects from 'all generations' a like honour to that which Elizabeth had assigned her, and speaks of 'the great things' that God had done for her (1⁴⁸).

Yet, while the NT thus justifies the Church's instinct of loving and reverential gratitude to the Holy Mother of the Lord, and authorizes the naming of her with lofty titles, it presents us with not one instance of her influence with Christ being invoked either in her lifetime or after her departure. At Cana, when she does interpose, she is bidden wait His time; and her advice to those whom she is sure that He will help is, 'Whatsoever He saith unto you, do it' (Jn 2⁴⁻⁵). When, on another occasion, she 'sent unto him, calling him,' He apparently did not go, but answered, 'Whosoever shall do the will of God, the same is . . . my mother' (Mk 3³¹⁻³⁵, Lk 8²⁰). When a woman exclaimed, 'Blessed is the womb that bare thee,' He replied, 'Yea rather, blessed are they that hear the word of God, and keep it' (Lk 11²⁷⁻²⁸). He does not imply, of course, that Mary had not these graces—they were conspicuous in her; but He certainly puts the moral virtue higher than even her unique privilege. And when, from the Cross, He commends her to St. John saying, 'Behold, thy mother,' and him to her, 'Behold, thy son,' while to have her with him in 'his own home' (Jn 19²⁶) was doubtless a precious legacy to the theologian apostle, yet the obvious meaning of our Saviour's words was rather that St. John should take care of her than that she should be his protectress (R. Stier, *The Words of the Lord Jesus*, Eng. tr., Edinburgh, 1855-58, vii. 467 ff., on Jn 19²⁶⁻²⁷). There is certainly no evidence in St. John or elsewhere in the NT that he, or any other, so much as thought of her being established as a mother to pity all Christians, and help them in their approach to Christ. On the other hand, to expound the passage, as some Protestant writers (even Stier, *loc. cit.*) have not hesitated to do, as an intimation that all Christ's earthly relationships—even Mary's to Him as His mother—ceased and determined by His death is to come perilously near the denial of His abiding manhood whereby, as our High Priest within the veil, He is still 'touched with the feeling of our infirmities' (He 4¹⁵). A sufficient explanation of our Lord's neither calling her here His mother nor naming either St. John or her is supplied when we take it as an instance of His considerateness: had He betrayed the relationship, those who mocked at Him would not have been slow to insult her; and the newly re-awakened courage of the disciple might have again been shaken by the utterance of their names.

The only other notices of Mary in the NT are (1) the mention of her by St. Luke (Ac 1¹⁴) in the place of honour as the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference

to her by St. Paul (Gal 4⁴) as 'a woman'—an obvious allusion to the Protevangelium (Gn 3¹⁵); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

2. In the first three centuries.—The Christian literature of this period keeps in regard to Mary strictly to the lines of the NT. References to her are sparse; and these, though distinct as to her being the Virgin Mother of the Lord and therefore to be honoured, give no suggestion of aught that could be called a cult of her. Polycarp's short Epistle does not contain her name; but in his *Life* by Pionius there is this:

'He, according to the prophecy, . . . being born of an undefiled and spotless virgin' (xiii.).

In the *Apology* of Aristides she is simply 'a Hebrew virgin.' Ignatius, in the short recension of his seven Epistles (here regarded as genuine), is fuller.

He tells (*ad Ephes.* xix.) how the virginity of Mary deceived the Deceiver; that 'hidden from the prince of this world were the virginity of Mary and her childbearing . . . mysteries wrought in the silence of God, now to be cried aloud'; he adores our Saviour, 'Son of Mary and Son of God'; and he insists (*ad Trall.* ix. 1.) that His birth of her demonstrates against the Docetists that His flesh is a reality and no semblance; but the correspondence between Ignatius and the Virgin is a Latin forgery, which never existed in the Greek, and is based on the saint's use of the word *χριστοφόρος*.

Justin Martyr (*Dial. cum Tryph.* c.) and Irenæus speak of her as does the Puritan Milton, as 'the second Eve.'

'The knot of Eve's disobedience was loosed by the obedience of Mary; for what the Virgin Eve had bound fast through unbelief that did the Virgin Mary set free through faith' (Irenæus, *adv. Hæc.* iii. xxii. 4). And again he dwells on the moral side of her part in the Incarnation: 'Mary, having a man betrothed to her and being nevertheless a virgin, by yielding obedience became the cause of salvation to herself and to the whole human race' (ib.).

If, however, we find Irenæus, in the barbarous Latin version of his works, calling Mary the 'advocate' of Eve, we shall do well to remember that his Greek had, apparently, *συμβήτορας*, which implies not advocacy in our sense, but rebuke. Origen supplies one of the only two places in the Fathers where the words of our Lord from the Cross to her and to St. John have the least appearance of ascribing to her a permanent office for Christians.

'Seeing that, according to those who think soundly of her, Mary had no other son save Jesus; and that Jesus said to her, "Behold, thy son," therefore those in whom Christ lives are sons of Mary' (*in Joan.* i. 6).

But does this go further than Christ's own, 'Behold, my mother and my brethren' (Mt 12⁴⁶, Mk 3³⁴)? Both Origen and Tertullian, like Ignatius before them, draw from her motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strong already was the Church's faith in the Virgin-birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of divines or the apologies of the defenders of the faith. But such accounts of the Church service of the period as have come down to us exhibit precisely the same features as do the writings of the ante-Nicene Fathers. No mention of Mary's name, no reference to her, occurs in the notices of Holy Communion in the NT; nor in the liturgical thanksgiving in the 1st Epistle of St. Clement of Rome; nor in the *Didache*; nor in Justin Martyr's or Tertullian's account of the Eucharistic service. The only place where an invocation of St. Mary could come in is at the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyprian has to say is:

'Ecclesiastical discipline teaches, as the faithful know, that at the point where the martyrs are named at the altar of God, there they are not prayed for; but for others who are commemorated prayer is offered' (*Ep. i. [Opera, Oxford, 1682, p. 8]*).

There is no direct evidence that among 'the martyrs' the Virgin was so much as mentioned.

The one thing in these centuries that points in the direction of any cult of her in the Church is the appearance, somewhere in the 2nd cent., of an apocryphal *Evangelium Jacobi*, which was very popular and became the basis of two later works, *Liber de Infantia Mariæ et Christi Salvatoris* and *Evangelium de Nativitate Mariæ*. It is from these that the 'traditional' names of her parents, Joachim and Anna, have been derived, and the story of Mary's nurture in the Temple from her third to her twelfth year. These books, if they were not genuine, at least met a growing and significant demand, which was not checked by their condemnation as heretical in the earliest papal *index expurgatorius* attributed to Pope Gelasius (A.D. 492-496).

3. During the period of the four great councils (A.D. 325-451).—With the conversion of Constantine Christianity became fashionable, and, as Newman puts it, the spirit of the world was poured into the Church (*The Arians of the Fourth Century*, London, 1876, p. 258). The leaders of the faithful had to raise their standard against an inrush at once of pagan sensuality and of heresies born of pagan conceptions of the Godhead. It is among the latter that we find the earliest notice in Christian history of an actual worship of St. Mary. Epiphanius reckons it a heresy (*Hær. lxxix.*) that 'certain women in Thrace, Scythia, and Arabia' were in the habit of adoring the Virgin as a goddess and offering to her a certain kind of cake (*καλλυρίδα τράγα*), whence he calls them 'Collyridians.' Their practice (cf. *Jer 44¹⁰*) and the notion underlying it were undoubtedly relics of heathenism always familiar with female deities. Epiphanius rebukes them:

'Let Mary be had in honour, but let the Lord be worshipped' (*Hær. lxxix. 9*).

'Honour to Mary' was inevitably augmented by the Church's answer (true and necessary as that answer was) to the much more formidable heresy of Arius. Arianism, stumbling at the awful mystery of the Word made flesh (*Jn 1¹⁴*), and chiming in with the old pagan conceptions of gods older and younger, greater and less, presented to men the Eternal Son as only the first of creatures. It did not deny that Christ was born of the Virgin, but, by denying that He who issued from her womb was personally God, it lowered the greatness and the glory of her motherhood. It is not so much, however, in the interests of her dignity as for the utterance of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds of them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregories, of Ambrose and Augustine as well as of Leo. It was in this connexion that Athanasius had spoken of her as *θεοτόκος* long before the Nestorian preacher shocked the congregation of St. Sophia by refusing her the title.

Athanasius gave it her because 'from the flesh of holy Mary the Son of God by essence and nature did proceed. . . . How can they wish to be called Christians who assert that the Word descended on a holy man as upon one of the prophets, and deny that He Himself became Man, taking the body from Mary?' (*Ep. lix. 'ad Epict.' 2*); and, again, because, 'when He was descending to us, He fashioned His body for Himself from a Virgin, thus to afford to all no small proof of His Godhead, in that He who formed this is also Maker of everything else as well' (*de Incarn. Verbi, xviii.*).¹

¹ Athanasius was anxious to secure the reality of our Lord's manhood no less than His divinity; and in support of this truth also he, like Ignatius before him, appeals to Christ's birth of Mary: 'Human, then, by nature, was that which was from Mary according to the holy Scriptures, and true was the body of the Lord. True it was, since it was the same with ours. For Mary was our sister, since we are all from Adam' (*Ep. lix 'ad Epict.' 7*).

In like manner, Gregory of Nyssa, 'Have any of ourselves dared to say "Mother of Man" of that most holy Virgin the Mother of God?' (*Ep. xix.*); and Ambrose, 'Talis decet partus Deum' (*Hymn iv. 'de Adventu Domini' [PL xvi. 1474]*). Cyril of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companion truth of His real manhood.

'Believe that this Only-Begotten Son of God . . . was begotten of the holy Virgin by the Holy Ghost, and was made Man, not in seeming and mere show, but in truth; nor yet by passing through a channel, but truly of her made flesh. . . . If the Incarnation was a phantom, salvation is a phantom too' (*Cat. Lect. iv 9*).

All the heresies, we may say, of this period were, in one form or another, denials of the Incarnation; they all fixed men's thoughts on the question propounded by our Lord Himself, 'What think ye of the Christ? whose son is he?' (*Mt 22⁴²*). It was impossible for the Church to refute any of them without speaking, as of God His Father, so of the Virgin Mary His Mother—to reply to Macedonianism, with its denial of the Godhead of the Holy Ghost who overshadowed her (*Lk 1³⁵*); to Apollinarianism, which, refusing to Christ a human soul, cut off from His sacred heart its thousandfold return of her love; and then to Nestorianism, which, dissolving the unity of Christ's Person, by one and the same stroke reduced the Saviour from being Himself the Word incarnate to a man in close association with the Word, and made Mary the mother only of a human infant. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us so

'startled him in his young days when first it flashed upon him that it must be true, that one of our nature, which is the last and lowest of God's rational creation was raised to a nearness to Almighty God above all the choirs of angels. . . . Yet it was self-evident, as soon as stated, that she of whom Christ deigned to take His human flesh was brought to a nearness to Himself above all created beings; that she stood single and alone in all creation or all possible creations, in that in her womb He who in His Godhead is consubstantial with the Father, deigned, as to His Human Body, to become consubstantial with her' (*Birenion, ii. 24*).

It is no creature-worship; it is the sense of this tremendous fact brought home to a heart inflamed with the love of the Incarnate Son that explains at once the profound solemnity of Cyril's Letter to Nestorius and the splendid eloquence of Proclus's oration on the Virgin Mother. It is not that she is the mediator (there is no hint of such a thought); it is that He is God whom she bore, whom 'she alone inexplicably housed.' Nor need we fancy (with the writer on 'Mary' in *EB¹¹*) that it was the Nicene 'solution of the Arian controversy, however correct it may have been theoretically,' that 'undoubtedly had the practical effect of relegating the God-man redeemer for ordinary minds into a far away region of "remote and awful Godhead," so that the need for a mediator to deal with the very Mediator could not fail to be felt' (*EB¹¹ xvii. 812f.*). As a matter of fact, it was the complete manhood of our Lord that the Church in the next succeeding controversies (Monophysite and Monothelite) triumphantly asserted, while at the same time carefully retaining the condemnation of Nestorianism. Indeed it has been observed that it is in the creed of Chalcedon, and not in the canons of Ephesus, that the term *θεοτόκος* occurs. With all the honour that they gave to her, the Fathers of this age never forgot that, if she ministered to our salvation by becoming, on and through her faith, the Mother of our Redeemer, it was through her faith in Him that she herself was saved. The great titles bestowed upon her by the Fathers relate to the fruits of the Incarnation.

'The flesh of the Virgin differs nothing from the flesh of sin; . . . but her body transmits it not to the Body of Christ, which she did not conceive through concupiscence' (Augustine, *c. Jul. Pelag. v. 15*).

And Pope Leo I. (in a passage still remaining in the Roman Breviary as one of the Lessons for Christmas Day) says that 'to [Christ's] birth alone the throes of human passion had not contributed.'

In entire consistency with this teaching of the great Fathers, we find that the worship of the Church in the conciliar period shows hardly a trace of any cult of the Virgin. There are indications that she was prayed for.

Thus in the Armenian Liturgy, 'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the proto-martyr Stephen, and of all the saints' (F. E. Brightman, *Liturgies Eastern and Western*, i. 440).

But she is not often mentioned. In the liturgy in the *Apostolic Constitutions* she is not even named; if she is referred to there at all, it is as included with others—'apostles, martyrs, virgins . . . whose names Thou knowest.' In other liturgical works of the period—e.g., the *Statutes of the Apostles* (Ethiop. c. 350)—there is no mention of any commemoration of the departed, nor is there in the Arabic and Saidic versions of this book. The Eucharistic service in the *Testamentum Domini* gives thanks that the 'Word . . . was born of the Holy Ghost and the Virgin'; but its commemoration of the dead, 'Remember those who have fallen asleep in the faith, and grant us an inheritance with Thy saints,' names neither the Virgin nor any other saint. The *Pilgrimage of Silvia* also is silent concerning her, while the *Catechetical Lectures* (Lect. xxiii. on the Eucharistic service) of Cyril of Jerusalem, where we might have expected to find something, has only this:

'Then we commemorate also those who have fallen asleep before us, first Patriarchs, Prophets, Apostles, Martyrs, that at their intercessions God would receive our petition'—still no mention of Mary.

In the liturgy of the civil 'diocese' of Africa in the time of Augustine (A.D. 400) 'the only place where an invocation of the Virgin could have come in is in its commemoration of the saints and martyrs, but there is again no direct evidence that her name appeared' (*Ordo Rom. Primus*, App. iv.). Of Basil his latest editor says:

'Of any cultus of the Virgin, St Basil's writings shew no trace.' Even Letter CCCLX, which bears obvious marks of spuriousness, and of proceeding from a later age, does not go beyond a recognition of the Blessed Virgin as Θεοτόκος, in which the Catholic Church is agreed, and a general invocation of the apostles, prophets, and martyrs, the Virgin not being set above these (Blomfield Jackson, *Prolegomena to 'St Basil, Nicene and Post-Nicene Fathers*, viii. [1895] p. lxxiii). The passage runs: 'I invoke them to supplication to God, that through them, that is through their mediation, the merciful God may be propitious to me.'

That the departed saints, now 'with Christ' (Ph 1²³), do pray for us is an obvious conclusion from their perfected love; it has some sanction in the NT (Rev 6¹⁰); it is argued for on this ground by Origen (*de Orat.* 31), Eusebius (*de Martyr. Palast.* v.), and Jerome (*Ep.* lx.); and it was an easy transition to ask God that their intercessions might be heard for us; but 'Omniscience alone can hear the cry of every human heart, and Omnipotence alone can deliver everywhere,' and it was quite another thing to credit any saint, however highly exalted, with powers or prerogatives of this extent. Not so did the Fathers of the Church and the holy martyrs pray. Cardinal Newman admitted that no prayer to the blessed Virgin is to be found in the voluminous works of St. Augustine. And when, late in the 4th cent., we do find cases of direct invocation of this or that individual saint, it is in private prayer, and in regard to some more restricted matter in which that saint had been interested when on earth and might be presumed to be interested still. Of this limited sort was the prayer of Justina, mentioned with incidental approval by Gregory Nazianzen (*Orat.* xxiv. 11), 'imploping Mary the Virgin to come to the aid of a virgin in danger.' St. Mary

had already been thought of as the 'virgin of virgins'—the leader of those virgin bands to whom, next to the martyrs, the Church felt that she owed a special debt. The martyrs were her witnesses to Christian truth; her virgins the conspicuous exponents of Christian purity. Virginity, be it remembered, had been praised—though not enforced—by our Saviour Himself (Mt 19¹²), and by St. Paul (1 Co 7³⁷⁻⁴¹); under the pagan persecutions the virgin martyrs had won a twofold triumph; and when, on Constantine's conversion, pagan sensuality proved a menace no less formidable to morals than heresy to doctrine, virginity, organized into monasticism, became more and more alike the expression and the shield of this side of Christian virtue. Athanasius found the monks and virgins of Egypt of the greatest use to him in his contest with Arianism. He introduced monasticism at Rome; Ambrose and Martin carried it respectively to Cisalpine and Transalpine Gaul; through the latter, the trainer of missionaries, it spread over the Celtic West. Jerome carried it to Palestine; Basil was its protagonist through Asia Minor. Virginity and monasticism, no less than orthodoxy, turned the thoughts of the faithful very much towards St. Mary. If orthodoxy found, as we have seen, that Christ's birth of her was a witness at once of His Godhead and His manhood, so did monasticism boast of her as the crown of virgins. If orthodoxy called forth the panegyrics on Mary by Proclus and Cyril of Alexandria, the thought of her virginity led even more directly to her being regarded as a patroness.

It is while consoling the votaries of the virgin life that Augustine reminds them how 'the Birth from the one holy Virgin is the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father' (*de Sanct. Virg.* v.).

Thus, too, Jerome:

'Therefore the virgin Christ and the Virgin Mary have dedicated in themselves the firstfruits of the virginity of both sexes' (*Ep.* xlviii. 'ad Pam.' 21);

and Gregory of Nyssa:

'What happened in the stainless Mary when the fulness of the Godhead which was in Christ shone out through her, that happens in every soul that leads by rule the virgin life. No longer, indeed, does the Master come with bodily presence, . . . but, spiritually, He dwells in us and brings His Father with Him' (*de Virg.* ii.).¹

4. During the mediæval period.—For the purposes of this article, this period may be dated from the extinction of the Western Empire by Odoacer (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity runs in an Eastern and a Western stream; but, in spite of their divergence, there took place in both a remarkable development in the cult of the Virgin. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to all these the orthodox found a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His natures and the unity of His Person; it hallowed monasticism; it rebuked the impieties first of the iconoclasts and then of the Muhammadans, while the calamities which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, were at least sufficient to impress all Christians who remained, or had been, its subjects with awestruck thoughts of Christ as the Judge of men. They remembered how, in the days of His flesh, the good centurion had, unrebuked, deemed himself not worthy to come to Christ direct (Lk 7⁷), but had besought Him through the elders of the

¹ W. M. Ramsay argues that so early as the 5th cent. the honour paid to the Virgin Mary at Ephesus was the recrudescence in a baptized form of the old pagan Anatolian worship of the Virgin Mother (*Pauline and other Studies*, p. 126).

Jews. How much more, then, might they, sin-burdened, approach Him through the prayers of His spotless Mother? The 'Theologian' among the orthodox divines (Gregory Nazianzen) had, as we have seen, approved of Justina asking her help; why might not Justinian ask her advocacy for his Christian empire, and Narses look for her direction on the field of battle, and Heraclius bear her image on his banner, and Simeon Stylites, in his post-communion thanksgiving, invoke as supplicants 'all the saints . . . and with them Thy most holy Mother, . . . receive their prayers, O Christ?' (*Euchology of Orthodox Church*, tr. G. V. Shann, Kilderminster, 1891, p. 257 f.). So strong was the current of feeling that even the great liturgies, already venerable, received interpolations to express it. In some of these we can see the process going on. Thus in the Liturgy of St. Mark (Alexandrian), though originally St. Mary was simply included in the prayer that God would give rest to all the holy dead, now she is mentioned by name, 'especially the most holy, stainless, blessed, our Lady, Mother of God, and ever-Virgin,' and the sequence of thought, which still shows that she is prayed for, is interrupted by a salutation, 'Hail, thou that art full of grace . . . because thou didst bring forth the Saviour of the world.' So in St. James, the parent of all the Syrian liturgies, she had originally simply been commemorated, but now it is added 'that we may obtain mercy through their prayers and intercessions'; and in the Anaphora there is interpolated, not only the angelic salutation, but a long quotation from Proclus's glowing panegyric (Neale and Littledale, *Liturgies*, p. 54). The alteration is very naively made in the liturgy of the Coptic Jacobites:

'To our fathers and our brethren who are fallen asleep . . . give rest, remembering all saints . . . and most chiefly . . . the holy theotokos Mary . . . Not that we are worthy to intercede for their blessedness . . . but . . . that standing before the tribunal of thine onlybegotten Son they may in recompense intercede for our poverty and weakness' (Brightman, i. 169). In the Armenian Liturgy St. Mary's name remains in the Great Intercession:

'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the protomartyr Stephen and of all the saints' (ib. p. 440). But at an earlier stage the Deacon bids the worshippers 'make the holy mother of God and all the saints' their 'intercessors with the Father' (ib. p. 415).

The two liturgies remaining in use among the orthodox Greeks are those of Chrysostom and Basil, and are more moderate.

The latter merely mentions her in the Eucharistic Thanksgiving for Christ 'born of a woman, the holy Mother of God, ever-Virgin'; and prays that God 'would unite all of us who are partakers of the one Bread . . . that we may find mercy with all Thy saints . . . especially our all-holy, immaculate, supereminently blessed glorious Lady, the Mother of God, and Ever-Virgin Mary' (ib. pp. 323, 330 f.).

It is not impossible, in view of Basil's own writings, that even the last is an interpolation. The liturgy called Chrysostom's is fuller on St. Mary:

The Prayer of the Trisagion closes 'through the intercessions of the Holy Mother of God and all the Saints'; but, again, it prays for her: 'We offer to Thee this reasonable service on behalf of those who have departed in the faith . . . Apostles . . . Virgins . . . especially the most holy, undefiled, excellently laudable, glorious Lady, the Mother of God, and Ever-Virgin Mary' (ib. pp. 314, 331).

When, however, we turn to the less august and more popular of the authorized devotions of the Greek Church, we find her invoked in the most direct manner:

'O most holy Mother of God, light of my darkened soul, my hope, protection, refuge. I thank thee that thou hast enabled me to be a partaker of the . . . Body and . . . Blood of Thy dear Son. Enlighten the eyes of my heart . . . quicken me . . . give me tears of repentance and thanksgiving' (*Euchology*). In the *Book of Needs*, the 'Prayerful Canon at the Departure of a Soul' teaches the dying man to cry to her:

'Known refuge of the sinful and the low, make known to me thy mercy, O thou pure one, and set me free from the hands of demons, which come about me like dogs.'

It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teaching of the latest, and henceforth the most influential in the East, of the Greek Fathers, John of Damascus, that Mary is the sovereign Lady to whom the whole creation is made subject by her Son—implying, of course, that, over and above her office in the Incarnation, she is herself, through His gift, a direct giver of help to such as may seek it at her hands. It should be added that the Feast of *her* (not of Christ's) Presentation in the Temple (the story is from *Protev. Jac.*) originated in the East in the 8th cent., and was not adopted in the West till the 15th. See art. IMMACULATE CONCEPTION.

The Western Church, too, was to find through many ages the practical value of monasticism, and to carry the doctrine of celibacy to further lengths than its Eastern sister. It, too, was to have experience of errors (such as the 8th cent. Adoptionism) which, disparaging the Saviour, disparaged her also. In Spain, Hungary, and the two Sicilies, as well as through the Crusades and Algerian piracy, it was to come into painful contact with Islam. In the West too, therefore, the reaction from those errors contributed its impetus to every movement in the Virgin's honour, while manifold oppressions of the poor turned them naturally to the thought of her as the Mother of Pity, and the chivalry of the knight made her the Lady of his orisons. But the development of her cult was slow in the West. In Adamnan and Bede it is hardly perceptible; in the *Life of St. Columba* she is not mentioned.

In Bede's *HE*, St. Wilfred has a vision of St. Michael telling him, 'the Lord has granted you life, through the prayers of your disciples, and the intercession of His Blessed Mother Mary of perpetual virginity' (v. 19), and the Hymn concerning St. Ethelreda sings how 'over the Virgin Mother a shining virgin band rejoices'; and how 'her honour has made many virgin blossoms to spring forth' (iv. 20).

At Rome in the pope's (8th cent.) mass on Easter-day at the Basilica of St. Mary Major, the only mentions of her are those (1) in the Great Intercession:

'Venerating the memory first of the glorious ever-Virgin Mary, Mother of the same our God and Lord Jesus Christ; and also of Thy blessed apostles and martyrs . . . and all Thy saints; by whose merits and prayers do Thou grant that in all things we may be defended by the help of Thy protection; through the same Christ, our Lord';

and (2) in the Post-Communion:

'Deliver us, O Lord . . . ; and at the intercession for us of the blessed and glorious and ever-Virgin Mary, the Theotokos, and of Thy blessed apostles . . . and of all saints, graciously give peace in our days . . . through our Lord . . . There is no direct invocation of her, nor prayer to her (*Ordo Rom. Primus*, App. 3);

nor, indeed, is there anything more in the Canon of the Roman Mass to the present day, though in the *Proprium Missarum de tempore* this 'collect of St. Mary' is said on all Sundays in Advent:

'God, who willest that Thy Word should take Flesh from the womb of the Blessed Virgin Mary, grant that we who believe her to be in truth the Mother of God may by her intercessions be helped before Thee.'

But neither is this, nor the *Secreta de S. Maria*, nor the *Post-Communio de S. Maria* a prayer to her; the last was indeed adopted in the English Book of Common Prayer as the collect for the Annunciation. The confession of sins in the Mass made 'to Almighty God, to the Blessed Mary, ever-Virgin . . . and to all saints,' is held to be but a recognition of the fact taught us by St. Paul, that the whole body of the Church (from which death does not separate the saints [Ro 8³⁸]) suffers with the suffering of every member (1 Co 12²⁶); and, inasmuch as, in like manner, the honour of Christ the Head is the honour of all His members, it cannot be wrong, it is thought, to ask, as is done in the prayer 'Suscipe sancta Trinitas,' that our memorial of Christ's Passion, Resurrection, and Ascension may redound to the honour of Mary and all saints, as well as to the salvation of all for

whom they pray. These are regarded as fair inferences from the truth which we all confess, in the Apostles' Creed, of the Communion of Saints. The moderation of the Roman Missal did not suffice, however, for the popular devotions, which more and more tended to assume the forms, first, of invoking her directly to intercede for us ('ora pro nobis'), and, next, of asking her personal help for both soul and body. Two festivals really of our Lord—His Presentation in the Temple (Feb. 2), and His Conception (March 25)—became rather those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or at Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking of her soul to God—and it is sometimes called her *dormitio*, or 'sleep.' The doctrine of her bodily assumption into heaven, derived from the apocryphal story condemned by Pope Gelasius, though widely believed, and implied in the Breviary lection from John of Damascus, is not even now *de fide* in the Roman Catholic Church, but only a 'pious opinion.' The Feast of the Visitation of the Virgin (July 2), also apocryphal in origin, was introduced from the East in the 14th cent., withdrawn from the Calendar by Pius V. (1565–72), and reintroduced by Sixtus V. (1585–90). The Nativity of Mary (Sept. 8) would be older if the sermon of Augustine, cited in its Office, be genuine, but it is commonly said that this fact is first mentioned by Andrew of Crete (c. 750); its observance was appointed by the synod of Salzburg in 800; two centuries later it had not become general in Italy, while (c. 1140) St. Bernard blames the canons of Lyons for the innovation of keeping the feast of her conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb. Thomas Aquinas said (*Summa Theol.* III. xxix.) that the Church of Rome tolerated it but did not keep it (a not uncommon way with some in those days of treating popular devotions); and, when it did come in at Rome, in the church of St. Mary Major, it was still, so late as 1340, the festival only of the 'Sanctification of the B. V. Mary.' Underlying these different names for this festival lay the long controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk I²⁶, He 7²⁶); but there arose in the 13th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her Immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and *a priori* considerations. The discussion, nevertheless, tended to her exaltation above all other saints, on the ground not alone of her office, but of the grace bestowed on her. It must be confessed that some mediæval writers transgressed all bounds in the language which they employed, Peter Damian, e.g., speaking of her as 'delicata' (*Serm. de Nativ. Mar.* [P.L. cxliv. 740]), while the very natural use of what Archbishop John Hamilton's *Scots Catechism* of 1552 calls the 'bonny image of the Baby Jesus and His Blessed Mother' to remind us of His gracious coming as an infant to sanctify childhood and maternity was darkened into something not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was re-

garded and resorted to as more powerful for the help of suppliants than another.

5. From the Reformation to the present day.—The fundamental position of the Protestant Reformers, that the justification and salvation of the sinner are through faith in Christ alone, involved, on the one hand, the fullest recognition alike of His Godhead and His manhood; and the Reformers, accordingly, were at one in confessing the Catholic faith as set forth in the ancient creeds and by the great councils, which meant, of course, their acceptance of His birth of a pure virgin, and her honour as His mother. It involved, on the other hand, an insistence that the soul should come to Christ direct, and a repudiation of the idea of any creature coming between it and Him. The latter principle, it is true, could be pushed to the extreme of disparaging the helps which He has graciously provided in His Body the Church (Eph I²²), for bringing men to Himself, and in the ordinances whereby 'Christ and the benefits of the covenant of grace are . . . applied to believers' (*Shorter Catechism*, 92). It brought almost everywhere the practical elimination from Protestant teaching of all thought of the departed saints having any function whatever (save that of remembered examples) towards Christians in this world. The 'Communion of Saints,' while admitted in words, was interpreted as existing simply between believers in this present world; and, contrariwise, the prayers of the living were limited to the 'Church militant here on earth.' The prominence of St. Mary in Roman Catholic devotions reacted among the Reformed in an opposite direction, till Puritanism (in certain sections) 'scrupled' even the singing of her inspired *Magnificat*, gave up the public use of the Apostles' Creed because her name occurred in it, and even so late as the publication of the *Church Hymnary* (1898) was able to secure the rejection of Bishop Richard Mant's version of the *Stabat Mater* and the deletion of the words 'Son of Mary' from H. H. Milman's hymn. It may be doubted whether such courses have helped either to a livelier faith in Jesus Christ or to a deeper love towards Him; or how far they have furthered Christian ideals of purity, chivalry, and saintliness. Puritanism, however, has not conquered either the Scottish or the Anglican Church. The former in the 18th cent. dared to speak of the Virgin in the public service in one of its 'Paraphrases' (Par. 38), and restored the use of the *Magnificat* (in metre) in another (Par. 36), and of late years 'authorized' the chanting of it in prose, as well as the recital of the Apostles' and Nicene Creeds (*Church Hymnary*, *Church of Scotland Anthem Book*, and *Mission Hymnal*). These have always kept their place in the Anglican Books of Common Prayer; and the Church of England has further secured a commemoration of St. Mary by retaining among 'the Feasts to be observed' both 'The Purification of the Blessed Virgin' (Feb. 2) and 'The Annunciation of the Blessed Virgin' (March 25). In both countries divines universally respected (e.g., the Scottish Dr. W. Hanna and the English Bishops Joseph Hall and John Pearson) have spoken of her in terms of singular reverence and beauty, while W. M. Ramsay, holding, as he does, some pagan ancestry for her cultus as it exists in Asia Minor, speaks of it nevertheless as 'a purifying and elevating principle' (*Pauline and other Studies*, p. 159).

In the Roman Catholic Church there was some hope at the beginning of the Counter-Reformation that much then complained of in the extremer cult of St. Mary would be abated or put down. Something certainly was done; and the Council of Trent in its Decrees, and even in its Catechism, is fairly moderate, distinguishing, as did the older councils, between the *κατὰ*, due only to God, and the

δουλεία or the ὑπερδουλεία, due in different degrees to His saints and servants, and insisting that the 'worship' to be paid to the Deipara must never exceed *hyperdulia*. But it is difficult to see where, in the practical system which since then has been not only permitted, but more and more encouraged, by the popes the line of difference is drawn; e.g.,

'Hail, O queen, Mother of Mercy! Hail, our life, our sweetness, our hope! To thee we fly, the banished sons of Eve' (Antiphon to the *Magnificat* in the Roman Breviary, reformed by order of the Council of Trent, published by order of Pope Pius v., and revised by Clement viii. and Urban viii.).

The Breviary, with 'the Offices since granted,' may almost be said to be now—in strange contrast to the NT—nearly as full of Mary as of Christ. On all Saturdays, and throughout the whole month of May, votive offices of the Blessed Virgin are said. The Sunday within the octave of the Nativity is 'the Feast of the Most Holy Name of Mary,' the third Sunday of Sept. that of her 'Seven Sorrows'; four Sundays in October are devoted respectively to her 'Rosary,' her 'Motherhood,' her 'Purity,' her 'Patronage,' while the old feast of her Conception (Dec. 8)—originally her 'Sanctification'—is now that of her 'Immaculate Conception,' and the bull of Pius ix. declaring this an article of faith to be received by all Christians supplies a large proportion of the lessons appointed to be read within its octave. The Breviary itself, moreover, is restrained in comparison with such books as *Le Glorie di Maria* by Alfonso de Liguori (1696–1787), the founder of the Redemptorist Order. Liguori goes far beyond the Council of Trent, for, whereas the latter says only that 'it is useful' to invoke her intercessions, he insists upon the necessity of doing so:

'Mary is our life, because she obtains for us the gifts of pardon . . . and of perseverance'; 'Mary is the hope of all'; 'Mary is the peace-maker of sinners with God' (ii 11., iii 1, vi 3)

JAMES COOPER.

MĀSAI.—1. *History.*—It is advisable, first of all, to specify what we mean by the term Māsaī. It is the tolerably correct designation of a widely scattered but not numerous Nilotic Negro people in E. Equatorial Africa, whose habitat, down to the beginning of the 19th cent., stretched from the Nandi plateau, the south end of Lake Baringo, and the southern slopes of Mount Kenya on the north almost to the 6th degree of S. lat. in the south. On the east they were bounded by the Bantu and Galla peoples of the region between the Tana and the Rufu rivers; on the west by the Nandi and Bantu peoples of the Sotik and Lumbwa highlands, which form the eastern limits of the Victoria Nyanza basin. The older name which this distinct race of pastoral nomads adopted for themselves—or at any rate for the pastoral and warlike section of the original tribe—was (according to A. C. Hollis) Il-maa, which in the 19th cent., if not before, became Il-māsaī (spelt Maasae by some). The western and northern sections of the Māsaī people, especially those sometimes known as Il-oigob, Enjāmusi, or Was'igishu, were not only cattle-keepers and shepherds, but also industrious agriculturists. Still, the main bent of this hand-

some Negro race (which in bodily characteristics verges on the Hamitic negroid) was pastoral; and cattle, sheep, goats, and the domesticated ass of Ethiopia played a great part in their lives and mental considerations. All sections of the Māsaī, agricultural as well as pastoral, speak a language which differs but little in its two or three dialects. The relationships of this speech lie most nearly and clearly with the Lotuka language of the Mountain Nile, with the Bari of the southern Egyptian Sūdān, with the Elgumi or Tesw, north-west of Mount Elgon, and with the Turkana of Lake Rudolf; perhaps also with other languages of the Rudolf basin. In a more remote degree Māsaī is related to the other members of the great Nilotic speech-group—the Nandi languages of British E. Africa, and those of the Dinka, Shilluk, etc., of the Egyptian Sūdān. The customs and, to some extent, the beliefs of the Māsaī similarly connect them with the tall Negroes of the Upper Nile basin. Clearly, the progenitors of the Māsaī emigrated originally from those regions which now constitute the northern provinces of the Uganda Protectorate; but at what period there is little evidence to show, except that it was far enough back in the history of E. Equatorial Africa for the migration to have passed out of tribal recollection.¹ In all their myths and stories the Māsaī think of themselves as a people indigenous to E. Africa, most of all to the regions round about Mount Kenya. This snow-crowned lofty volcano of more than 17,000 feet in altitude plays a considerable part in their traditions, and is supposed by them to be the habitation of a demigod or goddess Naiterukop,² who was at the same time an 'Eve' or 'Adam,' the parent, at any rate, of the higher types of humanity. The Māsaī speech, like some other Nilotic languages, especially those of the south-eastern portion of the regions inhabited by Nilotic Negroes, bears evident traces of an ancient Hamitic impress, though it must be emphatically stated that neither it nor any other member of the Nilotic family can be described as Hamitic, or as other than a 'Negro' speech. But many centuries ago, perhaps as far back as the last periods of dynastic Egypt, the Kushitic section of the wide-spread Hamitic race (Caucasians tinged with Negro and perhaps Dravidian blood) profoundly impressed itself on the racial type, the speech, the culture, beliefs, and customs of the Nile Negroes. Similar action on the part of these Hamites appears to have led to the final shaping of the Bantu languages and the impulse of the Bantu conquest of the southern third of Africa. It is curious that, however 'Hamitic' the Māsaī, Nandi, and other south-eastern Nilotes may be in physical and mental characteristics, their cattle, on which such a large proportion of their thoughts and beliefs is centred, are of the E. African, humped, originally Indian 'zebu' type. They do not belong to the long-horned, usually straight-backed, Galla breed, a bovine variety which seems to have originated from a wild species in W. Asia in remote Neolithic times, and to have been the earliest form of domestic cattle in ancient Egypt. These Galla oxen are nowadays found in the greater part of Abyssinia, in Darfur, Wadai, and Bornu.³ The mysterious Ba-hima—the Galla-

¹ In the traditions of the Māsaī their home-land—Kopekob or Kōpekob—lay to the north of their present habitat. They called the south 'the land of strife,' showing that their southward advance was attended by constant struggles with the preceding tribes not of Māsaī race.

² Na-iteru-kop is a word beginning with the feminine prefix *na*, a prefix originally conveying the sense of 'mother,' but often diverging into an equivalent for 'source of,' 'place of,' 'productive of.'

³ There are, however, traditions among the south-western Māsaī that they once possessed or knew of this long-horned breed.

like aristocracy of E. Equatorial Africa — implanted this long-horned type of ancient Egyptian ox on the highlands between the Victoria Nyanza, Tanganyika, and the frontier of the Congo forest. But the long-horned Galla ox has never yet made its appearance to the east of the Victoria Nyanza or among the Māasai tribes, whose cattle are Indian in type.

2. Gods.—Though in physical characteristics the Negro element predominates in the Māasai over any other, this people is superior in mentality to the pure-blood Negro; and one is struck with a certain imaginativeness and a natural poetry in their thoughts, stories, and religious beliefs rarely found among Negro peoples, and probably due to some ancient or modern infusion of the Caucasian. The Māasai believe in a far-reaching divine power emanating from the sky high above the earth, and even above the lower regions of the atmosphere. This divinity, to which they can pray at times with real earnestness, is known usually by a female name, Eñ-ai (*Eñ-* is the feminine article, *ai*, or *gai*,¹ is the root). Eñ-ai is occasionally referred to as 'the Black God,' though in some stories or in some minds there seems to be a triad consisting of (1) Eñ-ai, the greatest and remotest of all gods, the god of the elements; (2) the benign Black God of rain, who takes a real, though far-off, interest in humanity; and (3) the surly or malign Red God, who is, on the whole, spitefully disposed towards mankind and dwells in the lower part of the atmosphere. Eñ-ai and the Black God (or both fused in one personality) would like to send the rain to the parched lands below in perpetual abundance, so that there might always be fat pastures to feed the Māasai cattle, or perpetual cultivation for the Māasai agriculturists; but the Red God frequently intervenes and intercepts the moisture so necessary to life under an equatorial sun. Distant thunder is believed to be the remonstrance of Eñ-ai at this churlishness of his subordinate deity, whom, however, he seldom bestirs himself to circumvent. Eñ-ai is known to some of the non-Māasai tribes as 'Kai' or 'Gai' without the article, and by the Māasai themselves is called by other names, such as Paasai.²

3. Demons.—In addition to these two gods or three gods (according as the Black and Good God is or is not identified with the Ruler of the Heavens, Eñ-ai), the Māasai believe in superhuman beings somewhat resembling the *jann* ('genii') of the Arabs—devils, it is convenient to call them. Similar beliefs reappear in the Sūdān and in many parts of the northern range of the Bantu languages, such as the Cameroons. These *jann*, or devils, trench in some of their characteristics on the werewolf conception, being in some aspects like a lion and in others like a man, or having originally taken the form of lions and then put on an appearance half human and half like an inanimate stone; or they are believed to go about looking like a lion on one side, and on the other like a monstrous human being. Their favourite home is the forest. They are mainly, if not entirely, anthropophagous in their food preferences, and do not touch wild beasts.

In one of the Māasai stories recorded by Hollis³ it is narrated that the devil's custom is to call to human beings who pass the place of his concealment in the forest, 'Come, my brother, help me lift this load of firewood.' If they are foolish enough to proceed to his help, they are struck with a pointed stake which he carries. When any particular district was believed to be haunted by a devil and the Māasai wished to pass through it in their customary migrations in search of pasture for their cattle, they would arrange to march past the cannibals' haunt in as

large a body as possible, the warriors going both in front and behind. 'Should a voice be heard issuing from the mist and calling some one, everybody remains silent, for they know that it is this devil that is calling.' In another story¹ the anthropophagous *jann* ate up all the human beings in one district except a woman, who succeeded in hiding herself with her child in a pit. As the boy grew up, he made a bow and arrows, which (presumably) he poisoned; and, when the demon, discovering their existence from the smoke of their fires, came to eat them, the boy from the branches of a tall tree shot all his arrows into the monster's body, who at first thought that it was merely the stings of gad-flies, until he succumbed to their effects. Repenting apparently in his dying moments, he gave the boy information as to how he might proceed to recover the cattle of the tribe, and most, if not all, of the people whom he had eaten. Out of gratitude these resuscitated Māasai elected the boy as their chief.

It is quite possible that this and similar stories, wide-spread over Negro Africa, refer to the lurking cannibals of some big and brutish race which lingered on in the forests of Africa long after the more open country had been populated by the modern types of man. Such grim ogres may have worn over their backs the pelts of wild beasts that they had killed, and thus have seemed on one side beast, and on the other a ghoulish type of man.

4. Cosmology.—The Māasai believe that, when Naiterukop,² the demi-god of Mount Kenya, decided to start a race of true men on the earth—presumably Māasai—he found three things in E. Africa, viz. an already existing Dorobo³ (the word is properly spelt *Torobo* and means 'dwarfish'), who was a kind of pre-Adamite man, an elephant, and a serpent, all of whom lived together. In course of time the Dorobo hunter killed both the serpent and the elephant mother, who, however, before her death had given birth to a calf, which escaped from the Dorobo, and in its journeying about the world met a Māasai, to whom it confided its troubles. At this juncture God Himself (Eñ-ai) intervened, and summoned both the Dorobo and the Māasai to His presence. The Māasai came, but the Dorobo seems to have delayed. The consequence was that the Māasai received God's good gifts and henceforth became rich in cattle and the master of E. Africa. Other variants of this story make Naiterukop (the divine man of Mount Kenya) the *deus ex machina* throughout, and do not invoke the intervention of the great sky-god, Eñ-ai.

5. Eschatology.—With regard to a life after death, in some of the Māasai traditions it is related that, when the man-god Naiterukop gave to their primal ancestor, Le-eyo, instructions what to say when a child died, the latter out of selfishness—because the child next to die was not his own—inverted the prayer which was to adjure the child-spirit to return. Le-eyo consequently prayed that the moon, though it died, might return again, but that the dead child might remain dead. Some time afterwards Le-eyo was likely to lose a child of his own, and therefore said the prayer rightly. But it was too late; only the first invocation of nature held good, and thus man, when he dies, never comes back, but the moon always returns.

Yet this great agony of the mind of man—this refusal to regard death as the end of all in the personalities of those whom we have loved or respected—prevails with the Māasai, athwart the repeated assertions in their folklore that 'All is over with man as with the cattle, and the soul does not come to life again.' With this people there has been a gradually growing belief (it is so also among many Bantu tribes) that a medicine-man, a great doctor, a great chief, or a very wealthy

¹ Hollis, p. 221 ff.

² J. L. Krapf, the great missionary pioneer of Equatorial E. Africa, writing in 1864 in his preface to the *Vocabulary of the Engātuk Eloikob* (the Western Māasai), thus describes the religious beliefs of the Māasai: 'At the remotest antiquity there was one man residing on "Oldoinyo eibor" (Mt. Kenya) who was superior to any human being, and whom Eñgal (heaven, supreme being, god) had placed on the mountain. This strange personage whose beginning and end is quite mysterious and whose whole appearance impresses the Wakusai mind with the idea of a demi-god is called . . . Naiterukob. The intelligence of this strange person residing on Oldoinyo eibor reached a man named Enjemasi Enauner, who with his wife Sambu lived on Mount Sambu which is situated to the south-west of Oldoinyo eibor and is a high mountain but does not attain to the height of Oldoinyo eibor. . . . Enjemasi went to the White mountain with his wife who by the intercession of Naiterukob became fruitful and gave birth to a number of children. Naiterukob also taught Enjemasi Enauner the taming of wild cows which he saw in the forest. . . . It is to Oldoinyo eibor ("Kenia," as the Wakamba call it) that the Wakusai resort in order to obtain the intercession of Naiterukob for getting rain, cattle, and health from the Eñgal.'

³ From the circumstance that this root assumes the form of *-gai* or *-kai* when borrowed by adjoining Bantu or Dorobo tribes it is possible that it was originally Eñ-gai in Māasai.

² A. O. Hollis, *The Masai*, Oxford, 1906, p. 341.

³ *Ib.* p. 265 f.

person cannot entirely cease to exist in personality even after the body is dead, buried, and decayed. It is thought by the Māsai, as by Zulus and numerous tribes of W. African Bantu, that the soul of a deceased person of importance enters one or other of the python-like snakes which frequent the vicinity of human habitations in pursuit of rats and other vermin. These (usually black) snakes are, therefore, sacred in the eyes of the Māsai, who are careful not to kill them. If a woman sees one in her hut, she pours milk on the ground for it to lick up. A variety of species of snake are even regarded as totem animals by one of the Māsai clans, who protect them against ill-treatment by the members of any other clan, and will even call on them for help if they get worsted in a fight, exclaiming, 'Avengers of my mother's house, come out!' The Māsai believed that the female snakes thus invoked would bite such as had not adopted them as a totem.

It has even been thought by some Māsai, probably not earlier than the latter years of the 19th cent., that the souls of very great chiefs are not sufficiently provided for by transmigration to a snake, but in some way go to heaven, to the abode of Eñ-ai. It is not impossible that this growing belief may have resulted from their talks with the early missionaries in E. Africa. They certainly believe that there is what we should define as a soul, some impalpable living essence, and that this quits a man's body when he falls asleep. Therefore a sleeper must not be too suddenly awakened lest the soul be left outside the body and the man die. In one mood the Māsai will assert that no such things as 'ghosts' exist, because they cannot be seen; in another they appear to believe that ghosts do exist and can be seen by cattle, though not by men. When a herd of cattle halts and stares fixedly at something, if it is not a lion or a leopard, it is a ghost.

6. *Divination*.—They also believe in omens, and, like all the Negro peoples of E. Africa, pay great attention to the cries and the actions of birds which are propitious or unpropitious. Their medicine-men practise divination of future events (1) by shaking a handful of stones out of a horn, (2) by examining the entrails of a slaughtered goat, (3) by getting drunk on mead, and then prophesying at random, and (4) by the interpretation of dreams.

7. *Prayers*.—The Māsai have a very real belief in God, and, if they are vague about His personality and uncertain whether they are praying to the Great God of the Firmament or to the Black God of the Upper Clouds, to one or other they occasionally make sacrifices of sheep—a rite usually conducted by the women, who, as a matter of course, pray twice a day, while men and children only occasionally utter prayers. In these prayers men and women associate the evening and morning stars, and even the snow peaks of the great mountains, Kenya and Kilimanjaro, with the Deity. They pray for children and for the health of their children, for rain, for successes in time of war, and plenty of cattle. The present writer, however, when residing many years ago at Taveita near the eastern base of Kilimanjaro, noted that the men of the Wa-Taveita (mainly Māsai in race and religion, though now speaking a Bantu language) could pray most earnestly and touchingly to Eñ-ai, the Power of the Sky, if their children were sick.

When one of their number gives birth to a child, the Māsai women gather together and take milk to the mother; they then slaughter a sheep, which is called a 'purifier of a hut,' or simply a 'purifier.' The women slaughter the animal by themselves and eat all the meat, and no man may approach the spot where the animal is slaughtered, for it is

considered unlawful. When they finish their meal, they stand up and sing a song, which may be rendered approximately thus (paraphrased from Hollis):

'God to whom I pray,
God who thunders and it rains,
Give me offspring.
To thee only every day do I pray,
Thou morning star;
To thee only every day do I pray,
Thou who art of sweet savour like sage plants.
To thee only every day do I pray,
Who art prayed to and who hearest;
To thee only every day do I pray.'

Women and children also pray for rain. The old men's prayer in time of drought (chanted round a bonfire of sweet-smelling wood into which is thrown a charm from the medicine-man) is:

'Black god, Ho!
God water us;
O thou of the uttermost parts of the earth,
Black god, Ho!
God water us.'

Young men pray that their battle raids may be successful and that they may bring back herds of cattle. All these prayers seem to be indifferently addressed both to God and to the morning and the evening star. God is not confused with the sun or the moon, but is something behind, above, beyond, and more powerful than these heavenly bodies, which are beings of either sex that alternately marry and quarrel. Of the stars other than the planets Venus and Jupiter they take little heed, with the exception of the Pleiades (the appearance of which in the heavens is indicative of seasonal changes), the Sword of Orion, and Orion's Belt. Comets are perturbing as indicative of approaching disasters.

8. *Source of Māsai religion*.—M. Merker, a German officer, who lived much among the Māsai of German E. Africa, published a work (first issued in 1904) in which, after discussing various Māsai beliefs and customs, he attributes these and, in part, the origin of the Māsai, to a strong wave of Semitic influence from the north, even reviving that old story, the dispersal of the Ten Tribes. It is difficult to understand how he can see anything in Māsai belief and ritual that especially suggests Jewish blood or influence and at the same time overlook the presence of similar beliefs and rites in the intervening Hamites or the Semitized Somālis. For unnumbered centuries waves of Caucasian influence and even trickles of Caucasian blood have been passing from Western and Southern Arabia, Syria, and Egypt through Ethiopia into Nileland, the Central and Western Sudan, and the steppes and forests and lake regions of E. Africa. The Māsai have brought their share of these beliefs, superstitions, and customs from their northernmost centre of development—somewhere, possibly, in the basin of Lake Rudolf, a region that, no doubt, was influenced from Abyssinia a score of centuries ago, as it is at the present day. At the same time, attention should be given to Merker's records of Māsai traditions and beliefs, especially as set forth in the later edition of his work (*Die Māsai*, Berlin, 1910). A. C. Hollis, whose own work on the Māsai is one of importance, and Albert Steggall, a missionary long resident in the eastern part of Māsai-land, both argue that Merker got his information regarding Māsai beliefs chiefly from Māsai who had long been connected with the Roman Catholic mission, and, consequently, that these informants were merely giving him versions of the Hebrew traditions in the OT. The receptivity of the Māsai mind is no doubt great; but no mission had been established in those regions a sufficient length of time for much teaching to have been imparted to Māsai boys, nor, from what the present writer knows of mission work in those regions, is it likely that either Roman Catholic or Protestant missions

at that stage in their development spent much time in translating and teaching the book of Genesis to Māsai inquirers. It is more probable that the ancestors of the Māsai in their northern home were in contact with the Christian Gallas or Abyssinians, and from them imbibed those ideas of Adam and Eve and the other traditions regarding the great Patriarchs which irresistibly recall the legends enshrined in the first chapter of Genesis; or the ideas may even have percolated through N.E. Africa in pre-Christian days, when the Jews and Idumæans were influencing a good deal of W. Arabia and of Ethiopia.

The stories transcribed by Merker are not only reminiscent of the Jewish myths of Adam and Eve, Cain and Abel, Enoch, Methuselah, Lamech, and Abraham, but even extend to a personality like Moses, actually bearing the name of Musanna (or Marumi). There are even traces of a belief in a fiery serpent, of the Ten Commandments of Sinai, and of a paradise garden like Eden.

A good deal of this account of the Māsai religion must be taken in the past tense. Year by year old beliefs and traditions are fading away, and the people are becoming either absolute materialists (with the white man as their wonder-working divinity) or adherents of the various Christian missions, to which they are proving useful and influential converts.

LITERATURE.—In addition to the works of Hollis and Merker quoted throughout, see J. L. Krapf, *Vocabulary of the Engituk Bloitob, or Language of the Wakusai Nation*, Tübingen, 1854 (Preface is noteworthy); J. Erhardt, *Vocabulary of the Enguduk Iitigob, as spoken by the Māsai Tribes in E. Africa*, Basel, 1857; J. Thomson, *Through Masai Land*, London, 1885; H. H. Johnston, *The Kikuyu Expedition*, do. 1886; *The Uganda Protectorate*, do. 1904; S. L. and H. Hinde, *The Last of the Masai*, do. 1901. H. H. JOHNSTON.

MASBOTHÆANS.—According to Eus. *HE* IV. xxii. 5f., Hegesippus had written of the Hemerobaptists and the Masbothæans (*Μασβωθαῖοι*)¹ as two distinct sects 'in the circumcision among the children of Israel.' The brief characterizations of the Masbothæan sect given by the ancient heresiologists are based simply upon their etymologies of the name, which they connect either with the word 'sabbath' or with *mas*, 'will', 'purpose.' Among modern scholars A. Hilgenfeld has advanced the conjecture that the Masbothæans were the followers of the early heretic Thebuthis, also mentioned by Hegesippus, but in all likelihood the name simply means 'baptists.' In glossaries of Palestinian Aramaic the only word given for 'baptism' is *masbō'thā*, and, as we know that among the Mandæans on the Euphrates the regular term for ceremonial immersion in running water was *מסבחה* (see art. *MANDÆANS*, p. 387^b), we can hardly doubt that *Μασβωθαῖοι* signifies people in whose religious practice such immersions formed an outstanding element. Thus the Gr. term 'Hemerobaptists' might quite well have been applied to the same group, and the idea that the two names denoted different sects may simply have been a mistake on the part of Hegesippus. It is, no doubt, the case that in the time of Hegesippus there were among the Jews various parties which advocated the practice of immersion, each, however, after its own particular form: there were, e.g., the devout, who bathed every morning and evening, and the 'bathers of the early morning', who thought it necessary to perform an immersion before morning prayer. The term 'Hemerobaptists' would, of course, be quite appropriate for both groups.

The designation 'Masbothæans,' however, would

¹ In *Apoc. Const.* vi. 6 *Μασβωθαῖοι* (=αι); the form *Masbuthazi* (emend. *Masbuthani*) appears as a Lat. transcription of the name from the Armen. tr. of a Syr. text in one of the two MSS ed. G. Moesinger, *Evangelii concordantis expositio facta a sancto Ephraemo*, Venice, 1876, p. 238.

also suit the Elkesaites, and, in fact, pointedly suggests that sect, as the Elkesaite tradition contains the name *Σοφιαλ*, formed from the same verbal root as *מסבחה* (cf. art. *ELKESAITES*, vol. v. p. 265^a). By the time of Hegesippus the Elkesaites had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan—that he can hardly have remained ignorant of their existence. On these grounds, accordingly, it would seem very probable that those who had become known to him as the sect of the Masbothæans were none other than the Elkesaites.

On the Jewish Hemerobaptists and 'bathers of the early morning': Brandt, *Die jüdischen Baptisten*, Giessen, 1910, pp. 48-51, 92 ff. W. BRANDT.

MASK.—A mask may be defined as a moulded surface, representing the anterior half of a head and face, and usually worn over the face of a person. Further significations are the cast taken from the face of a dead person and the parallel form in sculpture—the front half of a human head and face preserved—and the head of a fox. A division is made by W. H. Dall into 'mask' proper, 'maskette,' resembling mask but worn not upon but above or below the face, and 'maskoid,' resembling mask, but not intended to be worn.¹ This division is primarily anthropological.

The use of masks in one form or other and for various purposes has been practically universal in all stages of culture above that which the natives of Australia may be assumed to represent. The greater proportion of the Polynesian peoples are an exception. It will be most convenient to arrange the subject according to the purposes for which the mask is employed, incidentally noting details of form and manufacture and variations of general type. It may be noted at once that both in form and in use there is the usual similarity between the most widely separated races. The mask is in most cases ethnologically independent in origin.

1. Views as to the original meaning of masks. —The usual purpose of a mask is disguise by a more or less defined impersonation, impersonation alone, or, more rarely, protection, physical or moral. The figures impersonated may be real persons, imaginary persons, especially spiritual and divine, or various animals and natural objects. Robertson Smith regarded the use of animal masks in religious ceremonial as a survival of an earlier practice according to which the worshipper put on the skin of a victim, in order to 'envelop himself in its sanctity.'² In the form of a 'maskette' many peoples have used the heads of animals, even as a war head-dress. The ritual mask is frequently credited with the power of imparting to the wearer the qualities of what it represents. The Eskimo believe that the wearer is 'mysteriously and unconsciously imbued with the spirit' represented by the mask, and, when wearing the mask of a totem, he becomes that totem.³ In the drama of the Pueblo Indians the actor is 'supposed to be transformed into the deity represented.'⁴ The wearer of a mask in the dances of 'primitive' peoples is 'assimilated to the real nature of the being represented'—possessed by him.⁵ But neither this belief nor the desire to be enveloped with sanctity can be regarded as the original factor in the invention of the mask. Dall considers the original mask

⁴ J. G. Frazer, *Totemism and Exogamy*, London, 1910, III 227 f. *Kachina* means both 'deity' and 'masker.'

⁵ H. Webster, *Primitive Secret Societies*, New York, 1908, p. 76 n.

to have been a shield held in the hand to protect the face from missiles, and later worn on the face, after which it was carved into a terrifying aspect, with the object of frightening the foe. On another line of development it became the helmet; but this view also fails to give any original psychological element. The Australians do not have the mask, but in their ceremonies they disguise the face by painting, or with down and blood. Previous to the invention of the Attic dramatic mask, the Dionysian mummers painted their faces with wine, possibly with the idea of assimilation to the deity, as in the case of the ancient Roman kings and generals, whose faces were painted with vermilion on state occasions to resemble Jupiter. But this idea is clearly secondary. Again, it cannot be argued that the mask is a development from the custom of painting the face. The two are parallel reactions to the irreducible dramatic instinct in its elemental phase of the assumption of another personality. The elaborate facial make-up of modern dramatic art is, when contrasted with the Attic masks, a fair analogy to the blackened face of the modern peasant mummer, as contrasted with the wooden masks of the N. American dancer. We may conclude that the ideas of assimilation, whether magical or religious, of terrorism, of protection, and even of disguise are secondary, and that the primary meaning of the mask is dramatic; the mask is a concrete result of the imitative instinct.

The various purposes, therefore, to which the mask is applied have no necessary development from one another, but are natural applications to particular purposes of the original mimetic instinct.

2. **War masks.**—These are not of frequent use. In Central and E. Africa warriors used hideous 'masks' of zebra-hide. The natives of Yucatan wore masks representing lions, tigers, and so forth, to terrify the enemy. In mediæval Europe and Japan soldiers wore helmets fronted with frightful masks.¹ The frontal skull on the helmet of the German 'Death's Head Hussars' is of similar origin.

3. **The mask of terror.**—For other purposes than those of battle, the terrorist idea has been applied. The Chinese placed horrible paper masks on the faces of their children in order to frighten away the demon of smallpox.² In Africa there has been the office of 'sham devil.' In China, in order to neutralize the activity of an evil spirit, a man was masked to represent it, and placed in its sphere of operations to discourage its advance.³ The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body.⁴ The further idea is here involved of protection by means of a mask which, so to say, draws the enemy's fire.

A similar use of the mask is seen in the expulsion of evils. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchten of Central Europe had originally a similar function. There may have been a mimic struggle between the Beautiful and the Ugly masks, symbolizing a struggle for the crops; masked mummers at Kayan sowing festivals represent evil spirits.⁵

4. **The mask of justice.**—Officers of justice or terrorism assume the personality of a supernatural

inquisitor, the Vehme of mediæval Europe being a historical case. Executioners wore a mask, and possibly the black cap of the judge is an adaptation.

5. **The mask in secret societies.**—These institutions are practically universal in the middle culture.⁶ In some cases they include among their functions the administration of some form of justice. This, like all their proceedings, is carried out with mummery, and the mask is employed along with other disguise or impersonation.

The Sindungo society of Loango collects debts; the collectors wear masks.⁷ The Kukkwi, Egbo, and Egungun are other instances of these W. African societies; their masks are based on various ideas connected with the tutelary spirits of the society.⁸ The Ogboni society of the Yoruba-speaking peoples is closely connected with the priesthood, and the king is obliged to submit to its decrees. The mask of Egungun represents a hideous human face; he is supposed to be a man risen from the dead, in order to spy out what is going on in the land of the living and carry off those who misbehave.⁹ The Tamate of the Banks' Islands is a secret society whose name means 'ghosts.' The members possess much power, and periodically hold meetings and processions, wearing their masks.¹⁰

The famous Duk-duk societies⁶ of New Britain, New Ireland, and the Duke of York Islands comprise practically the whole of the adult male population. In one aspect of its functions the Duk-duk is a personification of justice—judge, policeman, and executioner in one. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual force in the semblance of a cassowary. The operators are two, Duk-duk representing the male and Tubuan the female cassowary. The mask worn by each is a 'huge hat-like extinguisher' of grass or palm-fibre, 6 ft. high. As far as the body-dress is concerned, it may be said to represent the cassowary, but the head is 'like nothing but the head of a Duk-duk.' A long stick is at the apex, and the 'tresses' are coloured red. The female is said to be plain, the male more gaudy. The extraordinary belief is held that the Tubuan mask gives birth to the novices when initiated into the society; and two female masks are kept from year to year for the purpose of annually breeding two Duk-duks. The persons acting seem to be lost or merged in the mask. No one is supposed to know who the actors are. The male masks appear to be burned after the ceremony.

The committees of adults who supervise the 'making of young men' are frequently dressed in disguise and wear masks. In Torres Straits on these occasions a man represents the deity Agud; he is painted all over and wears a leaf petticoat and a turtle-shell mask. Several masked *magur* (devils) frighten the novices, who are well beaten, and are told the dreadful names of the masks.⁷ A 'wolf' society among the Nutkas holds initiation meetings; men wearing wolf-masks carry off the novices.⁸

6. The divine mask.—The shaman of N.W. America, *e.g.*, among the Makahs, has one mask for each of his familiar spirits. When giving a séance, he puts on a mask and summons the spirit with his rattle.¹ The Eskimo shamans, in making their masks, give expression to their ideas of the spirits represented. Here is a primitive source of creative plastic art. The shaman is said to be able to see through the animal-mask to the manlike face behind.² In the ritual of ancient Mexico the priest wore a mask representing the god.³ On the other hand, priests in Nigeria may not wear or touch a mask.⁴

From a similar point of view the protégé of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it.⁵ The Monumbo of New Guinea wear masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangaroos, dogs, and cassowaries. The masks, when made, are fumigated in order to 'put life into them.' They are treated with respect and addressed as if they were living persons.⁶ A man wears a mask representing his totem. This practice is common in N.W. America,⁷ and the belief is that the wearer becomes the totem-animal.

The image of a god may wear a mask; the Mexicans placed on the face of certain idols masks of a human face cut off from the skull and preserved. They also used elaborate masks with pyrites for the eyes, and obsidian and turquoise mosaic in bands across the face.⁸ The image of the goddess 'Our Mother' wore a two-faced mask, and her priest donned a replica of this.⁹

7. The death-mask.—In connexion with the dead the mask has been exploited along interesting lines, assisting among other things the art of portrait sculpture. Besides the practice of embalming or otherwise preserving the heads of dead friends or enemies, several peoples have made masks of these. One such has been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christy collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (skull masks) were worn in sacred dances.¹⁰ The Mexicans also placed painted masks or masks of gold or turquoise mosaic on the faces of their dead kings.¹¹ The Aleuts covered the faces of their dead with masks.¹² The meaning of the last practice is obscure, but the Aleuts think that it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religious dances, so as not to behold the idol round which they revolve and whose glance means death, may be compared.¹³ Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks.¹⁴ Basuto girls at puberty wear straw masks,¹⁵ and Lilloet girls (British Columbia) wear goat-skin masks at the same period.¹⁶ In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away his

soul.¹ Some idea of disguising a person dangerous or in danger may be connected with the practice, and here the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. The Shans have the same custom, using masks of silver or gold.² These cases and the next seem to touch upon the idea of a portrait. The Egyptian mummy had an artificial face forming part of the portrait superstructure over the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Mesopotamia, Phœnicia, the Crimea, Italy, France, the Danube valley, and Britain.³ The most conspicuous and complete examples are supplied by Mycenæ and Rome. In the famous shaft-graves opened at Mycenæ golden masks, 'clearly portraits,' were found, corresponding to men and children. Those at least of the latter, being of thin gold leaf, 'must have been moulded with the hand on the faces of the dead.' The masks of the men were of thicker plate, and had no eye-holes. 'The hands and feet of the children were also wrapt in gold leaf.'⁴ This suggests that the informing idea was similar to that of swathing the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Roman *nobiles* kept wax portrait-masks of their ancestors in the *atrium*.⁵ The dead *nobilis* lay in state for seven days, during which the embalmer (*pollinator*) took a mould of the face, which he then cast in wax, and painted with the natural colours. The mask was placed on the dead man's face, or, in case of putrefaction, on an effigy. After the burial the mask was hung in the *atrium*, possibly fixed on a bust, and under it was a *titulus* giving the name and exploits of the man represented. These *imagines* were connected by lines, giving the genealogical succession, and termed *stemma*. The *ius imaginum* gave a man the right of having his *imago* carried in the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The *imagines* were crowned with laurel on feast days. By Pliny's time the wax masks were giving way to *clipeata imagines*, *i.e.* medallions of metal.⁶

Since Roman times the method of securing a portrait by taking a mould of the dead man's face has been continued in the case of great personages. This is the 'death-mask' of sculpture.

8. The dramatic mask.—The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their 'masonic' privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the mediæval gilds. Frazer describes the institution as 'a religious drama' like that of ancient Greece.⁷ Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to the constitution of the society, whether totemic or consecrated to guardian spirits or otherwise. But the essence of their

function is pantomime, and the mask is the means of impersonation. The masks are made of various woods—alder, maple, or cotton-wood; they are large and prominent of feature, painted red, black, and white. In some of the grotesque sort the eyes and jaws are movable, and worked by a string. Some are held by means of a mouth-bar. Some masks are two-faced, enabling the actor suddenly to change his character.¹ The masks are surrounded, as usual, with considerable mystery, and are burned or thrown away at the end of the season. For their manufacture and use there are elaborate rules. No uninitiated person may see them being made. Little masks are worn on the fingers.² The masks represent human persons—mythical, sometimes hideous—or animals. Ancestors, spirits, *sulia* (tutelary spirits), natural objects (e.g., the sun-mask of the Kwakiutl, 'set round with seal's whiskers, and feathers, which gradually expand like a fan'³), animals, and birds form the subjects of a remarkably varied collection. The Tsimshians have a mask representing the thunder-bird, and at the performance mock lightning is produced and water is poured from the roof on the spectators. Salish masks represent the ancestors of the clans, viz. the wolf, owl, frog, and coyote. But, since the wearing of a mask is regarded as being unlucky, well-to-do men hire professionals to represent them. This idea may be compared with civilized prejudices against the actor's profession. The dances are pantomimic representations of the myths stored by the society, and may thus be compared with the magical pantomimes of the Australians, intended to encourage the natural processes which they represent, and, on the other hand, with the mediæval 'morality,' which was an object-lesson in good and evil. The use of the mask 'throws a sort of mysterious glamour over the performance and at the same time allows the actor to remain unknown.'⁴ Apart from entertainment, the pantomimes are performed in honour of dead personages, or to bring blessings on a particular man or the community. In N.W. Brazil a very pretty pantomime is performed in honour of the dead, at which the masked actors represent the gorgeously-coloured birds and insects of the forest.⁵ The drama of the Pueblo Indians is remarkable; it has features resembling those of the morality and the Greek drama. Divine beings are the characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity in general.⁶

The Lamas of Tibet practised a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks.⁷ The Burmese drama employed masks for character types such as king and minister.⁸ Siamese actors wore paper masks, coloured green, red, black, or gold. A peculiarity was that the wearer did not speak; the parts were spoken by prompters.⁹ In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals being represented in masks by good artists.¹⁰

The drama of ancient Athens, both tragic and comic, employed the mask, which had been used in the old Bacchic mummeries that seem to have produced the drama. Previously the mummers had smeared their faces with wine or covered them with fig-leaves. Similarly, the peasants of Latium wore masks of bark in the Bacchic festivals.¹ The dramatic use of masks was first established by Thespis, who previously had painted his face with white lead or purslane. Linen masks unpainted were then adopted; Choerilus improved them; Phrynichus introduced female masks; and Æschylus added paint and generally fixed their form.²

The Greek mask was made of linen, or, sometimes, of cork or wood. It was large (in tragedy) to correspond to the superhuman proportions of the actors. The *onkos* (*ὄγκος*), a cone-shaped prolongation of the upper part of the forehead, added size and dignity to the head. The white of the eye was painted strongly, but an aperture was made for the actor to see. The mouth was permanently opened wide, and the tradition remains, unexplained, that resonance was given to the voice by means of the shape of the mask. All that the mask aimed at was the bold emphasizing of types; every feature was exaggerated, and in the huge theatres of the Greeks this fact was essential. No change of facial expression being possible and the finer shades of emotion being excluded, the mask prevented any considerable evolution of the psychological drama. 'It would be difficult to imagine the part of Hamlet played in a mask.'³ Pollux enumerates twenty-eight styles of tragic masks. The tyrant's mask had thick black hair and beard and wore a frown. The lover's face was pale.⁴ The comic mask was, in the Old Comedy, the portrait of a real person; when Aristophanes presented *The Clouds*, Socrates stood up in the auditorium to enable the audience to identify the mask of his impersonation; but, when Cleon was to be staged, the makers refused to supply a mask, such was the fear inspired by the demagogue. In the New Comedy of manners types were represented. The hot-tempered old father wore a mask with one eyebrow drawn up and the other normal; he expressed his changes of temper by turning this or that side.⁵ The Roman drama dispensed with masks until the time of Roscius, who is said to have introduced them on his own account, being ugly and affected with a squint; but they had always been worn in the old-fashioned *Atellane*, in which an actor, when hissed, was obliged to remove his mask.⁶

In mediæval Europe and England the mask was used in the folk-drama from which the modern drama was evolved. At the Feast of Fools references are made to the wearing of masks through the period from A.D. 1200 to 1445.⁷ The term 'visor' was usual for the mask. 'Mumming' and 'disguising' were terms for the various folk-plays, which were often suppressed.⁸ A side-development of this drama, and a new application of the word 'mask,' were made in the 'masque' popular in Elizabethan times.⁹

The theory of Frazer as to the magical and religious origin of the drama may be tested by the special case of the mask. He writes:

¹ A. E. Haigh, *The Attic Theatre*, Oxford, 1907, p. 239.
² *Ib.* pp. 285, 242.
³ See Aul. Gell. v. 7, and Smith's *Dict. of Gr. and Rom. Antig.* s.v. 'Persona'; this term refers to the resonance.
⁴ Pollux, *Onomasticon*, iv. 133-141.
⁵ Haigh, pp. 262, 264.
⁶ Smith's *Dict. of Gr. and Rom. Antig.* s.v. 'Persona'.
⁷ E. K. Chambers, *The Mediæval Stage*, Oxford, 1903, i. 391.
⁸ *Ib.* p. 394. Skeat connects the terms 'mumming,' 'mummer,' with the Low German *Mumme* ('mask'); it is onomatopœic from *mum*, *nom*, used by nurses to frighten or amuse children, while pretending to cover the face.
⁹ *Ib.* p. 400 ff.

'Actors sought to draw down blessings on the community by mimicking certain powerful superhuman beings and in their assumed character working those beneficent miracles which in the capacity of mere men they would have confessed themselves powerless to effect.'¹

The mimetic magical ceremonies of the Central Australian natives are a strong piece of evidence in favour of this view, but it seems more probable that the native mimetic instinct expressed itself first with no particular purpose, being later applied to various magical or religious aims. It is impossible to prove that the earliest masks or even face-paints represented anything but fanciful characters of merely dramatic import.² The instinctive delight in personal disguise is a universal element in all the applications of the mask, and is repeated to-day in the custom of civilized peoples of wearing a mask on the upper part of the face at fancy-dress balls, which reproduce the barbaric entertainments of lower cultures. The burglar's mask is another modern reproduction of the idea of disguise, but employed for utilitarian purposes.

9. **The swinging mask.**—Cases have been cited of the mask being separated from its wearer and becoming more or less of an idol. The ancient Italian *oscilla* are an interesting parallel. These were miniature masks in wax, marble, or terracotta, and apparently wool, which were hung up on trees at agricultural festivals, and allowed to swing in the wind.³ The intention may have been magical, to make the crops or vines grow, by disseminating magical force, by swinging high,⁴ or by the virtue of movement.

10. **Masks in metaphor and history.**—Many obvious metaphors have been inspired by the mask, which need not be recapitulated. In history the Faux Visages, a section of the Ghibelline faction in the 13th cent., otherwise the Mascarati, are curiously repeated in name by the 'False Faces' secret society of the Iroquois.⁵ 'The man in the iron-mask' is a historic mystery illustrating the permanent fascination of this element of applied psychology.

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

MASS.—See EUCHARIST.

MASSEBHĀH.—In the OT *massebhāh* (מַסֶּבֶה) denotes a standing-stone, stele, obelisk, or pillar, sometimes conceived as being an abode of spirit or deity. The name is derived from *בָּה*, 'to set up' (Phoen. *baḥ*, 'tombstone'; Arab. *nusḥ*, pl. *anṣāb*; Aram. *ḥḥ*; Syr. prop. name Nisibis; Palmyrene (𐤍) *ḥḥ*). The *massebhāh* is referred to as a heathen symbol of the Canaanites (Ex 23²⁴ E, 34¹³ J, Dt 7⁵ 12³), and as an adjunct to a temple of Baal (2 K 3² 10²⁶). It is frequently conjoined with an *āshērāh*, which was primarily a sacred tree and later a stump or post (1 K 14²², 2 K 17¹⁰ 18⁴ 23¹⁴). *Maṣṣebhōth* and *āshērim* were so frequent that it could be said that they might be found 'upon every high hill, and under every green tree' (2 K 17¹⁰). The word *massebhāh* is used to describe sacred stones in connexion with an altar (Ex 24⁴ E [erected by Moses], Hos 3⁴ 10¹⁴, Is 19¹⁹ [without condemnation, the article being considered usual in Hebrew worship]). The strong pillars of Tyre doomed to destruction are called *massebhōth* by Ezekiel (26¹¹), and Jeremiah (43¹³) uses the same term for the Egyptian obelisks at Heliopolis. The use of *massebhōth* is strictly forbidden to Israelites by the

¹ GB³, pt. vi., *The Scapgoat*, p. 375; cf. the custom of wearing masks representing the animals about to be hunted. This may have an obviously utilitarian origin (Dall, p. 107, n.).

⁵ Dall, p. 144.

Deuteronomic code and in the Law of Holiness (Lv 26¹), and the editor of the books of Kings estimates their character in the light of this prohibition. The earlier writers, especially E and Hosea, see no harm in these stones; but the teaching of the other prophets of the 8th cent. evoked an aversion, and Ezekiah, Josiah, and Deuteronomy insist on their destruction. Later writers, such as P, consider the altar a divinely authorized instrument of worship, and they scruple to describe the patriarchs as having anything to do with the *massebhāh*, representing them as making altars (cf. LXX Ex 24⁴, substituting *אֲבָנִים*, 'stones,' for *בְּצִבְרוֹת*). Hebrew monotheism, when fully developed, denuded sun and moon of their ancient divinity (Gn 1¹⁴⁻¹⁷): 'The heaven is my throne, and the earth is my footstool: what manner of house will ye build unto me?' (Is 66¹). At such a period in Hebrew thought there was no longer any superstitious regard for stones, cairns, cromlechs, or menhirs.

Stones are used with no occult associations.

Samuel commemorates a victory by setting up a stone which he called Eben-ezer (1 S 7¹²); the Temple has two pillars, Jachin and Boaz, set up in the porch (1 K 7²¹); inscriptions are recorded on stone (Dt 27², Ex 34¹ [the Ten Words]); Rachel's grave is marked by a stone (Gn 35²⁰); Absalom in his lifetime rears a pillar, called a 'hand,' to perpetuate his memory (2 S 18¹⁸); an agreement between Jacob and Laban (Gn 31⁴⁰⁻⁴⁸) as to the boundary between them is marked by a stone and cairn (*גֹּמֵל עֵד*, 'cairn of witness').

When men sought an enduring memorial, when they wished to make the deity the protector of a covenant, they often chose some form of stone as an emblem of the divine presence. Something more than this is indicated in a few instances.

Jacob set up a stone for a *massebhāh*, poured oil upon the top of it, and called it Beth-el (Gn 28¹⁸⁻²²; Gn 35¹⁴ adds that Jacob poured a drink-offering thereon). As the *massebhāh* is found associated with altars and *āshērāh* figures in religious centres, Jacob's ceremony implies more than it states. Joshua sets up a stone saying, 'This stone shall be a witness against us; for it hath heard all the words of the Lord which he spake unto us' (Jos 24²⁷ E). The use of unhewn stones for an altar (Ex 20²⁵, Dt 27⁶, Jos 8³¹) betrays the feeling that the chisel would offend the *numen* in the stone.

Semitic and other parallels show that such instances are surviving specimens of an elaborate system of stone-worship. The *massebhāh* is found in the cognate languages, and denotes 'lapides qui divi dicuntur' (Lampridius). Among the primitive Arabs 'the *nusḥ* serves as an altar, the victim's blood is smeared over it; hence the name *ghariy*. It is, however, more than an altar, it represents the god-head' (J. Wellhausen, *Reste arab. Heidentumes*, Berlin, 1887, p. 99). Herodotus (iii. 8) describes Arabs making a covenant.

An umpire draws blood with a sharp stone from the hand of each of the two persons making the contract, and with part of their garments he smears the blood on seven stones placed between them, invoking Orotal and Allat. Herodotus might have added that the parties tasted each other's blood (W. R. Smith, *Kinship and Marriage*, London, 1907, p. 56 ff.).

The Canaanite high-place discovered at Gezer reveals the conspicuous place assigned to standing-stones in the cult of Palestine before the Hebrew occupation (R. A. S. Macalister, *Excavation of Gezer*, London, 1912). Phœnician coins and temples confirm the sanctity of the stone column, and the Greek name *βαλῦλος*, *βαλῦλιον*, appears to be derived from Beth-el.

Theophrastus, in the 4th century B.C., depicts the superstitious Greek passing the anointed stones in the streets, taking out his phial and pouring oil on them, falling on his knees to adore, and going his way' (PC⁴ ii. 165).

Traces of like practice are recorded down to the present day. A full description of 'a shrine of pre-Islamic stone-worship' with a ritual preserving pre-historic customs in a Turkish village of Macedonia is given by A. J. Evans in his 'Mycenæan Tree and Pillar Cult' (JHS xxi. [1901] 99 ff.). It is due to prophetic intolerance of the irrational and immoral that so slight traces of litholatriy remain in the OT.

'What mean ye by these stones?' asked the Hebrews; *ratio in obscuro*, answered Tacitus. To seek one principle consistently applied is as hopeless in custom as in a language. Feeling, variable and indifferent to logic, determines usage in regard to sacred stones. Mountains have inspired awe and affection—e.g., Olympus, Fujiyama, Hermon, Horeb, Sinai—and it has been suggested that the sacred pillar is a little model of the Holy Hill. Meteorites have been found and treasured; and, if the host of heaven received adoration, any fragment coming on a path of light, like a falling star, or supposed to be sent amid thunder and lightning would command devotion (cf. Diana of the Ephesians and the image which fell down from Jupiter [Ac 19³⁵]; *ἑσπερίων* in Damascus, quoted by Photius [A.D. 850], *Biblioth.* 342b, 26; 348a, 28; the Ka'ba at Mecca, as R. Burton thinks [*Pilgrimage to El-Medīnah and Meccah*, London, 1893, ii. 300 f.], retaining its sanctity in spite of Islām). Moreover, the shadow of a pillar is a clue to the movement of the sun and the regulation of the calendar. The structures at Stonehenge 'had for the most part an astronomical use in connexion with religious ceremonies' (N. Lockyer, *Nature*, lxxiii. [1905-06] 153; see also series of Notes on Stonehenge, *ib.* lxxii. [1905] 32, 246, 270, lxxiii. 224). The same conclusion is maintained with regard to the standing-stones of Stenness in Orkney by M. Spence (*Scottish Review*, xxii. [1893] 401-417). The late Hebrew term *צֶמֶח*, rendered uniformly 'sun-images' in RV (Ezk 6⁴⁻⁶, Lv 26³⁰, Is 17⁸ 27⁸, 2 Ch 14⁸ [cf. 14⁸] 34⁷), probably represents the *massebhāh* with solar associations. Palestine had a human past before the Hebrews entered it. The stone-tables (dolmens) occurring in hundreds suggested imitation; the menhirs to the east of the Jordan served as prototypes of the *massebhāh*. Of the more obvious influences specified by the Biblical writers the commemoration of the dead has always been the strongest inspiration.

Cup-markings on the *massebhāh* or on adjoining altars are not infrequent (cf. art. CUP- AND RING-MARKINGS). On an altar they are supposed to receive the blood of the victim; on a tombstone they would serve for food and drink offered to the dead, although a plain Turk explained the hollows on tombstones as meant to gather water for the birds. The cups are sometimes in the side, not on the upper surface of the stone; and they may be arranged in the shape of a horse-shoe. Cup-markings are held to be inconsistent with the purpose of the pillar in one case at Gezer, and the situation showed that the cups and pillar had not originated at the same period (*PEFS* xxxvi. [1904] 112 f.). The cupped stone is cited to explain Zec 3⁹: 'Behold the stone that I have set before Joshua; upon one stone are seven eyes: behold, I will engrave the graving thereof, saith the Lord of hosts, and I will remove the iniquity of that land in one day.'

An article by B. D. Eerdmans (in *JBL* xxx. [1911] 109-113), entitled 'The Sepulchral Monument "Massebah"' has revived discussion on the meaning of the pillars.

'The massebah is easily explained as a house for the soul. Therefore the name of the deceased person is inscribed upon it; and the monument itself is called "soul." The male form was chosen for the graves of men, the female form for the graves of women' (p. 113).

This result has, with some reservations, been approved by E. Sellin, who adds corroborations and, in consequence, suggests striking interpretations of Is 6⁸ and 51¹⁴. (*OLZ* xi. [1912] 119 ff., 371 ff., 568 f.). The views of Eerdmans and Sellin are strongly contested by K. Budde (*ib.* 248 ff., 469 ff.). This indication of sex is a welcome improvement on the *suggestio concupiscentiæ* which prevailed for some time. In spite of Herodotus, ii. 106, and

similar testimony in Lucian, and the phallic columns at Gezer and Petra, it appears that this was a subsidiary and occasional interpretation of the standing-stones. The feeling that the stone slab or pillar may serve as a resting-place for the soul is supported by the Jewish custom in Oriental cemeteries (מִצְבָּה מָה, as they are called) of giving every individual a stone. The inscribed name indicates the sex, apart from a special shape of the stone. The tombstone of a Rabbi or of a person who died of cholera has a distinctive shape.

LITERATURE.—In addition to sources cited in the art. see W. Baudissin, art. 'Malsteine,' in *PRE³* for main works since 1885; P. Thomsen, *Kompendium der palastinischen Altertumskunde*, Tübingen, 1913, contains references to recent periodical literature. D. M. KAY.

MASTER AND SERVANT.—See EMPLOYERS, EMPLOYMENT.

MATERIALISM.—Materialism is one of several types of metaphysical theory concerning the nature and number of the ultimate principles to be assumed in order to explain the universe. Dualism (*q.v.*) asserts that two independent principles must be presupposed, viz. mind and matter. Monism (*q.v.*)—in the qualitative sense—regards these two principles as simply modes or aspects of one ultimate. Monism—in the quantitative sense—is opposed to dualism in regarding one principle as sufficient. There are two kinds of such monistic theory: spiritualism, which affirms mind or spirit to be the only ultimate reality, and materialism, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, impenetrable, eternally self-existent matter, susceptible of motion, is the one fundamental constituent of the universe; mind or consciousness is but a mode or a property of such matter, and psychical processes are reducible to physical. More precisely, there are three kinds of metaphysical materialism, thus described by Külpe (*Introd. to Philosophy*, Eng. tr., p. 117): 'attributive materialism, which makes mind an attribute of matter; causal . . . , which makes it an effect of matter; and equative . . . , which looks upon mental processes as really material in character.'

1. History.—The atomism of Leucippus and Democritus is the earliest example of materialistic theory. According to these philosophers, the physical world is composed of invisible material particles, and mind is made up of similar atoms, smaller, rounder, smoother, and more mobile. The theory reduced all qualitative differences to quantitative (of size, form, arrangement), banished final cause or intelligent purpose from the world, denied the immortality of the soul, and interpreted the universe only in terms of mechanism and fixed law. The last element in early Greek atomism does not necessarily presuppose or involve materialistic theory, though Lange, the historian of materialism, seems to see in it the chief virtue of early materialistic speculation. The theory of Leucippus and Democritus was developed by Epicurus and Lucretius, with certain modifications.

At the beginning of the modern period the early Greek materialism was revived by P. Gassendi, who, however, deprived it of metaphysical significance by reconciling it with belief in God as Creator of the atoms. T. Hobbes, at the same time, taught a similar view, so that, though the tone of his philosophical system is materialistic, he cannot be called a thoroughgoing materialist. He strongly insisted that all that exists is body or matter, and that motion is the only kind of change in the universe. Gradually developing in England, materialism perhaps reached its climax in the writings of the French Encyclopædists (*q.v.*), after science had revealed how closely psychical states and

mental development depend on the body. P. H. D. Holbach's *Système de la nature* (London, 1770), which rejects every form of spiritualism and supernaturalism, marks the culmination of this movement of thought.

Nearer to our own time materialism appeared, as a reaction from post-Kantian idealism, with renewed energy in Germany, K. C. Vogt, J. Moleschott, and L. Büchner being its leading exponents at about the middle of the 19th century. Their writings, though evincing—for the first time, perhaps, in the history of materialism—some sense of the need of an epistemological foundation for a metaphysic which resolves mental process into material, reveal great crudity of thought and knowledge in this connexion, and in spite of their popularity are of no philosophical worth to an age which is careful and critical as to epistemological presuppositions, especially such as are involved in the physical sciences. Description of physical and even mental processes, in the language of materialism, is easier to science; and this fact, together with the jubilant confidence with which science, flushed with many successes, over-hastily exaggerated its own scope and functions a generation ago, accounts for the materialistic colouring which many generalizations of natural knowledge have received—a colouring which has often been taken by students of the physical sciences, unpractised in philosophical reflexion and criticism, for an essential implication or consequence of scientific truth rightly so called. T. Huxley, who on occasion could teach materialism of the most dogmatic kind, and in another mood would capitulate to spiritualism, sought permanent refuge in agnosticism; and, since his earlier and more militant essays, materialism has found no literary champion among British scientists. In dogmatic form it is to be found to-day, perhaps, only in the literature of secularist 'free' thought. Even the monism of E. Haeckel, which is materialism in all but its name, awakens no enthusiasm among scientific students in Britain; it is rightly regarded as involving an obsolete standpoint which science, more silent and cautious—if not more critical—than formerly, has left behind.

2. The attractiveness and plausibility of materialism.—The chief outbursts of materialistic metaphysic have coincided with occasions of renewed interest in, or remarkable progress of, physical science. The emergence of this tendency to regard the world as fundamentally material, at successive epochs in the history of thought, is evidence that materialism strongly commends itself to many minds, especially to those whose studies chiefly lie in the sphere of the physical sciences.

There are many reasons for the attractiveness of materialism as a metaphysical theory or view-of-the-world to such minds, and the view possesses great plausibility when it is contemplated from the epistemological standpoint which the natural sciences, as well as the philosophy of common sense or ordinary social intercourse, take for granted. These reasons may now be specified, and the assumed theory of knowledge whence they derive their plausibility examined.

One reason why, as H. Höffding says (*Problems of Philosophy*, New York, 1905, p. 140), 'ever and again essays are made in the materialistic direction, although—since the advent of the critical philosophy—not with such dogmatic assurance as formerly,' is that our knowledge of matter, its changes and its properties, is so much greater, and so much more easy to obtain, than our knowledge of mind. Psychology is a comparatively young science. In so far as it embraces psychophysics and is pursued in its relation to physiology, even psychology deals with matter rather than

with mind. And in so far as it is pursued by the analytic method—the only truly psychological one—it is a study beset with enormous difficulties. Moreover, such psychological knowledge as is forthcoming and established is rarely studied by the investigator of physical phenomena, so that he proceeds in abstraction from essential elements involved in every 'objective' fact that he examines and classifies. Psychology, again, more immediately involves metaphysics, which for the most part is as yet disputed ground. Lastly, the physical sciences owe much of their prestige to the fact that they are based on measurement, and, being thus quantitative, are capable of mathematical treatment, whereas in psychology (of the pure or analytic kind) measurement is out of the question.

The physical sciences, again, impress us with their connectedness. The connectedness of the material world exercises an overwhelming power on our minds, and especially upon the imagination. Mind, on the other hand, is discontinuous; it is known only in the form of individual minds; and these minds are not known, as yet, with anything like certainty, to communicate with each other through any other medium than that of matter. Further, we know minds only in connexion with bodies or material organisms, and, so far as observation goes, we have no knowledge of mind existing independently of body, though—again, so far as observation goes—it seems that most material 'things' exist without mind. Science teaches us also of the past history of a material world which existed for ages before organic beings, which alone experience enables us certainly to endow with minds, could exist upon it. Yet more impressive is the array of facts furnished by physiology, comparative anatomy and psychology, and pathology as to the concomitance of psychical processes with physical, their dependence on material phenomena such as the functioning of the brain, the correlation of mental development throughout the animal kingdom with organization and complexity of brain-structure, the effects upon mind of injury or disease in brain tissue, and so forth. Thus a very strong, clear, and convincing case for the priority of matter to mind, and for the dependence of the mental on the material, is presented by science; and there is much to suggest that consciousness is a property, and, indeed, a product or an effect, of matter or material process. The progress of science would seem, as Huxley put it, to have meant the extension of mechanical law and the realm of matter, and the concomitant banishment of spirit and spontaneity from the universe, and to afford as good ground for asserting mental phenomena to be effects of material as for asserting heat to be due to physical causes.

Moreover, it may be added, it is impossible to invalidate this coherent and cumulative argument for materialism from the standpoint of the physical sciences. No counter-case can be made, for instance, out of the fact, if it be a fact, that to some mental events no correlated material changes within the brain have been discovered; for future research may possibly discover them, and it is precarious to stake our metaphysical theory on gaps in scientific knowledge. Nor can materialism be refuted by saying that thought, or consciousness in general, is unlike other activities or properties of matter. Heat, light, sound, and electricity are qualitatively different, yet all of them are properties of matter or of ether possessing some of the characteristics of matter. It is a baseless dogma that the effect must resemble the cause, so long as we refer to phenomenal causes and effects. Science, in its more abstract developments, does indeed reduce all diversity to quantitative difference, all causality to identity, so that

heat, light, electricity, etc., are resolved into motions of matter—i.e. of extended and inert substance; but at this level of analysis consciousness, looked upon as one kind of phenomenon among others, and regarded from the purely or abstractly objective point of view adopted by science, might similarly be held capable of resolution into physical antecedents. Perhaps the most that can be urged, from this epistemological standpoint, in opposition to materialism, is that the adoption of it as metaphysical truth would involve us in absolute scepticism, and therefore in doubt as to the validity of materialism. For, if thoughts and all other modes of being conscious are produced by material causes, and their co-existences and sequences are mechanically determined (so that all purposiveness is excluded), there would seem to be no reason for believing that any of our thoughts and judgments, even concerning matter, are true. This argument should suffice to dispose of the dogmatic certainty of materialism, though not necessarily of the possibility of its (indemonstrable) truth. That material change, while ever pursuing the sole path of least resistance, should throw off psychical epi-phenomena, the connexion of which is that of logical sequence, is a possibility with which the materialist must be credited, and to which, perhaps, his opponent will allow him to be welcome. A similar crux which materialism has to encounter is the order in the universe. If there be enough disorder to disturb the equanimity of the spiritualist and to put the theist in a difficulty, there is surely too much order in the world to allow the materialist to feel at home there.

3. Refutation of materialism.—But there are more telling arguments against a materialistic metaphysic than any of those hitherto mentioned. They emerge only when the question of the epistemological standpoint of physical science is raised, and the first principles and presuppositions of such knowledge are exposed to the searching light of criticism.

When science boasts of the 'objectivity' of its knowledge, it does not merely imply possession of knowledge (concerning fact) such as is universal, or capable of being common to all subjects—which is a perfectly legitimate contention; it further drops out of sight altogether, as convenient or essential to its own practical procedure, all reference to the subject of such knowledge, or to the subjective elements which are essential to the very existence of knowledge at all, and which survive in some form even when science has developed its abstractive processes to the furthest limit. Rightly recognizing that any object of universal human experience, such as the sun, is 'independent' of any individual subject's consciousness, we are often apt to speak as if such an object were similarly independent of the experience of human subjects collectively—which is a very different matter. The phenomena which science studies are not indeed the objects of individual experience, the nature of which—in complete isolation from intercourse with other individuals' experience—we can only guess or reconstruct in part; but they are the sum of objective elements common to many individual experiences. Consciousness of an object which is not owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—these things are impossible, inconceivable, and meaningless. Knowledge, moreover, as distinguished from pure passive sensation (if there be such a thing in reality), reveals the work of subjective activity and creative elaboration; and the more generalized and abstract the principles of theoretical science become, the more, and not the less, of this teleological or subjective shaping, guided by interests, ends, and purposes, do they
